THE

AMERICAN

ANNUAL CYCLOPÆDIA

AND

REGISTER OF IMPORTANT EVENTS

OF THE YEAR

1862.

EMBRACING POLITICAL, CIVIL, MILITARY, AND SOCIAL AFFAIRS; PUBLIC DOCUMENTS; BIOGRAPHY, STATISTICS, COMMERCE, FINANCE, LITERATURE, SCIENCE, AGRICULTURE AND MECHANICAL INDUSTRY.

VOLUME II.

NEW YORK:
D. APPLETON & COMPANY, 443 & 445 BROADWAY.
1865.

ENTERED, according to Act of Congress, in the year 1863, by
D. APPLETON & COMPANY,
In the Clerk's Office of the District Court of the United States for the Southern District of New York.

PREFACE.

THE favorable reception given to the volume of this work for the preceding year has induced the publishers to make special efforts in the preparation of this one. It is their aim to make an Annual Supplement not only to the New American Cyclopædia, but to all others, which shall embrace contemporaneous events, and the progress attained in the various branches of knowledge. Such a work is addressed to all classes of readers, since it includes in its contents whatever transpires in political, military, civil, and social affairs, commerce, finance, literature, science, agriculture, art, and mechanical industry.

The year 1862 will probably be looked upon as the most important in a period of great events. It witnessed the struggles of great armies; the numerous battles and ceaseless skirmishes in the United States; the expedition against Mexico; the disgraceful flight of King Otho of Greece; the unfortunate conflict at Aspromonte, in Italy; the enkindling of the Polish revolution; the French war in Cochin China; the recognition in Russia of the rights of man, by the approaching emancipation of the serfs; the Tae-ping rebellion in China; and, not least, the distress in Lancashire, and the stoppage of the looms of Lyons. Of scarcely less note were the naval conflict below New Orleans; the contest between the Monitor and Merrimac, and the destructive exploits of the Alabama. Among the peaceful events were the debates and proceedings in the Federal Congress on confiscation and emancipation; the triumph of anti-slavery views in the Government of the United States, and its measures for emancipation; the silent revolution shown by the ballot-box; and the measures of the seceded States to secure their independent organization.

The relation of these events, especially those of a military character, it is hoped, will be found truthful and just. It is a detailed statement, day by day and step by step, of the movements of the armies, the objects of those movements, and their consequences. It has been prepared chiefly from official papers, and is accompanied with corresponding maps and plans of battles. Important documents and reports are also given.

The details of the internal affairs of the country embrace the organizations of the armies North and South, their officers, and the number and condition of the troops; the important measures of the Federal and Confederate Congresses; the acts and resolutions of State Legislatures and State political organizations; the votes of the citizens at the elections; the messages of the Presidents of the United and seceded States; the orders and instructions of cabinet officers and of commanding generals; the commercial regulations relating to trade with ports of the Southern States; the loans, taxes, and currency measures and debts of the Federal and Confederate Gover ments; their intercourse with foreign nations, and the difficult questions that occurred; the enforcement of martial law, and the exchange of prisoners; thus comprising all important occurrences in the history of the nation.

The interesting events relating to foreign nations, as above stated, are presented with such fulness as to enable the reader to comprehend their causes, their influence upon the welfare of the people, and their probable results.

The progress of mechanical industry is shown in the active construction of iron-clad vessels; in the display at the British Industrial Exhibition; in the many interesting inventions presented at the Patent Office; in the repairs of the steamer Great Eastern, and some other achievements.

The developments in natural science have not been overlooked. In some branches these have been fully brought up, and notice has been taken of various questions raised among scientific men, and the views presented in their discussions.

The continued prosperity of the commerce of the country, and its kindred pursuits, since the previous year, and the surprising resources of the people, as shown in the vast financial operations of the Government, forming a portion of current history of more than usual interest, are explained with ample details.

The geographical explorations were active in all quarters, and those of archæology produced some surprising results. The record of literature was hardly less important than in former years, although the number of works issued was somewhat reduced.

The present condition of the principal religious denominations of the United States is so presented as to show their branches, membership, numbers, views on civil affairs, and the spread of their distinctive opinions among the nations of the earth.

The mortality of the year was unusually large, and the number of distinguished men who closed their career was far greater than usual. Their services have been fully recognized.

THE

ANNUAL CYCLOPÆDIA.

A

AFRICA, one of the six grand divisions of the earth's surface, comprises the southwestern portion of the eastern continent. Its political divisions are, on the north, the Empire of Morocco; the French province of Algeria; the pashaliks of Tunis, Tripoli, and Barca, and the oasis of Fezzan, dependencies of the Turkish empire; Egypt, a viceroyalty of the Turkish empire, though in a state of *quasi*-independency. On the east, Nubia and Kordofan, dependencies of Egypt; Abyssinia, a collection of petty states under savage chieftains, a considerable number of which have recently become subject to the sway of the bold and capable Theodore, the chief of Amhara, who has taken the title of "King of the Kings of Ethiopia;" the countries bordering on the gulf of Aden and the Indian Ocean, and stretching southwestward for more than a thousand miles; these are inhabited by tribes of savages known by the names of Somauli, Wakuafi, Wanika, Galla, &c. &c. The names of the principal countries are: Adel, Ajan, Berbera, Zanguebar (which is a collection of several states), and Mozambique, the coast of which is held by the Portuguese. At different points of this long stretch of coast the Arabs have established themselves, and have reduced the native tribes to subjection, though others, as the Gallas, defy their authority and maintain an ascendency over the tribes of the interior. Of these interior tribes or their country little is known, the many attempts made by missionaries and explorers to penetrate to any considerable distance from the coast, having been, in most instances, repulsed by the savages, often with the loss of the lives of the explorers. On the Mozambique coast the Portuguese have maintained for many years an extended commerce, mainly in ivory and slaves. Dr. Livingstone has penetrated into the interior through this country, ascending the Zambezi to the Victoria Falls, and exploring a portion of the course of the Shire and the Rovuma as well as the lakes Nyassa and Nyanja. East of Mozambique, and separated from it by the Mozambique channel, is the great and populous island of Madagascar.

South Africa is composed of several states, part of them British colonies, and part in some sense dependencies of these. The Cape Colony is the oldest of these, and occupies the southern portion of the continent; above it, on the S. E., are Caffraria, Natal, and the Zulu country; and lying west of these and separated from them by the Kalamba mountains, the Orange river, and Transvaal Republics, composed mostly of Dutch settlers and their Hottentot or Bechuana dependents. On the west coast, north of the Orange river, and extending about 300 miles into the interior, is the Hottentot country, and lying between this and the Transvaal Republics, the land of the Bechuanas.

North of the Hottentot country, stretching northward for more than 1,500 miles, is the region long known as Lower Guinea, but really composed of numerous chieftaincies and some Portuguese colonies. These chieftaincies, beginning with the most southern, are Cimbebas and the country of the Damaras, Benguela, Angola a Portuguese colony, Congo, Loango, the region of the Gabün, country of the Calbongas, and Biafra. Between this and the eastern coast described above, lies a vast tract, varying in width from ten to twenty-eight degrees of longitude, and extending from nearly ten degrees above to sixteen degrees below the equator, almost wholly unexplored by Europeans. Along the eastern portion of it Dr. Livingstone has made some discoveries, but much of this has only been penetrated by him and his adventurous coadjutors.

From the gulf of Biafra the continent turns

sharply westward, and the coast line of Upper Guinea faces the south. This region, long known as the slave coast, is occupied by several native states, the largest being the Kingdom of Dahomey, the king of which has attained an evil notoriety by the vast number of human sacrifices immolated on his altars. North of this, and stretching in a belt of variable width across the continent to the confines of Nubia and Kordofan, is that region known formerly as Soudan and Nigritia, composed of numerous and constantly changing states, part of them Mohammedan and part pagan. The most important of these, beginning in the east, are Darfur, Waday, Bergoo, Kanem, Bornou, Adamawa, Houssa, Timbuctoo, Yoruba, and Bambarra.

Where the western coast of Africa begins again to turn-northward, is the little Republic of Liberia, and northwest of it the British colony of Sierra Leone, both settled in great part by free negroes, either from the United States or Great Britain, or recaptured Africans taken from slave ships, or, as in the case of a portion of the inhabitants of Liberia, native tribes who have become civilized. Lying between this and the Great Desert is the country of Senegambia named from its two great rivers, inhabited by several tribes of negroes and mixed races. France has a colony, St. Louis, at the mouth of the Senegal, and England a settlement, Bathurst, at the mouth of the Gambia. Between this country and the Empire of Morocco, and extending eastward to the confines of Egypt and Nubia, with but here and there a fertile oasis and grove of palms amid its vast wastes of sand, stretches the Great Desert of Sahara. Its oases are inhabited by tribes of Arab or half Arab origin, the Tuaregs, the Tibboos, &c., and its deserts are traversed by caravans and companies of Arab Bedouins, the exact counterparts of their brethren of Arabia.

In another place (*see* GEOGRAPHICAL EXPLORATIONS) will be found the results obtained, during 1862, by the numerous exploring parties who have penetrated into the unknown interior of this vast continent-peninsula. In the present article it is proposed to notice briefly a few of the important political events of the past year in the countries best known to the civilized world.

In Morocco the treaty of peace with Spain, of April 26, 1860 (*see* NEW AMERICAN CYCLOPÆDIA, vol. xi, art. MOROCCO), by which the Emperor Sidi Mohammed agreed to pay to Spain an indemnity of 20,000,000 piastres (about $4,000,000, and to cede a district of territory around Melilla, valued at $37,500,000, had remained unfulfilled up to the summer of 1861. The indemnity had not been paid, and the Kabyles, or inhabitants of Rif, refused to obey the mandate of the emperor, and surrender their lands; and throughout Morocco, there were indications of insurrection, which the emperor lacked the power to suppress. Spain meantime held the important city of Tetuan in which she was authorized to continue a garrison till the fulfilment of the treaty, and made preparations for its permanent occupation. Unwilling to relinquish this important post, Sidi Mohammed sent his brother Muley-el-Abbas, to treat with the Spanish Government for more favorable terms. He succeeded in negotiating a new treaty, in which the payment of three million *douros* within 5 months is guaranteed, and the payment of the remainder of the indemnity made a lien on the customs receipts, for the prompt payment of which the Queen of Spain is authorized to appoint an agent to receive a portion of the duties at each of the five ports of the empire. The Spaniards are to evacuate Tetuan when the first instalment of the indemnity is paid, the territory ceded by the former treaty being placed under their control prior to the evacuation. The Spanish missionaries are to be allowed to found a Mission House at Tetuan, and to be protected in their persons, their asylums, and the exercise of their worship throughout the empire. In January, 1862, a convention was concluded between the Sultan of Morocco and the British Government, by virtue of which the sultan obtained a loan of about half a million pounds sterling, at 5 per cent., at a discount of 17 per cent., reimbursable from the half of the revenue of the ports, at the rate of £38,000 per annum, to be collected by English officers resident at those ports. The amount of this loan was to be paid over to Spain as indemnity. This gives the British Government an influence in Morocco, which, with her possession of Gibraltar, enables her to hold the keys of the Mediterranean.

In Egypt, Mohammed Said Pasha, viceroy since 1854, and the wisest and most judicious ruler of Egypt in modern times, died in January, 1863. He had released the fellahs or cultivators of the soil, from the condition of serfs in which he found them, abolished the system of monopolies by which the government was the sole purchaser and vender of Egyptian products, and allowed the farmer to sell his crops in any market he chose; substituted a tax of 8 per cent. of the income, payable in money, for the old tax of one tenth, payable in kind, abrogated all internal excises, bestowed on the fellah the liberty of changing his residence at will, and allowed the judges of the provinces and districts to be elected by the people, as a measure of judicial reform. He had also made great reforms in the conscription, organization, and discipline of the army. The finances, which, on his accession to the viceroyalty, were in a deplorable state, are now in a better condition than those of any other oriental country. The debt is only 32 millions of dollars, the annual receipts about 8 millions of dollars beyond the ordinary expenditure, and the bonds of the government at par, with 8 per cent. interest, while the ordinary and legal interest of the country is 10 per cent.

There is undoubtedly a dark side to this picture. Bribery, corruption, and peculation,

which seem inseparable from all oriental governments, existed here also; and contractors were continually robbing the government. The worst feature in the administration of Said Pasha was his neglect and partial suppression of the schools of the viceroyalty, established with so much labor by his grandfather Mehemet Ali. His successor, Ismail Pasha, who is a warm advocate of education, will unquestionably remedy this great defect of his administration. In 1862 Said Pasha was obliged to resort to another loan of 8 millions of dollars, which was negotiated at 82½ per cent. for 7 per cent. thirty years' bonds. The present debt of the viceroyalty is $33,250,000, of which about $17,000,000 is for bonds issued to the Company of the Canal of Suez. The imports of the country for 1861 were $13,396,308, and its exports $17,155,491, from the port of Alexandria alone, to which is to be added a small sum from other ports. In October, 1861, Egypt was visited by a terrible flood; the Nile breaking through the levees or dikes, which confined it in Upper Egypt, laid almost the whole of Lower Egypt under water, destroying the crops of maize and millet, and greatly injuring the cotton and sugar crops. The railroads and telegraph lines were also undermined and torn up, and a vast number of dwellings and animals destroyed. To the great joy of the people the flood subsided rapidly, and despite its destructiveness of property, greatly enhanced the yield and value of the crop of 1862.

The ship canal, intended to unite the Mediterranean and the Red Sea, by cutting through the Isthmus of Suez from Port Said to Suez, projected by M. Ferdinand Lesseps, and carried forward by the French, Egyptian, and Turkish Governments, is approaching completion. At the annual meeting of the canal company in May, 1862, M. Lesseps stated that it would undoubtedly be opened to canal-boat navigation by May, 1863, and to ships by the spring of 1866. The work has been one of great difficulty; it was found necessary to construct a fresh-water canal to connect with the Nile, as well as the ship canal, and to build piers, jetties, and breakwaters to protect shipping entering the canal from either sea; and in order to secure the opening of one of the ancient canals, the company were under the necessity of purchasing the entire estate of Waday, the property of El-Hamy Pasha, at a cost of about $400,000. The total expenditure to May, 1862, had been about $42,000,000, and nearly $30,000,000 would probably be required to complete it. Twenty-six thousand men were employed on the work, and M. Lesseps hoped to have 35,000 to 40,000 employed during the next year.

In Abyssinia, Theodore, "King of the Kings of Ethiopia" (*see* NEW AMERICAN CYCLOPÆDIA, vol. xv, art. THEODORUS), has completely subdued Tigré, the most important of the Abyssinian States opposed to him, and having cut off the right hand and right foot of Négoussrèh, its king, that chief survived the mutilation but three days. Theodore is now, without dispute, master of the whole of Abyssinia, and seems disposed to cultivate friendly relations and to introduce civilization and education into his domains.

Proceeding down the eastern coast of Africa, we find the next point of interest in the island of Madagascar. Ranavalona, Queen of the Hovas, the most considerable native tribe of the island, and a most bitter and ferocious persecutor of the Christian missionaries and native converts among the Hovas, died on the 16th of August, 1861, at her capital, Tananarive. Her only son, on her decease, ascended the throne, with the title of Radama II, king of Madagascar. He had been, during his mother's lifetime, friendly to the missionaries and the native Christians, and was regarded as himself a convert. On his accession to the throne he assured the delegations of the English and French Governments of his determination to maintain religious liberty, and the extension of commerce, agriculture, and the arts and sciences among his people. He caused the productions of Madagascar to be represented in the International Exhibition of 1862 in London, and has adopted as his intimate friend and counsellor M. Lambert, a French gentleman, with whom he had been on terms of friendship before his accession to the throne. Great jealousy is manifested by the French and English Governments of the influence exerted by one or the other over the young king, partly from the effect which the preponderating sway of one or the other might have on the colonies which each government possesses in the Indian Ocean, and partly from the fact that the one is the champion of Protestantism and the other of Catholicism in the East. At the latest accounts the French seemed to be gaining the advantage. Radama II was crowned in August, 1862.

South of Mozambique, in the northern part of the Zulu country and extending in the interior toward the Zambezi river, a series of German missionary colonies have been planted by the exertions of Pastor Harms of Hermannsburg in Hanover. The work was commenced in 1854. About 200 colonists have gone out, and they have ten or twelve stations, and have collected very considerable bodies of natives, who have become partially civilized. The movement is one of great promise.

Passing around the Cape of Good Hope and skirting the coast of Lower Guinea, where there have been no occurrences of political or social interest to call for notice, the Bight of Benin is worthy of attention, where, in August, 1861, the English Government took possession of the kingdom of Lagos, and in 1862 established themselves at Whydah, the two most important centres of the slave trade. This occupation not only promises to accomplish more than any previous measure for the overthrow of the slave trade, but opens a ready route of communication with Abbeokuta and the Yoruba country in the interior, a region

admirably adapted for the culture of cotton and the production of palm and cocoa oils.

The Republic of Liberia has made material progress within the past two years. The recognition of the republic by the United States Government and the appointment of a commissioner to represent it there, have been attended with beneficial results. The Republic has entered with great zeal upon the culture of cotton, coffee, sugar, and rice, and the quality of its productions, which are already exported in considerable quantities to England and the United States, is very superior. Within the past year a college fairly endowed, and with a course of instruction equal to that in most of the colleges in the United States, has been opened in Monrovia. Its president and professors are all men of color, and possess suitable qualifications for their several chairs.

The culture of cotton has received a remarkable impulse throughout Africa. Egypt exported in 1862 a much larger quantity than in any previous year; Liberia and Sierra Leone sent some very excellent long stapled cotton into market; the Yorubas and the tribes dwelling on the banks of the Quorra contributed a considerable quantity; some thousands of bales were sent from Kaffraria and the Cape Colony, and Dr. Livingstone, in his ascent of the Shue and Rovuma, found its cultivation already large and rapidly increasing. In the future, Africa promises to be a powerful rival to the United States for the cotton trade of the world.

AGRICULTURE. A condition of war is not usually considered favorable to agricultural progress; but except in those States which have formed the actual battle ground of the past year, the agricultural products of 1862 have been unusually large and profitable. In the Southern States the area devoted to the culture of cotton has been greatly diminished; corn and other cereals having taken its place in extensive districts, while many of the best cotton lands have been trampled by contending armies.

In the Northern States the crops of all descriptions have been abundant. The great export demand for the cereals in 1861, together with the demand for army consumption, led to the planting of a much greater breadth than usual; in winter wheat about 18 per cent. more area was planted than the previous year, taking the whole country together, and in some of the largest wheat growing States the excess of area planted was much more than this; thus, Wisconsin had 67 per cent. more area than in 1861, Michigan 35 per cent., Ohio 18.7 per cent., while Illinois had only 14 per cent. The yield of winter wheat was 26 per cent. above that of 1861. Of spring wheat the increased area sown was about 23 per cent., but the crop was about 10 per cent. below the average, and perhaps a little more than that below the crop of 1861. Including both kinds of wheat the yield was probably about equal to that of 1861, and fully 10 per cent. above the average of the past five years. The crop of Indian corn was about equal to that of 1861, and 22 per cent. above the average of the past five years. The area planted was no greater than in 1861. Oats were an average crop; a larger area having been sown, but the yield to the acre being about one tenth less. The hay crop was slightly above the average, but the great demand for the army kept the price high, $30 per ton being the average price paid by Government in the winter of 1862–'3. Potatoes were slightly above the average. Fruits of all kinds were remarkably abundant, the apple crop being fully double that of ordinary years, and the peach crop nearly quadruple. Beans were largely above the average in their yield, as were also hops, tobacco, and clover seed. Sorghum was planted in much larger quantities than ever before, and the production of the syrup and sugar nearly doubled. But for the tendency of the seed to deteriorate by admixture with ordinary broom corn, &c., the yield would have been still greater.*

The autumn of 1862 developed the fact that there was again a great deficiency in the cereal crops of Western Europe, and that the export demand for American grains and flour would be nearly equal to that of the preceding year. The following table shows the exports of cereals from two of the principal ports in 1861 and 1862, as well as the receipts at Chicago, the largest of the lake ports, and at Boston. A large amount of grain was sent to Europe by way of the Welland canal and the St. Lawrence river; but the amount, as compared with that of the previous year, is not yet ascertainable.

Oats, "	160,825	210,669	....	....	1,047,345	1,168,991	....	....

The exports of grain and flour, it will be seen by the above table, in 1862 were not quite equal to those of 1861, but since the 1st of Jan. 1863, they have been much larger than in the same period of 1862, so that the total export of the crop of 1862 will probably fully equal that of 1861; the high rate of exchange has contributed materially to this result. The prices of breadstuffs at the beginning of the

* These crop statistics have been compiled from the "Crop Reports" of the "American Agriculturist," to which our acknowledgments are tendered.

† Besides 31,672 barrels corn meal.

‡ Besides 50,149 barrels corn meal.

year 1862 and at its close, were as follows: flour, Jan. 1, 1862, $5.40 to $8.25 per barrel; Dec. 31, $6.05 to $10. Wheat, Jan. 1, $1.26 to $1.52½ per bushel; Dec. 31, $1.30 to $1.75. Corn, Jan., 65 to 68 cts. per bushel; Dec., 83 to 95 cts. Rye, Jan., 82 to 85 cts.; Dec., 90 to $1.02. Barley, Jan., 67 to 80 cts. per bushel; Dec., $1.33 to $1.55. The prices of other agricultural products showed a still greater appreciation. Cotton, as was to be expected, rose from 32 to 34 cts. in Jan., to 68 to 72½ cts. in Dec. Rice, $6.75 to $7.75 per cwt. in Jan., was $9 per cwt. in Dec. Potatoes, $1.38 to $2.25 per bbl. in Jan., were $1.60 to $3 in Dec. Butter, which ranged from 11 to 21 cts. in Jan., was from 16 to 26 in Dec. Mess pork, $11.75 to $12.37 per bbl. in Jan., was $14.62 to $14.75 in Dec.

Three measures, enacted by Congress in the session of 1861–'2, had an important bearing upon agriculture. The first was the establishment of a distinct department or bureau of agriculture, which had hitherto been attached to the Patent Office. Isaac Newton, Esq., of Pennsylvania, was appointed the commissioner of the new department. Second, the passage of the Homestead bill, designed to encourage the development of the new lands of the West by actual settlers, who should, on certain conditions of loyalty and actual improvement of the lands for a term of three years, become the proprietors in fee simple of a small farm, by paying only the register's fee, was in effect a law for the promotion of agriculture, to which similar enactments on the part of some of the newer States also contributed; and third, the "Agricultural College Act," by which there were granted to each State 30,000 acres of land at the minimum price of $1.25 per acre, for each senator and representative they might have in Congress, according to the apportionment under the census of 1860, to constitute an endowment for at least one college, in which, without excluding classical or other scientific studies, instruction should be given in agriculture and the principles of the mechanic arts. Ten per cent. of the proceeds of the lands so granted might be used for the purchase of a farm or farms for practical instruction in agriculture, but no portion of it could be expended for buildings or furniture; and the remainder of the proceeds should constitute a permanent and inviolable fund, to be invested in stocks at not less than 5 per cent. (to be made good by the State if lost), the interest whereof should be applied to the teaching of "such branches of learning as are related to agriculture and the mechanic arts, in such manner as the legislatures of the States may respectively prescribe, in order to promote the liberal and practical education of the industrial classes in the several pursuits and professions of life." The several States, in order to avail themselves of the benefits of this act, must signify their acceptance of it within two years from its passage.

The establishment of the "Agricultural Department" seems thus far to have been of much less advantage to the agricultural interests of the country than its framers had expected. The "propagating garden," established at Washington many years since by the Patent Office, is indeed maintained; and large quantities of seeds are distributed through the members of Congress to their constituents; but no effort has yet been made or proposed to obtain reports of the condition or prospects of the crops, analyses of soils and plants, or to ascertain the meteorology or climatic peculiarities of different sections of the country, the adaptations of their soil or temperature to different classes, species, or varieties of plants. The investigation of the grasses, cereals, and root crops most serviceable and profitable for each section, and the introduction of useful plants and fruits of other countries, or the development under favorable circumstances of some of the wild plants and fruits, are also objects properly coming within the scope of such a department, but as yet they have received little or no attention.

The encouragement of the immigration of practical agriculturists by means of "Homestead" acts, has been tried successfully in other countries less eligibly situated, and bids fair to produce good results here. Texas, before coming into the Union, had largely increased her population by land grants, and Missouri and Michigan have both offered State lands in small quantities to actual settlers, either entirely free or at a nominal price.

The "Agricultural College Act" cannot fail of effecting much good. The necessity of scientific instruction in agriculture has long been felt by many of the more intelligent tillers of the soil; and while some have sought instruction in the great agricultural schools of Germany and France, others have attempted to effect the establishment of such schools in this country, and with some success. The scientific schools attached to Harvard, Dartmouth, and Yale colleges, each provide for instruction in some of the branches of agricultural science, and have proved of great advantage to the intelligent practical farmers who have availed themselves of the course; neither of these, however, has an experimental farm, and for the want of which they have been compelled to confine themselves to theoretical instruction.

The State of Michigan was the first to establish an agricultural college, having appropriated $50,000 for the purpose in 1855, and purchased a tract of 7,000 acres of land near Lansing, upon which were erected buildings for the institution. In 1857 the Legislature appropriated a further sum of $40,000, and in May, 1857, the first class was admitted. For some cause the college has within the past two years suspended operations. It is now under the care of the State Board of Agriculture. An agricultural college was incorporated in New York in 1853, but no means were provided for its support. In 1855 a subscription was commenced, and an act passed the Legis-

lature in the same year, loaning the college $40,000 for twenty years without interest, provided a like sum could be raised by private subscription. This amount, and a considerable sum in excess of it, was raised, a farm of 700 acres purchased in Ovid, Seneca county, and buildings erected sufficient for the accommodation of 150 students; the first class was organized in Dec. 1860, but the college was closed from the depression produced by the war, and has not since been opened. The "People's College" at Havana, Schuyler county, was also intended to be partially agricultural in its character, and has a farm of 200 acres; buildings have been erected, but it is not yet opened for students. The Maryland Agricultural College was incorporated in 1856, and is located on a farm of 400 acres, ten miles north of Washington, D. C.; $50,000 were raised for it by subscription, and the State makes an annual appropriation of $6,000 for its support. It was opened for students in 1860 and is still in operation. Its course of instruction differs but little from that of ordinary colleges, and it does not require manual labor from the students. The Minnesota Agricultural College was incorporated in 1858, and has a farm of 320 acres in Glen county, but has not yet erected buildings.

Iowa has purchased a farm, and made a beginning toward the erection of buildings for an agricultural college; but has as yet no organized school. Illinois and Wisconsin have also taken some legislative action relative to such institutions. Oregon, at the session of her Legislature in Sept., 1862, incorporated a State agricultural college at Eugene City, Lane county. There are also collegiate institutions for instruction in agriculture established by private enterprise near Chicago, Illinois, and near Cincinnati, Ohio.

The most complete organization for agricultural training in this country, and the only one now in operation which gives a course approaching in thoroughness and extent the agricultural colleges of the continent of Europe, is the Agricultural College of Pennsylvania, situated on a farm of 400 acres in Centre county, near Bellefonte, not far from the geographical centre of the State. This college was projected in 1853, and incorporated in 1854, at first under the name of the "Farmers' High School of Pennsylvania," which was changed in 1862 to that of "Agricultural College of Pennsylvania." The State Agricultural Society appropriated $10,000 toward its establishment; the Legislature in 1857 granted $25,000, upon condition that $25,000 more were raised by private subscription. A second sum of $25,000 was granted upon the same terms; and in 1856 Gen. James Irvin gave 200 acres, and sold 200 more at a low price to the trustees, from his estate in Centre county, for the location. Centre county raised about $15,000 in addition for the college, and, including the State appropriation, there had been raised in 1859 about $103,000. The buildings were, however, but partially erected, and required over $40,000 more for their completion, and other expenditures to the extent of $15,000 more were needed to fit it for a true agricultural college. In 1861 the Legislature granted a further appropriation of $50,000, which enabled the corporation to complete their buildings and furnish the necessary apparatus and implements. The college was opened for pupils in 1858; four classes had been organized in the summer of 1862, and two classes had graduated. The trustees had secured at the beginning the services of Evan Pugh, Ph. D. and F. C. S., as the president, and he spent two years in Europe visiting the agricultural colleges, collecting a library and cabinet of geology and mineralogy, and familiarizing himself with the methods of instruction there pursued, and returned in 1860 to take charge of the college. Besides his duties as president, Dr. Pugh also acts as professor of chemistry, scientific agriculture, mineralogy, and geology. There are four other professors: one of English language and literature, and moral and intellectual philosophy; one of botany, physiology, zoology, horticulture, and gardening; one of the mathematical sciences, and one of the science and art of veterinary surgery; two assistants in analytical chemistry, and five superintendents of the farm, nursery garden, &c. The course of study occupies four years, and the student who passes successfully the several examinations and presents a thesis, receives on graduating the degree of bachelor of scientific agriculture (B. S. A.). After a fifth year of study he may receive the degree of master of scientific agriculture (M. S. A.). There are partial scientific and practical courses, without degrees, for those who are unable to take a full course. The course of study comprises for the first year arithmetic and elementary algebra, horticulture, elementary anatomy and physiology, physical geography and elementary astronomy, English grammar and composition, elocution, history, practical agriculture, and the details of management on the college farm. For the second year, advanced algebra and geometry, general chemistry, vegetable anatomy and physiology, zoology and veterinary surgery, geology, paleontology, practical agriculture and horticulture, logic and rhetoric. The studies of the third year are: surveying, navigation, levelling, drafting with the use of instruments, analytics, trigonometry and calculus, natural philosophy, chemical analysis, veterinary surgery, entomology, agricultural botany, practical agriculture and pomology, political and social economy. The fourth year's studies are analytical geometry, differential and integral calculus, engineering, drafting, mechanical drawing, quantitative chemical analysis, veterinary pharmacy, gardening, agricultural accounts and farm management, moral and intellectual philosophy. Every student is required to perform three hours' manual labor on the farm or in the garden, nursery, or orchard daily. The cost of board and tuition, room, rent, and washing, is $100

per annum, and incidentals bring it up to about $125. In 1862 the college had 110 students.

The tendency, especially in the Western States, to perform the heavy labors of gathering and securing the crops by the aid of machinery, has stimulated the inventive genius of the people to the utmost, and every year, even at a period when the great interest seems to centre in firearms, projectiles, and other implements of war, witnesses the applications at the Patent Office of a host of inventors of mowing machines, reaping machines, machine rakes, hoes, cultivators, corn shellers, threshers, drills, seed planters, steam ploughs, cow milkers, &c., &c. In 1861 about 400 patents were issued for agricultural implements, and the number was not much less in 1862. Among these were 25 for beehives, 51 for cultivators, 26 for churns, 70 for harvesting implements, 26 for corn planters, 41 for ploughs, 45 for seeding machines, 19 for threshing machines, and smaller numbers for a great variety of other implements. At the international exhibition at London in 1862. 11 of the 85 awards to American exhibitors were for agricultural machines and implements. One of them, the milking machine of Kershaw and Colvin, attracted much attention from the English farmers.

The culture of fruit is yearly becoming a more important branch of American agriculture, and the improvement of the qualities and the selection of the best varieties for cultivation, is a topic of great interest. Many portions of the Northern and Western States possess especial adaptation to fruit crops; among these are notably Northern New York and Ohio, the lower peninsula of Michigan, and Iowa, Wisconsin, and Minnesota, for apples and pears; and New Jersey, Delaware, Southern Pennsylvania, Western Virginia, Kentucky, Tennessee, and Southern Indiana, Illinois, and Missouri, for peaches. In the size and lusciousness of its fruits, California bears away the palm, though it will find a formidable rival in Eastern Oregon, which is destined to be the fruit garden of the Pacific.

Efforts have been made during the past year, and with considerable success, to obtain opinions from large numbers of intelligent fruit growers in different sections of the country relative to the varieties of fruit best adapted to profitable cultivation in their respective regions. The following statement, condensed from the "American Agriculturist" for May, 1862, gives the result of the opinions of seventy-seven eminent fruit growers in the different sections of the Union, in regard to the best varieties of apples, sweet and sour, winter and summer, for cultivation in each section.

In New England reports were received from 17 fruit growers, all of them distinguished for long experience and thorough knowledge of fruit culture. Fourteen of these pronounced the Early Harvest the best summer apple (not sweet), and fifteen the Sweet Bough the best sweet summer apple; after these the Red Astrachan had 13 votes, William's Favorite 7, Saps of Wine 3, and Golden Sweet 6. For autumn apples the Porter and Gravenstein had each 13 votes, the Fall Pippin 8, the Fameuse 4, and the Maiden's Blush and Northern Sweet 3 each. For winter apples, the whole 17 pronounced the Baldwin best, and of other varieties, the Rhode Island Greening had 14 votes, the Roxbury Russet 11; Hubbardston Nonsuch 7; Peck's Pleasant 6, and the Esopus Spitzenberg and Northern Spy 3 each. The Ladies' Sweeting was the only winter sweet apple commended. In New York the first prefences in summer apples were the same as in New England; of 17 fruit growers all declared for the Early Harvest, 16 for the Sweet Bough, and 13 for the Red Astrachan. In other varieties the selection differed from that of the New England fruit culturists; the American Summer Pearmain and Early Joe receiving 4 votes each, and the Early Strawberry and Primate 3 each. In autumn apples, in the State of New York, the Fall Pippin stood highest, receiving 14 votes, the Gravenstein next with 13 votes, the Porter 11, the Hawley 4, and the Twenty Ounce and Primate each 3. The northern sweet autumn apples most approved were Jersey Sweeting, Autumn Bough and Northern Sweet. Of winter apples, New York, like New England, gave the first preference to the Baldwin, and the second to the Rhode Island Greening; but after these, the Esopus Spitzenberg had 11 votes, the Roxbury Russet 7, Northern Spy and King of Tompkins County each 6, Hubbardston Nonsuch and Swaar each 4, Westfield Seek-no-further and Newtown Pippin each 3. Of sweet winter apples, the Talman Sweeting was the first favorite, having 10 votes, and the Ladies' Sweeting the next. From New Jersey, Pennsylvania, Maryland, Delaware, and Virginia, 13 fruit growers reported. Their preferences for summer apples were the Early Harvest, Red Astrachan and American Summer Pearmain, and for sweet apples the Sweet Bough and Golden Sweet. In autumn apples the Rambo stood highest, receiving 7 votes; next the Fall Pippin and Porter, each having 5 votes; and the Maiden's Blush and Smokehouse each 4. The Jersey Sweeting was the only autumn sweeting approved. In winter apples the Baldwin was the first choice, having 9 votes, and next in order the Rhode Island Greening and Smith's cider apple, having 6 votes each; the Roxbury Russet and Fornwalder, having 4 votes each, and the Northern Spy and Ridge Pippin, having 3 each. The Ladies' Sweeting was the only winter sweet apple named.

From Ohio, Indiana, and Michigan 16 fruit growers reported, and of them 12 gave their suffrages for the Early Harvest, and 6 for the Red Astrachan, among summer apples; while the Summer Queen, and Summer Rose, the Carolina Red June, and the Benoni had each their admirers. Of sweet summer apples the Sweet Bough and Golden Sweet were the favorites.

Among autumn apples the Rambo occupied the highest place, receiving 12 votes, while the Fall Pippin had 10, and the Maiden's Blush 8; other favorites, receiving 3 votes each, were the Porter, Gravenstein, Lowell, Late Strawberry, and Fall Wine. Of sweet fall apples none but the Jersey Sweeting was named. Of winter apples, the Yellow Bellflower received the most votes, and next in order, having 5 votes each, were the Rhode Island Greening and the Belmont; then followed the Westfield Seek-no-further, Rawle's Janet, the Wine Sap, Smith's Cider, and Rome Beauty. The Broadwell and Talman Sweeting were the favorite sweet apples.

From Wisconsin, Illinois, Iowa, and Utah, 9 reports were received. In summer apples the Early Harvest, Red Astrachan, and Carolina Red June were the favorites, while the Keswick Codlin had 3 votes. Of sweet summer apples the High Top was the only one named. In autumn apples the Rambo, as generally throughout the Middle and Western States, takes the lead, followed by the Maiden's Blush, Fameuse, and Fall Pippin, while the Pumpkin Sweet is preferred as a fall sweet apple. Among winter apples the Yellow Bellflower is the prime favorite, and after this in their order Rawle's Janet, the Wine Sap, Westfield Seek-no-further, and Golden Russet. Talman's Sweeting is the only winter sweet apple named.

From Missouri, Kentucky, Tennessee, and Minnesota five reports were received. Of summer apples, the Early Harvest, as everywhere else, was first. After this the Carolina Red June and the Red Astrachan, and for a sweet apple the Sweet Bough. Of autumn apples, none save the Gravenstein was named. Among winter apples, Rawle's Janet occupied the first place, and after it the Yellow Bellflower, Wine Sap, Fornwalder, Limber Twig, and Pryor's Red.

Taking the whole country, the following apples seem to be most generally approved and adapted to all the varieties of climate: for summer apples the Early Harvest, Red Astrachan and Sweet Bough; for autumn the Fall Pippin, Porter, Gravenstein, and Rambo; for winter the Baldwin and the Rhode Island Greening.

A few other varieties, more lately introduced, but possessing high merit, receiving only single votes in these reports, are yet worthy to be named. Among these are the Early Bough and the Summer Paradise among the summer apples; the Willis Sweeting, and the Fall Orange among the autumn varieties; the Vandervere, an apple of admirable flavor, the Prentiss Russet, and the Moore and Pound Sweetings among the winter apples.

A similar, though less extensive canvass in regard to pears, gives this result, the pears being named in the order of their value: *Standards*—Bartlett, Flemish Beauty, Lawrence, Beurre Clairgeau, Beurre Giffard, Rostiezer, Winter Nelis and Beurre Superfin. *Dwarfs*—Louise Bonne de Jersey, Rostiezer, Duchess D'Angoulême, White Doyenne, Beurre Diel, Eastern Beurre, Fondante D'Automne, Beurre D'Anjou, Vicar of Wakefield, Winter Nelis, Tyson, Kirtland, Doyenne, D'Ete, Seckel, Flemish Beauty, Bartlett, and Glout Morceau.

In grapes, the following seems to be the verdict of the best grape growers: North of lat. 43° the best wine grapes are the Delaware and Clinton; the best table grapes, the Delaware, Hartford Prolific, Concord and Logan. Between 40° and 43°, for wine, the Delaware, Chester, and Catawba; for the table, the Delaware, Rebecca, Diana, and Isabella. South of 40°, for wine, the Catawba and Delaware; for the table, the Delaware, Catawba, Rebecca, Diana, Isabella, and To Kalon. In strawberries, there is much diversity of opinion; but the prevailing sentiment seems to be in favor, for family use, of the Triomphe de Gand, Hooker's, and Wilson's seedlings. Other varieties may be better for market purposes.

ALABAMA, one of the States bounded on the south by the Gulf of Mexico contains, an area of 50,722 square miles and in this respect is the fourteenth in comparative size. In population it is the thirteenth in rank, containing 964,201, of whom 526,431 are whites, 2,690 free colored, and 435,080 slaves. Of the whites 270,190 are males; 256,081 females; of the slaves 217,766 are males and 217,314 females. In density of population it is the twentieth in rank, having 19.01 inhabitants to the square mile. Its ratio of increase per square mile, during the last ten years, has been 3.80. The number of slaves manumitted during the ten years preceding 1860 was 101, and the number of fugitives was 36. The mortality in the State during the year ending May 31st, 1860, was 12,760, of whom 6,753 were males, and 6,007 females. The most fatal diseases were consumption, croup, diarrhœa, typhoid fever, and pneumonia. The number of violent deaths was 549 males and 356 females, nearly all of which were accidental. Deaf and dumb, 235. The value produced in iron founderies during the same period was $142,480; coal 10,000 bushels; value of lumber produced $2,017,641. Flour and meal, $807,502. Spirituous liquors distilled, 528,800 gallons. Capital invested in cotton manufactures, $1,306,500; Spindles 28,540, looms 663; annual products, $917,105. Capital invested in the manufacture of woollen goods, $100,000; spindles, 1,000; looms, 20. Annual products, $218,000. Value of leather produced, $340,400. The improved lands amount to 6,462,987 acres and the unimproved 12,687,913 acres. The cash value of farms is $172,176,168; value of live stock, $43,061,805. The crop of cotton amounted in 1860 to 997,998 bales of four hundred pounds each. Wheat, 1,222,487 bushels; rye, 73,942; corn, 32,761,194; oats, 716,435; rice, 499,559 pounds; tobacco, 221,284 pounds; wool, 681,404 pounds. Miles of railroads, 743; cost of construction, $17,591,188.

The amount of cotton received at Mobile, the

only port of the State, from the first of September to the first of December, 1860, was 362,370 bales, being nearly one third of the crop raised in the State during that year. The amount received during the same period in 1861, was 22 bales. That which was raised was kept on the plantations, as the blockade cut off all shipments. The commerce of the State was entirely destroyed, except what took place with the adjoining States. In 1862 a very short crop was produced, owing to the small breadth of land planted and the unusual shortness of the yield. The corn crop was also short, but sufficient for home consumption. The wheat and oat crops were an entire failure, owing to an unprecedented drought, which continued through twelve weeks.

Alabama is rich in mineral treasures. Lead and saltpetre, which were greatly needed by the Confederate Government, exist within her limits, and vigorous efforts were made to procure them. Four caves in the State were worked for nitre, which yielded in a few months over twelve thousand pounds, at a cost of seventy-five cents per pound.

The arrival of the Federal forces under Gen. Benjamin F. Butler at Ship Island, at the beginning of 1862, caused great alarm at Mobile. It was supposed that an immediate attack would be made upon that city. The governor, John Gill Shorter, on the 1st of March issued a proclamation to arouse the people to action. He requested the citizens and directed the military officers to burn "every lock of cotton within the State, if it became necessary to prevent it from falling into the hands of the public enemy. He further urged them not to plant one seed of cotton beyond their home wants, but to put down their lands in grain and every other kind and description of farm produce, and to raise every kind of live stock, which might contribute to the relief of the needy families of the soldiers of the army. There were at that time eighteen hundred persons supplied with the necessary articles of food at the free market, which had been opened in Mobile. He further appealed to the people to contribute their shot guns to arm the soldiers, saying:

> Men, brave and gallant men, responding to the call of their bleeding country, are rushing by thousands to the field. Their cry is for arms with which to engage the foe. People of Alabama! will you not commit your arms into their hands? People of Alabama! will you not send the shot guns and rifles rusting in your houses, that I may place them in the hands of your own sons to defend your altars and your homes? Agents are appointed all over the State to collect arms. If they do not find you I beg you to find them. Let every sheriff and judge of probate, and all State officers, civil and military, receive and forward arms. Expenses will be promptly paid by the State.
>
> Let every man do something toward arming our troops, if he cannot go to the battle field. Turn your shops into laboratories for the manufacture of arms and munitions of war. Send me thousands of shot guns and rifles, bowie knives and pikes. Send powder and lead and ball. What you cannot afford to give, the State will buy. Let the entire resources and energies of the people be devoted to the one great purpose of war—war stern and unrelenting—war to the knife—such a war as, in the providence of God, we may be compelled to wage in order to vindicate the inalienable right of self-government.

About the same time, the militia of the counties of Mobile, Washington, Clark, Baldwin, Marengo, Choctaw, Sumter, Green, Perry, Wilcox, Monroe, Dallas, Pickens, Tuscaloosa, Bibb, Shelby, Covington and Antagua were ordered to hold themselves in readiness to be called out for ninety days. The entire body of militia in these populous counties was to take the field, and in addition sixty companies of volunteers. Each company was to consist of one captain, one first and two second lieutenants, five sergeants, four corporals, and not less than sixty-four nor more than one hundred privates. Each company was also to be provided with at least six axes, four hatchets and four shovels and ten days' rations, and be prepared as minute men to proceed to Mobile. Each man was desired to provide himself with twenty rounds of ammunition suitable for the gun he carried, and to take with him his bullet mould and powder flask.

The force which the State had contributed to the war previous to the call of President Davis for an additional quota of 12 regiments, was 22 regiments, and battalions, of at least ten companies of horse and as many of foot. The conscription act followed, by which every man between eighteen and thirty-five was declared to be a soldier. This law created much dissatisfaction in the State, and some suits were commenced to test its constitutionality, but the authorities waived the question, and sustained the Confederate Government.

On the approach of the Federal force in north Alabama (*see* ARMY OPERATIONS), much apprehension was raised that Montgomery might be captured. At the time more than fifty thousand bales of cotton were stored there. Orders were issued by the Government, requiring the railroads to prepare transportation to remove it at once when desired by the owners, and all public drays were impressed into service to remove other portions to a warehouse without the city, where it could be burned without endangering the city. At the same time all persons were forbid to remove the cotton from their warehouses to their private residences. Great alarm was produced throughout the northern part of the State by the approach of the force under Gen. Mitchell. It was supposed that the Federal army would cross the Tennessee river, at the extreme southward point of that river in Alabama, near Gunter's Landing. This is within fifty miles of Gadsden on the Coosa river, which distance might be passed in one day, and the passage of any more steamboats up to Rome might thus be cut off; or the boats might be seized and a force transported to Rome, where some most important establishments for the manufacture of cannon and small arms were in operation. At this point engines and cars in large numbers might also have been captured and a movement made to destroy the bridges of the railroad.

Some expeditions were made by bodies of Federal troops to towns in the northern part of the State, during which many skirmishes occurred. The town of Athens was one of the last in this part of the State to accede to the Confederacy. The threats of devastation by the neighboring town caused this change. Subsequently a body of Federal toops belonging to the brigade of Col. Turchin, were retiring from the town, about the 10th of May, when some of the citizens cheered. The soldiers becoming provoked returned, and made a general onslaught upon the community; stores were sacked and dwellings plundered. The affair was subsequently investigated by a court-martial at Huntsville, and a verdict found dismissing Col. Turchin from service. Previous to the session of the court a commission appointing him a brigadier-general was issued by President Lincoln. On the 25th of July, a guard at Courtland bridge, consisting of two Federal companies of the 10th Kentucky and one company of the 1st Ohio cavalry, were surprised and captured by a force of irregular cavalry. Some other small affairs occurred between the irregular troops of the State and outposts of the Federal forces.

The tax imposed by the Confederate Government in 1861, amounting to two millions of dollars, was paid by the State, and the Legislature also passed an act to guarantee the payment of a million and a half of Confederate bonds, and recommended a similar measure to the other states of the Confederacy.

ARGENTINE REPUBLIC, The, is bounded on the north by Bolivia, on the east by the Paraguay and Uruguay rivers, south by the Atlantic and Rio Negro, and west by Chili. It lies between the 20th and 40th parallels of S. latitude and 56th and 70th degrees of W. longitude, and contains about 780,000 square miles. President, General Bartolomeo Mitré, elected 1862. Ever since the overthrow of the rule of the Dictator Rosas in 1853, the Argentine Republic has been a prey to internal dissensions. There were two great parties. The one, the old Federal party, sought to impart a kind of organization to the Argentine nationality, and succeeded for a moment in rallying upon this platform all the provinces save that of Buenos Ayres. The other party, the old Unitarians, had its centre in Buenos Ayres, which for some time maintained a separate existence. The constitution of the Argentine Confederacy was adopted in May, 1853, and provided for two chambers, a senate consisting of 30 members, and a house of representatives counting 51 deputies. Buenos Ayres was again united with the Argentine Republic by the peace of San José de Flores, Nov. 10, 1859, and by the act of union concluded June 6, 1860, at Parana. Hostilities between Buenos Ayres and the Argentine Confederacy recommenced in 1861. On Sept. 17. 1861, Gen. Mitré, of Buenos Ayres, defeated the Argentine troops at Pavon. In consequence of this victory, the President of the Argentine Republic, Dr. Santiago Derqui, abdicated the presidency, and the national government was provisionally intrusted to General Mitré, who was charged with convoking a national congress on May 25, 1862, at Buenos Ayres, to which place the diplomatic corps, which had hitherto resided in Parana, transferred its residence. The congress adopted a new constitution, which provided for the federalization of the city of Buenos Ayres, its relation to the Confederacy being made similar to the relation of the District of Columbia to the United States. The province of Buenos Ayres, however, elects a governor, but his jurisdiction is only "extra-mural," the city being exempt from it. The congress elected Gen. Mitré first president of the reunited Argentine Republic, and he was installed on October 14. Since that time the republic has enjoyed a permanent peace, and both the people and the men in power appear intent on peaceful and industrial improvement.

The republic, as now constituted, embraces 14 provinces, the names, subdivisions, area, and population of which are as follows:

Names of Provinces.	Subdivisions	Area in geog sq. m.	Population.	Capitals.	Population.
Juguy	9	1,577	33,200	Juguy	6,900
Salta	16	2,985	66,600	Salta	11,300
Catamarca	8	1,683	50,000	Catamarca	12,000
Tucuman	9	1,100	88,500	Tucuman	11,000
Santiago	8	1,825	60,000	Santiago	6,000
Corrientes	17	2,138	85,000	Corrientes	16,000
La Rioja	7	1,463	34,500	La Rioja	4,000
Cordova	14	2,775	130,000	Cordova	25,000
Santa Fé	4	1,180	40,000	Santa Fé	15,000
Entre Rios	10	1,409	80,000	Parana	8,000
San Juan	4	883	62,000	San Juan	20,000
San Luis	8	1,136	32,000	San Luis	5,000
Mendoza	8	1,444	60,000	Mendoza	18,000
Buenos Ayres	51	3,933	350,000	Buenos Ayres	120,000

Besides these provinces, the territory of the republic comprises the district Gran Chaco, with 6,667 geographical square miles and about 100,000 free Indians, and the Southern Desert as far as the Rio Negro, with 8,967 square miles.

ARKANSAS, one of the southwestern States, is west of the Mississippi river and south of the State of Missouri. Its population, according to the census of 1860, was 435,450, of whom 324,191 were whites; free colored, 144; slaves, 111,115. The ratio of increase from 1850 to 1860 was, whites, 99.88; free colored, 81.25; slaves, 135.91. The number of each sex of the white population was: males, 171,447; females, 152,666. The number of manumitted slaves was 41; fugitives, 28. The mortality in the State for the year ending May 31, 1860, was 8,860. Consumption, fever, and pneumonia were the most fatal diseases. The number of deaf and dumb in the State was 142, of whom 15 were slaves. The product of iron founderies during 1860 was valued at $52,000. The value of sawed and planed lumber, $1,033,185. The number of gallons of spirituous liquors distilled in the year ending June 1, 1860, was 8,500, valued at $6,125. Value of leather produced, $115,375. Number of acres of improved land,

1,933,036; do. unimproved, 7,609,938. The cash value of farms was $91,673,409. Number of horses, 101,249; mules, 44,458; milch cows, 158,873; working oxen, 70,944; sheep, 202,674; swine, 1,155,379. Value of live stock, $22,040,211. Wheat, 955,298 bushels; rye, 77,869 bushels; corn, 17,758,665 bushels; oats, 502,866 bushels; tobacco, 999,757 pounds; cotton, 367,485 bales, of 400 pounds each; wool, 410,285 pounds; peas and beans, 439,412 bushels; Irish potatoes, 418,000 bushels; sweet potatoes, 1,462,714 bushels; barley, 3,079 bushels. Value of home-made manufactures, $928,481. Railroads, 38 miles.

The military movements of the Federal troops at the West in the beginning of the year excited great apprehensions in Arkansas. Already twenty-five regiments and six battalions of infantry and cavalry and ten companies of artillery, amounting to 21,500, had been sent to the Confederate army for the war. On the 18th of February Governor Rector issued a proclamation calling into immediate service every man in the State subject to military duty. They were required to appear within twenty days. On the same day a despatch from St. Louis to Washington, sent by Gen. Halleck, announced that Gen. Curtis had driven Gen. Price from Missouri into Arkansas, and that "the flag of the Union is floating in Arkansas." At the same time the commandant at Pocahontas, a short distance southeast of the position of the Federal forces under Gen. Curtis, becoming alarmed, issued the following appeal to the people:

POCAHONTAS, ARK., *Feb.* 26, 1862.

Reliable information has just been received by me that the enemy, 16,000 strong, left Greenville, Mo., on Saturday last, for the purpose of attacking Pocahontas. It now becomes the duty of every man to turn out promptly, shoulder his musket, and drive the Vandals from the State.

This is probably the advance guard of a much larger force of the enemy. Come without delay, singly or in squads, and rendezvous in Jacksonport. Bring as few horses as possible, as forage is scarce.

MAJOR KEYWORTH, Com'g.

The Confederate force, retiring before Gen. Curtis, abandoned Mudtown. They were subsequently charged with having poisoned the provisions not taken away and the wells of the town. It was reported to Gen. Halleck that forty-two officers and men were thereby poisoned, whereupon he issued, on the 28th of February, an order, saying:

We cannot retaliate by adopting the same barbarous mode of warfare, nor can we retaliate by punishing the innocent for the acts of the guilty. The laws of war forbid this, but the same code authorizes us to retaliate upon the guilty parties.

Persons guilty of such acts, when captured, will not be treated as ordinary prisoners of war, nor will they be shot, but will suffer the ignominious punishment of being hung as felons. Officers are in a measure responsible for the acts of their troops. Officers of troops guilty of such acts, although not themselves the advisers or abettors of the crime, will, when captured, be put in irons and conveyed as criminals to these headquarters. The laws of war make it their duty to prevent such barbarities, and if they neglect that duty they must suffer the consequences.

For the important military movements in the State, *see* ARMY OPERATIONS. It was beyond the power of the Confederate Government to send aid to Arkansas, and the State was forced to rely upon its own resources and such aid as might be obtained from Missouri, the Indian territory, and Texas. This state of affairs induced the governor, in May, to issue an address to the people, in which his indignation is expressed in these words:

It was for liberty that Arkansas struck, and not for subordination to any created secondary power, north or south. Her best friends are her natural allies, nearest at home, who will pulsate when she bleeds, whose utmost hope is not beyond her existence. If the arteries of the Confederate heart do not permeate beyond the east bank of the Mississippi, let southern Missourians, Arkansians, Texans, and the great West know it and prepare for the future. Arkansas lost, abandoned, subjugated, is not Arkansas as she entered the Confederate Government. Nor will she remain Arkansas, a Confederate State, desolated as a wilderness. Her children, fleeing from the wrath to come, will build them a new ark, and launch it on new waters, seeking a haven somewhere of equality, safety, and rest.

After the military movements in the northwestern part of the State, including the battle of Pea Ridge, Gen. Curtis moved to the White river, and occupied Batesville about the 1st of May. Here he was met by many demonstrations of attachment to the Union. Many citizens came forward and took the oath of allegiance to the United States; these were judges of courts, clergymen, and citizens holding positions of influence. His advance being pushed forward on the road to Little Rock, a great excitement was produced there. The governor issued a proclamation calling upon the State militia to repair immediately to its defence. Finding himself not sufficiently supported, Gov. Rector fled, and the State was left without any executive government. Martial law was then declared by Brig.-Gen. Roane, commanding the department, and George C. Watkins was appointed provost marshal. The weakness of Arkansas at this moment was caused by the concentration of all the Confederate military strength at Corinth, and her fate was as much involved in the security of that position as the fate of Tennessee or Mississippi. But while the forces of Arkansas were taken to defend Corinth, ten regiments were taken from Gen. Curtis to reënforce the Federal troops attacking it. This left him in no condition to march upon Little Rock, and the capital of the State thus escaped being captured.

On the 19th of May a skirmish took place near Searcy, between one hundred and fifty men of Col. (acting Brig.-Gen.) Osterhaus's division and a State force under Cols. Coleman and Hicks. The loss was small on both sides. Other skirmishes occurred during the march of Gen. Curtis from Batesville to Helena, of small importance. Bridges were burned by the Arkansas troops across Bayou Des Arc and Cypress river, and about ten thousand bales of cotton on the Arkansas river, and all the cotton and sugar at Jacksonport. By the first of June,

twelve thousand men were collected at Little Rock in answer to the call of the governor, but were very destitute of arms. The State records, however, had been removed to Arkadelphia.

After Gen. Curtis had occupied Helena, the Federal Government appointed John S. Phelps of Missouri military governor, and Col. Wm. F. Switzler secretary for Arkansas. He left St. Louis on Aug. 19, for Helena. It was contemplated at this time that a movement on Little Rock would be made. This however was not done, and the office of governor became of little importance. Two regiments were organized at Helena, composed of citizens of Arkansas; they were chiefly men who had suffered in consequence of their attachment to the Union, and were refugees.

The legislative proceedings in Arkansas possess little interest. An act was passed imposing a tax of thirty dollars per bale on cotton. The object was to favor the cultivation of grain and to discourage that of cotton.

At the State election in August, Flanagan was chosen governor. The opposing candidate was Governor Rector. On the day of inauguration the 1st Monday in November, the governor elect being absent in the army, the duties of the office devolved upon Mr. Fletcher, the president of the senate. An animated contest took place between B. C. Johnson and Augustus H. Garland for the senatorship in the Confederate Congress. Mr. Johnson was elected.

The loss of all communication with the North and foreign countries, stimulated the domestic manufactures of the State. At the close of the year there was in operation a tobacco factory at Burtonville; a large cotton factory in Washington county; another for cotton and wool at Van Buren, Crawford county, another at Norristown, Pope county; another in Pike county. Large saltpetre works were set up in Newton county; and in Independence county some fine caves of the same article were mined. Lead mines in Newton and Sevier counties were worked. Salt was made on the White river, and also near the Louisiana State line. Works on the Washita, with an unlimited supply of brine, commenced vigorous operations. A cannon foundery was at work at Camden; two founderies at Little Rock were at work, one of which furnishes grapeshot for the army. At Hopefield, opposite Memphis, the machine shop of the Memphis and Little Rock railroad was turned into an armory for altering and repairing guns. Several extensive tanneries were commenced in various parts of the State. The State arsenal at Little Rock was converted into an armory for the use of the Confederate Government. At the State penitentiary, gun carriages, caissons, wagons, boots and shoes, clothing, and other material for the army were manufactured.

ARMY, CONFEDERATE. The policy usually adopted by countries between which hostilities exist, to conceal from each other not only their military plans, but especially the strength of the forces by which they are to be executed, has been very carefully pursued by the Confederate Government. No precise statement of its forces in the field has ever been published, or any such details as would enable the United States Government to form an accurate estimate of their numbers. In all the military operations of the Confederate States, large, and probably exaggerated statements of the numbers of men have been made before action, which have been greatly reduced after a conflict. It is also impossible for the most unprejudiced observer to form a correct estimate of the numbers of men from the mere appearance of an army. These circumstances have rendered it difficult to state with precision the number of Southern troops which have been actually brought into service. The entire white population of the States comprising the Confederacy, by the census of 1860, was as follows:

Alabama	526,431
Arkansas	324,191
Florida	77,748
Georgia	591,588
Louisiana	357,629
Mississippi	353,901
North Carolina	631,100
South Carolina	291,388
Tennessee	826,782
Texas	421,294
Virginia	1,047,411
Total	5,449,463

This statement of the population includes the whole of Virginia and the whole of Tennessee. A statement of the population made in the Confederate States, for an estimate of the effects of conscription embraces only one half of Virginia, and two thirds of Tennessee. A statement, however, including all of Virginia and Tennessee, and excluding aid received from Kentucky and Missouri, somewhat exceeds the available force of the Confederate Government. According to the census of 1850 the population of the United States between the ages of eighteen and thirty-five was fifteen per cent. of the aggregate population. Under this ratio the males between those ages in the Confederate States, by the census of 1860, were 817,419. The estimate made in the Confederate States on this basis was for a white population of 5,015,618. The number between the ages of eighteen and thirty-five was put at 752,342. It was also estimated that the volunteers offering who were not embraced in these ages, together with those from Kentucky, Maryland, and Missouri, would make the aggregate soldiery of the Confederacy reach the number of 800,000. It has been generally supposed that the number of volunteers under eighteen and over thirty-five, including also those from Kentucky and Missouri, was large. The Confederate estimates make it about 50,000. From the male population between the ages of eighteen and thirty-five in 1860, amounting to 817,419 if the entire population of the States which have joined the Confederacy is estimated; and amounting to 752,342 if only the population is estimated, which was under the control of the Confederate Government on the 16th of April, when the conscrip-

tion act was passed; there is to be a deduction for those who were not able bodied, or who were exempt from service. This deduction would amount to fifteen per cent. If this deduction is made on the Confederate estimate of 752,342, it is 112,851, and leaves the number of able-bodied men 639,491, to which fifty thousand should be added for volunteers under and above the prescribed ages, and also from Maryland, Kentucky, and Missouri, making the total 689,491. If the deduction of fifteen per cent. is made from the whole population of the Confederate States within the prescribed ages in 1860, viz., 817,419, it is 122,612, and leaves 694,807, with no additions to be made for volunteers from other States or of other ages. The troops furnished by the States at the close of 1861 with their quotas were nearly as follows:

States.	Volunteers.	Quota.
Alabama	23,000	33,750
Arkansas	21,500	21,435
Florida	7,000	5,141
Georgia	25,000	37,633
Louisiana	23,577	23,706
Mississippi	17,824	23,284
North Carolina	34,094	39,209
South Carolina	19,000	18,270
Tennessee	44,600	52,848
Texas	19,500	28,573
Virginia	70,000	66,105
Total	305,095	349,954

These volunteers were mostly for twelve months. To these troops in the Confederate service should be added the militia force called out in Georgia, and the volunteers from Maryland, Kentucky, and Missouri, making the entire force about 350,000.

On the 1st of February the President called upon the States for an additional quota of troops: Mississippi, 7 regiments; Alabama, 12; North Carolina, 5; Georgia, 12,000 men, &c. The governors resorted to threats of a draft, and the quotas were completed. The original force had been reduced by sickness and the casualties of war to such an extent, that when the Federal armies commenced operations in February and March, 1862, the Confederate Government was entirely unprepared to resist them. The first disasters showed to the Government and people their real weakness. Soon after the session of Congress commenced under the Permanent Government, President Davis sent in a Message urging the passage of a conscription act. One was passed on the 16th of April, which declared every man, with a few exceptions, between the ages of 18 and 35 years, a soldier. (*See* Confederate States.) Thirty days were allowed in which to volunteer, after which the law took absolute effect. All contracts with volunteers were annulled, and those over 35 and under 18 years were required to continue in the service 90 days after their term of enlistment expired. Before the ninety days expired an order from the Secretary of War extended the time of service. This conscript act thus brought out the full number liable to conscription, 639,491, reduced by the losses of war and sickness, exemptions, and desertions up to midsummer 1862, which reduction was not less than 100,000 men, and probably near 200,000. The weakness of the Confederate armies was however so sensibly felt, that the press publicly declared in the middle of August that the Confederacy had not 300,000 effective men in the field, and Congress, in October, passed a second conscription act, by which the President was authorized to call into the field all men between the ages of 35 and 45 years. The act provided that only such portions of this conscription should be called out as the President deemed necessary. By the 1st of November the Secretary of War issued an order for the enrolment of all persons, except exempts, between 18 and 45 years of age. This law was declared to be "odious to a large class of the people." A few regiments of Indians have been brought into the field, but they have proved so troublesome that the experiment has not been tried any further.

The following is an official list of general officers in the service in August, 1862. The major and brigadier generals are said to belong to the Provisional Army, their commissions having been granted under the Provisional Government, or prior to 1862:

General-in-Chief.

*Robert E. Lee.....Virginia.

Adjutant and Inspector-General.

*Samuel Cooper.....Virginia.

Quartermaster-General.

*A. C. Myers.....Louisiana.
*Larkin Smith (Assistant).

Chief of Ordnance.

*Benjamin Huger.....South Carolina.

Generals—Regular Army.

*Samuel Cooper.....Virginia.
*Joseph E. Johnston.....Virginia.
*Robert E. Lee.....Virginia.
*P. G. T. Beauregard.....Louisiana.
*Braxton Bragg.....Louisiana.

Major-Generals—Provisional Army.

*Leonidas Polk.....Louisiana.
*Earl Van Dorn.....Mississippi.
*Gustavus W. Smith.....Kentucky.
*Theo. N. Holmes.....North Carolina.
*William J. Hardee.....Georgia.
*Benj. Huger (rel'd).....South Carolina.
*James Longstreet.....Alabama.
*J. B. Magruder.....Virginia.
*Thomas J. Jackson.....Virginia.
*Mansfield Lovell.....District Columbia.
*E. Kirby Smith (rel'd).....Florida.
William W. Loring.....North Carolina.
Sterling Price.....Missouri.
*John P. McCown.....Tennessee.
*Daniel H. Hill.....North Carolina.
*Richard S. Ewell.....Virginia.
*John C. Pemberton.....Virginia.
*Ambrose P. Hill.....Virginia.
John C. Breckinridge.....Kentucky.
Wm. S. Cheatham.....Tennessee.
Thomas C. Hindman.....Arkansas.
*Richard H. Anderson.....South Carolina.
*James E. B. Stewart.....Virginia.
*Simon B. Buckner.....Kentucky.
*James M. Withers.....Alabama.

Brigadier-Generals.

John B. Floyd (rel'd).....Virginia.
Henry A. Wise.....Virginia.
*August R. Lawton.....Georgia.
G. J. Pillow (rel'd).....Tennessee.
*Daniel S. Donelson.....Tennessee.
*David R. Jones.....South Carolina.
*John H. Winder.....Maryland.
*Ashbel A. Early.....Virginia.
*Arnold Elzey.....Maryland.
*Samuel Jones.....Virginia.
*C. C. Sibley (dead).....Louisiana.
*Wm. H. C. Whiting.....Georgia.
*Daniel Ruggles.....Virginia.
Charles Clark.....Mississippi.
*Roswell S. Ripley.....South Carolina.
*Isaac R. Trimble.....Maryland.
*Paul O. Hebert.....Louisiana.
*Richard C. Gatlin.....North Carolina.
L. Pope Walker.....Alabama.
*Albert B. Blanchard.....Louisiana.
*Gab. J. Rains (killed).....Kentucky.
*Lafayette McLaws.....Georgia.
*Thomas F. Dayton.....South Carolina.
*Lloyd Tilghman.....Kentucky.
*Nat. G. Evans.....South Carolina.

*Cadmus C. Wilcox	Tennessee.
Richard E. Rodes	Alabama.
Richard Taylor	Louisiana.
*James H. Trapier	South Carolina.
*Samuel G. French	Mississippi.
William H. Carroll	Tennessee.
*Hugh W. Mercer	Georgia.
Humphrey Marshall	Kentucky.
*Alexander P. Steuart	Tennessee.
*W. Montgomery Gardner	Georgia.
*Richard B. Garnett	Virginia.
William Mahone	Virginia.
L. O'B. Branch (killed)	North Carolina.
Maxey Gregg	South Carolina.
Robert Toombs	Georgia.
*George H. Stewart	Virginia.
*Wm. W. Mackall	District Columbia.
*Henry Heth	Virginia.
*Johnson K. Duncan	Louisiana.
John R. Jackson	Georgia.
*Edward Johnson	Virginia.
Howell Cobb	Georgia.
Joseph L. Hogg	Texas.
William S. Featherston	Mississippi.
Roger A. Pryor	Virginia.
*John H. Forney	Alabama.
*John B. Villepigue (dead)	Georgia.
*Bushnel R. Johnson	Tennessee.
*Thomas K. Jackson	———.
*Thomas Jordan	Virginia.
*John S. Bowen	Missouri.
*John B. Hood	Texas.
*G. B. Anderson (k'd)	North Carolina.
*Thomas M. Jones	Virginia.
J. J. Pettigrew	South Carolina.
Albert Rust	Arkansas.
James J. Ramsey	Georgia.
Hamilton P. Bee	Texas.
Henry McCulloch	Texas.
William Preston	Kentucky.
*Henry Little (killed)	Missouri.
*R. Ransom	North Carolina.
Martin E. Greene	Missouri.
Thomas R. E. Cobb (killed)	Georgia.
——— Wood	Alabama.
——— Kemper	South Carolina.
——— Kershaw	South Carolina.
——— Leadbeater	Tennessee.
——— Armstrong	———.
John S. Williams	Kentucky.
N. B. Forrest	Tennessee.
Robert E. Garland (killed)	Virginia.
*A. W. Reynolds	Virginia.
——— Jenkins	South Carolina.
*——— Pender	North Carolina.
Edward W. Gantt	Arkansas.
Solon Borland	Arkansas.
*M. L. Smith	Mississippi.
*William B. Taliaferro	Virginia.
*George E. Pickett	Virginia.
——— Wright	Georgia.
——— Helm	Kentucky.
George Maurey	Tennessee.
Blanton Duncan	Kentucky.
*L. A. Armistead	Virginia.
——— Semmes	Georgia.
——— Maxey	———.
S. R. Gist	South Carolina.
*D. M. Frost	Missouri.
Beverly R. Robertson	Virginia.
J. B. S. Roane	Arkansas.
C. L. Stevenson	———.
Wade Hampton (dead)	South Carolina.
A. G. Jenkins	Virginia.
——— Fields	———.
——— Martin	North Carolina.
*Fitz Hugh Lee	Virginia.
John R. Jones	Virginia.
James E. Slaughter	———.
Henry Hayes	Louisiana.
Henry W. Hilliard	Alabama.
*Abraham Buford	Kentucky.

This list, numbering 137 generals, is divided among the several States as follows: Virginia, 31; South Carolina, 14; Georgia, 14; Kentucky, 11; Tennessee, 11; Louisiana, 9; North Carolina, 9; Alabama, 7; Mississippi, 5; Missouri, 5; Arkansas, 5; Texas, 4; Maryland, 3; District of Columbia, 2; Florida, 1; Unknown, 6.

The following were born in the North: Gen. S. Cooper, New York; Maj.-Gen. John C. Pemberton, Pennsylvania; Brig.-Gens. H. C. Whiting, A. B. Blanchard, Massachusetts; Johnson K. Duncan, Pennsylvania; R. S. Ripley, Ohio; ——— Leadbeater, Connecticut; S. G. French, New Jersey; D. M. Frost.

CASUALTIES, &c.—*Killed.*—Maj.-Gen. A. S. Johnston,* Texas, at Shiloh, April 6, 1862.

Brig.-Gen. R. S. Garnett,* Va., at Carrick's Ford, July 11, 1861.

Brig.-Gen. Bernard E. Bee,* S. C., at Manassas, July 21, 1861.

Brig.-Gen. F. K. Zollicoffer, Tenn., at Somerset, January 19, 1862.

Brig.-Gen. Ben McCulloch, Texas, at Pea Ridge, March 7, 1862.

Brig.-Gen. A. H. Gladden, La., at Shiloh, April 6, 1862.

Brig.-Gen. T. W. Ashby, at ——— ———, May —, 1862.

Brig.-Gen. Robert Hatton, Tenn., at Seven Pines, May 31, 1862.

Brig.-Gen. Richard Griffith, Miss., before Richmond, June 27, 1862.

Brig.-Gen. C. S. Winder,* Md., at Cedar Mountain, August 9, 1862.

Brig.-Gen. J. T. Hughes, Mo., at Independence, August —, 1862.

Brig.-Gen. Robert E. Garland, Va., at South Mountain, September 14, 1862.

Brig.-Gen. Starke, N. C., at Antietam, September 17, 1862.

Brig.-Gen. Law. O'B. Branch, N. C., at Antietam, September 17, 1862.

Brig.-Gen. Henry Little, Missouri, at Iuka, September 19, 1862. Total—15.

Acting Brig.-Gen. F. S. Bartow, Ga., at Manassas, July 21, 1861.

Acting Brig.-Gen. James McIntosh, at Pea Ridge, March 7, 1862. Total—13.

Died.—Brig.-Gen. J. B. Grayson, Ky.; T. A. Flourney, Ark.; Philip St. George Cooke,* Va. (suicide)—3.

Resigned.—Maj.-Gens. David E. Twiggs, Ga. (since dead); M. L. Bonham, S. C.; George B. Crittenden, Ky.; Brig.-Gens. H. R. Jackson, Ga.; T. T. Fauntleroy, Va.; G. W. Randolph, Va.; L. T. Wigfall, Texas; S. C. Anderson, Tenn.; J. R. Anderson,* Va.; Albert Pike, Ark.; W. H. T. Walker,* Ga.—11.

* Graduates of West Point.

The Confederate army in Virginia, near the close of the year, was in a most destitute condition. The following statement, dated at Winchester, Virginia, on September 26, was circulated through the Confederate States, as entirely reliable, and made the basis of appeals to the people to contribute to the relief of the soldiers:

I can recall no parallel instance in history, except Napoleon's disastrous retreat from Moscow, where an army has ever done more marching and fighting, under such great disadvantages, than Gen. Lee's has done since it left the banks of the James river.

This army proceeded directly to the line of the Rappahannock, and, moving out from that river, it fought its way to the Potomac, crossed the stream, and moved on to Frederick and Hagerstown, had a heavy engagement at Boonsboro' Gap, and another at Crampton Gap below, fought the greatest pitched battle of the war at Sharpsburg, and then recrossed the Potomac back into Virginia. During all this time, covering the full space of a month, the troops rested but four days! And let it always be remembered, to their honor, that of the men who performed this wonderful feat one fifth of them were barefooted, one half of them in rags, and the whole of them half famished. The country from the Rappahannock to the Potomac had been visited by the enemy with fire and sword, and our transportation was insufficient to keep the army supplied from so distant a base as Gordonsville; and, when provision trains would overtake the army, so pressing were the exigencies of their position, the men seldom had time to cook. Their difficulties were increased by the fact that cooking utensils in many cases had been left behind, as well as everything else that would impede their movements. It was not unusual to see a company of starving men have a barrel of flour distributed to them, which it was utterly impossible for them to convert into bread with the means and the time allowed to them. They could not procure even a piece of plank or a corn or flour sack upon which to work up their dough.

Do you wonder, then, that there should have been stragglers from the army?—that brave and true men should have fallen out from sheer exhaustion, or in their efforts to obtain a mouthful to eat along the roadsides? Or that many seasoned veterans, the conquerors in the valley, at Richmond and Manassas, should have succumbed to disease, and been forced back to the hospital? I look to hear a great outcry against the stragglers. Already lazy cavalrymen and dainty staff officers and quartermasters, who are mounted and can forage the country for something to eat, are condemning the weary private, who, notwithstanding his body may be covered with dust and perspiration, and his feet with stone bruises, is expected to trudge along under his knapsack and cartridge box, on an empty stomach, and never turn aside for a morsel of food to sustain his sinking limbs. Out upon such monstrous injustice! That there has been unnecessary straggling is readily admitted; but, in a large majority of cases, the men have only to point to their bleeding feet, tattered garments, and gaunt frames for an answer to the unjust charge. No army on this continent has every accomplished as much or suffered as much as the army of Northern Virginia within the last three months. At no period during the first Revolutionary War, not even at Valley Forge, did our

forefathers in arms encounter greater hardships, or endure them more uncomplainingly.

But great as have been the trials to which the army has been subjected, they are hardly worthy to be named in comparison with the sufferings in store for it this winter, unless the people of the Confederate States, everywhere and in whatever circumstances, come to its immediate relief. The men must have clothing and shoes this winter. They must have something to cover themselves when sleeping, and to protect themselves from the driving sleet and snow storms when on duty. This must be done, though our friends at home should have to wear cotton, and sit by the fire. The army of Virginia stands guard this day, as it will stand guard this winter, over every hearthstone throughout the South. The ragged sentinel who may pace his weary rounds this winter on the bleak spurs of the Blue Ridge, or along the frozen valleys of the Shenandoah and Rappahannock, will also be your sentinels, my friends, at home. It will be for you and your household that he encounters the wrath of the tempest and the dangers of the night. He suffers, and toils, and fights for you, too, brave, true-hearted women of the South. Will you not clothe his nakedness, then?. Will you not put shoes and stockings on his feet? Is it not enough that he has written down his patriotism in crimson characters along the battle road from the Rappahannock to the Potomac? And must his bleeding feet also impress their mark of fidelity upon the snows of the coming winter?

It is not necessary to counsel violent measures; but it is not expected that any person will be permitted to accumulate leather and cloth for purposes of speculation. The necessities of the armies rise up like a mountain, and cannot, and will not be overlooked. It was hoped at one time that we might obtain winter supplies in Maryland. This hope was born after the army left Richmond, and has now miserably perished. The Government is unable to furnish the supplies, for they are not to be had in the country. If it had exercised a little foresight last spring and summer, when vessels were running the blockade with cargoes of calico, linen, and other articles of like importance, a partial supply at least of hats, blankets, shoes, and woollen goods might have been obtained from England. But foresight is a quality of the mind that is seldom put in practice in these days.

But whatever may be done by the people should be done immediately. Not one moment can be lost that will not be marked, as by the second-hand of a watch, with the pangs of a sufferer. Already the hills and valleys in this high latitude have been visited by frost, and the nights are uncomfortably cool to the man who sleeps upon the ground. Come up, then, men and women of the South, to this sacred duty! Let nothing stand between you and the performance of it. Neither pride nor pleasure, nor personal ease and comfort, should withhold your hands from the holy work. The supply of leather and wool, we all know, is limited; but do what you can, and all you can, and as soon as you can. If you cannot send woollen socks, send half-woollen or cotton socks; and so with under clothing, coats, and pants; and if blankets are not to be had, then substitute comforts made of dyed osnaburgs, stuffed with cotton. Anything that will keep off the cold will be acceptable. Even the speculator and extortioner might forego their gains for a season, and unite in this religious duty.

If the army of Virginia could march through the South just as it is—ragged, and almost barefooted and hatless; many of the men limping along, and not quite well of their wounds and sickness, yet cheerful, and not willing to abandon their places in the ranks; their clothes riddled with balls, and their banners covered with the smoke and dust of battle, and shot into tatters, many of them inscribed with "Williamsburg," "Seven Pines," "Gaines's Mill," "Garnett's Farm," "Front Royal," "McDowell," "Cedar Run," and other victorious fields—if this army of veterans, thus clad and shod, with tattered uniforms and banners, could march from Richmond to the Mississippi, it would produce a sensation that has no parallel in history since Peter the Hermit led his swelling hosts across Europe to the rescue of the Holy Sepulchre.

The Governor of North Carolina issued an appeal to the citizens in behalf of the soldiers of that State in the following words:

After the most strenuous exertions on the part of its officers, the State finds it impossible to clothe and shoe our soldiers without again appealing to that overflowing fountain of generosity—the private contributions of our people. The rigors of winter are approaching, our soldiers are already suffering, and must suffer more if our sympathies are not practical and active. The quartermaster's department is laboring faithfully to provide for them; but owing to speculation and extortion, will fall short. The deficiency must be supplied by the people. We shall have an active winter campaign, and how can our troops, if ragged, cold and barefoot, contend with the splendidly equipped columns of the enemy.

The articles most needed, and which the State finds it most difficult to supply, are shoes, socks and blankets, though drawers, shirts, and pants would be gladly received. If every farmer who has hides tanning would agree to spare one pair of shoes, and if every mother in North Carolina would knit one strong pair of either thick cotton or woollen socks for the army, they would be abundantly supplied. A great lot of blankets also might yet be spared from private use, and thousands could be made from the carpets upon our parlor floors. With good warm houses and cotton bed clothing we can certainly get through the winter much better than the soldiers can with all the blankets, we can give them.

The colonels of militia regiments throughout the State are hereby appointed agents for the purchase and collection of all such articles as can be spared by our people, who, through their respective captains, are ordered immediately to canvass every county and visit every citizen in their beats for this purpose. A liberal price will be paid for everything where the owner feels that he or she is not able to donate it, and active agents will immediately forward them to our suffering regiments. Expenses will be allowed the officers engaged in this duty, and transportation furnished the colonels or their agents to bring the articles to Raleigh.

And now, my countrymen and women, if you have anything to spare for the soldier, in his name I appeal to you for it. Do not let the speculator have it, though he offer you an enormous price; spurn him from your door, and say to him that our brave defenders have need for it, and shall have it without passing through his greedy fingers. Do not place yourselves among the extortioners—they are the vilest and most cowardly of all our country's enemies; and when this war is ended, and people come to view the matter in its proper light, you will find that the most detested tories are more respected than they. When they tempt you with higher prices than the State offers; just think for a moment of the soldier, and what he is doing for you. Remember, when you sit down by the bright and glowing fire, that the soldier is sitting upon the cold earth; that in the wind which is whistling so fearfully over your roof, only making you feel the more comfortable because it harms you not, he is shivering in darkness on the dangerous outpost, shuddering through the dreary hours of his watch. Remember that when you come forth in the morning well fed and warmly clad, leading your families toward the spot where the blessed music of the Sabbath bells tells you of the peaceful worship of the God of Peace, the soldier is going forth at the same moment, perhaps, half fed, after a night of shivering and suffering, to where the roar of artillery and shout of battle announce that he is to die that your peace and safety may be preserved. Oh, remember these things, generous and patriotic people of North Carolina, and give freely of your perishable

goods to those who are giving all that mortal men can give for your safety and your rights. Z. B. VANCE.
RALEIGH, Oct. 15, 1862.

These appeals were not without effect. As an instance, the proprietors of the Pulaski House, in Mobile, contributed the carpeting of one hundred and twenty rooms, which was estimated to be sufficient to make five hundred blankets.

The straggling from the army, as the winter approached, was without a parallel. The press, the President, and officers of the Confederate and State Governments appealed to the people, and particularly to the women, to frown upon all stragglers, and use every means to secure their apprehension. It was declared that more than half the men who went into service from the northeastern counties of the State of Georgia were at home without leave, and most of them were skulking in the mountains to avoid being arrested. Others had banded together under a few desperate leaders to resist any attempts that might be made to arrest them, or to release from the jails those who had been arrested. Some of those bands had arms and ammunition, and subsisted by plunder. They were volunteers and not conscripts, as the conscript laws had never been enforced in that section.

ARMY OF THE UNITED STATES. The United States, unlike the great powers of Europe, has not hitherto considered a large standing army necessary, and has only maintained a sufficient force to garrison moderately its forts and fortresses, and to form a nucleus for the organization and training of a large volunteer army in time of war. The policy of the Government being eminently peaceful, it has been only on great emergencies that it has been necessary to call out any considerable force of militia or volunteers. Aside from the war of 1812 and the Mexican, no such force had ever been called for previous to the present war; and the militia of particular districts had only occasionally been summoned in small numbers to suppress local insurrections or riots. It may be well, therefore, to give a brief historical sketch of the origin, growth, and present condition of the regular or standing army of the United States, and then to speak of the militia and volunteer troops.

I. *The Regular Army.*—The Constitution of the United States, Art. 1, sec. 8, empowers Congress "to raise and support armies;" and Art. 2, sec. 2, designates the President as "commander in chief of the army and navy, and of the militia when called into the service of the United States." The War Department, as the agency by which the President was to carry into effect these provisions of the Constitution, was established by act of Congress, Aug. 7, 1788. At first the standing army was organized under the "Original Rules and Articles of War," adopted by the Continental Congress of 1776, with such slight modifications as were necessary to adapt them to the altered condition of affairs. This military code formed the basis of the present articles of war, though greatly modified in 1806.

In 1790, Congress fixed the number of rank and file in the army at 1,216 men; in 1791 an additional regiment of of 900 men was authorized. In 1796, the standing army consisted of 4 regiments of infantry, of 8 companies each; 2 companies of light dragoons; and a corps of artillerists and engineers; and the President was authorized by Congress to appoint one major-general and one brigadier-general, each with a suitable staff, for the command of this force; but in 1797 the major-general was discharged as being unnecessary.

In 1798, a provisional force of 10,000 men was authorized owing to the threatening attitude of France; but the danger passed over and the army returned to its former small proportions. The war of 1812 had been long foreseen, and provision made for it not by an increase of the regular army but by the authorization of a provisional volunteer force of 30,000 to 35,000 men, and at the close of the war in 1815 this provisional army was disbanded; but no permanent modifications were made in the peace establishment till 1821.

By the act of Congress for the organization of the army in 1821, 7 regiments of infantry, 4 of artillery, and a corps each of engineers, topographical engineers, and ordnance were established and provision made for medical, adjutant-general's, quartermasters', paymasters', and commissary-generals' departments. Irregular mounted rangers, occasionally called into the service, formed the only cavalry force of the army till 1833, when a regiment of dragoons was authorized; and in 1836 a second was added.

At the commencement of the Mexican war in May, 1846, the whole number of troops of the line was 7,244. The regular army was increased during the war, by the enlistment, to twenty thousand soldiers, aside from the volunteer troops; this addition was made to the different arms of the service as follows: 9 infantry regiments (one of them a *voltigeur* regiment, that is, light horsemen); a third regiment of dragoons, and a regiment of mounted riflemen, who, however, served on foot during the war. At the close of the war the third regiment of dragoons and the 9 infantry regiments were discharged, and the only permanent increase of the army was the mounted rifles.

The grade of lieutenant-general by brevet, which had not existed since the death of Washington, was revived and bestowed on Maj.-Gen. Winfield Scott in 1855. The same year, there were added to the regular army 2 regiments of infantry and 2 of cavalry.

On the 1st of January, 1860, the whole number of commissioned officers in the regular army was 1,083; of non-commissioned officers, musicians, artificers, and privates, 11,848, forming a total of line troops of 12,931.

In August, 1862, the following was the number of officers of each grade and privates, in the regular army:

Major-Generals	5	Regimental hospital stewards	13
Brigadier-Generals	13	Battalion sergeant-majors	27
Colonels	97	Battalion quartermaster-sergeants	27
Lieutenant-Colonels	79	Battalion commissary-sergeants	27
Majors	243	Battalion hosp'l stewards	27
Aides-de-camp	33	First sergeants	448
Captains	677	Company quartermaster-sergeants	84
Adjutants	30	Company commissary-sergeants	72
Regimental Quartermasters	30	Sergeants	1,790
Regimental Commissaries	6	Corporals	3,090
Battalion Adjutants	27	Musicians	1,298
First Lieutenants	648	Farriers and blacksmiths	144
Second Lieutenants	500	Artificers	415
Supernumerary Lieutenants	72	Saddlers	72
Military Storekeepers	33	Wagoners	84
Hospital Chaplains	100	Teamsters	144
Medical cadets	70	Privates	31,479
Sergeant-Majors	21	Ordnance, enlist'd men	905
Quartermaster-Serg'ts	21		
Commissary Sergeants	7	Total commissioned	2,388
Leaders of bands	9	Total enlisted	40,626
Chief musicians	40		
Saddler's sergeants	6	Aggregate line troops	43,014
Chief trumpeters	6		
Chief farriers	6		
Ordnance sergeants	93		
Hospital stewards	201		

The pay of both officers and men is the same as that of the volunteers, the discipline somewhat more strict, and the drill generally more perfect. The titles of officers are, except in the case of the highest officer, lower than in the volunteers—colonels, lieutenant-colonels, majors, captains, and in one or two cases, even lieutenants in the regular army, being brigadier-generals of volunteers, and the first three, in some instances major-generals in the volunteer army. Promotion in the regular army is, however, greatly coveted by men who intend to make military life a permanent profession.

II. *The Militia Force.*—An act was passed by Congress, May 8, 1792, providing for a uniformed militia, to be raised in each State, and to form the reserve force which could be called out in case of invasion or rebellion; but during the long period of peace, the militia organization had been almost wholly neglected. Most of the States had at one time or another proper laws for the State organization of the militia, but these were generally but little regarded, and the fines imposed for non-appearance on parade were regarded as a vexatious exaction. The commencement of the present war found not more than two or three States with a militia organization sufficiently perfect to admit of a response through it to the President's proclamation of April, 1861. In most of the States even the three months' troops were volunteers. Since that time nearly every State has passed a militia law, which will provide against the evils of being obliged to send into the field in case of war entirely unorganized and undisciplined troops. These laws differ somewhat in detail in the different States; but all provide for the enrolment of all able-bodied white male citizens (some, as for instance, Rhode Island and Massachusetts, include colored citizens also) between the ages of 18 and 45, with certain specified exceptions, among which are usually clergymen, teachers, State and United States officers, railroad and telegraph employés, firemen, and convicts, idiots, and drunkards; these are divided into two classes, the active and inactive militia, the first embracing the voluntary companies and such other companies organized under the law as may be necessary to make up a given number of regiments and brigades, such number to be completed if needful by draft from the enrolled men between 18 and 30; the others, including all between 30 and 45, to form the inactive militia, and required under penalty of a fine or tax of $1 per annum to appear on a specified day and answer to their names. The active militia have a full corps of officers, and are required to be uniformed and to have all the necessary arms and equipments at their arsenals in condition for immediate service; they are also to be called out once or twice a year for a camp drill of two or three days, and are paid for their time and service. The officers are drilled and instructed in their duties two, three, or four times a year, and receive a moderate compensation for their time. It has been a prevalent idea among the militia, having perhaps some foundation in the law of 1792, that militia troops could not be required to go out of their own State to fight, and could not be retained in the United States service more than three months; and these ideas led more than once, as the readers of the history of the war of 1812 will remember, to serious and disastrous results; but Congress, in its session of 1861–'2, passed an act (July 17, 1862) authorizing the President to call out the militia for nine months, and to use them either for the filling up of old regiments or the organization of new corps. It is impossible to give anything more than an approximation of the number of the militia enrolled or who should be enrolled in the loyal States. The report of the adjutant-general of the United States in 1860, based, however, in many of the States on returns made from 7 to 15 years previous, gave the number (omitting Iowa, Oregon, New Mexico, Washington, Kansas, and Nebraska) as 3,070,-987, officers and privates; this would be very nearly one tenth of the population, and adopting this as a basis of calculation, the number of men between 18 and 45 capable of bearing arms in the loyal States would be 2,242,841. This estimate is probably below rather than above the truth. Of the 77,875 three months' troops, a little more than one half were militia; of the 30,000 or 40,000 called out in the summer of 1862, all or nearly all were militia. There were also some militia regiments among the nine months' force raised under the call of August 9, 1862.

III. *The Volunteer Army.*—It was evident at the commencement of this war, as in every war in which the nation has been engaged, that though the militia of the several States might render efficient service in the beginning, while other forces were in the process of organization, they could not be depended upon for a long war; the tenure of their service (three

months being then generally understood to be the longest term for which they could be called out), and the mode of appointing their officers by the suffrages of the privates, were fatal to their use for any considerable period, and volunteers were called for within four weeks from the first proclamation, though unfortunately not in sufficiently large numbers at first. In July Congress, by act of July 22, 1861, authorized the raising of 500,000 volunteers, and on the 25th of the same month, probably inadvertently gave authority for the raising of 500,000 more.

How many were actually raised under these two acts is somewhat uncertain. Secretary Cameron, in his report of Dec. 1, 1861, gives the aggregates as follows: Three months' regiments, 77,875 men; volunteers for the war, 640,637. The reports of the adjutant-generals of the different States show a very considerable difference between the number raised and the number credited therein in this report; some claiming many thousands more, and others considerably less than the number assigned them by the Secretary. At the date of the Secretary's report a large number of regiments organizing under the call had not been mustered into the service; many of the regiments indeed were not fully organized till January or February. About the 1st of June, 1862, a call for militia troops for three months' service was made upon several of the States, and Massachusetts, Rhode Island, New York, Pennsylvania, and Ohio sent forward regiments numbering in all nearly 40,000 men. In August and September the raids of the Confederate forces along the Ohio river, and the invasion of Maryland by the Confederate generals Lee, Jackson, and Stuart, led to the calling out of militia and volunteer troops in large numbers, from Pennsylvania, Ohio, Indiana, and Illinois, who were discharged when the enemy had been driven back. On the 1st of July, 1862, the President called for 300,000 more volunteers for the war, and on the 9th of August for 300,000 for nine months, who were to be drafted unless they volunteered promptly. There was subsequently considerable vacillation on the part of the Government in regard to the force to be raised under these two calls. In Pennsylvania a part of those enlisted under the first call were enlisted for twelve months only; in other States an excess raised under the first was allowed to be credited to the second; and in some instances an excess under the previous calls was allowed to count on these. There was very little drafting; probably up to Feb. 1, 1863, there were not 10,000 drafted men in the army. This was mainly due to the great exertions made in the loyal States to promote volunteering and the very liberal bounties offered by States, counties, cities, towns, and individuals, to those who would enlist. The following table, prepared from official reports from each loyal State, shows the number of troops furnished by each for the war to Dec. 1, 1862:

States.	Three months' troops, call of April 15, 1861.	All others to Dec. 1, 1862.
Maine	768	30,240
New Hampshire	779	16,000
Vermont	780	19,006
Massachusetts	3,736	72,107
Rhode Island	1,285	10,000
Connecticut	775	28,551
New York	10,188	*219,059
New Jersey	3,068	27,400
Pennsylvania	19,199	†230,000
Delaware	775	2,500
Maryland	....	10,000
West Virginia	779	20,000
Kentucky	....	55,000
Missouri	9,356	38,031
Ohio	10,236	‡164,402
Indiana	6,000	§96,698
Illinois	4,941	130,059
Michigan	781	47,220
Wisconsin	792	42,557
Minnesota	930	10,957
Iowa	968	50,000
Kansas	....	14,000
California	....	9,000
Oregon	....	1,500
Colorado	....	2,300
Nebraska	....	3,500
New Mexico	....	2,000
District of Columbia	2,823	2,000
Total	78,959	1,355,087

The number of these troops now in service can only be conjectured. It does not probably exceed 900,000.

The following table gives the pay and perquisites of the officers and privates of the regular and volunteer service, both receiving the same pay in their respective grades:

MONTHLY PAY OF NON-COMMISSIONED OFFICERS, PRIVATES, &c.

Cavalry.

Sergeant-Major	$21 00	Corporal	$14 00
Quartermaster-Serg't.	21 00	Bugler	13 00
Chief Bugler	21 00	Farrier and Blacksmith	15 00
First Sergeant	20 00	Private	13 00
Sergeant	17 00		

Ordnance.

Sergeant	$34 00	Private, first class	$17 00
Corporal	20 00	Private, second class.	13 00

Artillery and Infantry.

Sergeant-Major	$21 00	Artificer, artillery	$15 00
Quartermaster-Serg't.	17 00	Private	13 00
First Sergeant	20 00	Principal musician	21 00
Sergeant	17 00	Musician	12 00
Corporal	13 00		

Sappers, Miners, and Pontoniers.

Sergeant	$34 00	Private, second class.	$13 00
Corporal	20 00	Musician	12 00
Private, first class	17 00		

Brigade Bands.

Leader	$45 00	Drum-Major	$17 00
Four of the Band	34 00	Four of the Band	20 00
Eight of the Band	17 00		
Medical Cadets (and 1 ration per day)	$30 00	Matrons	$6 00
Hospital Stewards	30 00	Female Nurses, per day and 1 ration 40 cents.	
Master Wagoners (3d Aug. 1861)	17 00	Wagoners (Aug. 3, '61)	14 00

12½ cents per month is to be retained from the pay of each enlisted man of the army for the support of the "Soldier's Home."

$2 per month is allowed for reënlistment, and $1 per month additional for each subsequent period of five years' service, provided the enlistment is made within one month after the expiration of each term.

* Including 15,838 three months' troops in the summer of 1862.

† Including 50,000 volunteers raised to repel the invasion of the State in September, 1862.

‡ Including 16,657 three months' troops furnished in the summer of 1862.

§ Including 4,229 troops raised for short special service.

TABLE OF PAY, SUBSISTENCE, &c., ALLOWED BY LAW TO THE OFFICERS OF THE ARMY.

Rank and Classification of Officers.	Pay.	Subsistence.		Servants.		Total monthly pay.	Forage furnished for horses.	
	Per month.	Number of rations per day.	Monthly commutation value.	Number of servants allowed.	Monthly commutation value.		In time of war.	In time of peace.
General Officers.								
Lieutenant-General	$270 00	40	$360 00	4	$90 00	$720 00	And for forage.	$50
Aides-de camp and Military Secretary to Lieutenant-General, each	80 00	5	45 00	2	45 00	170 00	$2	2
Major-General	220 00	15	135 00	4	90 00	445 00	7	5

Regim'l Quartermaster, in addition to pay, &c., of Lt.	10 00	..	....	..	....	10 00	2	2

Storekeepers attached to the quartermaster's department; at armories, and at arsenals of construction; the storekeeper at Watertown arsenal, and storekeepers of ordnance serving in Oregon, California, and New Mexico, receive $1,490 per annum; at all other arsenals, $1,040 per annum.

Chaplains are paid $100 per month, 2 rations per day, or $18 per month commutation value; and in time of war or peace $1 per month is allowed for forage; total, $119.

Paymasters' clerks receive $700 per annum, and one ration (75 cents) per day when on duty.

The officer in command of a company is allowed $10 per month for the responsibility of clothing, arms, and accoutrements.—Act March 2, 1827, Sec. 2.

Subaltern officers, employed on the general staff, and receiving increased pay therefor, are not entitled to the additional or fourth ration provided by the Act March 2, 1827, Sec. 2.

Every commissioned officer below the rank of brigadier-general receives one additional ration per day for every five years' service.—Act July 5, 1836, Sec. 12; and July 7, 1838, Sec. 9.

In suddenly calling such vast numbers of men into the field, the industrial energies of the Northern States were aroused to prepare them for an active campaign. While the generals were engaged in organizing and disciplining these forces, the Government was preparing for their equipment. Their clothing was of a uniform material, which was made up in every part of the loyal States. The personal outfit of the soldiers was very complete. The arms were in part manufactured in the country, and partly imported from Europe. The supply of artillery in the country was also so small that it was not only manufactured to the utmost extent practicable, but also imported from Europe. The harness for the horses in every variety of the service, and the materials of which it was composed, and the equipments for the large force of cavalry, were not in existence, and could be obtained only by manufacture and importation. The thousands of wagons required existed only in the form of rough wood and bars of iron. The tents of the soldiers demanded for their manufacture the active efforts of those heretofore employed to make the sails for ships. These demands exposed the unprepared condition of the country for a great war, and delayed the period of active operations. The abundant resources of the Northern States, however, enabled them to fit out their troops with a profuseness that was burdensome, and interfered to some extent with military success.

From a careful investigation and comparison of the monthly "casualty returns" made to the office of the adjutant-general, it is calculated that the number of deaths in the volunteer force of the United States in active service has been at the annual ratio of 53.2 per thousand men, of which 44.6 were from disease and accident, and 8.6 from wounds received in action. Some defects and omissions in the regimental returns render it probable that this may be an understatement, as the data do not include deaths among those discharged from or otherwise quitting the service. An allowance, however, was made for this defect.

Assuming that the rate of mortality experienced by those who quit the service (by discharge for disability, desertion, or otherwise) is the same as those continuing in the service, to wit, 53.2 per 1,000—a very moderate estimate, since those discharged for disability are justly presumed to be at the time, in point of health, inferior to their comrades who remain—the actuary of the Sanitary Commission, reckons the annual rate of deaths at about 65 per 1,000.

It appears from the returns, that while the death-rate from wounds in action is greater in the case of officers than of privates, being respectively $11\frac{1}{2}$ and $8\frac{1}{2}$ per 1,000, the death-rate of officers from disease and accident is much less than of privates—22 for the former to 46 for the latter—and that the rate from all causes, embracing both disease and violence, is less with the officers than with the men—the entire rate for officers being 33, and for men 54 per 1,000.

The excess of the mortality due to disease and accident, over that due to wounds in action, is a noticeable fact in the volunteer army of the United States, as in all other armies—two thirds of the deaths of the officers and five sixths of those of the men resulting from disease and accident; the remaining one third and one sixth, respectively, being caused by wounds received in battle.

It appears from the returns that the general mortality of the army has been gradually increasing since the commencement of the war, and that the rate for the autumnal months is 1.7 times that indicated by the returns for the summer period, and the winter rate in turn double 1.9 times that of autumn.

It is also observed that the mortality of the armies recruited at the West, and which operate at the West, is 3.01 times that of the troops recruited in the Middle and New England States, and which serve in the armies at the East; the Western rate from wounds received in action being 4 9 times, and that from disease and accident 2.8 times as great as the corresponding rates in the East.

To supply losses among the enlisted men in the Eastern armies requires recruits at the rate of 18.8 per 1,000 per month, or 226 per 1,000 per annum; of which latter proportion 32 is the number required to supply the annual loss by death; 100 the annual loss by discharge from service, chiefly from disability; 79 the annual loss from missing in action and from desertions; and 15 to supply the loss from other causes.

To supply such losses in the Western armies requires recruits at the rate of 19.5 per 1,000 per month, or 134 per 1,000 per annum; of which latter proportion 96 are required to

supply the annual loss from deaths; 101 the loss from discharges from service, mainly from disability; 35 the loss from missing in action and from desertions, and 2 from other causes.

The number of "missing" and of "deserters" in the Eastern volunteer army is more than double the number of those classes in the Western volunteer forces.

Taking the returns of the period from the 1st of June, 1861, to the 1st of March, 1862, as the basis of calculation, it is estimated that to secure in the field a constant force of 500,000 effective men, the nation must not only maintain 58,000 sick men, but must also recruit the ranks of the enlisted portion of these forces with new material at the rate of 123,000 per annum so long as the war shall last—a rate somewhat exceeding 10,000 recruits per month. Of those 123,000 annual recruits 83,000 are to supply losses by death and discharges from service (exclusive of discharges for expiration of term of enlistment); 34,000 for desertions and missing in action; and 6,000 to supply other losses specified and unspecified.

The desertions from the army in the autumn of 1862 became so great as to cause the appointment of officers to arrest and return such persons. An order of Gen. Buell, dated near Florence, Alabama, on June 24, stated that 14,000 officers and soldiers were absent from the various divisions of his army. Some had gone without any authority, and others with the permission of officers not authorized to grant it. Sickness was generally stated to be the cause of this absence, but in many cases it had notoriously ceased to exist. In September the War Department issued the following order:

Orders respecting Special Provost Marshals, and defining their duties.

WAR DEPARTMENT, ADJUTANT-GENERAL'S OFFICE, WASHINGTON, *Sept.* 24, 1862.

First. There shall be a Provost Marshal General of the War Department, whose headquarters will be at Washington, and who will have the immediate supervision, control, and management of the corps.

Second. There will be appointed in each State one or more Special Provost Marshals, as necessity may require, who will report to, and receive instructions and orders from the Provost Marshal General of the War Department.

Third. It will be the duty of the Special Provost Marshals to arrest all deserters, whether regulars, volunteers, or militia, and send them to the nearest military commander, or military post, where they can be cared for and sent to their respective regiments; to arrest, upon the warrant of the Judge Advocate, all disloyal persons subject to arrest under the orders of the War Department; to inquire into and report treasonable practices, seize stolen or embezzled property of the Government, detect spies of the enemy, and perform such other duties as may be enjoined upon them by the War Department; and report all their proceedings promptly to the Provost Marshal General.

Fourth. To enable Special Provost Marshals to discharge their duties efficiently, they are authorized to call on any available military force within their respective districts, or else to employ the assistance of citizens, constables, sheriffs, or police officers, so far as may be necessary under such regulations as may be prescribed by the Provost Marshal General of the War Department with the approval of the Secretary of War.

Fifth. Necessary expenses incurred in this service will be paid on duplicate bills certified by the Special Provost Marshals, stating the time and nature of the service, after examination and approval by the Provost Marshal General.

Sixth. The compensation of Special Provost Marshals will be ——— dollars per month, and actual travelling expenses and postage will be refunded on bills certified to under oath and approved by the Provost Marshal General.

Seventh. All appointments in this service will be subject to be revoked, at the pleasure of the Secretary of War.

Eighth. All orders heretofore issued by the War Department, conferring authority upon other officers to act as Provost Marshals (except those who have received special commissions from the War Department), are hereby revoked.

By order of he Secretary of War,

J. THOMAS, Adjutant-General.

The operations for the surgical department have been aided by humane and benevolent associations. The horrors of battle have been assuaged by ministers of mercy, and the services of the medical profession have been voluntarily and gratuitously offered on every occasion. Relief associations in every State have done much to comfort and assist the sick and wounded in camps and hospitals, and their vigilant superintendence has perhaps operated to check the negligence, abuse, and fraud that too often prevail even in such institutions. Religious congregations and societies have also tendered to the Government their church buildings for hospitals, while their pastors have ministered to the patients.

The subsistence of the armies during the year has been reported as good and wholesome. Fresh beef has generally been supplied to the armies in the field on the hoof, to lessen, as far as possible, the quantity of transportation required, and in larger proportion of the ration to marching columns. The troops on the coasts of the Carolinas, and at the Gulf posts, including New Orleans, received their fresh beef by shipment from New York. In addition to the troops, subsistence has been furnished to all political prisoners and prisoners of war, to a large number of contrabands, and to the suffering Union inhabitants found in the march of armies in the Confederate States. It is stated by the general-in-chief—Halleck—that no armies in the world are so well supplied as the armies of the United States.

Notwithstanding the extraordinary demand for arms occasioned by the new levies, and the enormous losses occasioned by the casualties of war, and, in some instances, by the misconduct of officers and men, over four hundred thousand new troops suddenly called into the field were supplied at once. The issues from the ordnance department include 1,926 field and siege, and 1,206 fortification cannon, 7,294 gun carriages, caissons, mortar beds, travelling forges and battery wagons; 1,276,686 small arms, 987,291 sets of equipment and accoutrements, and 213,991,127 rounds of ammunition for artillery and small arms.

GENERAL OFFICERS OF THE REGULAR ARMY OF THE UNITED STATES.

Officers not thus * designated are graduates of the Military Academy.

Casualties in the Volunteer Force.—Maj.-Gen. Charles F. Smith, at Savannah, Tenn., April 25, 1862.

Maj.-Gen. O M. Mitchel, at Beaufort, S. C., Oct. 30, 1862..

Maj.-Gen. Israel B. Richardson, of wounds received at the battle of Antietam, at Harper's Ferry, November 4, 1862.

Maj.-Gen. Philip Kearney, of New Jersey, killed at the battle of Chantilly, Va, September 1, 1862.

Maj.-Gen. Jesse L. Reno, of Massachusetts, killed at the battle of Catochtin, Md., September 14, 1862.

Maj.-Gen. William Nelson, of Kentucky, killed in a personal rencontre at Louisville, September 29, 1862.

Brig.-Gen. F. W. Lander, at Camp Chase, Va., March 2, 1862.

Brig.-Gen. Wm. H. Keim, at Harrisburg, Pa., May 18, 1862.

Brig.-Gen. William H. L. Wallace, at Savannah, Tenn., of wounds received at the battle of Shiloh, Tenn., April 10, 1862.

Brig.-Gen. Nathaniel Lyon, of Connecticut, killed at the battle of Wilson's Creek, Mo., August 10, 1861.

Brig.-Gen. Thomas Williams, of Michigan, killed at the battle of Baton Rouge, La., August 5, 1862.

Brig.-Gen Robert L. McCook, of Ohio, shot by guerillas in northern Alabama, August 6, 1862.

Brig.-Gen. Joseph B. Plummer, of Missouri, at Camp Gaylord, Miss., August 9, 1862.

Brig.-Gen. Henry Bohlen, of Pennsylvania, killed on the Rappahannock, Va., August 23, 1862.

Brig.-Gen. George W. Taylor, of New Jersey, killed at the second battle of Bull Run, Va., August 31, 1862.

Brig.-Gen. Isaac I. Stevens, of Washington Territory, killed at the battle of Chantilly, Va., September 1, 1862.

Brig.-Gen. Joseph K. F. Mansfield, died at the battle of Antietam, Md., September 18, 1862.

Brig.-Gen. Isaac P. Rodman, of R.I., died at Hagerstown, Md., Sept. 29, of wounds received at the battle of Antietam.

Brig.-Gen. Pleasant A. Hackleman, of Indiana, killed at the battle of Corinth, Miss., October 4, 1862.

Brig.-Gen. James S. Jackson, of Kentucky, killed at the battle of Perryville, Ky., October 8, 1862.

Brig.-Gen. Wm. R. Terrill, of Va. (Captain Fifth U. S. Artillery), killed at the battle of Perryville, Ky., Oct. 8, 1862.

Brig.-Gen. F. E. Patterson, at Fairfax, Va., Nov. 22, 1862.

Brig.-Gen. Richard J. Oglesby, of Michigan, at the battle of Perryville, Ky., October 8, 1862.

Brig.-Gen. George D. Bayard, of New Jersey, at the battle of Fredericksburg, Va., December 13, 1862.

Brig.-Gen. Joshua W. Sill, of Ohio, at the battle of Murfreesborough, December 31, 1862.

ARMY OPERATIONS. At the commencement of the year 1862, the position of the Federal forces was as follows: At Fortress Monroe and Newport News under the command of General Wool, there were estimated to be 15,000 men in a good state of organization and discipline. Thence proceeding up the Potomac, Gen. Hooker's division, including Gen. Sickles's brigade, was south of Washington, and partly on the Maryland side of the Potomac. They numbered about 10,000 men. Southwest of Washington, and in the neighborhood of that city, was the mass of Gen. McClellan's army, consisting of a large portion of the men who had volunteered from the middle and eastern States, for the war. They were organized into eight divisions, and becoming disciplined for future operations. The divisions of Gens. Keyes and Casey were in and around Washington, that of Gen. Stone was at and near Poolesville, and that of Gen. Banks near Darnestown, with detachments on the Potomac to Williamsport. The entire force thus organized, was not far from 160,000 men, which, in connection with other troops on the line of railroad to Baltimore, at that city, and in the vicinity, was something less than 200,000 men. This force before Washington was subsequently designated as the Army of the Potomac. It was organized into divisions, each commanded by a major-general, or by a brigadier-general acting as a major-general; and each division consisted of three brigades, each brigade of four, a few of five, regiments of infantry, making twelve infantry regiments in a division, one regiment of cavalry, and three and sometimes four batteries of artillery, or about twenty pieces. To each division generally one regiment of cavalry was assigned, and one or two of them had four instead of three batteries.

Further up the Potomac, was Gen. Kelly's force, of which Gen. Lander soon took command, looking up the valley of the Shenandoah, toward Winchester. Gen. Rosecrans was in western Virginia, with a force somewhat less than 20,000 men.

At Louisville, in Kentucky, Gen. Buell had collected and combined the scattered Federal forces, and was now organizing and preparing for future operations, an army of more than 100,000 men. At St. Louis and Cairo, Gen. Halleck was performing a similar service, and at the same time holding in check the Confederate forces in Missouri, and preparing to drive them entirely over its southern border. The force he was thus organizing, was nearly equal to that under Gen. Buell in Kentucky.

On the western frontier preparations were also making for an expedition, which was designed to be more than 20,000 strong, for the purpose of penetrating from Kansas to the Gulf of Mexico. A naval force was also collected at Cairo and St. Louis, to coöperate, by gunboats, with the military force, at important points on the western rivers. The entire Federal force, including the troops under Gen. Sherman in South Carolina, and those under Gen. Burnside on their way to North Carolina, and the regiments designed for the expedition under Gen. Butler, made not more than 450,000 to 475,000 in the field.

The position and force of the Confederate army at the commencement of the year, were nearly as follows: At Norfolk and Yorktown there was a considerable force, probably over 30,000 men. The larger portion of this force was at Yorktown. A small force also manned batteries on the James and York rivers. The army before Washington was fortified on a very extended line. Its right wing rested upon the Potomac, beyond Fredericksburg, and at Stafford Court House, Dumfries, &c., and thus formed a support to the batteries which blockaded the Potomac river, and endangered the navigation between Washington and the lower Potomac into Chesapeake Bay. The main body was at Centreville and Manassas. The former place was strongly fortified, and held not less than 75,000 troops. The left wing occupied Aldie and Leesburg, and considerable forces were stationed at Winchester and Martinsburg. This entire force has been estimated to have reached 175,000 men, under Gen. Joseph Johnston. A small force was in western Virginia.

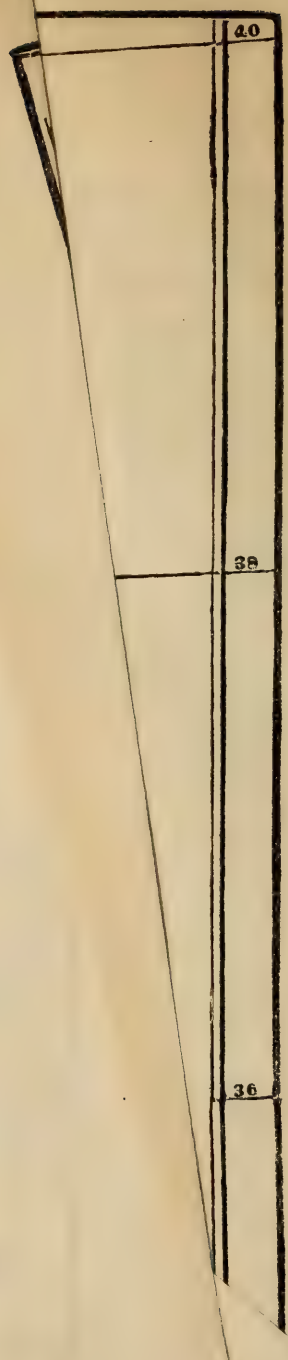
In Kentucky, the Confederate forces were stationed at Prestonburg, Hazel Green, Bowling Green, Columbus, Hickman, Donelson and Fort Henry, and amounted to 30,000 men.

The points occupied by the Confederate forces in Tennessee, were Cumberland Gap, Nashville, Waverly, Humboldt, Chattanooga, Jonesboro, Memphis, and forts Osceola, Wright, Randolph, Rector and Harris. These troops amounted to 20,000 men.

There were also Confederate troops stationed at Vicksburg, Natchez, New Orleans, Mobile, Savannah, Charleston, and at various points in Missouri. The total force under arms, was not far from 350,000 men.

The Confederate forces at this time occupied half of Missouri, nearly half of Kentucky, including the strong positions of Columbus and Bowling Green, western Virginia, nearly as far north as the Kanawha river, the whole of eastern Virginia, except a few miles around Washington and Fortress Monroe and Newport News, the whole of North Carolina, except Hatteras Inlet, the whole of Florida except Key West, and Santa Rosa Island, and all the rest of the Southern States.

The results of the previous year when compared with the purposes entertained by the citizens of the North, appear most insignificant. But this is not a true view of the case. It was too soon to expect results, and nothing was done which had any influence upon the termination of the war. These gigantic combatants were yet unprepared for the conflict. Armies had been collected and hastily equipped, and the work of organization and discipline to change raw militia into men of war was progressing on both sides. So unused, however,



40

36

were the people to such events, that a speedy close of the contest had been anticipated by them. War, in their minds, was to be begun, carried on, and closed up with the despatch of ordinary enterprises.

It was not only necessary to organize and discipline armies, but to provide food, munitions, and transportation, and to organize artillery reserves, the engineer corps, the pontoon trains, the telegraphs, and the hospitals; but also to manufacture or import from other countries cannon, carriage harness, cavalry equipments, small arms, artillery, camp equipage, bridge trains, &c. The time required to secure these objects, under the most favorable circumstances, was even longer than had been assigned for the duration of hostilities by the people of both the Northern and Southern States.

The Federal Government proposed to blockade the coast to cut off the Confederate States from all communication with other nations. The recovery of the Mississippi valley, by which the western States of the Confederacy would be separated, and the outlet of the Northwest to the ocean recovered, was also a part of the purpose of the Government. The recovery of the Border Slave States by actual military force, and their protection against invasion by the Confederate Government, which claimed them as a part of its Union, was the occasion of the most active and extensive military operations. It was anticipated that the signal success which would attend the execution of these purposes, would so emphatically convince the Southern people of the irresistible power of the North as to satisfy them that the attainment of their independence was hopeless. At the same time it was believed their efforts of resistance would so exhaust their limited resources as to make a return to the Union on their part a necessity. Such appear to have been the purposes of the Federal Government, and such were the views of the people. On the opposite side, the purposes of the Confederate Government were no less determined, and the views of the people no less sanguine and exalted. A defence was to be made to the last extremity, and if this was successful, an invasion of the enemy was to follow, when the smoking ruins of Philadelphia, New York, and Cincinnati would wring humiliating conditions from the North. The year which passed has thus witnessed most stupendous military operations conducted on a theatre which was almost the size of a continent, with a profusion of expenditure and a waste of resources sufficient to engulf most nations. The actors in these terrific scenes now stand forth to receive the judgment of mankind not only upon their skill, ability, and sincerity, but upon those higher and nobler qualities which are the jewels of humanity.

The military operations in the interior of the country have been conducted chiefly with a reference to the lines of the railroads and the water courses. The facilities for the transportation of supplies and for the concentration of men furnished by these railroads and the rivers, in a country so covered with woods, and so poorly supplied with common roads, has resulted in making some of them the base of all important movements.

At the beginning of the year preparations were vigorously pushed forward both at the West and with the Army of the Potomac. The forces of each side on the line between the Federal and Confederate States maintained their respective positions during the month of January, excepting in eastern Kentucky. There Col. Humphrey Marshall had a few months previous intrenched the Confederate forces under his command, consisting of a few regiments of infantry, one battery of artillery, and five or six companies of cavalry at a town called Paintville. It was expected in the Confederate States that he would be able to sweep the whole of eastern Kentucky, take possession of Frankfort, the seat of the State Government, and set up the authority of the Provisional Governor Johnson. Meanwhile Col. John A. Garfield, commanding a brigade of Union forces, having the 42d Ohio and 14th Kentucky infantry and a squadron of Ohio cavalry, advanced to encounter the Confederate force. Embarrassed by the difficulty of moving supplies at that low stage of the Big Sandy river, it was the 7th of January when his advance, consisting of five companies of the 42d Ohio, under Lieut.-Col. Sheldon, reached Paintville. The Confederate force had then evacuated its intrenchments two and a half miles south of the town, but a part of it was placed in ambush at Jennie Creek, two miles west. This body was driven out immediately by Col. Bolles, of the 1st Virginia cavalry, who had come up. At the same time Col. Garfield, with eight companies of the 42d Ohio and two companies of the 14th Kentucky, moved upon the main position of the enemy, who were found to have hastily retreated. On the next day the 40th Ohio, Col. Cranox, and six companies of the 1st Kentucky cavalry joined Col. Garfield; a part of the 22d Kentucky, under Lieut.-Col. Munroe, had also reached him. With a portion of this force, the pursuit of the enemy was immediately commenced up the road along the Big Sandy river.

The following despatches from Col. Garfield describe his movements:

PAINTSVILLE, *January* 8.

To Capt. J. B. Fry, Assistant Adjutant-General:

I entered this place yesterday with the 42d Ohio, the 4th Kentucky, and 300 of the 2d Virginia cavalry. On hearing of my approach, the main rebel force left their strongly intrenched camp and fled. I sent my cavalry to the mouth of Jennie Creek, where they attacked and drove the rebel cavalry, which had been left as a vanguard, a distance of five miles, killing three and wounding a considerable number.

Marshall's whole army is now flying in utter confusion. He had abandoned and burned a large amount of his stores. We have taken fifteen prisoners. Our loss is two killed and one wounded. I start in pursuit to-morrow morning.

(Signed) J. A. GARFIELD,
Col. commanding Brigade.

were the people to such events, that a speedy close of the contest had been anticipated by them. War, in their minds, was to be begun, carried on, and closed up with the despatch of ordinary enterprises.

It was not only necessary to organize and discipline armies, but to provide food, munitions, and transportation, and to organize artillery reserves, the engineer corps, the pontoon trains, the telegraphs, and the hospitals; but also to manufacture or import from other countries cannon, carriage harness, cavalry equipments, small arms, artillery, camp equipage, bridge trains, &c. The time required to secure these objects, under the most favorable circumstances, was even longer than had been assigned for the duration of hostilities by the people of both the Northern and Southern States.

The Federal Government proposed to blockade the coast to cut off the Confederate States from all communication with other nations. The recovery of the Mississippi valley, by which the western States of the Confederacy would be separated, and the outlet of the Northwest to the ocean recovered, was also a part of the purpose of the Government. The recovery of the Border Slave States by actual military force, and their protection against invasion by the Confederate Government, which claimed them as a part of its Union, was the occasion of the most active and extensive military operations. It was anticipated that the signal success which would attend the execution of these purposes, would so emphatically convince the Southern people of the irresistible power of the North as to satisfy them that the attainment of their independence was hopeless. At the same time it was believed their efforts of resistance would so exhaust their limited resources as to make a return to the Union on their part a necessity. Such appear to have been the purposes of the Federal Government, and such were the views of the people. On the opposite side, the purposes of the Confederate Government were no less determined, and the views of the people no less sanguine and exalted. A defence was to be made to the last extremity, and if this was successful, an invasion of the enemy was to follow, when the smoking ruins of Philadelphia, New York, and Cincinnati would wring humiliating conditions from the North. The year which passed has thus witnessed most stupendous military operations conducted on a theatre which was almost the size of a continent, with a profusion of expenditure and a waste of resources sufficient to engulf most nations. The actors in these terrific scenes now stand forth to receive the judgment of mankind not only upon their skill, ability, and sincerity, but upon those higher and nobler qualities which are the jewels of humanity.

The military operations in the interior of the country have been conducted chiefly with a reference to the lines of the railroads and the water courses. The facilities for the transportation of supplies and for the concentration of men furnished by these railroads and the rivers, in a country so covered with woods, and so poorly supplied with common roads, has resulted in making some of them the base of all important movements.

At the beginning of the year preparations were vigorously pushed forward both at the West and with the Army of the Potomac. The forces of each side on the line between the Federal and Confederate States maintained their respective positions during the month of January, excepting in eastern Kentucky. There Col. Humphrey Marshall had a few months previous intrenched the Confederate forces under his command, consisting of a few regiments of infantry, one battery of artillery, and five or six companies of cavalry at a town called Paintville. It was expected in the Confederate States that he would be able to sweep the whole of eastern Kentucky, take possession of Frankfort, the seat of the State Government, and set up the authority of the Provisional Governor Johnson. Meanwhile Col. John A. Garfield, commanding a brigade of Union forces, having the 42d Ohio and 14th Kentucky infantry and a squadron of Ohio cavalry, advanced to encounter the Confederate force. Embarrassed by the difficulty of moving supplies at that low stage of the Big Sandy river, it was the 7th of January when his advance, consisting of five companies of the 42d Ohio, under Lieut.-Col. Sheldon, reached Paintville. The Confederate force had then evacuated its intrenchments two and a half miles south of the town, but a part of it was placed in ambush at Jennie Creek, two miles west. This body was driven out immediately by Col. Bolles, of the 1st Virginia cavalry, who had come up. At the same time Col. Garfield, with eight companies of the 42d Ohio and two companies of the 14th Kentucky, moved upon the main position of the enemy, who were found to have hastily retreated. On the next day the 40th Ohio, Col. Cranox, and six companies of the 1st Kentucky cavalry joined Col. Garfield; a part of the 22d Kentucky, under Lieut.-Col. Munroe, had also reached him. With a portion of this force, the pursuit of the enemy was immediately commenced up the road along the Big Sandy river.

The following despatches from Col. Garfield describe his movements:

PAINTSVILLE, *January* 8.

To Capt. J. B. Fry, Assistant Adjutant-General:

I entered this place yesterday with the 42d Ohio, the 4th Kentucky, and 300 of the 2d Virginia cavalry. On hearing of my approach, the main rebel force left their strongly intrenched camp and fled. I sent my cavalry to the mouth of Jennie Creek, where they attacked and drove the rebel cavalry, which had been left as a vanguard, a distance of five miles, killing three and wounding a considerable number.

Marshall's whole army is now flying in utter confusion. He had abandoned and burned a large amount of his stores. We have taken fifteen prisoners. Our loss is two killed and one wounded. I start in pursuit to-morrow morning.

(Signed) J. A. GARFIELD,
Col. commanding Brigade.

SECOND DESPATCH.

To Capt. J. B. Fry, Assistant Adjutant-General:

I left Paintsville on Thursday noon with 1,100 men, and drove in the enemy's pickets two miles below Prestonburg. The men slept on their arms. At 4 o'clock yesterday morning we moved toward the main body of the enemy at the forks of Middle Creek, under command of Marshall. Skirmishing with his outposts began at 8 o'clock, and at 1 P. M. we engaged his force of 2,500 men and 3 cannon, posted on the hill—fought them until dark, having been reënforced by 700 men from Paintsville, and drove the enemy from all their positions. He carried off the majority of his dead and all of his wounded.

This morning we found twenty-seven of his dead on the field. His killed cannot be less than sixty. We have twenty-five prisoners, ten horses, and a quantity of stores. The enemy burned most of his stores, and fled precipitately. To-day I have crossed the river, and am now occupying Prestonburg. Our loss is—two killed and twenty-five wounded.

(Signed) J. A. GARFIELD,
Col. commanding Brigade.

This was a rapid and spirited movement on the part of Col. Garfield, and it resulted in forcing Col. Humphrey Marshall with his troops to retire from eastern Kentucky.

On the 16th of January Col. Garfield issued the following address to the inhabitants:

HEADQUARTERS EIGHTEENTH BRIGADE,
PAINTSVILLE (KY.), *January* 16, 1862.

Citizens of the Sandy Valley:

I have come among you to restore the honor of the Union and to bring back the Old Banner, which you all once loved, but which, by the machinations of evil men and by mutual misunderstanding, has been dishonored among you. To those who are in arms against the Federal Government I offer only the alternative of battle or unconditional surrender. But to those who have taken no part in this war, who are in no way aiding or abetting the enemies of the Union—even to those who hold sentiments averse to the Union, but yet give no aid and comfort to its enemies—I offer the full protection of the Government, both in their persons and property.

Let those who have been seduced away from the love of their country to follow after and aid the destroyers of our peace lay down their arms, return to their homes, bear true allegiance to the Federal Government, and they shall also enjoy like protection. The army of the Union wages no war of plunder, but comes to bring back the prosperity of peace. Let all peace-loving citizens who have fled from their homes return and resume again the pursuits of peace and industry. If citizens have suffered from any outrages by the soldiers under my command, I invite them to make known their complaints to me, and their wrongs shall be redressed and the offenders punished. I expect the friends of the Union in this valley to banish from among them all private feuds, and let a liberal-minded love of country direct their conduct toward those who have been so sadly estranged and misguided, hoping that these days of turbulence may soon be ended and the days of the Republic soon return.

J. A. GARFIELD,
Col. commanding Brigade.

But the most important action of the month was fought at a place called Webb's Cross Roads on the 19th. It is known as the battle of Mill Springs, although this place is about five miles distant from the spot where the battle was fought. For three months previous the Federal General Schoepff had been stationed at Somerset, a small town in south-eastern Kentucky, with a force of about 8,000 men. The object was to prevent the advance of the Confederate force any further north. At the same time the Confederate General Zollicoffer, with nearly the same force, was intrenched directly south on both banks of the Cumberland river, for the purpose of defending the approach to the Cumberland Gap and the road into east Tennessee against any Federal force. About two weeks previous to the action, Gen. Zollicoffer was reënforced by the division under Gen. Crittenden, which had been previously stationed at Knoxville, Tennessee. Gen. Crittenden took command, and issued the following proclamation:

DIVISION HEADQUARTERS, MILL SPRINGS, KY.,
January 6, 1862.

To the People of Kentucky:

When the present war between the Confederate States and the United States commenced, the State of Kentucky determined to remain neutral. She regarded this as her highest interest, and, balancing between hope for the restoration of the Union and love for her Southern sisters, she declared and attempted to maintain a firm neutrality.

The conduct of the United States Government toward her has been marked with duplicity, falsehood, and wrong. From the very beginning, the President of the United States, in his Messages, spoke of the chosen attitude of Kentucky with open denunciation, and on the one hand treated it with contempt and derision, while on the other hand he privately promised the people of Kentucky that it should be respected. In violation of this pledge, but in keeping with his first and true intention, he introduced into the State arms which were placed exclusively in the hands of persons known or believed to be in favor of coercion, thus designing to control the people of Kentucky, and to threaten the Confederate States. Then the Government of the Confederate States, in self-defence, advanced its arms into your midst, and offer you their assistance to protect you from the calamity of Northern military occupation.

By the administration of your State Government, Kentucky was being held to the United States, and bound at the feet of Northern tyranny. That Government did not rest upon the consent of your people. And now, having thrown it off, a new Government has been established and Kentucky admitted into the Southern Confederacy. Can Kentuckians doubt which Government to sustain? To the South you are allied by interest, by trade, by geography, by similarity of institutions, by the ties of blood, and by kindred courage. The markets of the North do not invite your products—your State is, to the centre of its trade, society, and laws, but a distant province, despised for its customs and institutions—your heroic lineage forbids association in arms with their warriors of Manassas, of Leesburg, and of Belmont; and your former devotion to the Union must intensify your hatred toward that section which has, in its Abolition crusade, broken to pieces the Constitution, and which is now vainly endeavoring to destroy the liberty of the Southern States!

At first you may have been deceived as to the purposes of the North. They talked of restoring the Union. Do you not see that it is hopelessly lost in the storm of war, and that, while the rotten Government of the North is shaking over its ruins, the South has erected out of them a new, powerful, and free constitutional republic! And now, indeed, the mask is thrown off, and you find the North, through its President, and Secretary of War, and public journals, and party leaders, giving up the claim of Union, and proclaiming the extinction of slavery and the subjugation of the South. Can you join in this enterprise? The South would never in any event consent to a reconstruction. She is contending with unconquerable spirit, with great

military power, with unbroken success, for constitutional freedom, and for her own national government. Where is your spirit of other days, that you do not rush to her victorious standard? Shall the sons of Tennessee, Virginia, Mississippi, and other Southern States, with whom you have gathered the laurels on other battle fields, win them all in this war of independence, while you are inactive and lost in slothful indolence? May the proud genius of my native Kentucky forbid it.

In these mountains, where freedom and patriotism stir the human heart, can you sleep with the clarion of a glorious war ringing in your ears? True, you have refused to bear the arms and wear the livery of Northern despotism. Their base hirelings have been among you, but have not seduced you into their ranks. Will you stay at home and let noble bands of soldiers, armed in your cause as in their own, pass on to battle fields, on your own soil, consecrated by no deed of your valor?

Having assumed command of the forces of the Confederate States on Cumberland river, in south-eastern Kentucky, I make this appeal to you. You are already assured that we come among you as friends and brothers, to protect you in your personal liberties and property, and only to make war against the invaders of your home and our common enemies. I invoke you to receive us as brothers, and to come to our camp and share with us the dangers and the honor of this struggle. Come to these headquarters, as individuals or in companies, and you will be at once accepted and mustered in with pay and arms from the Government of the Confederate States. At first many Kentuckians entered the army of the South for the great cause it supports; now this has become the cause of Kentucky, and it is your duty to espouse it. Duty and honor unite in this call upon you. Will you join in the moving columns of the South, or is the spirit of Kentucky dead? GEO. B. CRITTENDEN, Major-General.

Previous to the junction of the force of Gen. Crittenden with that of Gen. Zollicoffer, Gen. Buell, in command of the Federal department, with his headquarters at Louisville, had detached from his main body a division under Gen. Geo. H. Thomas to attack the rear of Gen. Zollicoffer, whose position was a strong one. It was about fifteen miles south-west of Somerset, forty miles south-east of Columbia, and six miles below the head of steamboat navigation. It was considered to be one of the three Confederate strongholds in Kentucky—the first being Columbus, in the extreme West; the second, Bowling Green in central Kentucky; and the third, this one in the south-east, commanding the coal mines and many of the salts wells south of the Cumberland, and suitable to check any Federal advance into east Tennessee. The hills on the immediate bank of the river are between three and four hundred feet in height and their summits were fortified. The actual situation of the Confederate force has been variously represented. It was nearly destitute of supplies, and upon hearing of the approach of the Federal force, the choice was presented to Gen. Crittenden, either to retreat without striking a blow, or to remain in his position and be stormed out, or to surrender upon the approach of starvation, or to make an advance. The latter measure was chosen, and for this reason the Confederate general was found without his intrenchments and making an attack upon the approaching force. It is probable, however, that the Federal force was supposed to be much smaller than it in truth was, and hence the Confederate general was tempted to advance and make an attack. That day (Sunday) he was defeated and retired to his intrenchments. During the night he abandoned his camp, and by the aid of a small steamboat crossed the Cumberland with his entire force. The Federal forces most actively engaged were: the 9th Ohio, Col. McCook; 2d Minnesota, Col. Van Cleve; 4th Kentucky, Col. Fry; 10th Indiana, Col. Munson; with the batteries of Capts. Stanhart and Wetmore. These were supported by the 14th Ohio, Col. Steadman; and the 10th Kentucky, Col. Haskin. The force of Gen. Schœpff came up and joined in the pursuit. The Confederate force consisted of the 15th Mississippi, Col. Walthal; 19th Tennessee, Col. Cummings; 20th Tennessee, Capt. Battle; 25th Tennessee, Capt. Stouton; 17th Tennessee, Col. Newman; 28th Tennessee, Col. Murray; 29th Tennessee, Col. Powell; 16th Alabama, Col. Wood, with two batteries. The Federal loss was 38 killed and 194 wounded; the Confederate loss was 190 killed (among whom was Gen. Zollicoffer), 60 wounded, and 89 prisoners. The forces of Gen. Thomas and Gen. Crittenden were about equal. The force of Gen. Schœpff, however, was equal to a reserve for Gen. Thomas. The artillery of Gen. Thomas was of longer range than the Confederate guns.

The following order of thanks was issued by President Lincoln in consequence of this victory:

WAR DEPARTMENT, *January* 22, 1862.

The President, commander-in-chief of the army and navy, has received information of a brilliant victory achieved by the United States forces over a large body of armed traitors and rebels at Mill Springs, in the State of Kentucky.

He returns thanks to the gallant officers and soldiers who won that victory; and when the official reports shall be received, the military skill and personal valor displayed in battle will be acknowledged and rewarded in a fitting manner.

The courage that encountered and vanquished the greatly superior numbers of the rebel force, pursued and attacked them in their intrenchments, and paused not until the enemy was completely routed, merits and receives commendation.

The purpose of this war is to attack, pursue, and destroy a rebellious enemy, and to deliver the country from danger menaced by traitors. Alacrity, daring, courageous spirit, and patriotic zeal, on all occasions and under every circumstance, are expected from the army of the United States.

In the prompt and spirited movements and daring battle of Mill Springs, the nation will realize its hopes, and the people of the United States will rejoice to honor every soldier and officer who proves his courage by charging with the bayonet and storming intrenchments, or in the blaze of the enemy's fire.

By order of the President.

EDWIN M. STANTON, Secretary of War.

This victory opened the path into east Tennessee, but no advantage was taken of it by the Federal Government. It also produced an exhilaration in the North far above its importance.

Some important reconnoissances were made in western Kentucky at this time, extending even to the Tennessee line. The country around Fort Columbus was fully explored, the length and condition of the roads ascertained, the number of bridges and their strength, the depth of the streams without bridges, and the sentiments of the inhabitants. Fort Henry was twice approached by the gunboat Lexington, and its strength estimated. These reconnoissances were made by forces from the Department of Missouri, then under the command of Maj.-Gen. Halleck. Early in January troops began to concentrate at Cairo, Paducah, and Fort Jefferson from different quarters. To such an extent had this progressed that, in the public mind, it was supposed that a great movement was on foot.

The plan of the campaign in the West now began to be manifest. At the time when Gen. Buell was ordered to the command of the department of the Ohio, the views of the Government were favorable to an expedition to the Cumberland Gap and into east Tennessee, for the purpose of seizing the Virginia and east Tennessee line of railroad and affording aid to the loyal citizens. The Confederate line of defence had now become so fully developed, with its strong positions of Bowling Green and Columbus, that the propriety of an expedition by the forces in Kentucky into east Tennessee became a question for military investigation. The mountainous character of the country through which the Gap had to be reached, the roughness of the roads, rendering the conveyance of artillery extremely difficult and slow, and subjecting an army at every interval to formidable resistance, were discouraging obstacles to an advance in that direction.

On the other hand, the movement of troops from Cairo up the Cumberland river by transports and gunboats against Nashville, so as to reach the rear of the Confederate army under Gen. Buckner, presented an easy manner of breaking the enemy's line and compelling the evacuation of Kentucky. Its successful achievement might be attended with the capture of the Confederate force at Bowling Green. These views finally prevailed and measures were taken to carry them into execution. The original plan of the western campaign had been for a military and naval expedition to proceed from St. Louis and Cairo down the Mississippi river. For this purpose the gunboats were originally constructed. They were found to be of sufficiently light draft to navigate the Cumberland and Tennessee rivers, and the coöperation of the western department under Gen. Halleck was also secured. Indeed the Mississippi river expedition was thus diverted at the outset, and Gen. Halleck, by order of the President, assumed the entire commahd After a union of these two armies, they were expected to control the whole country to New Orleans.

The reconnoissance of Fort Henry had convinced Com. Foote, in command of the western fleet of gunboats, that it could be easily reduced by his gunboats. At an early day he applied to Gen. Halleck for permission to attack the fort. These views undoubtedly had an important influence on the plan of the western campaign.

The States which contributed chiefly to the force organized by Gen. Buell in Kentucky were: Ohio, Kentucky, Indiana, Illinois, Michigan, Wisconsin, Minnesota, Pennsylvania, and Tennessee, as follows: Ohio, thirty regiments of infantry, two and half regiments of cavalry, and eight batteries of artillery; Indiana, twenty-seven regiments of infantry, one and half regiments of cavalry, and five batteries of artillery; Illinois, three regiments of infantry; Kentucky, twenty-four regiments of infantry, four regiment, of cavalry, and two batteries of artillery; Pennsylvania, three regiments of infantry, two regiments of cavalry, one battery of artillery; Michigan, three regiments of infantry, one battery of artillery; Wisconsin, three regiments of infantry; Minnesota, two regiments of infantry, and one battery of artillery; Tennessee, two regiments of infantry. Besides these there were of regulars, three regiments of infantry, and three batteries of artillery. Thus making one hundred and two regiments of infantry, ten regiments of cavalry, and twenty-one batteries of artillery; which might be summed up as follows: infantry 100,000, cavalry 11,000, artillerists 3,000; total 114,000 men, and 126 pieces of artillery. This army was divided into four grand divisions under the command of Gens. Alexander McDowell McCook, Geo. H. Thomas, Ormsby M. Mitchell, Thos. L. Crittenden. Among the brigade commanders, of whom there were twenty, were the following officers: Ebenezer Dumont, Albin Schœpff, Thos. J. Wood, Wm. Nelson, Richard W. Johnson, Jerre T. Boyle, Jas. S. Negley, Wm. T. Ward.

The force organized by Gen. Halleck, with his headquarters at St. Louis, was concentrated at that place and Cairo and Paducah, excepting that portion which was in the field in the State of Missouri. It was somewhat less in numbers than the army of Gen. Buell. For operations in Kentucky and Tennessee it was placed under the command of Gen. Grant. It was drawn chiefly from the States adjacent to Missouri.

The naval force prepared to coöperate with the military consisted of twelve gunboats carrying an armament in all of one hundred and twenty-six guns. None of these guns were less than 32-pounders, some were 42-pounders, and also 9 and 10-inch naval columbiads. In addition, each boat carried a rifled Dahlgren 12-pounder boat howitzer on the upper deck. Several of the larger guns on each boat were rifled.

The boats were built very wide, in proportion to their length, giving them almost the same steadiness in action that a stationary land battery would possess. They were constructed

with the sides sloping upward and downward from the water line, at an angle of forty-five degrees. The bow battery on each boat consisted of solid oak timber twenty-six inches in thickness, plated on the exterior surface with iron two and a half inches thick.

The side and stern batteries were somewhat thinner, but had the same thickness of iron over that portion covering the machinery.

The boats were built so that in action they could be kept "bow on;" hence the superior strength of the bow battery. Broadsides were so arranged as to be delivered with terrible effect while shifting position. To facilitate movements in action, the engines and machinery were of the most powerful kind. The boilers were five in number, constructed to work in connection with or independent of each other.

Seven of these boats only were iron clad. The number of mortar boats ordered was thirty-eight. Each one which was built, carried a mortar of 13-inch calibre. The charge of powder for the mortar was about twenty-three pounds. Each boat was manned by a captain, lieutenant, and twelve men. Formidable as this naval force appears, its preparation was very tardily undertaken by the Government, and at the moment when first needed, but few of the boats were ready.

On the 27th of January, the President of the United States appeared as commander-in-chief of the army and navy, and issued the following order:

EXECUTIVE MANSION, WASHINGTON, *Jan.* 27, 1862.

PRESIDENT'S GENERAL WAR ORDER, No. 1.

Ordered, That the 22d day of February, 1862, be the day for a general movement of the land and naval forces of the United States against the insurgent forces.

That especially

The Army at and about Fortress Monroe,
The Army of the Potomac,
The Army of Western Virginia,
The Army near Munfordsville, Kentucky,
The Army and Flotilla at Cairo,
And a Naval Force in the Gulf of Mexico,

be ready for a movement on that day.

That all other forces, both land and naval, with their respective commanders, obey existing orders for the time, and be ready to obey additional orders when duly given.

That the Heads of Departments, and especially the Secretaries of War and of the Navy, with all their subordinates, and the General-in-Chief, with all other commanders and subordinates of land and naval forces, will severally be held to their strict and full responsibilities for the prompt execution of this order.

ABRAHAM LINCOLN.

This order was unproductive of direct military effect, but was viewed as an indication of the President's desire that active measures should be taken speedily toward the initiation of hostilities. Gen. McClellan still continued to be general-in-chief, and all the movements of Gen. Buell up to the occupation of Nashville, and those of Gens. Halleck and Grant, were made under his instructions up to the 11th of March, when the order of the President was issued, relieving him "from the command of the other military departments."

By the "Army near Munfordsville, Kentucky," were designated the forces of Gen. Buell. After the battle of Mill Springs, movements were made by order of Gen. Buell, as if with the purpose of advancing into eastern Tennessee in force. The Cumberland river was crossed at Waitsboro', and a column was pushed toward Cumberland Gap, while two brigades were moved from Gen. Buell's centre toward his left. The Confederates understood that east Tennessee was the destination of these troops, and hastily sent a large force by railroad from Bowling Green through Nashville to Knoxville. But the army of Gen. Thomas, instead of going to east Tennessee, turned back to Danville and subsequently marched to join Gen. Nelson, at Glasgow, and flank Bowling Green on the left. Thus, instead of dividing his forces, Gen. Buell concentrated them by a movement from the left to the centre. Meanwhile the centre of Gen. Buell's force, under Gen. Mitchell, had been advanced toward Munfordsville, on the road to Bowling Green.

By the term "The Army and Flotilla at Cairo," was designated the military force of Gen. Halleck's department, collected at Cairo, Paducah, and Fort Jefferson, under Gen. Grant, together with the gunboats, and intended for the Tennessee river expedition.

A movement against Fort Henry on the Tennessee river was at once undertaken. This fort is situated near the line of Kentucky and Tennessee, on the east bank of the stream. It stands on the low lands adjacent to the river, about the high water mark, and being just below a bend in the river, and at the head of a straight stretch of about two miles, it commands the river for that distance, and very little else. On Saturday night, Feb. 1, the gunboats St. Louis, Cincinnati, Carondolet, Essex, Tyler, and Lexington, in an incomplete state of preparation, being the only ones manned, left Cairo, and proceeded to the mouth of the Tennessee at Paducah. Here they were joined by the gunboat Conestoga and a fleet of transports, with a land force under Gen. Grant, and on Monday afternoon proceeded up the river. By Tuesday all were anchored about eight miles below the fort, which being an unfavorable place for the debarkation of troops, a reconnoissance was made by the Essex, St. Louis, and Cincinnati. A suitable place for the landing, encampment, and general rendezvous of the troops was found just below the range of the guns of the fort. The troops were landed during the afternoon, and the transports returned to Paducah for more regiments. By Thursday morning, Feb. 6, a large force was gathered, and a body of troops under Gen. Smith were also landed on the west side of the river, where it was supposed that a considerable Confederate force was encamped. The troops after being landed were formed into two divisions; the first, consisting of the 8th, 18th, 27th, 29th, 30th, and 31st, making one brigade; and the 11th, 20th, 45th, and 48th Illinois regiments making

another brigade, with one regiment (the 4th Illinois), and four independent companies of cavalry, and four batteries of artillery, under Gen. McClernand. This division was ordered to move across the country to a point on the road leading from the fort to the town of Dover, on the Cumberland river, for the purpose of preventing reënforcements to the enemy and cutting of his retreat. The second division consisted of the 7th, 9th, 12th, 28th, and 41st Illinois regiments, the 11th Indiana, 7th and 12th Iowa, 8th and 13th Missouri, with artillery and cavalry, under Gen. Smith. About ten o'clock the land force commenced the march over the hilltops, and the gunboats began to move under steam toward the fort. Passing up the narrow passage to the westward of the island below the fort, they were protected from its guns until within a mile, and emerged in line of battle, the St. Louis, Lieut. Paulding, on the left, next the Carondolet, Commander Walke, next the flag ship Cincinnati, Commander Stembel, and next upon the right the Essex, Commander Porter. The other boats acted as a reserve. Firing upon both sides soon commenced, but the gunboats continued to approach until within six hundred yards of the Confederate batteries. The action lasted for one hour and a quarter, when the flag on the fort was hauled down. Meantime the high water and muddy roads prevented the arrival of the land forces under Gen. Grant, and the Confederate troops in the fort retired, and escaped. Commodore Foote, commanding the naval portion of the expedition, says: "The garrison, I think, must have commenced their retreat last night, or at an early hour this morning. Had I not felt it an imperative necessity to attack Fort Henry to-day, I should have made the investment complete and delayed until to-morrow, so as to secure the garrison. I do not now believe, however, the result would have been any more satisfactory."

This Confederate force was supposed to number between four and five thousand. The fort was armed with twenty guns, 32 and 34-pounders, including one 10-inch Columbiad. Before the close of the action a shot entered the boiler of the Essex, which resulted in wounding and scalding twenty-nine officers and men. Eighty-three prisoners were taken, among whom was Brig. Gen. Tilghman, and a large amount of stores, and everything belonging to the retiring force. On the gunboats two were killed and nine wounded in the action, and on the part of the Confederates five killed and ten wounded.

The result of this action occasioned great joy in the Northern States. The Secretary of the Navy, Gideon Welles, sent the following despatch to Com. Foote:

NAVY DEPARTMENT, *February* 9, 1862.

Your despatch announcing the capture of Fort Henry, by the squadron which you command, has given the highest gratification to the President, to Congress, and the country. It was received and read in both Houses of Congress in open session. The country appreciates your gallant deeds, and this department desires to convey to you and your brave associates its profound thanks for the service you have rendered.

GIDEON WELLES.
Secretary of the Navy.

Flag Officer A. H. FOOTE, U. S. N., commanding the United States naval forces, Cairo, Ill.

By the possession of Fort Henry the Federal forces were in the rear of Columbus on the Mississippi, and within ten miles of the bridge by which the railroad connection was made between Columbus and Bowling Green. There was now no obstacle to the passage of the gunboats to the sources of the Tennessee river in northern Alabama.

Immediately after the surrender, Commander Phelps was ordered to proceed with the gunboats Conestoga, Tyler, and Lexington, up the river to the railroad bridge, and to destroy so much as would prevent its use by the enemy, and thence proceed as far up the river as the stage of water would permit, and capture the gunboats and other vessels which might be useful to the enemy.

After dark, on the same day, the expedition arrived at the bridge for the railroad crossing about twenty-five miles above Fort Henry, where considerable camp equipage was destroyed. Thence the expedition proceeded as far up the river as Florence in Alabama, at the foot of the Muscle shoals. Here the enemy burnt six of their steamers and two were captured, beside a half complete gunboat and considerable lumber. Two hundred stands of arms, a quantity of stores and clothing were also seized, and the encampment of a regiment destroyed. This sudden appearance of the Federal gunboats was like an unexpected apparition to the inhabitants, and loyal and friendly feelings were manifested on every side.

The next step of Com. Foote was to return to Cairo to prepare the mortar boats for operations against Fort Donelson. He desired a delay of a few days to complete them, believing that thereby the garrison, however extensive, could be shelled out without much loss of life to the Federal force. But Gen. Halleck regarded an immediate attack as a military necessity, and it was made although the fleet was reduced to a crippled state, and the loss of life was considerable. There is no question of the correctness of Gen. Halleck's views relative to the attack; the deficiency resulted from a degree of precipitation in the entire movement after the issue of the President's proclamation.

At this time Gen. Crittenden, in command of the right wing of Gen. Buell's army, having advanced to the left bank of Green river near South Carrollton and manœuvred in front of the Confederate (Gen. Buckner's) force, suddenly retreated to Calhoun on Green river. Steamers were there awaiting him, on which his force was embarked and taken down the Green river to the Ohio, down the Ohio, and

up the Cumberland, where a junction was effected with Gen. Grant's army.

Troops were also sent from St. Louis, Cairo, and Cincinnati, until the following regiments and batteries were under the command of Gen. Grant, not including the force brought by Gen. Crittenden:

Illinois Infantry.—7th, Col. John Cook, acting brigadier-general; Lieut.-Col. Andrew J. Babcock; 8th, Col. Richard J. Oglesby, acting brigadier-general; Lieut.-Col., Frank L. Rhodes; 9th, Col. Augustus Marsey; 10th, Col. James D. Morgan; 11th, Col. Thomas E. R. Ransom; 12th, Col. John McArthur; 16th, Col. Robert F. Smith; 18th, Col. Michael K. Lawler; 20th, Col. C. Carroll Marsh; 22d, Col. Henry Dougherty (invalid); Lieut.-Col. H. E. Hart; 27th, Col. Napoleon B. Buford; 28th, Col. Amory K. Johnson; 29th, Col. James S. Riordan; 30th, Col. Philip B. Fouke, absent; Lieut.-Col. E. B. Dennis; 31st, Col. John A. Logan; 32d, Col. John Logan; 41st, Col. Isaac C. Pugh; 45th, Col. John E. Smith; 46th, Col. John A. Davis; 48th, Col. Isham N. Haynie; 49th, Col. Wm. R. Morrison, wounded; Lieut.-Col., Thomas G. Allen; 50th, Col. Moses M. Bane; 52d, Lieut.-Col. John S. Wilcox; 55th, Col. David Stuart; 57th, Col. S. D. Baldwin.

Illinois Artillery.—2d regiment, Col. Silas Noble; 3d regiment, Col. Eugene A. Carr; 4th regiment, Col. T. Lyle Dickey; 7th regiment, Col. William Pitt Kellogg.

Illinois Artillery Batteries.—Schwartz's, Dresser's, Taylor's, McAllister's, Richardson's, Willard's, and Buell's; in all, thirty-four guns.

Troops from other States.—3d Iowa, Col. N. G. Williams; 7th Iowa, Col. John G. Lauman; 11th Iowa, Col. Abraham F. Hare; 12th Iowa, Col. Jackson J. Wood; 13th Iowa, Col. Marcellus M. Crocker; 14th Iowa, Col. William T. Shaw; 8th Missouri, Col. Morgan M. Smith; 13th Missouri, Col. Crafts J. Wright; 1st Missouri Artillery, Major Cavender; 11th Indiana, Col. George F. McGinniss; 23d Indiana, Col. Wm. L. Sanderson; 48th Indiana, Col. Norman Eddy; 52d Indiana, Col. James M. Smith.

Gen. Lewis Wallace commanded a third division, in which were the following regiments who were engaged in the battle at Donelson: 28th Kentucky, Col. James L. Shackelford; 31st Indiana, Maj. Fred. Arn; 44th Indiana, Col. Hugh B. Reed; 17th Kentucky, Col. John McHenry.

The force of Gen. Grant had grown within a few days into almost gigantic proportions. Its numbers have been variously stated. After the surrender of Donelson, Gen. Halleck sent the following despatch to Gen. Hunter:

HEADQUARTERS, DEPARTMENT OF ST. LOUIS, *Feb'y* 19.

To Maj.-Gen. D. Hunter, Commanding Department of Kansas at Fort Leavenworth:

To you more than any other man out of this department, are we indebted for our success at Fort Donelson.

In my strait for troops to reënforce Gen. Grant, I applied to you. You responded nobly, by placing your forces at my disposal.

This enabled us to win the victory. Receive my most heartfelt thanks.

(Signed) H. W. HALLECK, Major-General.

A respectable authority wrote as follows, on the morning of Feb. 14:

At eleven o'clock last night we arrived within two miles of the fort. Here we found the Carondolet at anchor. She had been engaging the enemy during the afternoon, at a distance of a mile, had fired about two hundred shots, and retired without receiving any damage. By six o'clock this morning, sixteen transports had arrived from St. Louis, Cairo and Cincinnati, carrying in all about 10,000 troops, cavalry, artillery and infantry. The debarkation occupied about four hours. The sight of such strong reënforcements encouraged all our men greatly. Knowing already that the fort was surrounded by Gen. Grant's command—estimated at 30,000—we felt that such a large addition to his numbers would make assurance doubly sure.

Senator Trumbull thus stated, in the Senate of the United States, his view of the force engaged: "I think there is a disposition to overestimate the number of men upon both sides in the field. We have seen a statement within a few days going the rounds of the papers, that Fort Donelson was invested by an army of fifty thousand men; I have seen it in a number of papers; but when we come to see what regiments were there, instead of being fifty thousand, there were not thirty thousand men. A gentleman direct from Cairo, well acquainted with all the troops engaged in that gallant affair, informs me that the number of our troops was less than twenty-eight thousand."

The Confederate regiments in the fort were reported as follows:

Regiments.—Tennessee, 11; Mississippi, 8; Texas, 1; Kentucky, 2; Arkansas, 1; Virginia, 4; Alabama, 1.

Cavalry Battalions.—Alabama, 1; Tennessee, 1; Mississippi, 1.

The location of the fort was on a fine slope, one hundred and fifty feet high, on a slight bend on the west side of the Cumberland river. At this point the Cumberland and Tennessee rivers, both running north, approach within about twelve miles of each other. Opposite on the Tennessee is situated Fort Henry. There were two batteries at Fort Donelson—the first about twenty-five feet above the water, consisting of nine guns, eight 32's and one 10-inch; the second having one rifled 32-pounder and two 32-pound carronades, located sixty feet higher up. The main fort was in the rear of these batteries, occupying a high range cloven by a deep gorge opening toward the south. The outworks consisted in the main of rifle pits. Along the front of the extension line, the trees had been felled and the brush cut and bent over breast high, making a wide abatis very difficult to pass through. The Confederate camp was behind the hill and beyond the reach of shot and shell from the gunboats.

At three o'clock on the afternoon of Feb. 14, Com. Foote began the conflict with four

iron-clad gunboats and two wooden ones. It continued for an hour and a quarter, and the latter part of the time within four hundred yards of the fort, when the wheel of one vessel and the tiller of another were shot away, and both rendered unmanageable, and drifted down the river. At this time the Confederates appeared to be deserting their batteries along the water. The other boats were injured between wind and water, and fifty-four had been killed and wounded, when all retired. Com. Foote deeming his services to be less required on the spot than at Cairo, "until damages could be repaired, and a competent force brought up from that place to attack the fort," retired to Cairo. At the same time he sent a gunboat up the Tennessee to render the railroad bridge above Fort Henry impassable. This had not been done by Lieut. Phelps who had gone up that river with three gunboats.

The land forces under Gen. Grant left Fort Henry on the 12th of February, in two divisions, stated by Gen. Grant as "about fifteen thousand strong,"—six regiments having been sent round on transports. The head of the marching column arrived within two miles of Fort Donelson at twelve o'clock. The Confederate fortifications were from this point gradually approached and surrounded, with occasional skirmishing on the line. The next day the investment was extended on the Confederate flanks, and drawn closer to their works, with skirmishing all day. That night the gunboats and reënforcements arrived. On the next day the attack of the gunboats was made, and after its failure Gen. Grant resolved to make the investment as perfect as possible, and to partially fortify and await the repairs to the gunboats. This plan was frustrated by a vigorous attack upon his right under Gen. McClernand, by the enemy. The battle was closely contested for several hours, and with considerable advantage to the enemy, when they were finally repulsed, having inflicted upon the Union troops a loss of one thousand two hundred in killed, wounded, and missing. At this time Gen. Grant ordered a charge to be made on the left by Gen. Charles F. Smith with his division. This was brilliantly done, and the contest here, which continued until dark, resulted in giving to him possession of part of the intrenchments. Soon after this charge was commenced, an attack was ordered by Gen. Grant to be made by Gen. Wallace of the third division, and two regiments of the second division, on the other Confederate flank, by which it was still further repulsed. At the points thus gained, all the troops remained for the night, feeling that, notwithstanding the bravé resistance, a complete victory awaited them in the morning.

The result of this conflict convinced the Confederate officers that without fresh troops they would be unable to hold their position on the next day. Gens. Pillow and Floyd determined therefore to withdraw as no reënforcements would reach them, leaving Gen. Simon B. Buckner in command. By means of two or three small steamboats these officers retired during the night taking about five thousand troops with them.

Early the next morning a flag of truce was sent to Gen. Grant with the following letter:

HEADQUARTERS, FORT DONELSON, *Feb.* 16, 1862.

SIR: In consideration of all the circumstances governing the present situation of affairs at this station, I propose to the commanding officer of the Federal forces the appointment of commissioners to agree upon terms of capitulation of the forces at this post under my command. In that view I suggest an armistice until twelve o'clock to day.

I am, very respectfully, your obedient servant,
S. B. BUCKNER.
Brigadier-General C. S. Army.

To Brig.-Gen. U. S. Grant, Commanding
United States forces near Fort Donelson.

The reply of Gen. Grant to this letter was as follows:

HEADQUARTERS, ON THE FIELD,
FORT DONELSON, *Feb.* 16, 1862.

To Gen. S. B. BUCKNER:

SIR: Yours of this date, proposing an armistice and the appointment of commissioners to settle on the terms of capitulation, is just received.

No terms, except unconditional and immediate surrender, can be accepted.

I propose to move immediately on your works.

I am, very respectfully, your obedient servant,
U. S. GRANT,
Brigadier-General Commanding.

The answer of Gen. Buckner was as follows:

HEADQUARTERS, DOVER (TENN.), *Feb.* 16, 1862.

Brig.-Gen. U. S. Grant, U. S. Army:

SIR: The distribution of the forces under my command, incident to an unexpected change of commanders, and the overwhelming force under your command, compel me, notwithstanding the brilliant success of the Confederate arms, to accept the ungenerous and unchivalrous terms which you propose.

I am, sir, your servant,
S. B. BUCKNER.
Brigadier-General C. S. Army.

The fort was subsequently given up and occupied by the Union troops.

In the action 231 were killed and 1,007 wounded on the Confederate side. The number was larger on the Union side. About 10,000 prisoners were made, and 40 pieces of cannon and extensive magazines of all kinds of ordnance, quartermasters' and commissary stores were captured.

The following is a list of the regiments which were captured at Fort Donelson: 49th Tennessee regiment, Col. Bailey; 43d Tennessee regiment, Col. Abernethy; 27th Alabama regiment, Col. Jackson; 42d Tennessee regiment, Col. Quarrells; Captain Guy's battery; 26th Tennessee regiment, Col. Silliard; 14th Mississippi regiment, Col. Baldwin; 18th Tennessee regiment, Col. Palmer; 2d Kentucky regiment, Col. Hanson; 20th Mississippi regiment, Major Brown; Captain Milton's company; 15th Virginia regiment, Lieut. Haslep; Texas regiment, Col. Gregg; 15th Arkansas regiment, Col. Lee; Capt. Oreston's cavalry; 15th Tennessee regi-

ment, Maj. Clark; one Company, Col. Lugg; Porter's artillery; 3d Tennessee regiment, Col. Brown; 8th Kentucky regiment, Capt. Lyon; 30th Tennessee regiment, Maj. Humphrey; 32d Tennessee regiment, Col. Cook; 41st Tennessee regiment, Col. Forquehanor; Mississippi regiment, Col. Davidson. A portion of the Federal troops in Gen. McClernand's division were under arms two days and nights, amid driving storms of snow and rain.

The fall of the fort occasioned great rejoicing in the Northern cities.

The commanding general (Grant) thus addressed his troops:

HEADQUARTERS, DISTRICT OF WEST TENN., }
FORT DONELSON, Feb. 17, 1862. }

The General commanding takes great pleasure in congratulating the troops of this command for the triumph over rebellion gained by their valor on the 13th, 14th, and 15th instant.

For four successive nights, without shelter during the most inclement weather known in this latitude, they faced an enemy in large force in a position chosen by himself. Though strongly fortified by nature, all the additional safeguards suggested by science were added. Without a murmur this was borne, prepared at all times to receive an attack, and with continuous skirmishing by day, resulting ultimately in forcing the enemy to surrender without conditions.

The victory achieved is not only great in the effect it will have in breaking down rebellion, but has secured the greatest number of prisoners of war ever taken in any battle on this continent.

Fort Donelson will hereafter be marked in capitals on the map of our united country, and the men who fought the battle will live in the memory of a grateful people. By order U. S. GRANT,
Brigadier-General Commanding.

The following is the order of Gen. Halleck:

HEADQUARTERS, DEPARTMENT OF MISSOURI. }
ST. LOUIS, *Feb.* 19, 1862. }

The Major-General commanding the department congratulates Flag-Officer Foote, Brig.-Gen. Grant, and the brave officers and men under their command on the recent brilliant victories on the Tennessee and Cumberland.

The war is not ended. Prepare for new conflicts and new victories. Troops are concentrating from every direction. We shall soon have an army which will be irresistible. The Union Flag must be restored everywhere, and the enthralled Union men in the South must be set free. The soldiers and sailors of the Great West are ready and willing to do this. The time and place have been determined on. Victory and glory await the brave!

By command of Maj. Gen. HALLECK.
N. H. McLEAN, Assistant Adjutant-General.

The Confederate Congress being at that time in session, the following Message was addressed to that body by President Davis:

EXECUTIVE DEPARTMENT, *March* 11, 1862.

To the Speaker of the House of Representatives:

I transmit herewith copies of such official reports as have been received at the War Department of the defence and fall of Fort Donelson.

They will be found incomplete and unsatisfactory. Instructions have been given to furnish further information upon the several points not made intelligible by the reports. It is not stated that reënforcements were at any time asked for; nor is it demonstrated to have been impossible to have saved the army by evacuating the position; nor is it known by what means it was found practicable to withdraw a part of the garrison, leaving the remainder to surrender; nor upon what authority or principles of action the senior Generals abandoned responsibility by transferring the command to a junior officer.

In a former communication to Congress, I presented the propriety of a suspension of judgment in relation to the disaster at Fort Donelson, until official reports could be received. I regret that the information now furnished is so defective. In the mean time, hopeful that satisfactory explanation may be made, I have directed, upon the exhibition of the case as presented by the two senior Generals, that they should be relieved from command, to await further orders whenever a reliable judgment can be rendered on the merits of the case. JEFFERSON DAVIS.

The successful operations against Fort Donelson were followed by the immediate evacuation of Bowling Green by the Confederate troops under Gen. Johnston. The centre of Gen. Buell's army under Gen. Mitchell was advancing from Munfordsville upon Bowling Green on the 14th of February, and by a forced march reached the river at that place on the next day. He immediately began to reconstruct the bridge, which had been burned some hours previous to his arrival, and took possession of the fortifications on the next day.

Since the battle of Mill Springs the intention of holding Bowling Green had been given up by the Confederate commander, and the troops were gradually withdrawn. About the 25th of January Gen. Floyd, with a command composed of his brigade and those of Gens. Wood and Breckinridge, left Bowling Green and went to Nashville and east Tennessee. The brigade of Gen. Buckner about the same time moved in the direction of Hopkinsville, near which place he manœuvred in front of Gen. Crittenden until the latter left to join Gen. Grant, when Gen. Buckner fell back and combined his forces with those at Fort Donelson. The force then remaining at Bowling Green consisted of the brigades commanded by Gens. Hardee and Hindman, which were chiefly Arkansas regiments, and twelve in number. This force, being about 8,000 men, was totally inadequate to defend the position against the forces of Gen. Mitchell and the reserve of Gen. Buell commanded by Gen. McCook.

On the 19th of February Com. Foote left Fort Donelson with the gunboats Conestoga and Cairo on an armed reconnoissance. At Clarksville he learned that nearly two thirds of the citizens had fled in alarm, and therefore issued a proclamation, assuring "all peaceably disposed persons that they could with safety resume their business avocations, and requiring only the military stores and equipments to be given up and holding the authorities responsible that it should be done without reservation." Clarksville is on the line of railroad communication between Memphis and Nashville and Memphis and Bowling Green and Louisville. Below the town were two small forts which were taken by the Federal force without any resistance. They mounted three guns each. One span of the railroad bridge had also been destroyed.

The fate of Nashville was now settled. With a high state of the water of the Cumberland river, there were no obstacles to the immediate approach of the gunboats with a force on transports. The centre of Gen. Buell's army had already arrived at Bowling Green, within

two days' march of Nashville. Its progress had been attended with many difficulties, and Brig.-Gen. Mitchell in command issued the following address to his soldiers:

BOWLING GREEN, *February* 19, 1862.

Soldiers of the Third Division! You have executed a march of forty miles in twenty-eight hours and a half. The fallen timber and other obstructions opposed by the enemy to your movements, have been swept from your path. The fire of your artillery and the bursting of your shells announced your arrival. Surprised and ignorant of the force that had thus precipitated itself upon them, they fled in consternation.

In the night time, over a frozen, rocky, precipitous pathway, down rude steps for fifty feet, you have passed the advance guard, cavalry, and infantry, and before the dawn of day, you have entered in triumph a position of extraordinary natural strength, and by your enemy proudly denominated the Gibraltar of Kentucky.

With your own hands, through deep mud, in drenching rains, and up rocky pathways next to impassable, and across a footpath of your own construction, built upon the ruins of the railway bridge, destroyed for their protection, by a retreating and panic-stricken foe, you have transported upon your own shoulders your baggage and camp equipage.

The General commanding the department, on receiving my report announcing these facts, requests me to make to the officers and soldiers under my command the following communication:

"Soldiers who by resolution and energy overcome great natural difficulties, have nothing to fear in battle, where their energy and prowess are taxed to a far less extent. Your command have exhibited the high qualities of resolution and energy, in a degree which leaves no limit to my confidence in them in their future movements.

"By order of "Brig. Gen. BUELL,
"Commanding Department of the Ohio."

Soldiers! I feel a perfect confidence that the high estimate placed upon your power, endurance, energy, and heroism, is just. Your aim and mine has been to deserve the approbation of our commanding officer, and of our Government and our country.

I trust you feel precisely as does your commanding General, that nothing is done while anything remains to be done.

By order of Brig.-Gen. O. M. MITCHELL,
Commanding.

The certainty of the capture of Nashville showed to the Confederate generals the danger in which Columbus, their strong position on the Mississippi, was placed. Even the occupation of Clarksville by the Union forces put into their possession that part of the railroad running to Columbus, and opened the way to approach that position from the rear. At the same time the river in front was under the control of the Federal gunboats. Gen. Beauregard, having previously retired from his command at Manassas, was now the commanding officer in this Confederate department with Gen. Johnston. Orders were accordingly issued on the 18th of February to destroy a portion of the track and bridges of the Memphis and Ohio railroad preparatory to a removal of the forces at Columbus to Island No. Ten, about forty-five miles below on the Mississippi river.

At the same time preparations were made to remove the Confederate stores and other public property from Nashville. The near approach of the Federal forces filled the authorities of the State with great alarm. The Legislature, which had just been convened in extra session, retired with Gov. Harris to Memphis, taking the archives and treasury of the State. Extreme measures and the destruction of property were proposed by the Governor to the citizens, but without gaining their approval. The railroad and the suspension bridges over the river were, however, destroyed.

After taking possession of Clarksville, Com. Foote returned to Cairo for the purpose of obtaining an additional gunboat and six or eight mortar boats. Meantime the troops of Gen. Grant, under Brig.-Gen. Smith, were pushed forward to Clarksville, and at the request of Gen. Smith, Lieut. Bryant, of the gunboat Cairo, preceded seven transports with the brigade of Gen. Nelson up the river to Nashville. They arrived on the 24th. The troops were landed without any opposition, as there was not any hostile force on the banks of the river. On the same day the advance of Gen. Buell's centre from Bowling Green arrived on the opposite side of the river, to see the Stars and Stripes already floating in triumph from the staff on the State capitol. The Confederate force under Gen. Albert S. Johnston retired to Murfreesborough, a small town thirty-two miles distant on the Nashville and Chattanooga railroad. Here they were soon after joined by the force under the Confederate General Crittenden.

An invasion having now been commenced within the limits of the States attached to the Confederacy, the Major-General commanding the department of Missouri issued the following order for the regulation of the troops:

HEADQUARTERS, DEPARTMENT OF MISSOURI,
ST. LOUIS, *February* 22.

The Major-General commanding the department desires to impress upon all officers the importance of preserving good order and discipline among their troops as the armies of the West advance into Tennessee and the Southern States. Let us show to our fellow citizens in these States that we come merely to crush out rebellion, and to restore to them peace and the benefits of the Constitution and the Union, of which they have been deprived by their selfish and unprincipled leaders.

They have been told that we come to oppress and plunder. By our acts we will undeceive them; we will prove to them that we come to restore, not to violate, the Constitution and laws in restoring to them the flag of the Union. We will assure them that they shall enjoy under its folds the same protection of life and property as in former days.

Soldiers, let no excess on your part tarnish the glory of our arms. The orders heretofore issued in this department in regard to pillaging, marauding, the destruction of private property and stealing, and the concealment of slaves, must be strictly enforced.

It does not belong to the military to decide upon the relation of master and slave. Such questions must be settled by civil courts. No fugitive slave will, therefore, be admitted within our lines or camps except when especially ordered by the General commanding. Women, children, merchants, farmers, mechanics, and all persons not in arms, are regarded as non-combatants, and are not to be molested in their persons or property. If, however, they aid and assist the enemy, they become belligerents, and will be treated as such. If they violate the laws of war, they will be made to suffer the penalties of such violation.

Military stores and public property must be surrendered, and any attempt to conceal such property by fraudulent transfer or otherwise, will be punished; but no private property will be touched unless by orders of the General commanding.

Whenever it becomes necessary to levy forced contributions for the supply and subsistence of our troops, such levies will be made as light as possible, and be so distributed as to produce no distress among the people. All property so taken must be receipted and fully accounted for, as heretofore directed.

These orders will be read at the head of every regiment, and all officers are commanded to strictly enforce them.

By command of Maj.-Gen. HALLECK.
N. H. MCLEAN, Assistant Adjutant-General.

The effect of these military operations was a great excitement in the neighboring Confederate States. To witness their strongest positions for defence flanked and evacuated without a blow, to see other fortified points compelled to a quick surrender by an irresistible force of men and gunboats, revealed to them the gigantic contest in which they were engaged. They said: "No people were ever engaged in a more serious struggle. It is emphatically a combat for life or death." The Governor of Mississippi issued a proclamation calling upon every citizen able to bear arms to have his arms in readiness. Boards of police in all the counties of the State were required to appoint "enrollers" preparatory to drafting, and to establish gun shops to repair arms. The Governor of Arkansas issued a proclamation drafting into immediate service every man in the State subject to military duty, and requiring them to respond within twenty days. Gov. Harris of Tennessee issued a proclamation, saying: "As Governor of your State and Commander in Chief of its army, I call upon every able-bodied man of the State, without regard to age, to enlist in its service. I command him who can obtain a weapon to march with our armies. I ask him who can repair or forge an arm to make it ready at once for the soldier. I call upon every citizen to open his purse and his storehouses of provision to the brave defenders of our soil. I bid the old and the young, wherever they may be, to stand as pickets to our struggling armies." Thus was set on foot a system of measures which led to the passage of a conscription act by the Confederate Congress and the raising of an immense Confederate army during the ensuing summer months.

Meanwhile, on the morning of the 4th of March, an expedition consisting of the gunboats Louisville, Carondelet, St. Louis, Pittsburg, Lexington and four mortar boats, left Cairo for Columbus on the Mississippi. Transports with the following troops formed a part of the expedition: 42d and 27th Illinois, 6 companies of the 55th Illinois, four companies of the 71st Ohio and one company of the 54th Ohio. On arrival the fort was found to be unoccupied, except by two hundred and fifty of the 2d Illinois regiment, who had reached it by a land march a short time previous. The enemy had commenced the evacuation on the 26th ult. Almost everything difficult to move had been more or less destroyed. Still a large amount of army material was obtained. The enemy had retired down the river.

At Nashville order was speedily restored. Col. Matthews of the 51st Ohio was appointed provost marshal and the troops were all quartered without the city. An immense amount of military stores of the Confederate Government was found in the city. They consisted

of pork, beef, rice, corn and molasses. Gen. Buell removed his headquarters to the city, and the reserve of his army under Gen. McCook had arrived and were in quarters before the 2d of March.

This division in its progress had protected the railroad and repaired the bridges and roads on the route to Louisville. All of Gen. Buell's force was concentrated at Nashville and encamped along the different turnpikes leading from the city in a southerly direction at distances from two to five miles from the city, with pickets extending to the distance of ten miles.

Thus the Confederate line of defence from the Mississippi east to the mountains was swept away. The strongholds were evacuated and the less impregnable positions captured. There was nothing to withstand the triumphant march of the Federal forces southward over the country but the military force which might be gathered from the Confederate States. Was Tennessee therefore restored to the Union? Opposition presented itself everywhere. The Federal flag wherever waved was in the hands of individuals, and might indicate the true sentiments of the bearer, or might be upheld to cover and conceal the real disloyalty of his heart. Public bodies and representatives of established organizations made no such display. That Tennessee which one year previous reposed in peace under the folds of the national flag, now stood aloof and claimed that her allegiance was due to another power. This power she hoped would soon return and eject the invaders. Thus it was evident the territory was acquired by the Federal forces, but the hearty allegiance of the people would never be restored while the Confederate Government remained safe and strong in its seat at Richmond.

Meantime important events had taken place elsewhere. The military and naval expedition under Gen. Burnside was making important captures in the most populous and fertile part of the State of North Carolina. His force, being engaged at the time in active operations, was not included in the order of the President for a general advance. This army corps comprised three brigades. The first, under the command of Brig.-Gen. John G. Foster, consisted of the 23d, 24th, 25th and 27th Massachusetts, and the 10th Connecticut regiments; the second, under the command of Brig.-Gen. Jesse L. Reno, consisted of the 51st New York, 51st Pennsylvania, 21st Massachusetts, 6th New Hampshire, and 9th New Jersey regiments; the third, under the command of Brig.-Gen. John G. Parke, consisted of the 8th and 11th Connecticut, 53d and 89th New York, and a battalion of the 5th Rhode Island, together with battery F of the Rhode Island artillery. These three brigades numbered about 16,000 men and required more than 30 transports to take them to their destination—5 vessels to transport the horses, 8 or 10 to carry the supplies, a siege train and 2 pontoon bridge schooners, a division hospital, and one for the signal corps. The naval portion of the expedition was under the command of L. M. Goldsborough, subsequently raised to the rank of rear admiral.

The chief of staff was Commander A. L. Case, staff medical officer, S. C. Jones, signal officer, H. G. B. Fisher. The names of the steam gunboats and of their commanders were as follows:

Name.	Guns.	Commander.	Rank.
Stars and Stripes	7	A. Herden	Lieut. Commanding.
Valley City	4	J. C. Chaplin	" "
Underwriter	2	N. V. Jefford	" "

Total	51		

To these may also be added the Virginia, Louisiana, Young America, Jenny Lind. These steamers were of three classes: screw and side wheel tugs, navy screw gunboats, and armed ferry boats. Their armaments consisted chiefly of 30-pounder Parrotts rifled, and long smooth 32's, 64's, and some of much heavier caliber. A coast division of gunboats, with the transports, consisted of the Picket, 4 guns, Pioneer, 4 guns, Hussar, 4 guns, Vidette, 3 guns, Ranger, 4 guns, Chasseur, 4 guns.

The transport portion of the expedition was under the command of Samuel F. Hazard of the U. S. navy.

Nothing had been withheld that was necessary to secure success, and the accomplished officers, the disciplined and gallant men, and the abundant material awakened the most sanguine expectations on the part of the Government and the people.

The expedition sailed from Hampton Roads on the 12th of January, consisting of over 100 vessels of all classes.

The order to sail was issued on Saturday night the 11th, and by daylight on Sunday morning the largest portion of the fleet had passed outside the capes. Some vessels, and especially the water boats, refused to leave the capes. The first part of the day was pleasant, with a light wind from the southwest. During the afternoon it was thick weather, and the sailing vessels were generally obliged to cast off from the steamers and take care of themselves, and two or three of the canal boats, with hay and horses on board, broke away and were blown ashore. The expedition was bound to Hatteras Inlet, which is an entrance from the ocean to Pamlico Sound. It is a narrow passage with seven feet of water on the bar, and difficult to enter in rough weather without dan-

ger of grounding. The entrance to the inlet was commanded by two forts, which were captured by an expedition under Gen. B. F. Butler and Commodore Stringham during the preceding year. (*See* ANNUAL CYCLOPÆDIA, 1861—EXPEDITIONS.)

The wind changed to the southeast and continued blowing in that quarter for several days after the vessels began to arrive. This brought in a considerable sea or swell, which made it dangerous for all the vessels drawing much water to cross the bar and attempt to enter except at the top of the tide. Those drawing the least water got in first, the others anchored outside watching an opportunity. In this perilous situation, with a high sea, a strong wind blowing on shore, and shoal water, with a crooked channel, several days passed during which the fleet was endeavoring one by one to get within the inlet. The steamer City of New York grounded on the bar, and the sea swept clean over her and quickly reduced her to a wreck. The gunboat Zouave sunk in the inlet, and two or three other small vessels were equally unfortunate. Within the inlet the anchorage was narrow and the change of the tide brought the vessels in contact, and the roughness of the water caused a constant chafing of rigging and spars, and crashing of bulwarks.

For two days the wind and sea were so high as to prevent all communication with the outer vessels, or with each other. The New Jersey regiment was then called to enter upon its work, with mourning in its ranks. Its Colonel, J. W. Allen, and its surgeon, F. S. Weller, were drowned by the overturning of a small boat in the breakers at the inlet.

The gale increased; dark clouds swept down from the east and seemed almost to touch the vessels' masts as they swayed to and fro. A single person here and there appeared on some vessel's deck, holding on by the rail or the rigging, and a few scattered groups of the soldiers who had been landed, were seen hurrying on the beach as if in search of shelter from the fury of the blast. The tents of the Massachusetts 24th, which had been pitched on the beach, were swept away, and the poor soldiers spent a fearful night, exposed to the peltings of a pitiless storm, with yet a more fearful night to follow. Even the brave commander of the expedition was heard to exclaim in suppressed tones, "This is terrible! When will the storm abate?"

This violent storm was followed by a high tide, and on the 24th, nearly all the vessels which had arrived were within the entrance, and by the 26th repairs had been made and the force was ready to move. Fortunately the few Confederate gunboats on the sound kept aloof and made no attack.

Preparations were now made for a speedy movement. The object was to proceed up Pamlico Sound, and open the passage into Albemarle Sound. This passage was called Croatan Sound, and was bounded on the one side by the mainland and on the other by Roanoke Island, which is low and marshy. As this was the principal communication between Pamlico and Albemarle, the enemy had erected fortifications in the upper part of the passage, on Roanoke Island, and had also obstructed it by piles and sunken vessels. They had a fleet of seven small gunboats, prepared to contest the passage, and stationed near the batteries.

On the 3d of February, Gen. Burnside issued the following general orders:

HEADQUARTERS, DEPARTMENT OF NORTH CAROLINA, PAMLICO SOUND, *February* 3, 1862.

GENERAL ORDERS, No. 5.

This expedition being about to land on the soil of North Carolina, the General Commanding desires his soldiers to remember that they are here to support the Constitution and the laws, to put down rebellion, and to protect the persons and property of the loyal and peaceable citizens of the State. In the march of the army, all unnecessary injuries to houses, barns, fences, and other property will be carefully avoided, and in all cases the laws of civilized warfare will be carefully observed.

Wounded soldiers will be treated with every care and attention, and neither they nor prisoners must be insulted or annoyed by word or act.

With the fullest confidence in the valor and the character of his troops, the General Commanding looks forward to a speedy and successful termination of the campaign.

By command of Brig.-Gen. A. E. BURNSIDE.
LEWIS RICHMOND, Asst. Adj.-Gen.

Further orders relative to signals, and to the disembarkation of the troops, were issued on the next day.

Everything being ready, the forward movement commenced at half past seven on the morning of the 5th of February. The naval squadron following the flag officer's vessel, headed the fleet. Their course was at first southward, following the zigzag channel, until it finally became north by west. At regular and short intervals the gunboats filled their places in the line, and with scarcely perceptible motion, steadily stretched away to the horizon. Next came the transports and gunboats carrying the troops, consisting of sixty-five vessels, of all classes and characters. Each brigade formed three columns, headed by the flag ship of the brigade. Each large steamer had one, two, and in some instances, three schooners in tow. The aisles between the three columns of vessels were kept unbroken, through the whole length, which extended almost two miles over the surface of the sound, except by the two or three small propellers whose duty consisted in conveying orders.

At sundown the fleet came to anchor about ten miles from the southern point of Roanoke Island. The next morning, at eight o'clock, it was in motion. The preceding beautiful day was followed by a stormy one, and anchors were again dropped at the entrance of the inlet or strait. This was the day on which Fort Henry was taken. The next morning was clear, and the sun rose in a sky marked only with clouds enough to give it peculiar beauty. By ten o'clock all preparations had been made, and the

gunboats moved forward, entering the inlet. The flag ship of Gen. Burnside next followed, but the remainder of the transports were detained nearly two hours. A gun fired from one of the Confederate gunboats announced the approach of the Federal squadron. At half past eleven the conflict commenced between the gunboats at long range, but it was noon before they were engaged in close action. The Confederate boats gradually retired, drawing their opponents within range of the forts, when fire was opened by the latter.

The contest between the boats and the battery continued with varied energy during the next three hours, in which time the barracks within the forts were consumed. At three o'clock the troops began to land, under the protection of the fire of three of the gunboats. At this time the Confederate gunboats drew near and recommenced the action, which was continued until their ammunition was exhausted. They then retired up the inlet or sound. The battery continued to fire until the Union gunboats retired for the night. The bravery of the Confederate defence was admitted on every side. On the Federal side, five had been killed and ten wounded. In the fort, the Confederates reported one killed and three wounded, and in the gunboats five wounded, and the largest gunboat sunk, and another disabled.

By four o'clock the transports had all arrived, and the first body of troops were landed unobstructed at five o'clock. In a short time six thousand were on shore, and the remainder of the force landed soon after.

The next morning the troops started in three columns, the centre under Gen. Foster, composed of the 23d, 25th, and 27th Massachusetts, and 10th Connecticut; the next, or left flanking column, under Gen. Reno, consisted of the 21st Massachusetts, 51st New York, 9th New Jersey, and 51st Pennsylvania; the third, or right flanking column, under Gen. Parke, consisted of the 4th Rhode Island, first battalion of the 5th Rhode Island, and the 9th New York. The approach to the enemy was by a road through a swamp, on each side of which was a thick underbrush. An earthwork about thirty-five yards wide had been erected across the road for defence. The attack was bravely made, as it had been planned, upon the enemy's position, and after a most spirited and splendid defence, as reported by the assailants, they were obliged to give way before this overwhelming force, and retiring further up the island were overtaken, and Col. Shaw, their commander, surrendered. Thus six forts, forty guns, over two thousand prisoners, and three thousand stand of arms were captured. The Union loss was thirty-five killed and two hundred wounded. The Confederate loss in killed was reported to be sixteen, and wounded thirty-nine. The artillery of each side consisted of some heavy pieces, such as 100-pound Parrotts, and a 100-pound Sawyer gun captured by the Confederates some time previous. The contest between the battery and the gunboats, in the morning, was unimportant, and the latter proceeded to remove the obstructions in the channel.

On the reception of the report of Gen. Burnside at Washington the following order was issued by President Lincoln:

WASHINGTON, *Feb.* 15.

The President, Commander-in-Chief of the Army and Navy, returns thanks to Brigadier-General Burnside and Flag Officer Goldsborough, and to General Grant and Flag Officer Foote, and the land and naval forces under their respective commands, for their gallant achievements in the capture of Fort Henry and at Roanoke Island. While it will be no ordinary pleasure for him to acknowledge and reward in a becoming manner the valor of the living, he also recognizes his duty to pay fitting honor to the memory of the gallant dead. The charge at Roanoke Island, like the bayonet charge at Mill Springs, proves that the close grapple and sharp steel of loyal and patriotic citizens must always put the rebels and traitors to flight. The late achievements of the navy show that the flag of the Union, once borne in proud glory around the world by naval heroes, will soon again float over every rebel city and stronghold, and that it shall forever be honored and respected as the emblem of Liberty and Union in every land and upon every sea.

By order of the President.

(Signed) EDWIN M. STANTON,
Secretary of War.
GIDEON WELLES, Secretary of the Navy.

On the afternoon of the next day after the surrender, Commodore Rowan, by order of Com. Goldsborough, with fourteen steamers, proceeded toward Elizabeth city. It is the capital of Pasquotank county, North Carolina, situated on the Pasquotank river, about twenty miles from its mouth and thirty miles from Roanoke Island. That night the fleet anchored about eighteen miles from the city. Next morning, the 10th, on approaching the town, seven Confederate gunboats and one schooner were discovered, and after a brief contest they retired under the guns of a small fort, were set on fire, and abandoned. This fort on Cobb's Point, mounting four guns, was also abandoned. At the same time the town was deserted by the Confederate forces, after having set on fire some of the houses, which were burned. All the Confederate gunboats were destroyed excepting one. Two were killed and about twelve wounded on the Union gunboats. The loss on the other side is not known. Commander Rowan immediately sent the gunboats Louisiana, Underwriter, Commodore Perry, and Lockwood, under Lieut. A. Maury, to Edenton, on the west end of Albemarle Sound. It is the capital of Chowan county and is at the head of Edenton bay, which opens into Albemarle Sound a little below the mouth of Chowan river. On the 12th the town was taken possession of by Lieut. Maury. Part of a light artillery regiment, from one to three hundred in number, withdrew without firing a gun. No fortifications existed, nor was any opposition made. Eight cannon and one schooner on the stocks were destroyed. Two schooners with four thousand bushels of corn were captured on the sound, and six bales of cotton taken from the custom house wharf.

On the next day, the 14th, Lieut. Jeffers was sent by Lieut. Maury with the gunboats Underwriter, Lockwood, Shawshene, and Whitehead, towing a couple of schooners to the mouth of the Chesapeake and Albemarle canal. The enemy were found engaged in placing obstructions in the mouth of the canal. These works were completed by sinking the two schooners and burning all that remained above water. This small expedition then returned to the mouth of North River. This was two days before the surrender of Fort Donelson. On the 18th of February the joint commanders of the Union forces in North Carolina issued the following proclamation, declaring to the people of that State the object of their mission:

ROANOKE ISLAND, NORTH CAROLINA, *February* 18, 1862.

To the People of North Carolina:

The mission of our joint expedition is not to invade any of your rights, but to assert the authority of the United States, and to close with you the desolating war brought upon your State by comparatively a few bad men in your midst.

Influenced infinitely more by the worst passions of human nature than by any show of elevated reason, they are still urging you astray to gratify their unholy purposes.

They impose upon your credulity by telling you of wicked and even diabolical intentions on our part; of our desire to destroy your freedom, demolish your property, liberate your slaves, injure your women, and such like enormities—all of which, we assure you, is not only ridiculous, but utterly and wilfully false.

We are Christians as well as yourselves, and we profess to know full well, and to feel profoundly, the sacred obligations of the character.

No apprehensions need be entertained that the demands of humanity or justice will be disregarded. We shall inflict no injury, unless forced to do so by your own acts, and upon this you may confidently rely.

Those men are your worst enemies. They, in truth, have drawn you into your present condition, and are the real disturbers of your peace and the happiness of your firesides.

We invite you, in the name of the Constitution, and in that of virtuous loyalty and civilization, to separate yourselves at once from these malign influences, to return to your allegiance, and not compel us to resort further to the force under our control.

The Government asks only that its authority may be recognized; and we repeat, in no manner or way does it desire to interfere with your laws constitutionally established, your institutions of any kind whatever, your property of any sort, or your usages in any respect.

L. M. GOLDSBOROUGH, Flag Officer,
Commanding North Carolina Blockading Squadron.
A. E. BURNSIDE, Brigadier-General,
Commanding Department of North Carolina.

It may be thought that this part of North Carolina was in a very defenceless condition. In many respects this was not so. It cost the United States two military and naval expeditions before it was reached. The first expedition, under the command of Gen. Benjamin F. Butler and Commodore S. H. Stringham, consisted of the steam frigates Minnesota and Wabash, and armed steamers Monticello, Pawnee, and Harriet Lane, and the steam transports Adelaide and George Peabody, and the tug Fanny. The steam frigate Susquehanna also joined the expedition. The military force consisted of 880 men. These forces captured the forts at the entrance of Hatteras Inlet, and made no further advance. The result of the expedition was the acquisition of the forts captured, the control of the island in which they were located, and the closing of the inlet against the passage of vessels running the blockade. The expedition under Gen. Burnside entered the inlet and captured the fortifications on Roanoke Island and destroyed the Confederate navy, when the country lay at its mercy. Small fortifications and some military force was found, however, at every town of any importance. No civil, commercial, or political changes were made such as to indicate that the inhabitants regarded themselves as restored to the Union. Those in whose hands was held the local civil and political power, retired to safe quarters upon the approach of the Federal force. They acknowledged another allegiance due to a power which they believed or hoped would yet be able to expel the Union troops. So long as that power retained its strength they either feared or declined to acknowledge allegiance elsewhere. That invariable follower of the invasion of hostile armies, the provost marshal, or military governor, attended the footsteps of the Burnside expedition as he has almost every other which has entered within the limits of the Confederate States during this year.

On the 19th of February a reconnoitring expedition left Edenton for Winton, the capital of Hereford county, situated near the head of navigation on the Chowan river, about fifty miles above its mouth. It consisted of the flotilla under the command of Commander Rowan and a company of Col. Hawkins' N. Y. regiment. This force had been informed at Elizabeth City, that five hundred Union men at Winton had raised "the Stars and Stripes" and desired protection. Upon arriving opposite the landing of the town, which was a short distance in the rear, a perfect shower of balls and buckshot were fired upon the advancing vessel. The river here is about a hundred yards wide and the banks high. The boats ascended and brought their guns to bear and fired several shells, and retired about eight miles down the river for the night. The next morning they returned and shelled the village. The military were landed and found it deserted, when the buildings were set on fire and burned.

The movements of the Federal forces caused efforts to be made by the State authorities to resist them. On the 22d Governor Clark issued the following proclamation:

NORTH-CAROLINIANS! Our country needs your aid for its protection and defence against an invading foe. The President of the Confederate States has made a requisition upon our State to complete her quota of troops in the field. Our own borders are invaded by the enemy in force, now threatening an advance to deprive us of liberty, property, and all that we hold dear, as a self-governing and free people. We must resist him at all hazards and by every means in our power. He wages a war for our subjugation—a war forced upon us in wrong and prosecuted without right, and in a spirit of vengeful wickedness without a parallel in the history of warfare among civilized nations.

As you value your rights of self-government and all the blessings of freedom—the hallowed endearments of home and fireside, of family and kindred—I call upon you to rally to their defence, and to sustain the noble and sacred cause in which we are engaged. North Carolina has always proved true, constant and brave, in the hour of trial and of danger. Never let it be said, that in the future she has failed to maintain her high renown. If we are threatened now more than heretofore, and upon our own soil, let our exertions be equal to every demand on our patriotism, honor, and glory. No temporary reverses dampened the ardor of your ancestors, even though the enemy marched in columns through the State. The fires of liberty still burned brightly in their breasts.

They were moved to new energy and resisted by gallant deeds, with abiding hope and unflinching courage and perseverance, bravely contending with enemies at home as well as the foreign foe, until, after a struggle of seven long years, our independence was achieved and acknowledged. Let us imitate their glorious example. The enemy is redoubling his efforts and straining every nerve to overrun our country and subjugate us to his domination—his avarice and ambition. Already it is proposed in their Congress to establish a territorial government in a portion of our State. Now is the time to prove our zeal and animate by example. I call upon the brave and patriotic men of our State to volunteer, from the mountains to the sea.

You are wanted both to fill up our quota in the confederate army and for the special defence of the State. I rely, with entire confidence, on a prompt and cheerful response to this call upon your patriotism and valor. Tender yourselves in companies and squads, under officers of your own selection. You will be at once accepted and organized into regiments under the laws that are or may be made, and which it is my duty to execute. The Adjutant-General will issue the necessary orders for this purpose.

Fellow citizens! Your first allegiance is due to North Carolina. Rally to her banners. Let every man do his duty and our country will be safe.

Given under my hand and the seal of the State, at Raleigh, this twenty-second day of February, 1862.

[Seal] HENRY T. CLARK.

Preparations were now made by Gen. Burnside for an attack upon Newbern. This city is situated at the confluence of the Neuse and Trent rivers, about fifty miles from Pamlico Sound near its southern extremity. It is second in commercial importance in the State, and is connected by railroad with Raleigh the capital. On the 11th of March the troops intended for the expedition were embarked and ordered with the naval force to rendezvous at Hatteras Inlet. The latter force was under Commander Rowan, Com. Goldsborough having been ordered to Hampton Roads. These forces having combined left Hatteras the next morning and arrived about sunset at Slocum's Creek, eighteen miles below Newbern, and the place selected for disembarking the troops. The landing was effected the next morning with great enthusiasm under cover of the gunboats, and after a toilsome march of twelve miles through the mud, the head of the column reached, that evening, within a mile and a half of the Confederate stronghold. The remainder came up during the night with eight pieces of artillery, chiefly boat howitzers. The gunboats shelled the road in advance of the march of the troops, and covered their encampment at night. Early the next morning Gen. Foster's brigade was ordered by Gen. Burnside to proceed up the main country road to attack the enemy's left, Gen. Reno up the railroad to attack the enemy's right, and Gen. Parke to follow Gen. Foster and attack the enemy in front, with instructions to support either or both brigades. The engagement which ensued continued for four hours, and resulted in carrying a continuous line of Confederate field work, over a mile in length, protected on the river flank by a battery of thirteen heavy guns and on the opposite flank by a line of redoubts over half a mile in length for riflemen and field pieces in the midst of swamps and dense forests. This line was defended by eight Confederate regiments of infantry, five hundred cavalry, and three batteries of field-artillery, each of six guns.

The position was finally carried by a brave charge, which enabled the Federal force to gain the rear of all the batteries between that point and Newbern. This was done by a rapid advance of the entire force up the main road and railroad, while the gunboats proceeded up the river throwing their shot into the forts and in front of the advancing forces. The enemy in retreating destroyed the country road bridge and the draw of the railroad bridge over the river Trent, thus preventing pursuit, and escaped by the railroad. Meantime the gunboats arrived at the wharves and commanded the city, but it was not occupied by the troops until Gen. Foster's brigade was brought up by the vessels. Thus eight batteries containing forty-six heavy guns, three batteries of light artillery containing six guns each, two steamboats, a number of sailing vessels, wagons, horses, a large quantity of ammunition, commissary and quartermasters' stores, forage, and two hundred prisoners were captured. The Union loss was ninety-one killed and four hundred and sixty-six wounded. The Confederate loss was severe, but not so great, as they were effectually covered by their works. They retired to Tuscarora about ten miles from Newbern. Gen. Gatlin being indisposed, they were commanded by Gen. O. B. Branch.

On the next day Gen. Burnside issued the following address to his force:

Headquarters, Dept. of North Carolina, Newbern, *March* 15.

General Order, No. 17.

The General Commanding congratulates his troops on their brilliant and hard won victory of the 14th. Their courage, their patience, their endurance of fatigue, exposure and toil, cannot be too highly praised.

After a tedious march, drawing their howitzers by hand through swamps and thickets, after a sleepless night, in a drenching rain, they met the enemy in his chosen position, found him protected by strong earthworks, mounting many and heavy guns, and in an open field themselves—they conquered. With such soldiers, advance is victory.

The General Commanding directs with peculiar pride, that, as a well-deserved tribute to valor in this second victory of the expedition, each regiment engaged shall inscribe on its banner the memorable name "Newbern."

By command of Brigadier-General
A. E. BURNSIDE.

Lewis Richmond, Adjutant-General.

On the 20th Gen. Parke's brigade commenced to march from Newbern for Beaufort, and on the 23d entered Moorhead city, thirty-six miles from Newbern, and found it evacuated. It is a short distance from Beaufort and connected by a steam ferry. A flag of truce was then sent over to Fort Macon, and a surrender demanded. This was refused, and vigorous measures were at once commenced to reduce it by a siege. Beaufort is the capital of Carteret county, situated at the mouth of Newport river, and a few miles from the sea. The harbor is the best in the State, and its entrance is defended by Fort Macon.

Meanwhile, on the 20th, a naval column consisting of the gunboats Louisiana, Delaware, and Com. Perry, with the transport Admiral, having on board eight companies of the 24th Massachusetts regiment, proceeded to Washington, a small town on the left bank of the Tar river about forty miles from Pamlico Sound. On the 25th, the force arrived before the town, and were received by the authorities without opposition. Below the town obstructions had been placed in the river, and abandoned fortifications were found on each shore adjacent. The commander, A. Maury, thus reported to his superior officer: "I found on further consultation with the authorities, on whom I made my demand for the restoration of the Hatteras Light property, that underlying an apparent acquiescence of the people of the town and neighborhood, in permitting the building of gunboats, and the construction of batteries to repel the approach of the Federal forces, was a deep-rooted affection for the old Union, and not a little animosity for its enemies; the latter element not being diminished by the importation of troops from a distant State. The result of this state of affairs was, as could be anticipated, the abandonment of its defences by the troops, followed by the destruction of what remained of Confederate property by the people. The launched gunboat had been towed several miles up the river, loaded with turpentine, and fired on the night of our arrival. A few hundred bushels of meal and corn left in the commissary store, were distributed to the poor by my orders. All the Hatteras Light property in the town was secured. The woods and swamps were represented as being alive with refugees from the draft. Many of them, encouraged by our presence, came in. They were bitter and deep in their denunciations of the secession heresy, and promised a regiment if called to aid in the restoration of the flag." This force returned to Newbern.

The force in the neighborhood of Fort Macon, however, was not idle. A detachment from Gen. Parke's brigade, consisting of the 4th Rhode Island and 8th Connecticut, on the night of the 25th, crossed over and took possession of Beaufort without opposition. In the day time this passage would have been resisted by the fort. No military force was found in the town. Preparations were now made seriously to invest the fort. All communication by land or water was cut off, and guns were put into position to reduce it. The garrison consisted of nearly five hundred men under command of Col. White. The regular siege operations commenced on the 11th of April, when a reconnoissance in force was made by Gen. Parke. The pickets of the enemy stationed on Bogue Beach, two miles from the fort, were driven in and a good situation for the siege guns was found. Everything being in readiness, on the morning of the 25th of April, fire was opened upon the fort from a breaching battery eleven hundred feet distant, and flanking mortars planted at a distance of about fourteen hundred yards, and behind sand banks which prevented the garrison from seeing them before the fire was opened. At the same time the blockading gunboats Daylight, Commander Lockwood; State of Georgia, Commander Armstrong; Chippewa, Lieut. Payson and bark Gemsbok, Lieut. Caverdy; approached the fort and began to fire. The three steamers assisted the bark, and kept under way, steaming round in a circle and delivering their fire as they came within range, a mile and a quarter distant from the fort. After an hour and a quarter, the sea became so rough and their fire consequently so inaccurate, that the fleet retired. The action however continued between the batteries and the fort until toward evening, when the latter was surrendered with the honors of war. All the guns on the side of the fort opposite that attacked, were dismounted, and also all but three of those bearing upon the Federal force, when it became untenable. The firing of the fleet did no injury to the fort. The Daylight was struck by an 8-inch solid shot which entered her quarter. Seven of the garrison were killed and eighteen wounded. One was reported killed on the Federal side.

While this siege was pressed forward, Gen. Burnside, in order to create the impression at Norfolk, Va., that he was approaching with his whole force, sent Gen. Reno with the 21st Massachusetts, 51st Pennsylvania, a part of the 9th and 89th New York, and 6th New Hampshire in that direction. Proceeding nearly to Elizabeth City, he disembarked at a point about three miles below, on the night of the 19th of April. Col. Hawkins was ordered forward with the 9th and 89th New York and the 6th New Hampshire toward South Mills, to be followed by Gen. Reno four hours after, upon getting the remaining troops ashore. Col. Hawkins lost his way and came in behind Gen. Reno on the march, and was ordered to follow. Having marched about sixteen miles, and within a mile and a half of South Mills, a Confederate force opened with artillery upon the advanced guard before it was discovered. They were found posted across the road, with their infantry in ditches, and their artillery commanding all the direct approaches. Their rear was protected by a dense forest. Gen. Reno or-

dered the 6th New Hampshire to form in a line on the left of the road and support the four pieces of artillery, while the 51st Pennsylvania and 21st Massachusetts filed to the right and passed over to the edge of the wood to turn the enemy's flank, and the New York regiments supported them. The effect of these movements, and the sharp firing that ensued, caused the enemy soon to retire in a rapid manner. The force rested until evening, and then withdrew to their boats. The Federal loss was fourteen killed and ninety-six wounded, and two taken prisoners. The Federal force remained on the field for seven hours, buried their dead, and transported all the wounded except fourteen, so severely wounded that they could not be moved, but who were comfortably provided for and left in charge of a surgeon and chaplain. "In obedience to orders," says Gen. Burnside, "Gen. Reno then returned to his fleet and embarked his men." Ten or fifteen prisoners were taken, most of whom belonged to the 3d Georgia regiment. The loss of the Confederate force was unknown; thirty killed and wounded were left on the field. They reported one regiment and three pieces of artillery as the entire force engaged.

On the 23d of April, a naval expedition consisting of the gunboats Lockwood, Whitehead, and Putnam, under Lieut. Flosser, was sent to obstruct the entrance of the Dismal Swamp canal. This was done by means of sinking a schooner, and filling the canal with brush, stumps, rails, and earth, and trunks of trees.

On the 6th of June, a sharp engagement occurred eight miles from Washington near Pactolus, between a Confederate force under Col. Singleterry and the 24th Massachusetts under Capt. Potter. This latter officer had been stationed at Washington with a small force, and hearing of the gathering of the enemy, obtained reënforcements, and successfully attacked them. Seven were killed and eleven wounded on the Federal side.

Some other military movements, to be hereafter stated, took place during the succeeding months. This portion of North Carolina was held by the Union forces throughout the year. Its ports were closed to imports for the Confederate States, and its commerce ceased entirely. (*See* NORTH CAROLINA.) The principal part of the forces under Gen. Burnside were subsequently brought to Newport News, where they remained in transports until the Army of the Potomac returned to Alexandria. They then united with it under Gen. Pope.

This expedition in its outfit, vigor of action, and complete achievements, showed that it was commanded by an experienced, judicious, and able officer. It was necessarily confined in its operations to the shores of the country, where it could act in concert with the gunboats. Public expectation had looked forward to see it penetrate the State of North Carolina, and occupy the eastern line of railroad connecting the Southern States with Richmond. It never was strong enough to entertain such a thought. Brave old North Carolina has always had a high reputation for soldiers. Her white population is over six hundred thousand, and her militia must have been nearly one sixth of this number. Gen. Burnside's military force was about sixteen thousand strong. His expedition had not been in the field four months, when the Government found itself entirely without soldiers who could be sent to reënforce him.

The achievements of the military and naval expedition to the coast of South Carolina and Georgia, should be described in this connection. For an account of its outfit, departure, and occupation of Hilton Head and adjacent islands, *see* ANNUAL CYCLOPÆDIA, 1861—EXPEDITIONS. Undoubtedly there was a double object in this expedition. On the one hand it was designed to seize and hold as large a district of the coast as might be practicable, and on the other prepare a base for future operations against Charleston and Savannah, South Carolina, and the great State of Georgia. The point designed for its headquarters, and for the base of future operations, was occupied at once. The first labor was to prepare Port Royal for the purposes in view. Immense cargoes of commissary stores, ordnance, and means of transportation were landed from the large ocean steamers which accompanied the expedition. Extensive warehouses were erected for the preservation of the stores; while for the security of the depot whence supplies were to be drawn for all portions of the command, and to enable as many troops as possible to be spared for distant operations, long lines of defence had to be constructed. While the works were pushed forward reconnoissances were made in every direction to ascertain the position and strength of the enemy, to learn the depth of water in the numerous creeks and inlets, and remove all obstructions that might have been placed in important channels of communication.

At the beginning of the year it was observed to be the design of the enemy to shut up the Federal troops in Port Royal Island, by placing obstructions in Coosaw river and Whale Branch, by constructing batteries at Port Royal Ferry, at Seabrook, and at or near Boyd Creek, and by accumulating men in the vicinity so as to be able to throw a force of twenty-five hundred or three thousand upon any of these points, at a short notice. It was determined to arrest their designs peremptorily, and in such a manner as would serve a subsequent purpose. Commander E. R. P. Rodgers had charge of the naval force of the expedition, consisting of the gunboats Ottawa, Lieut. Stevens, Pembina, Lieut. Bankhead, and four armed boats of the Wabash, carrying howitzers, and under the command of Lieuts. Upsher, Lane, Irwin, and Master Kempff, which were to enter the Coosaw by Beaufort river; and the gunboat Seneca, Lieut. Ammen, and tug boat Ellen, Master Budd, which were to move up Beaufort river, and approach the batteries at Seabrook and

Port Royal Ferry by Whale Branch. The tug boat E. B. Hale, Master Foster, was added to the expedition after it started. The part assigned to the naval force was to protect the landing of the troops at Haywood's plantation, the first point of debarkation, to cover the route of the advancing column, and the second point of debarkation, and to assail the batteries on their front. The military force consisted of the 47th and 48th New York regiments, Cols. Frazer and Perry, the 79th New York, 50th and 100th Pennsylvania, and 8th Michigan, with a naval howitzer force of forty men, under Lieut. Irwin. After the forces, landed at the two points, had marched, driving all of the enemy who were seen before them, and formed a junction, they were divided into centre, right, and left wings, and ordered forward to attack the batteries of the enemy. A sharp skirmish of half an hour ensued upon their approach to the battery, when the enemy retired, and the works were completely destroyed. An incomplete work at Seabrook, two miles from Port Royal Ferry, was destroyed at the same time. The result of the expedition was the destruction of the two batteries, driving the enemy five miles into the rear, and rendering the Broad and Coosaw rivers secure for the gunboats. The land force was commanded by Gen. Stevens. Eleven privates were wounded and two of them missing. Four of the enemy were found dead.

While all the improvements were urged forward at Hilton Head, reconnoissances were constantly made. The next movement of interest took place on the 26th of January, in consequence of explorations which had been previously made, and which were of such an adventurous nature as to entitle to honor the parties engaged. The city of Savannah is about fifteen miles from the mouth of the river of that name, and situated on its right or southern bank. The approach to it by water is defended by Fort Pulaski (*see* ANNUAL CYCLOPÆDIA, 1861—FORTS), a casemated work on Cockspur Island, at the mouth of the river, and Fort Jackson, a barbette work on the mainland, only four miles below the city. The left bank of the river is formed by a succession of islands, and the channel is also interrupted by large and numerous ones. The network of creeks and bays which surround Hilton Head terminates to the southward in Calibogue Sound, which is separated from Savannah river at its mouth by Turtle and Jones Islands. The waters that bound two sides of Jones Island, which is triangular in shape, are called Mud and Wright rivers; the latter is the more southern, and separates Jones from Turtle Island, which lies next to Dawfuskie Island, the western shore of Calibogue Sound. The water on the third side of Jones Island is the Savannah river. This island is about five miles long, and between two and three broad. About half way between its upper and lower angles, and fronting on the Savannah, is Venus Point, where a Federal battery was subsequently placed to cut off communication between Savannah and Fort Pulaski.

Lieut. J. H. Wilson, of the topographical

engineers, becoming convinced, from information obtained of negro pilots and others, that an interior passage existed, connecting Calibogue Sound with the Savannah river, and which, if passable by gunboats, might lead to cutting off Fort Pulaski from communication with Savannah, was despatched by Gen. Sherman on a reconnoissance. Taking with him two row boats, and about seventy men of the Rhode Island regiment, he left Calibogue Sound with his negro crew and pilots, and ventured by night through the intricate passages. At this time the Union troops had not advanced beyond Dawfuskie Island, and on some of these rivers Confederate pickets were still stationed. The oars of the reconnoitring party, however, were muffled, and they passed by the pickets without discovery. Under cover of the darkness they penetrated several miles up one of these streams, leaving the pickets in their rear. If discovered, retreat or escape would have been impossible for them, as there was no opportunity of returning except on the same route by which they came. The river which they thus

explored led into no other channel, but wasted away in a marsh. They got back into another stream. Finally the creeks became so shallow as to be unnavigable for any but the smallest craft. At one point an artificial channel had been constructed about two hundred yards long, called Wall's Cut. This led to the rear of Jones Island, and into both the Mud and Wright rivers, both of which, as stated above, empty into the Savannah, the former about six miles, and the latter about two miles above Fort Pulaski. This cut had, however, been obstructed by three rows of piles driven across its entire width, and by a large brig sunk in the same direction, across the channel. At high tide the reconnoitring party were able to get over the piles and pass the brig. The reeds on both banks were very high, and the cut altogether invisible from Savannah, while the marshy nature of the region prevented any approach by land. There was danger of meeting pickets or stray parties of sportsmen, shooting wild ducks abounding in those waters. The party remained concealed by the reeds during the day, and at night pursued their explorations. They found the channel of Mud river impassable for large vessels by reason of its shallow water, but got easily through the Wright river, and rounding the point of Jones Island, entered the Savannah. There they remained nearly all night, moving at times under the guns of Fort Pulaski, near enough to hear the challenge of the lonely sentinels, or the conversation of the gunners on the parapets before tattoo. They found the depth and bearings of the channel in all directions; went up the river beyond Venus Point, and even passed the entrance of Mud river, and then returned into the Wright, establishing to their own satisfaction that gunboats of ten feet draught could pass by that route into the Savannah, without incurring any material risk from the guns of Pulaski, which were at the nearest point a mile and three-fourths distant.

Upon this report Gen. Sherman caused another and fuller reconnoissance to be made. Major Beard of the 48th New York was sent to remove the obstructions in Wall's Cut. A party of volunteer engineers and a company of the 7th Connecticut accompanied him; and while some kept a careful watch, others were engaged at the obstructions. They were removed in three weeks of unremitting night labor. All the piles were sawn off a foot below the bottom of the cut, and the brig turned lengthwise, leaving a passage wide enough for the gunboats. All this was accomplished without awakening the suspicions of the enemy, whose pickets had been withdrawn. All stragglers, white or black, who approached were seized; of these, four or five whites seemed to have been hunting, for they were in boats loaded with game; others were slaves who had escaped from Savannah. All were astonished to see their captors there. No scouts were ever detected, and no boats passed on the Savannah river except the steamers plying to Fort Pulaski from Savannah. On some nights the rain fell furiously, but the work proceeded. After the obstructions had been removed, a violent storm that lasted for several days rendered any further operations impracticable; still the pickets kept up their watch on the dismal and muddy marsh, and every straggler or spy was seized.

A naval reconnoissance was now made by Capt. John Rodgers and Lieut. Barnes, in company with Lieut. Wilson. Like all the others it was made in the night. The party were able to pass through the cut, take soundings in the Wright river, enter the Savannah, and ascertain all that was necessary to determine the practicability of the passage of gunboats. Capt. Rodgers reported favorably, and was willing to command the movement. It was determined therefore that a reconnoissance in force should be made, and preparations were commenced for that purpose.

It had always been known that a passage existed on the right side of the Savannah, leading from Warsaw Sound through the Wilmington river until it narrows into St. Augustine Creek, and finally empties into the Savannah just below Fort Jackson. This passage was defended by a battery. Information was however obtained from negroes of another passage leading up also from Warsaw, but much nearer to the Savannah and entering it lower down than St. Augustine Creek. This second passage is called Wilmington Narrows. Several reconnoissances were made along its course and the result was a determination by Gen. Sherman and Com. Dupont to send a force up Wilmington Narrows, at the same time that operations should begin in the vicinity of Wall's Cut. Accordingly on the 26th of January, Gen. Wright with the 4th New Hampshire, Col. Whipple, 6th Connecticut, Col. Chatfield, and 97th Pennsylvania, Col. Guess, on the transports Cosmopolitan, Boston, and Delaware were convoyed by the gunboats Ottawa, Seneca, and others under Capt. C. H. Davis to Warsaw Sound. The force then proceeded up the Wilmington Narrows for some miles and in the rear of Fort Pulaski until it arrived at a place where piles had been placed to obstruct its further progress. The gunboats remained at this spot a short distance from the Savannah during the night, while reconnoissances were made on land and water. In the morning Capt. John Rodgers with three gunboats appeared on the opposite side of the Savannah in Wall's Cut. Two of these vessels passed into Wright river. About eleven o'clock in the forenoon Com. Tatnall and the five Confederate steam gunboats attempted to pass down the river with scows in tow, when fire was opened upon them by the gunboats on each side. The country on each side is so flat that but little obstruction to the sight intervened. In less than half an hour Com. Tatnall and one of his vessels were driven back; the other three escaped injury apparently and made

good their passage down to Fort Pulaski. They returned at low water and escaped uninjured. The objects of the reconnoissance being now attained the forces returned to Hilton Head. The gunboats in Wright river did not go down as far as the entrance to the Savannah, as they would be in reach of the guns of Fort Pulaski, and Capt. Rodgers feared that they might get aground. This withdrawal of the boats from Wall's Cut was regarded by the Confederate commander as an abandonment of the purpose to enter the Savannah by that route. Confidence was thus restored in the minds of the citizens of Savannah, and the wisest hoped that the fort, which was the key of the city, might be enabled to detain their enemy for an indefinite length of time. The greatest consternation therefore prevailed in Savannah when the fort was ultimately captured.

Gen. Sherman now commenced a series of measures by which to cut off all communication between the city and the fort. This consisted in the planting of batteries on the river. The most important one was at Venus Point on the river side of Jones Island. A road was made with almost herculean labor across its marshy surface from Wall's Cut, by the 48th New York regiment. Over this road the cannon were brought and placed in the battery. An attack was made on this battery by the Confederate gunboats on the 14th of March. After an engagement of an hour they were driven off. Another battery was placed on the extremity of Long Island, which was on the other side of the channel of the river, and still another was placed on floats at the mouth of Mud river. Some weeks were passed before this work was done and the communication entirely cut off. Preparations were next commenced for the reduction of the fort. This was to be done by batteries established on Tybee Island adjacent to Cockspur Island, on which the fort is located. These were not completed until the 9th of April, when the following order for the bombardment of the fort was issued:

General Orders—No. 17.

HEADQUARTERS UNITED STATES FORCES,
TYBEE ISLAND, GA., *April* 9, 1862.

The batteries established against Fort Pulaski will be manned and ready for service at break of day tomorrow.

The signal to begin the action will be one gun from the right mortar of Battery Halleck (2,400 yards from the work), fired under the direction of Lieutenant Horace Porter, chief of ordnance; charge of mortar 11 lbs., charge of shell 11 lbs., elevation 55°, and length of fuse 24″.

This battery (two 13-inch mortars) will continue firing at the rate of fifteen minutes to each mortar alternately, varying the charge of mortars and length of fuse, so that the shells will drop over the arches of the north and northeast faces of the work, and explode immediately after striking, but not before.

The other batteries will open as follows, viz:

Battery Stanton (three 13-inch mortars, 3,400 yards distant), immediately after the signal, at the rate of fifteen minutes for each piece, alternately from the right; charge of mortar 14 lbs., charge of shell 7 lbs., elevation 45°, and length of fuse 23″, varying the charge of mortar and length of fuse as may be required. The shells should drop over the arches of the south face of the work, and explode immediately after striking, but not before.

Battery Grant (three 13-inch mortars, 3,200 yards distant), immediately after the ranges for Battery Stanton have been determined, at the rate of fifteen minutes for each piece, alternately from the right; charge of shell 7 lbs., elevation 45°, charge of mortar and length of fuse to be varied to suit the range, as determined from Battery Stanton. The shells should drop over the arches of the south face of the work, and explode immediately after striking, but not before.

Battery Lyon (three 10-inch columbiads, 3,100 yards from the work), with a curved fire, immediately after the signal, allowing ten minutes between the discharges for each piece, alternating from the right; charge of guns 17 lbs., charge of shell 3 lbs., elevation 20°, and length of fuse 20″; the charge and length of fuse to vary as required. The shell should pass over the parapet and into the work, taking the gorge and north face in reverse, and exploding at the moment of striking, or immediately after.

Battery Lincoln (three 8-inch columbiads, 3,045 yards from the work), with a curved fire, immediately after the signal, allowing six minutes between discharges for each piece, alternating from the right; charge for gun 10 lbs., charge of shell 1½ lbs., elevation 20°, and length of fuse 20″, directed the same as Battery Lyon, upon the north face and gorge in reverse, varying the charge and length of fuse accordingly.

Battery Burnside (one 13-inch mortar, 2,750 yards from the work), firing every ten minutes, from the range as obtained for Battery Sherman; charge of shell 7 lbs.; elevation 45°; charge of mortar and length of fuse varying as required from those obtained for Battery Sherman. The shells should drop on the arches of the north and northeast faces, and explode immediately after striking, but not before.

Battery Sherman (three 10 inch-mortars, 2,650 yards from the work), commencing immediately after the ranges for Battery Grant have been determined, and firing at the rate of fifteen minutes for each piece, alternating from the right; charge of shell 7 lbs.; elevation 45°; charge of mortar and length of fuse to be fixed to suit the range as determined from Battery Grant. The shells should drop over the arches of the north and northeast faces.

Battery Scott (three 10-inch and one 8-inch columbiads, 1,677 yards from the work), firing solid shot and commencing immediately after the barbette fire of the works has ceased. Charge of 10-inch columbiads 20 lbs., elevation 4½°; charge of 8-inch columbiad 10 lbs., elevation 5°. This battery should breach the pancoupé between the south and southeast faces, and the embrasure next to it in the southeast face: the elevation to be varied accordingly, the charge to remain the same. Until the elevation is accurately determined each gun should fire once in ten minutes; after that, every six or eight minutes.

Battery Sigel (five 30-pounder Parrotts and one 24-pounder James', 1,620 yards from the work), to open with 4¾″ fuse on the barbette guns of the fort at the second discharge from Battery Sherman. Charge for 30-pounders, 3¼ lbs.; charge for 24-pounder, 5 lbs.; elevation, 40° for both calibers.

As soon as the barbette fire of the work has been silenced, this battery will be directed, with percussion shells, upon the walls, to breach the pancoupé between the south and southeast face, and the embrasure next to it in the southeast face, the elevation to be varied accordingly, the charge to remain the same. Until the elevation is accurately determined, each gun should fire once in six or eight minutes; after that, every four or five minutes.

Battery McClellan (two 42 and two 32-pounder James', 1,620 yards from the work) opens fire immediately after Battery Scott. Charges for 42-pounder, 8 lbs.; charge for 32-pounder, 6 lbs.; elevation of 42-

pounder, 4½°, and 32-pounder, 4°. Each piece should fire once every five or six minutes after the elevation has been established, charge to remain the same. This battery should breach the works in the pancoupé between the south and southeast faces, and the embrasure next to it in the southeast face. The steel scraper for the grooves should be used after every fifth or sixth discharge.

Battery Totten (four 10-inch siege mortars, 1,685 yards from the work) opens fire immediately after Battery Sigel, firing each piece about once in five minutes; charge of mortar, 3½ lbs.; charge of shell, 3 lbs.; elevation, 45°.; and length of fuse, 18¾". The charge of mortar and length of fuse vary, so as to explode the shell over the northeast and southeast faces of the work.

If any battery should be unmasked outside the work Battery Totten should direct its fire upon it, varying the charge of mortars and length of fuse accordingly.

The fire from each battery will cease at dark, except especial directions be given to the contrary.

A signal officer at Battery Scott, to observe the effects of the 13-inch shells, will be in communication with other signal officers stationed near Batteries Stanton, Grant, and Sherman, in order to determine the range for these batteries in succession.

By order of Brig.-Gen. Q. A. GILMORE.

Before the bombardment was commenced on the 10th, the fort was summoned to surrender. The following is the correspondence:

HEADQUARTERS DEPARTMENT OF THE SOUTH,
TYBEE ISLAND, GA., *April* 10, 1862.

To the Commanding Officer, Fort Pulaski:

SIR: I hereby demand of you the immediate surrender and restoration of Fort Pulaski to the authority and possession of the United States.

This demand is made with a view to avoiding, if possible, the effusion of blood which must result from the bombardment and attack now in readiness to be opened.

The number, caliber, and completeness of the batteries surrounding you, leave no doubt as to what must result in case of refusal: and as the defence, however obstinate, must eventually succumb to the assailing force at my disposal, it is hoped you will see fit to avert the useless waste of life.

This communication will be carried to you under a flag of truce by Lieut. J. H. Wilson, United States Army, who is authorized to wait any period not exceeding thirty minutes from delivery for your answer.

I have the honor to be, sir, your most obedient servant, DAVID HUNTER,
Major-General Commanding.

Gen. Hunter had been placed in command of the Federal forces, and Gen. Sherman, before completing the enterprises he had commenced, was recalled. The Confederate commander of the fort replied to this demand as follows:

HEADQUARTERS, FORT PULASKI, *April* 10, 1862.

Maj.-Gen. David Hunter, commanding on Tybee Island:

SIR: I have to acknowledge receipt of your communication of this date, demanding the unconditional surrender of Fort Pulaski.

In reply I can only say that I am here to defend the fort, not to surrender it.

I have the honor to be, very respectfully, your obedient servant, CHAS. H. OLMSTEAD,
Colonel First Volunteer regiment of Georgia, commanding post.

On this refusal, and at twenty-three minutes of eight o'clock in the morning the fire was opened. Three minutes after the fort replied from a 10-inch barbette gun, and soon after the firing became general on both sides. After eighteen hours the fort was breached in the southeast angle, and at the moment of surrender, 2 o'clock P. M. of the 11th, preparations had been commenced for storming. Forty-seven guns, a great supply of fixed ammunition, forty thousand pounds of powder, and large quantities of commissary stores, and three hundred and sixty prisoners were taken.

It was expected at Savannah that an attack would be immediately made upon Fort Jackson, to be followed by its surrender, and that of the city also. Nothing of the kind, however, was contemplated. The Union commander was in no condition to underteke such an enterprise, and actually was obliged to content himself with holding what had been acquired. The possession of Fort Pulaski prevented any further attempts to run the blockade into Savannah by the mouth of the river.

While these operations had been going on against Fort Pulaski, the other portion of the military and naval forces at Hilton Head had not been idle. On the 28th of February Com. Dupont sailed from Port Royal in the steam frigate Wabash, accompanied by the following vessels: Ottawa, Mohican, Ellen, Seminole, Pawnee, Pocahontas, Flag, Florida, James Adger, Bienville, Alabama, Key Stone State, Seneca, Huron, Pembina, Isaac Smith, Penguin, Potomska, armed cutter Henrietta, armed transport McClellan, the latter having on board the battalion of marines under the command of Maj. Reynolds, and the transports Empire City, Marion, Star of the South, Belvidere, Boston, and George's Creek, conveying a brigade under the command of Brig.-Gen. Wright.

On the 2d of March the expedition came to anchor in St. Andrew's Sound, and on the next morning a portion of the gunboats and transports, under Commander Drayton, proceeded down Cumberland Sound toward Fernandina on the north extremity of Amelia Island. Cumberland Sound is the passage between Cumberland Island and the mainland. Amelia Island is next in order below Cumberland Island; the north point of the former and the south point of the latter being nearly opposite. The remainder of the fleet proceeded down outside to the entrance between Cumberland and Amelia Islands. The object of sending a portion of the fleet through Cumberland Sound was to turn the works on the south end of Cumberland and the north end of Amelia Islands. The enemy having received information of the expedition, abandoned their works on its approach and retired. Fort Clinch on Amelia Island was taken possession of and garrisoned. The town of Fernandina, which was almost deserted, was occupied by the Union force, and a small steam boat loaded with stores was overtaken and captured. The Confederate force stationed at Fernandina consisted of the 4th Florida, Col. Hopkins, with a number of companies of cavalry and light artillery. Reconnoitring expeditions were sent out in different directions with successful results. New Fernandina on Amelia Island, about a mile and a half from Old Fer-

nandina, is the eastern termination of the railroad across the peninsula. The western termination is Cedar Keys, a small town located on one of a group of small islands close to the west coast of Florida. It was captured by a Union force on the 16th of January. On the same night that Fernandina was taken Commander E. R. P. Rodgers in the Ottawa ascended the St. Mary's river, and took possession of the town of that name, driving out a picket of the enemy's cavalry. This town and Fernandina were uninjured. Preparations for a most vigorous defence were found to have been made at both places, but the State troops were probably required for the Confederate army. The difficulties arising from the indirectness of the channel and from the shoalness of the bar would have added to the defences by keeping approaching vessels a long time exposed to fire under great disadvantages. Having turned the property over to the military power the expedition was ready for further movements.

A principal and ultimate object of this entire expedition was, in its first conception, to take and keep under control the whole line of seacoast, especially of the State of Georgia. Having heard at Fernandina that the works at Brunswick in Georgia had been abandoned, Com. Dupont on the 7th of March despatched a force, consisting of the Mohican, Pocahontas, and Potomska, under Commander Gordon, to hold the place. It is a port of entry in the extreme southeastern part of the State of Georgia, pleasantly situated on Turtle river, and has a spacious harbor. It is the eastern terminus of the Brunswick and Florida railroad. Commander Gordon with his vessels crossed the bar on the 8th, and anchored at sundown within two miles of the forts commanding the channel. The next day he took possession of the batteries on St. Simon's Island and on Jekyl Island. When abandoned, all their guns and ammunition had been removed. The town also was entirely deserted, and nearly all the property which could be removed had been taken away. Proclamations were posted by Commander Gordon on several public buildings, urging the inhabitants to return to their homes and promising protection to the property of all good citizens. The force then retired to the vessels.

On the 13th with the Potomska and Pocahontas Commander Gordon proceeded from St. Simon's Sound through the inland passage to Darien on the Altamaha river. Piles had been driven in two places across the passage, which were removed. Darien like Brunswick was entirely deserted, and also all the plantations on St. Simon's Island. But one white man was found on the island, and one old negro, although about fifteen hundred troops had been quartered there a few months previous. The former appeared to be in great dread of the coming of the Union force, and had been told that they would destroy even women and children.

At the same time when this force was ordered to Brunswick on the 7th of March, Com. Dupont sent the gunboats Ottawa, Seneca, Pembina, and Huron, with the Isaac Smith and Ellen under Lieut. Stevens to St. John's river with instructions to cross its difficult and shallow bar, feel the forts if still held, and push on to Jacksonville and even Pilatka and capture river steamers. St. John's river empties into the Atlantic some twenty-five miles south of Fernandina. On the 11th Lieut. Stevens succeeded in crossing the bar and anchored for the night. During the evening large fires were seen in the direction of Jacksonville, which proved to have been made under the order of the Confederate commander, Gen. Trapier, by the burning of mills, houses, and property belonging to Northern men suspected of entertaining Union sympathies. On arriving at Jacksonville during the next day, the corporate authorities came off to Lieut. Stevens and gave up the town. The 4th New Hampshire, Col. Whipple, was landed and took possession. The location of the town is on the northern bank of the St. John's, about twenty-five miles from its mouth. It contains about three thousand inhabitants. From almost all the houses a white flag was displayed on the approach of the force, and men, women, and children of all colors turned out to see the display. A Union feeling was aroused and encouraged. A public meeting was called and resolutions adopted in favor of organizing a Union State Government and calling a convention to meet at Jacksonville for that purpose on the 10th of April, then approaching. On the 8th of April the Union commander, Gen. Wright, evacuated the town, and then sent information of his movement to the Confederate commander, Gen. Trapier, inviting him to come and re-occupy the town, and requesting him to take care of the women and children remaining. On the 9th the Confederate officers stood on the dock and watched the vessels sailing away. On the 10th, the Union convention, which had been warmly encouraged by these retiring officers with their force, was called to assemble. Of course it was not held. The more active Unionists had through fear left with the fleet.

Com. Dupont, immediately after having despatched Commander Gordon to Brunswick and Lieut. Stevens to Jacksonville, as above stated, proceeded himself toward St. Augustine. Arriving off the harbor he ordered Commander Rodgers to approach the city with a flag of truce, presuming that if there were any people along the coast likely to remain in their houses, they would be found at St. Augustine. As Commander Rodgers approached the city, a white flag was hoisted upon one of the bastions of Fort Marion. As he landed upon the wharf and inquired for the chief authority, he was soon joined by the mayor and conducted to the city hall, where the municipal authorities were assembled. His report to Com. Dupont proceeds as follows:

I informed them that, having come to restore the

authority of the United States, you had deemed it more proper to send in an unarmed boat to inform the citizens of your determination, than to occupy the town at once by force of arms; that you were desirous to calm all apprehensions of harsh treatment, and that you should carefully respect the persons and property of all citizens who submitted to the authority of the United States; that you had a single purpose to restore the state of affairs which existed before the rebellion.

I informed the municipal authorities that so long as they respected the authority of the Government we serve, and acted in good faith, municipal affairs would be left in their own hands, so far as might be consistent with the exigencies of the times. The mayor and council informed me that the place had been evacuated the preceding night by two companies of Florida troops, and that they gladly received the assurances I gave them, and placed the city in my hands.

I recommended them to hoist the flag of the Union at once, and in prompt accordance with the advice, by order of the mayor, the national ensign was displayed from the flag staff of the fort. The mayor proposed to turn over to me the five cannon mounted at the fort, which are in good condition and not spiked, and also the few munitions of war left by the retreating enemy. I desired him to take charge of them for the present, to make careful inventories and establish a patrol and guard, informing him that he would be held responsible for the place until our force should enter the harbor.

I called on the clergymen of the city, requesting them to re-assure the people, and to confide in our kind intentions toward them. About 1,500 people remain in St. Augustine, about one-fifth of the inhabitants having fled. I believe there are many citizens who are earnestly attached to the Union, a large number who are silently opposed to it, and a still larger number who care very little about the matter. There is much violent and pestilent feeling among the women; they have a theatrical desire to figure as heroines! Their minds have doubtless been filled with the falsehoods so industriously circulated in regard to the lust and hatred of our troops.

On the night before our arrival a party of women assembled in front of the barracks and cut down the flag staff, in order that it might not be used to support the old flag. The men seemed anxious to conciliate in every way. There is a great scarcity of provisions in the place. There seems to be no money, except the wretched paper currency of the rebellion, and much poverty exists.

In the water battery at the fort are three fine army 32-pounders and two 8-inch sea coast howitzers, with shot and some powder. Several good guns were taken away some months ago. The garrison of the place left from St. Augustine at midnight on the 18th, for Smyrna, where are said to be about 800 troops, a battery, the steamer Carolina, and a considerable quantity of arms and ammunition.

The fort at this place is the second one of the old forts in Florida of which possession had then been recovered. The other is Fort Clinch at Fernandina. St. Augustine is farther south than Jacksonville and situated on the north shore of Matanzas Sound about two miles from the sea, from which it is separated by the island of Anastasia. The population exceeds two thousand.

The next object of Com. Dupont was to visit Musquito Inlet, fifty miles farther south. It had been reported to him that the inlet was resorted to by vessels of light draft for the introduction of arms transhipped from English vessels and steamers at the English colony of Nassau. Accordingly the Penguin, Lieut. T. A. Budd, and the Henry, Andrew S. W. Mather, master, were sent in advance and ordered to cross the bar and establish an inside blockade and guard from incendiarism the live oak timber on the Government lands. On their arrival they started with four or five light boats and forty-three men and moved southward into Mosquito lagoon, but when returning, they were unexpectedly fired on, upon landing, and the commanding officers and three men were killed, and several wounded, and two taken prisoners.

By these operations along the Florida coast some small steamers and other vessels were captured, and the blockade was rendered more effective by the actual occupation of the principal ports. The country appeared to be undefended and entirely unprepared to make any resistance against the overwhelming Union force. Many fortified positions were found, but the soldiers were not seen. The white population in Florida in 1860 was 77,778, and during the previous year the State sent about ten thousand men to the Confederate army. Her military strength was thus reduced to a feeble condition. Whatever progress was made in restoring the Union was defeated by the sudden evacuation of Jacksonville and the abandonment of many Union citizens there. It taught the people of the State that so long as the Confederate Government existed in security, it might at any time return and demand their allegiance.

Commodore Dupont now returned to Port Royal, leaving a small force at all the points taken. On his arrival on the 27th of March, he learned that the formidable Confederate batteries on Skidaway and Green islands had been abandoned, by which complete control was obtained of Warsaw and Ossibaw sounds and the mouths of Vernon and Wilmington rivers, which form a part of the approaches from the south to Savannah.

Toward Charleston the only movement of importance which had been made by Gen. Sherman was the occupation of Edisto Island by the 47th New York. This took place on the 11th of February. This island is about twelve miles long and nine broad, and is about ten miles from the mainland, twenty miles from the Charleston and Savannah railroad, and forty miles from Charleston. The island was found to be entirely deserted except by the negroes. Considerable cotton was gathered, although the greater portion of that produced had been burned.

On the 31st of March Maj.-Gen. David Hunter assumed the command of the department of the South, consisting of the States of South Carolina, Georgia, and Florida. Thus Gen. Sherman was relieved of the command and assigned to another post. In a proclamation issued on the same day, Gen. Hunter announced the division of his department into three districts as follows:

1. The first, to be called the Northern District, will comprise the States of South Carolina, Georgia, and

all that part of Florida north and east of a line extending from Cape Canaveral northwest to the Gulf coast, just north of Cedar Keys and its dependencies, and thence north to the Georgia line. The headquarters of this district will be at Port Royal, South Carolina, and Brig.-Gen. H. W. Benham (who will relieve Brig.-Gen. Sherman) is appointed to command this district and the troops therein, which troops will constitute a division, to be called the First Division of the Department of the South.

2. The second, to be called the Southern District, will comprise all of Florida and the islands adjacent, south of the said line from Cape Canaveral, extending northwest to the Gulf coast, just north of Cedar Keys. The headquarters of this district and the troops will remain, as at present, under command of Brig.-Gen. J. M. Brannan.

3. The third, to be called the Western District, will comprise that part of Florida west of the line before described as running north from Cedar Keys to the Georgia line. The headquarters of this district will remain at Fort Pickens, as at present, with Brig.-Gen. L. G. Arnold commanding.

The preparations, commenced by Gen. Sherman for the capture of Fort Pulaski, were pushed forward by Gen. Hunter, until the fort surrendered in April, as has been above described. The subsequent movements under Gen. Hunter consisted in reconnoissances in force toward Charleston. The southern boundary of the harbor of Charleston is formed by James Island. This island is bounded on the north by the harbor of Charleston and the Ashley river, on the northwest by Wappoo Creek, on the south and southwest by Stono river, and on the east are a few small islands and the ocean. Wappoo Creek connects with the Ashley river in the immediate rear of Charleston, and by entering Stono river and into Wappoo Creek, gunboats can reach Charleston. The next island south of importance is John's Island, and the next Edisto Island. Between these and Hilton Head is a number of islands of much less size. Early in May Com. Dupont ordered the channel of Stono river to be sounded out and buoys to be placed. This was completed on the 20th of May, and the gunboats Unadilla, Pembina, and Ottawa crossed the bar and entered the river. Along the river, owing to its great importance as a means of access to the city, a vast number of earthwork fortifications had been erected. All of these were abandoned as the gunboats proceeded. The distance from the mouth of the Stono to Wappoo Creek is about eight miles. Little was done in the river by the fleet for many days, except silencing some of the Confederate batteries, and preventing the erection of others in commanding points likely to be needed on the march toward Charleston, of which this was designed as a preliminary movement. No signs of the approaching army appeared for two weeks, during which several reconnoissances were made by the fleet. The fire of the forts at the entrance to Wappoo Creek was drawn from two large rifled cannon at the lower battery of seven guns. The Huron and Pembina were anchored within range of these guns and within three miles of Charleston. From their mastheads could be seen a dozen spires, cupolas and observatories, the top masts of two or three large ships, and nearly all the northwestern part of the city. On the 2d of June the military advance with Gens. Hunter and Benham arrived and were landed on James Island, to await the coming of Gen. Wright with cavalry, artillery, and additional infantry from the Edisto. An important fortification which had been vacated was occupied on James Island. On the 5th the additional forces arrived, and a series of skirmishes ensued for the next ten days both on James and John's islands. On the 13th a sharp contest occurred between several New York and Pennsylvania regiments and the 47th Georgia.

Meanwhile a diversion was made by a small Confederate force against Hilton Head, which caused much consternation there, but effected nothing further.

It was soon manifest that the Confederate force had been increased, and nothing of importance could be further effected by Gen. Hunter without reënforcements. As the Government had none at this time to send, not being able to reënforce the more important army in Virginia, military operations were comparatively suspended.

Up to this time movements of some importance had taken place in Missouri and Arkansas. Two sharp skirmishes for the numbers engaged took place,—the one at Mt. Zion, eighteen miles southwest of Sturgeon, on the 28th of December, 1861, and the other near Fayette, on the 8th of January of the year 1862. In the former, Brig.-Gen. Prentiss commanded, and in the latter Major Torneru. They produced no special influence on the campaign in that department. On the 29th of January, Gen. Earl Van Dorn took command of the Confederate forces in the trans-Mississippi district, which comprised a considerable portion of the State of Missouri, with his headquarters at Little Rock. On the preceding day, the division of the Union army under the command of Col. Jeff. C. Davis left Marseilles for Springfield. It consisted of four regiments—the 8th

and 22d Indiana, 37th Illinois, and 9th Missouri, with two batteries, and three companies of cavalry. The other forces immediately moved forward, and combined under Gen. Curtis. On the 11th of February this army moved forward from Lebanon, formed in three divisions—the right under Col. Davis, the centre under Gen. Sigel, and the left under Col. Carr. Six miles from Springfield on the 12th, a skirmish took place between the advance of this force and a body of Confederate troops, with serious loss to both sides. During the night a continuous fire was kept up between the pickets. On the next morning the Confederate force had retreated, and Gen. Curtis occupied Springfield without opposition. About six hundred sick and a large amount of stores were left behind by the Confederate General Price. Gen. Halleck, in command of this department, sent the following despatch to the commander-in-chief, Gen. McClellan, at Washington:

ST. LOUIS, *February* 14, 1862.

The flag of the Union floats over the court house in Springfield. The enemy retreated after a short engagement, leaving a large amount of stores and equipments, which were captured by Gen. Curtis. Our cavalry are in close pursuit.

H. W. HALLECK, Major-General.

Such had been Gen. Halleck's skilful management of this department, that a few days previous he had received the following despatch from the Secretary of War:

WASHINGTON, *February* 8, 1862.

Maj.-Gen. Halleck, St. Louis: Your energy and ability received the strongest commendation of this Department. You have my perfect confidence, and you may rely upon my utmost support in your undertakings. The pressure of my engagements has prevented me from writing you, but I will do so fully in a day or two.

EDWIN M. STANTON, Secretary of War.

As Gen. Price retreated Gen. Curtis followed rapidly in pursuit. On the 16th his army had advanced sixty-nine miles south of Springfield, and on the 18th had crossed the Arkansas line. Several skirmishes took place in the mountain defiles. The following despatch was sent to Washington by Gen. Halleck:

ST. LOUIS, *February* 18, 1862.

To Maj.-Gen. McClellan, Washington:

The flag of the Union is floating in Arkansas. Gen. Curtis has driven Price from Missouri, and is several miles across the Arkansas line, cutting up Price's rear, and hourly capturing prisoners and stores. The army of the Southwest is doing its duty nobly.

H. W. HALLECK, Major-General.

On the 19th Gen. Price had been reënforced by Gen. McCulloch, and made a stand at Sugar Creek crossing, but was defeated after a short engagement, and retreated. Squads of recruits from Missouri, on their way to join the Confederate force, were captured at this time, among whom was Brig.-Gen. Edward Price, son of Gen. Price. On the 26th Gen. Price had been driven from his stronghold at Cross Hollows, leaving his sick and wounded, and such stores as he could not destroy. He burned his extensive barracks at that place. The Federal forces had now, for some days, been subsisting chiefly on provisions which they had captured.

On the 27th, Gen. Halleck sent the following despatch to Washington:

HEADQUARTERS, ST. LOUIS, *February* 27.

Maj.-Gen. McClellan:

Gen. Curtis has taken possession of Fayetteville, Arkansas, capturing a large number of prisoners, stores, baggage, &c.

The enemy burnt a part of the town before they left. They have crossed the Boston Mountains in great confusion. We are now in possession of all their strongholds.

Forty-two officers and men of the Fifth Missouri cavalry were poisoned at Mud Town by eating poisoned food which the rebels left behind them. The gallant Capt. Dolfort died, and Lieut. Col. Von Dutch and Capt. Lehman have suffered much, but are recovering. The anger of our soldiers is very great, but they have been restrained from retaliating upon the prisoners of war. H. W. HALLECK, Major-General.

Gen. Price thus reported his retreat from Missouri, under date of Feb. 25:

"About the latter part of January my scouts reported that the enemy were concentrating in force at Rolla, and shortly thereafter they occupied Lebanon. Believing that this movement could be for no other purpose than to attack me, and knowing that my command was inadequate for such successful resistance as the interests of my army and the cause demanded, I appealed to the commanders of the Confederate troops in Arkansas to come to my assistance. This, from correspondence, I was led confidently to expect, and relying upon it, I held my position to the last moment, and, as the sequel proved, almost too long; for on Wednesday, February 12, my pickets were driven in, and reported the enemy advancing upon me in force. No resource was now left me except retreat, without hazarding all with greatly unequal numbers upon the result of one engagement. This I deemed it unwise to do. I commenced retreating at once. I reached Cassville with loss unworthy of mention in any respect. Here the enemy in my rear commenced a series of attacks running through four days. Retreating and fighting all the way to the Cross Hollows in this State, I am rejoiced to say my command, under the most exhausting fatigue, all the time with but little rest for either man or horse, and no sleep, sustained themselves, and came through, repulsing the enemy upon every occasion with great determination and gallantry. My loss does not exceed four to six killed and some fifteen to eighteen wounded."

On the 1st of March, Gen. Curtis issued the following address to the people of the Southwest:

HEADQUARTERS ARMY OF THE SOUTHWEST, CAMP HALLECK, ARK., *March* 1, 1862.

I have received a private communication from an intelligent writer, a citizen of Arkansas, who says: "We, as citizens, have left our homes and firesides for the purpose, as we supposed, of having to defend ourselves against a brutal soldiery that would lay waste our humble homes, and outrage the chastity of our wives and daughters, and place our own lives in jeopardy. We

have organized what is called Home Guard Companies, partly of Union men and partly of Southern men, all of whom are anxious to return to their homes. We are happy to find that you and your men are not composed of that class of persons commonly called jayhawkers, who do not regard the rights of citizens and property, but confine the war to its legitimate object."

The falsehoods circulated concerning us have driven thousands from their homes, and I take the liberty of responding publicly to the sentiments expressed by the writer, because these falsehoods have involved the whole community in the troubles which he seeks to mitigate.

The only legitimate object of the war is peace, and the writer only does me justice when he says I adhere to this legitimate object. Peaceable citizens shall be protected as far as possible. I act under strict orders of Maj.-Gen. Halleck. The flight of our foes from their camps, and the imitation of their conduct by the citizens, in fleeing from their homes, leaving their effects abandoned as it were for the victors, have much embarrassed me in my efforts to preserve discipline in my command, as these circumstances offered extraordinary temptations.

The burning of farms and fields of grain in Missouri, and extensive barracks and valuable mills in Arkansas by the enemy, has induced some resentments on the part of my troops, which I have severely punished. Necessary supplies for my command could not keep up with my rapid movements, and peaceable citizens not being at home to sell them to my quartermasters, I am compelled to take them without purchase, making settlement difficult and doubtful; occasioning irregularities which I have always labored to counteract. If peaceably disposed citizens will stay at home, or return home, and check the clandestine, stealthy warfare that is carried on under the cover and cloak of peaceable citizens, much of the havoc of war will be avoided, and many poor families can be protected from distress and misery. I have followed the war-path through the entire State of Missouri, have seen the havoc and devastation surrounding it, and I deplore the prospect of these disasters in the virgin soil of Arkansas.

Armed men, in the garb of citizens, are concealed by citizens, and the unfortunate condition of Missouri will be transferred to Arkansas, if you allow this complicity of yourselves in the struggle. If you do not discriminate by requiring soldiers to wear some distinctive badge, you must not complain if we cannot discriminate.

There is no honor, no glory, no good that can be gained by taking up arms in this way, to defend your homes, for we do not wish to molest them if you are peaceably disposed. We only wish to put down rebellion by making war against those in arms, their aiders and abettors. We come to vindicate the Constitution, to preserve and perpetuate civil and religious liberty, under a flag that was embalmed in the blood of our Revolutionary fathers. Under that flag we have lived in peace and prosperity until the flag of rebellion involved us in the horrors of civil war.

We have restored the Stars and Stripes to northwestern Arkansas, where I am glad to find many who rejoice to see the emblem of their former glory, and hope for a restoration of the peace and happiness they have enjoyed under its folds. A surrender to such a flag is only a return to your natural allegiance, and is more honorable than to persist in a rebellion that surrendered to the national power at Forts Henry and Donelson, at Nashville and at Roanoke, and throughout the most powerful Southern States. Why then shall the West be devastated to prolong a struggle which the States of Maryland, Virginia, Kentucky, North Carolina, and Tennessee cannot successfully maintain?

Disband your companies; surrender your arms; for in all instances where men in arms have voluntarily surrendered and taken the oath of allegiance to our common country, they have been discharged. No prisoners have, to my knowledge, been shot or hung, or cruelly treated by us.

I know of no instance where my troops have treated females with violence, and I have not heard of a complaint of any kind. I enjoin on the troops kindness, protection, and support for women and children. I shall, to the best of my ability, maintain our country's flag in Arkansas, and continue to make relentless war on its foes, but shall rejoice to see the restoration of peace in all the States and Territories of our country —that peace which we formerly enjoyed and earnestly desire; and I implore for each and all of us that ultimate, eternal peace "which the world cannot give or take away." I have the honor to be,

Very respectfully, your obedient servant,

SAMUEL R. CURTIS,
Brig.-Gen. Commanding Army of the Southwest.

On reaching Arkansas the forces of Gen. Price were rapidly reënforced by regiments which had been stationed in Arkansas and the Indian Territory. Knowing this fact, Gen. Curtis expected an attack would soon be made upon him. He therefore selected Sugar Creek, as the strongest of several strong places taken from the enemy, to make a stand against any and all odds. The position of Gen. Curtis's force on the 6th of March was as follows: The first and second divisions, under Gens. Sigel and Asboth, were four miles southwest of Bentonville under general orders to move round to Sugar Creek about fourteen miles east. The third division, under Col. Jeff. C. Davis, had moved to take position at Sugar Creek, under orders to make some preparatory arrangements and examinations for a stand against the enemy. The fourth division was at Cross Hollows under command of Col. E. A. Carr, about twelve miles from Sugar Creek on the main telegraph road from Springfield to Fayetteville. The number of his force is stated by Gen. Curtis to have been not more than 10,500 cavalry and infantry with forty-nine pieces of artillery. The following were the forces engaged in the battle of Pea Ridge: 1st division, under command of Col. Osterhaus,—36th Illinois, 12th Missouri, 17th Missouri, battalion of 3d, two battalions of Benton Hussars cavalry, one battalion 39th Illinois cavalry, batteries A and B, twelve guns. A brigade, consisting of the 25th and 44th Illinois, was commanded by Col. Coler. Another brigade was commanded by Col. Greusel.

The second division, commanded by Brig.-Gen. Asboth, consisted of the 2d Missouri, Col. Schæfer; 2d Ohio battery, six guns, Lieut. Chapman; 15th Missouri, Col. Joliet; 6th Missouri cavalry, Col. Wright; light battery of six guns, Capt. Elbert; battalion 4th Missouri cavalry, Maj. Messaur. These two divisions were commanded by Gen. Sigel.

The third division, commanded by Brig.-Gen. Jeff. C. Davis, consisted of 2 brigades: the 1st, commanded by Col. Barton, was composed of the 8th, 18th and 22d Indiana, and an Indiana battery of six guns. The 2d brigade, commanded by Col. White, was composed of the 37th Illinois, 9th Missouri, 1st Missouri cavalry, and a battery of four guns.

The fourth division, commanded by Col. Carr, consisted of 2 brigades; the 1st, commanded by Col. Dodge, was composed of the 4th Iowa, 35th

Illinois, and an Iowa battery. The 2d brigade, commanded by Col. Vandever, consisted of the 9th Iowa, 25th Missouri, 3d Illinois cavalry, and a battery. There were also two battalions of the Iowa 3d cavalry and a mountain howitzer battery of four guns. A considerable number of sick soldiers belonging to many of these regiments had been left at Rolla and Lebanon.

On the 5th of March, a cold, blustering day, snow having fallen so as to cover the ground, as Gen. Curtis was engaged in writing, not apprehending an immediate attack, he was informed by scouts and fugitive citizens that the enemy were rapidly approaching to give battle. His cavalry would be at Elm Springs, twelve miles distant, that night, and his infantry had then passed Fayetteville. Couriers were immediately sent to Gen. Sigel and Col. Carr to move with their divisions to Sugar Creek.

The Confederate forces were under the command of Gen. Van Dorn, who had arrived at their camp on the 2d of March. They were stated to be composed of between twenty-five and thirty thousand men, as follows: Missouri troops under Brig.-Gen. Price; Arkansas, Louisiana, and Texan troops under Brig.-Gen. McCulloch; Choctaw, Cherokee, and Chickasaw Indians under Brig.-Gen. Pike.

Gen. Sigel, upon receiving the orders of Gen. Curtis to march to Sugar Creek, and becoming aware of the dangerous position of his command, immediately ordered Col. Schæfer to break up his camp, and send the cavalry company to Osage Springs to cover his right flank and to march with his regiment to Bentonville. All the other troops he ordered to be prepared to march at two o'clock on the next morning. Commencing his march in the morning, he reached Bentonville, and, retaining a small force to set as a rear guard, he sent his train forward. At ten o'clock it was reported that large masses of troops, consisting of infantry and cavalry, were moving from all sides toward the front and both flanks of the rear guard at Bentonville. By a mistake a part of this force designed to act as rear guard had gone forward, leaving about six hundred men with five pieces of the light battery. These troops were ordered by Gen. Sigel to march in the following order: two companies of the 12th Missouri regiment at the head of the column deployed on the right and left as skirmishers, followed by the light battery; one company of the same regiment on the right and one on the left of the pieces, marching by the flank, and prepared to fire by ranks to the right and left, the remainder of the regiment being behind the pieces; two companies of cavalry to support the infantry on the right and left, and the rest of the cavalry with one piece of artillery following in the rear. Thus the troops advanced slowly in this formation, modified from time to time according to circumstances, fighting and repelling the enemy in front, on the flanks, and rear, whenever he stood or attacked, for five hours and a half, when reenforcements from Gen. Curtis arrived. What made this march a more difficult achievement, was the condition of the roads, which were in many places very narrow and badly cut up. This movement brought Gen. Sigel's division to the west end of Pea Ridge, where he formed a junction with Gen. Davis and Col. Carr.

On this day Gen. Curtis had been engaged in diligently preparing earthwork defences and cutting timber to check the progress of the enemy along the Fayetteville road, where they were confidently expected by him. But during the day and the ensuing night Gen. Van Dorn moved his entire army around the west side of Gen. Curtis's army, so that Gen. Price occupied the Fayetteville road north of Gen. Curtis's camp, while Gens. McCulloch and McIntosh lay north of Gen. Sigel. Thus the Confederate forces fronted south, and the division under Gen. Price formed their left wing. The distance apart of the main bodies of the two wings of each army was nearly three miles, thus forming in fact four distinct armies. Gens. Van Dorn and Price were opposed to Gen. Curtis, who had with him Gen. Davis and Cols. Carr and Asboth, leaving one division to Gen. Sigel opposed to Gens. McCulloch and McIntosh. Gen. Curtis was thus compelled to make a change of front, and formed it almost two miles further north and resting on the brow of a range of hills fronting north, called Pea Ridge. In this position the enemy occupied the line of retreat for Gen. Curtis, if defeated. The battle commenced on the 7th on the right of Gen. Curtis's column, and raged furiously during the entire day. The brunt of it was borne by Col. Carr's division. The Confederate forces, owing to their superior numbers, the numerous and deep ravines and the thick brush which covered the hills, succeeded in driving the Union right from the ground occupied in the morning, with a severe loss on both sides. They encamped on the battle ground during the night, and the right wing of Gen. Curtis fell back nearly a mile. The field occupied by this portion of both armies during the day did not exceed three fourths of a mile in diameter.

On the left wing Gen. McCulloch commenced in the morning by moving his force to the south and east, evidently intending to form a junction with Gens. Van Dorn and Price. Gen. Sigel, perceiving this movement and the effect it would have toward surrounding the Federal force, sent forward three pieces of light artillery, with a supporting force of cavalry, to take a commanding position and delay the movement of the enemy until the infantry could be brought into proper position for an attack. Hardly had the artillery obtained their position and opened fire, when an overwhelming force of the enemy's cavalry came down upon them, scattering the cavalry and capturing the artillery. This terrible onslaught of the enemy allowed their infantry to reach unmolested the cover of a dense wood. On the west of this

wood was a large open field. Here and in the surrounding wood a protracted struggle ensued between Gen. McCulloch and the forces of Col. Osterhaus. But the arrival of Gen. Davis's force, as a reënforcement, so strengthened Gen. Sigel that the enemy were finally routed and driven in all directions. At the same time Gens. McCulloch and McIntosh and a number of the Confederate officers were killed.

Thus the right wing of Gen. Curtis was defeated, and his left was victorious. The discipline of the right wing, however, was such as to keep the troops completely together, while the right wing of the enemy, which was defeated, was greatly disorganized in consequence of their loss of officers and lack of discipline. During the night all the Confederate forces formed a junction on the ground held by their left wing, which was a strong position, and they felt confident of a complete victory on the next day. On the Federal side the prospect was gloomy. The night was too cold to sleep without fires, and their position and nearness to the enemy would not allow fires along the advance lines. The men were exhausted by two days' fighting and the loss of sleep. The enemy's forces, in far superior numbers, held the only road for their retreat, and nearly a thousand of their companions were dead or wounded. No alternative was presented to them but to conquer or be destroyed.

With the rising sun the battle commenced. Col. Carr's division had been reënforced by a large part of that of Gen. Davis, thus enabling the right barely to hold its position. Gen. Sigel began to form his line of battle by changing his front so as to face the right flank of the enemy's position. For this purpose he first ordered the 25th Illinois, Col. Coler, to take a position along a fence in open view of the enemy's batteries, which at once opened fire upon the regiment. He next ordered a battery of six guns, partly rifled twelve-pounders, into a line one hundred paces in the rear of the 25th infantry, on a rise of ground. The 15th Missouri then formed into a line with the 25th Illinois on their left, and another battery of guns was similarly disposed a short distance behind them. Thus more infantry with batteries in their rear was placed until about thirty pieces of artillery, each about fifteen or twenty paces from the other, were in continuous line, the infantry in front lying down. Each piece opened fire as it came in position, and the fire was so directed as to silence battery after battery of the enemy.

For two hours the Confederate forces stood unshaken before that fire, with their crowded ranks decimated and their horses shot at their guns. One by one their pieces ceased to reply. Then onward crept the infantry and onward came the guns of Gen. Sigel. The range became shorter and shorter. No charge of the enemy could face those batteries or venture on that compact line of bayonets. They turned and fled. Again the Union line was advanced with a partial change of front, when an order to charge the enemy in the woods was given. Then the infantry rising up pressed forward into the dense brush, where they were met by a terrible volley, which was fiercely returned; volley followed volley, still the line pushed forward until more open ground was obtained, when the Confederate force broke in confusion. As Gen. Sigel advanced, Gen. Curtis also ordered the centre and right wing forward. The right wing turned the left of the enemy and cross-fired into his centre. This placed him in the arc of a circle. The charge was then ordered throughout the whole line, which utterly routed their forces as above stated, and compelled them to retire in complete confusion, but rather safely through the deep and almost impassable defiles of Cross Timbers. Gen. Sigel followed toward Keetsville, and the cavalry continued the pursuit still further. The Union loss in this battle was 212 killed, 926 wounded, and 124 missing. The Confederate killed and wounded was larger in numbers, with a loss of nearly 1000 prisoners. Among their killed were Gens. McCulloch and McIntosh.

On the 9th Gen. Van Dorn, under a flag of truce, requested permission to bury his dead, which was readily granted. In the reply to this request Gen. Curtis said: "The General regrets that we find on the battle-field, contrary to civilized warfare, many of the Federal dead, who were tomahawked, scalped, and their bodies shamefully mangled, and expresses the hope that this important struggle may not degenerate to a savage warfare."

To this statement, Gen. Van Dorn replied: "He hopes you have been misinformed with regard to this matter, the Indians who formed part of his forces having for many years been regarded as civilized people. He will, however, most cordially unite with you in repressing the horrors of this unnatural war; and that you may coöperate with him to this end more effectually, he desires me to inform you that many of our men who surrendered themselves prisoners of war, were reported to him as having been murdered in cold blood by their captors, who were alleged to be Germans. The general commanding feels sure that you will do your part, as he will, in preventing such atrocities in future, and that the perpetrators of them will be brought to justice, whether German or Choctaw."

Gen. Curtis in answer further said: "I may say, the Germans charge the same against your soldiers. I enclose a copy of a letter from Gen. Sigel, addressed to me before the receipt of yours, in which the subject is referred to. As 'dead men tell no tales,' it is not easy to see how these charges may be proven, and the General hopes they are mere 'camp stories,' having little or no foundation. The Germans in the army have taken and turned over many prisoners, and the General has not before heard murder charged against them; on the contrary, they have seemed peculiarly anxious to exhibit

the number of their captured as evidence of their valor. Any act of cruelty to prisoners, or those offering to deliver themselves as such, on the part of the soldiers of this army, coming to the knowledge of the General commanding, will be punished with the extreme penalty of the law."

The following is Gen. Halleck's despatch to Washington, announcing this battle:

ST. LOUIS, March 10, 1862.

To Maj.-Gen. McClellan:

The army of the Southwest, under Gen. Curtis, after three days' hard fighting near Sugar Creek, Arkansas, has gained a most glorious victory over the combined forces of Van Dorn, McCulloch, Price, and McIntosh. Our killed and wounded are estimated at one thousand. That of the enemy still larger. Guns, flags, provisions, &c., captured in large quantities. Our cavalry is in pursuit of the flying enemy.

H. W. HALLECK, Major-General.

The Confederate force retired south of the Boston Mountains unpursued by Gen. Curtis, to obtain reënforcements and to recover from their loss. Meantime reënforcements were sent to Gen. Curtis from Kansas and Missouri. He fell back to Keetsville, and remained through the month. On the 5th of April, it being supposed that Gen. Price was moving on Springfield, Missouri, Gen. Curtis began a march in that direction. On that day he advanced eigh teen miles and on the next twenty, to the junction of Flat Rock with James river. Failing in an attempt to cross the James, the force moved to Galena, where a crossing was effected in a rain storm. On the next day, the 9th, Bear Creek, thirteen miles, was reached, and on the 10th Forsyth, eighteen miles, where the army was concentrated. The high water of the river delayed active operations. Gen. Price, with a body of mounted men, was encamped about five miles south and on the other side of the river. On the 16th of April an expedition was sent out under Col. McCrellis to destroy some saltpetre works located eight miles below the Little North Fork, south side of White river. It was entirely successful. About ten thousand pounds nearly prepared for transportation were destroyed. The army next moved to West Plains, eighty-seven miles, thence to Salem, Arkansas, which is southeast of Forsyth, Mo., and distant one hundred and seventeen miles. Thence it advanced to Batesville, crossed the White river, and took the route to Little Rock, the capital of the State. It advanced to Searcy, fifty miles from Little Rock, where an order was received from Gen. Halleck to send ten regiments by a forced march to Cape Girardeau and thence to Corinth. The army then fell back to Batesville, which is the capital of Independence county and the most important town in the northeastern part of the State. It is situated on the White river about four hundred miles from its mouth. The river is navigable to this point for small steamers. Such was the scarcity of supplies that the army suffered severely. An expedition was fitted out in June from Memphis to descend the Mississippi to the mouth of Arkansas and thence up the White river to Batesville. (See page 66.) It was unsuccessful. Supplies were subsequently sent by land from Missouri, which reached Gen. Curtis about the 1st of July. His position during this period was critical, and excited much apprehension, as he was known to be nearly destitute of provisions, far distant from the sources of supply, and surrounded in the midst of a wilderness by foes. From Batesville he now advanced to Jacksonport at the confluence of the White and Black rivers, thence passing through Augusta and Clarendon he reached Helena on the Mississippi river, one hundred and seventy-five miles from Batesville.

It was reported soon after that Confederate troops under Gen. Price were crossing the Mississippi at a point between Napoleon and Vicksburg, and Gen. Curtis started with a body of troops on transports to make an exploration. The steam ferry boat at Napoleon, upon the approach of Gen. Curtis, was withdrawn up the Arkansas river, whither he followed and captured it with fifteen other ferry and flat boats. A large number of boats were destroyed on the Arkansas by this expedition, which soon after returned to Helena. Gen. Curtis was then absent until the close of September, when he was appointed to command the department of Missouri, containing the States of Missouri and Arkansas and the adjacent Indian Territory, with his headquarters at St. Louis. Helena continued to be occupied by the Federal troops, but active military operations were suspended. This closed the campaign of Gen. Curtis.

After the departure of Gen. Curtis from Helena on the 15th of November, an expedition under Gen. Alvin P. Hovey, consisting of eight thousand infantry and cavalry, started for the White river; but in consequence of new bars which had formed, and the low stage of the water, it entirely failed of the object intended, and returned. The command of the post was then taken by Gen. Steele, who had arrived with a division of troops. Subsequently Gen. Hovey was sent upon an expedition from Helena into Mississippi to coöperate with Gen. Grant on his advance into that State. The particulars of this expedition are stated in connection with the campaign of Gen. Grant.

The subsequent military operations in Arkansas exerted no special influence on the conduct of the war. They may be briefly stated in this place. The Confederate forces in the State, in October, were estimated to consist of five thousand men under Gen. Hindman, posted five miles north of Little Rock; five thousand men under Gen. Roan, posted fifty miles southeast of Little Rock at White Sulphur Springs, near Pine Bluff on the Arkansas river; at Cross Hollows in the northwestern part of the State, between four and five thousand men, chiefly conscripts under Gen. Rains; Gen. Holmes, in chief command, was at Little Rock with two thousand men; Gen. McBride was at Bates-

ville with two thousand more. Small forces were also at Arkansas, Crystal Hill, and Arkadelphia. The latter post had been made the seat of government. These forces were estimated at twenty thousand men with a deficient outfit. In the northwestern part of Arkansas, near Cross Hollows, twelve miles south of Fayetteville, Gen. Herron had a severe conflict with a Confederate force near the end of October. Again on the 28th of November Gen. Blunt made an attack on Gen. Marmaduke with about eight thousand men, at Cane Hill, forty-five miles north of Van Buren, which caused the Confederate force to retreat to Van Buren. Again, on the 7th of December, the combined Confederate forces under the command of Gen. Hindman, estimated at fifteen thousand men, made an attempt to cut off reënforcements for Gen. Blunt, ten miles south of Fayetteville. The Confederate forces advanced on the flank of Gen. Blunt's position, and attacked Gen. Herron with the reënforcements, who held them in check until they were attacked in the rear by Gen. Blunt at Crawford's Prairie. The fight continued obstinate until dark, when the Confederate forces retreated across Boston Mountains. The loss was severe on both sides, and the advance of the Confederate troops into Missouri was checked.

The campaign in the West was now pushed through. The evacuation of Columbus, and the flanking of other Confederate positions on the Mississippi river by the force on the advance up the Tennessee river, led to the fitting out of an expedition to move down the Mississippi. On the 4th of March an armed reconnoissance, commanded by Flag Officer Foote and General Cullum, was made as far as Columbus. This consisted of six gunboats, four mortar boats, and three transports having on board two regiments and two battalions of infantry under Gen. Sherman. On arriving at Columbus, it was found to have been evacuated and subsequently occupied by two hundred and fifty of the 2d Illinois on a scouting expedition. The Confederate troops had chiefly retired down the river to Island No. 10 and New Madrid. The evacuation was a consequence of the position being flanked on both sides of the river. The distances to various points down the river are as follows: Cairo to Columbus, 20 miles; Hickman, 37; Island No. 10, 45; New Madrid, 55; Point Pleasant, 87; Plumb Point, 154; Island No. 33, 164; Fort Wright, 167; Fulton Landing, 168; Hatche River, 170; Island No. 34, 170; Fort Randolph, 175; Fort Pillow, 238; Memphis, 242;

This force returned to Cairo, and on the 14th a formidable expedition left to move down the river. The following vessels formed the fleet: flag ship Benton, Lieut. Phelps acting flag captain; gunboats Cincinnati, Commander R. N. Stembel; Carondelet, Commander Walke; Mound City, Commander Kelly; Louisville, Commander Dove; Pittsburgh, Lieut. Thompson commanding; St. Louis, Lieut. Paulding commanding; Conestoga, Lieut. Blodgett commanding—the only boat in the fleet not iron-clad.

The mortar boats assigned to the expedition were designated numerically. Each had a mortar of 13-inch calibre and discharging a round shell weighing two hundred and fifteen pounds without its contents. The "sailing" or "running" crews of these mortar boats consisted of one captain and two men. The force to fire the mortars in action was one captain to each brace of mortars, and one lieutenant and twelve men to each boat. The Nos. of the vessels were, 5, 7, 11, 19, 22, 23, 27, 29, 30, 38, under command in chief of Capt. H. E. Maynadier, U. S. Army. The steamers Hammit and Wilson, lashed together, towed four; the Pike and Wisconsin four others; Lake Erie, No. 2, towed two others. Then followed a steamer with a barge laden with coal in tow, after which came the two ordnance steamers, and two transports with the 27th Illinois, Col. Buford, and 15th Wisconsin, Col. Hey, infantry—the latter regiment being composed exclusively of Norwegians—and also a battery of the 2d Illinois artillery. With the gunboats on the right, followed by the mortar fleet, ordnance boats, and transports with troops, the gunboat Conestoga brought up the rear, protecting the transports, while eight or ten little screw propellers, used for conveying orders and despatches from the flag ship to the fleet, were busily darting in all directions.

The expedition reached Columbus at 1 P. M., and at 3 o'clock left for Hickman, where it arrived between five and six o'clock. A small force of Confederate cavalry left upon its approach. The town was partly deserted; a few Union flags, however, were waved. The next morning it proceeded down the river to within half a mile of the Missouri point above Island No. 10, which by an air line was two and a half miles distant, while by the river, owing to the bend, it was four miles distant. In this position the flagship opened fire upon a Confederate battery discovered on the Kentucky shore, but, owing to the distance, without effect. Two of the mortar boats then, having got into position, opened upon and soon silenced it. A large Confederate force appeared to be encamped on that side.

Island No. 10 is situated in the corner of that bend of the Mississippi river which touches the border of Tennessee, a few miles further up the river than New Madrid, although nearly southwest of that point. It is situated about two hundred and forty miles from St. Louis, and nine hundred and fifty from New Orleans. The average depth of the water at this point is from ninety to one hundred and twenty feet, and the breadth of the stream from mainland to mainland about nine hundred yards. The current runs by the island at a moderately fast rate, and with the power of three rivers—Mississippi, Missouri, and Ohio—combined. The island is near the southern, or

what might be termed the eastern bank of the river, but at this point the stream varies from its southern course and turns abruptly to the northwest, leaving this island in the southern angle of the bend. It is about forty-five miles, by the course of the river, south of Columbus, and about twenty-six miles from Hickman. It is near Obionville, which is in Obion county, in the northwest extremity of Tennessee, where it borders on Kentucky and Missouri. The Mississippi river passes to the north and to the south of Obionville, leaving a land distance between the two waters very inconsiderable, and easily walked across in less than an hour, although the voyage by water between the same points, owing to the bends in the river, is about twenty miles. The surface of the surrounding country is nearly level. Obionville is connected by a turnpike road with Columbus, in Kentucky, via Hickman, and with Troy, the capital of the county.

The fortifications on the island and mainland adjacent consisted of eleven earthworks, with seventy heavy cannon, varying in caliber from thirty-two to one hundred pounders, rifled. The bombardment commenced on the 16th of March, and continued with more or less vigor until the 7th of April. A different plan, however, was arranged for the capture of the island. This consisted in cutting a canal across a portion of the narrow and low peninsula, by which the transports could pass below the island, and a part of the troops with Gen. Pope at New Madrid be taken across the river, and thus completely invest the island.

On the 21st of February, by orders of Gen. Halleck, Gen. Pope proceeded to Commerce in Missouri above Cairo, and was followed by a force numbering in the aggregate about forty thousand men. With this army Gen. Pope proceeded southwardly in the early part of the last week in February, destined for New Madrid. In a direct line the distance from Commerce to New Madrid is about fifty miles, but by the road it is between sixty and seventy-five miles. On the 3d of March he arrived with his forces before New Madrid, and found the place occupied by five regiments of infantry and several companies of artillery. The defensive works consisted of one bastioned earthwork, mounting fourteen heavy guns, about half a mile below the town, and another irregular work at the upper end of the town, mounting seven pieces of heavy artillery, together with lines of intrenchment between them; six gunboats, carrying from four to eight heavy guns each, were anchored along the shore between the upper and lower redoubts. The country being perfectly level and the river so high that the guns of the boats looked directly over the banks, Gen. Pope found the approaches to the town commanded for miles by guns of heavy caliber.

His first step was to occupy Point Pleasant, twelve miles below, in such a manner that his force could not be driven out by the Confederate gunboats, and thus blockade the river from below. He next procured siege guns from Cairo, which arrived on the 12th of March, and were placed in battery during the night within eight hundred yards of the enemy's main work, so as to command that and the river above it. The battery consisted of two small redoubts connected by a curtain, and mounting four heavy guns, with rifle pits in front and on the flanks for two regiments of infantry. As soon as day dawned on the 13th, these batteries opened fire, and were replied to by the whole of the enemy's heavy artillery on land and water. In a few hours several of the gunboats were disabled, and three of the heavy guns dismounted in the enemy's main work. The cannonading continued all day without producing any impression on the position of Gen. Pope, other than the disabling of one gun by a round shot. The effect of the contest during the day convinced the Confederate commander that he could not hold the town, although he had previously received reënforcements of men and guns from Island No. 10. Accordingly in the night, during a violent storm of rain, he evacuated the town by crossing over to the Kentucky shore. This evacuation was made with considerable precipitation. Almost everything was left behind. Even the pickets were abandoned. "Thirty-three pieces of artillery, magazines full of fixed ammunition, several thousand stand of small arms, hundreds of boxes of musket cartridges, tents for an army of ten thousand men, horses, mules, wagons, &c., were among the spoils."

The Confederate fleet was commanded by Com. Hollins, and their land force by Gens. McCown, Stewart, and Gantt. The Union loss was fifty-one killed and wounded; the Confederate loss was estimated by Gen. Pope to be larger. A number of their dead were left unburied. By the possession of these works Gen. Pope commanded the river, so as to cut off all communication with Island No. 10 from below. It was on the day after this evacuation that the fleet left Cairo.

In order to cut off entirely the retreat of the Confederate force from Island No. 10, it was necessary that a portion of Gen. Pope's army should be taken across the Mississippi to the Tennessee shore. To bring down transports a channel was made, twelve miles long, six of which were through heavy timber. The trees standing in water, had to be cut off four feet below its surface. While this work was pushed forward the bombardment of the island was continued. On the night of the 1st of April, under the cover of darkness and storm, a boat expedition from the fleet, with a small force under the command of Col. Roberts of the 42d Illinois, landed at the upper or No. 1 Fort on the Kentucky shore and spiked the six guns mounted, and retired without injury. The pickets of the enemy fired and fled, and the troops in the vicinity also retreated. As the work on the canal approached

completion, it was evident that the assistance of the gunboats would also be required to make a successful landing of the troops across the river. The enemy, to oppose any attempt that might be made to cross the river, had planted field pieces along the left bank for the distance of several miles above and below New Madrid. Gunboats were also needed to protect the transports from any gunboat of the enemy that might appear during the passage across the river. For these reasons the gunboat Carondelet, Capt. Walke, undertook to run down past the batteries of the island on the night of the 4th of April. For this purpose her hull was protected in all weak places by additional covering, and a barge laden above with hay was taken in tow on her left side. Starting at ten o'clock on the night of the 4th, amid the darkness of an impending storm, she proceeded on in silence. Twice as she approached the batteries of the enemy the soot in the chimneys caught fire, and a flame five feet high leaped out from their tops, lighting brightly the upper deck of the vessel, and everything around. It was seen by the enemy, and the anxious listeners for the signal of her safety in the fleet above now heard the long roll beat in the camps on the island. At the same time five rockets were sent up from the mainland and the island, and were followed by a cannon shot from Fort No. 2. A full head of steam was now let on, to make the greatest possible speed; and while vivid flashes of lightning lit up the hurried preparations of the enemy, while peal after peal of thunder reverberated along the river, and the rain fell in torrents, the moment for coolness and heroism came. For thirty minutes the discharge of cannon and musket ball at the dark and silent object, revealed on the waters only by the lightning flash, was furious, but no injury was done. Then stopping her machinery, her officers fired the signal guns to inform their companions in the fleet that she was safe. On the night of the 6th, the gunboat Pittsburg, Lieut. Thompson, also passed the batteries. On the morning of the 7th the transports were brought into the river from the bayou where they had been kept concealed, and while the division of Col. Paine was embarking, the gunboats ran down the river and silenced the enemy's batteries at the place of landing. Then the passage of the wide and swift river commenced, and was completed at the hour of midnight.

As soon as the troops began to cross the river the enemy began to evacuate the island and his batteries along the Kentucky shore. The divisions were pushed forward as fast as they landed, that of Col. Paine leading. The Confederate force was driven before him, says Gen. Pope; and although it made several attempts to form in line of battle and make a stand, Col. Paine did not once deploy his columns. It was pushed all night vigorously until, at four o'clock A. M., it was driven back on the swamps and forced to surrender. "Three generals, seven colonels, seven regiments, several battalions of infantry, five companies of artillery, over one hundred heavy siege guns, twenty-four pieces of field artillery, an immense quantity of ammunition and supplies, several thousand stand of small arms, a great number of tents, horses, and wagons were taken." The force that surrendered was under the command of Gen. Mackall. Before abandoning Island No. 10, the Confederate officers sunk the gunboat Grampus and six transports. The force surrendered consisted of Tennessee, Arkansas, Mississippi, Alabama, and Louisiana regiments, and numbered about five thousand. At the island a large amount of commissary stores was found with the tents and baggage of the enemy. Besides there were eleven earthworks, with seventy heavy cannon varying in caliber from 32 to 100-pounders, rifled. The works, erected with the highest engineering skill, possessed great strength. There appeared to be no concert of action between the force on the island and that on the shore. Gen. Pope did not lose a man or meet with an accident in crossing the river or afterward. The canal was made on the suggestion of Gen. Schuyler Hamilton. A part of the distance the route was through a bayou. The cut made was about four miles, sufficient for steamboats of moderate size, and about one thousand trees, ranging from six inches to three feet in diameter, were sawed off about four feet under water by means of long saws worked by hand. When the canal was finished, the water came through with such a current that the boats had to be dropped by lines nearly the whole distance. The work was done by an engineer regiment, under the superintendence of Col. Bissell.

The position thus taken was regarded by the Confederate officers as one of the highest importance to the new line of defence proposed by them. Upon their ability to hold it depended the safety of Memphis, and of the entire Mississippi valley thereabout. This line was adopted by the Confederate commander, with his left resting on the Mississippi, his centre between Jackson, Tenn., and Corinth, Miss., and his right between Florence and Decatur.

On the 12th of April the gunboats under Com. Foote, with the mortar boats, followed by the transports, left New Madrid, and stood down the river. The order of a line of battle was observed. A part of Gen. Stanley's division, and those of Gens. Hamilton and Palmer, were on the transports. Their destination was Fort Pillow or Wright, which is situated on the first Chickasaw Bluffs, near Islands Nos. 33 and 34, and about seventy miles above Memphis. At Plum Point the Mississippi makes a sharp bend, running for some distance eastwardly, and at the first Chickasaw Bluffs turns off abruptly south-southwest, which course it continues below Island No. 34, where it again bends; the convex side of the curve being to the Tennessee shore. Here are the second Chickasaw Bluffs, surmounted by Fort Randolph, some twelve

miles below Fort Pillow. The location of these fortifications was admirably adapted for defence, and in case of a determined stand it would have been very difficult to reduce them. Opposite Plum Point is the village of Osceola in Arkansas.

On the next day, at evening, the fleet arrived at Plum Point and anchored. A force of three Confederate gunboats were in sight most of the time during that day, but kept at a safe distance. The anchorage was about three and a half miles from the fort. Operations against the fort were commenced by moving the mortars to the Arkansas shore at Craighead Point, and opening upon the enemy's gunboats and batteries with shells. The distance of the contending forces across the point was three fourths of a mile, although by the river around the point it was three miles. In the afternoon of the 17th of April fire was opened from the mortars, and rapidly and accurately answered by the fort. This continued until midnight and then ceased; daily afterward it was repeated without any expectation of an immediate reduction of the fort. The high water of the river prevented coöperation of the land forces. On the 4th of May a battle occurred between the gunboats and a Confederate ram and gunboats, which has been thus related:

"The enemy appeared with four boats—three gunboats and a ram—the latter a powerful contrivance, combining immense weight and strength with high speed and admirable steering facilities. Her hull and boilers, as well as all the Confederate rams, were those of old New Orleans towboats. The upper works of these were cut away; their sides protected, in some instances with a layer of railroad iron, and in others only with bales of tightly compressed cotton, hooped and bound together, one to the other, with iron bands. Their bows were pointed and sharp, and apparently of solid iron.

"At their first appearance the gunboats manifested no disposition to come up the river, but sent the ram ahead to attack and destroy the Cincinnati, thinking then, doubtless, to run up and make an easy prey of the defenceless mortar boats. The commander of the Cincinnati perceived the movement and apprehended its intent. The ram was already halfway up to her before she was cut loose, and then the accumulated driftwood on her bows prevented her getting her head out into the stream. To back out would be to run directly upon the enemy while they were seeking to run into her, thus adding to the force of the blow with which they would strike her. In this dilemma she let fly her stern guns full into the face of the enemy, and at the same time attempted to crowd along up the shore, hoping, before moving far, to succeed in getting her head out. Her guns made not the slighest apparent impression upon the ram, which still held its course and was rapidly coming upon the entangled gunboat.

"Again the stern guns were let go full into the face of the enemy, but still her progress was not retarded in the slightest. A moment more and her tremendous weight came with terrible force upon the starboard stern quarter of the gunboat, but without inflicting any serious damage The force of the blow, however, threw the stern of the vessel in and enabled her to get headway from the shore. Then, in turning out, her broadside was discharged directly into the Confederate craft, which was backing off preparatory to renewing the assault.

"Again the gunboat prepares to open fire on her assailant, and the ram seeks an apportunity to renew the assault. The Cincinnati has worked herself away from the shore and is now more easily handled. Turning to and fro, she gives her antagonist broadside for broadside, with no apparent result. Still he comes on. As he nears his object, his steam apparatus is got ready, and his crew, armed with small arms, prepare to board the Federal craft. Commander Stembel, seeing these demonstrations, orders out carbines, boarding pikes, and cutlasses, and also puts his steam battery in readiness to give the enemy a warm reception. On they come, closer and closer, and strike! The boats collide with fearful violence, followed by the crashing of timbers, and the bending of iron, and the shouts of men, and the discharge of musketry, and, above all, another broadside directly into the enemy now immediately alongside. Amid this general uproar Commander Stembel rushes upon deck, and, seizing a pistol, with admirable aim discharged its contents into the head of the Confederate pilot, killing him instantly. The pilot's mate seized a gun in retaliation, and shot the gallant commander, just as he was turning to give his attention to some other duty, the ball entering high up on his shoulder behind, and, passing in at an upward direction through his neck, went out under his chin. He fell instantly, and was carried below.

"While this fierce engagement was in progress, the shots from the other vessels had exploded the boiler on one of the Confederate gunboats, and set fire to another which was burned to the water's edge.

"The Cincinnati, thus released from her antagonist, sought others of the foe. It was soon after this withdrawal that the Mallory, which is also fitted as a ram, though carrying a heavy armament, moved up and singled out the crippled Cincinnati as her special victim. This craft was more lumbering and slower than the rams proper, and could not be so easily moved about. She worked very hard to get her nose into the Cincinnati's side, but every time was foiled by the movements of the latter. At last she had apparently secured the desired opportunity, and was crowding all steam to make good headway, when an unlooked-for adversary appeared. The St. Louis bore down upon her, unseen, until close on her, and then came

the unavoidable collision—the ram was cut half into and sunk immediately. Her crew perished with her, but half a dozen or so escaping by clinging to the St. Louis. This was a brilliant manœuvre on the part of the St. Louis, relieving and probably saving the Cincinnati, which was already half sunk and almost unmanageable from the weight of water in her hold. Seeing her condition, the acting flag officer signalled her to withdraw, and she was run upon the shoal at the foot of the island, and sunk to the bottom.

"The action had now lasted about forty-five minutes. One of the enemy's boats had been sunk and two blown up. The rest of their fleet was crippled. To prolong the fight was to insure its destruction. They therefore gradually fell back, under cover of the smoke, around the point to the protection of their land batteries. The Cincinnati was the only boat injured in the Union fleet. Four were wounded on board of her."

On the night of the 4th of June Fort Pillow was evacuated. Everything of value was either destroyed or removed by the Confederate officers. On the same night Fort Randolph, some miles below, was evacuated. The few guns were dismantled. Com. Ellet, in his report to the Secretary of War, said: "Randolph, like Pillow, is weak, and could not have held out long against a vigorous attack." The remark is worthy of notice, as it raises an inquiry why such an attack was not made. The forts were not attacked because this expedition, was not sustained at the critical time for its success. There were no land forces to coöperate with the fleet.

On the 13th of April the gunboats and transports arrived before Fort Pillow, and on the 4th of June this fort and the one below were evacuated, and the way clear for the fleet to attack Memphis. On the 7th of April the battle of Pittsburg Landing took place between the Federal forces, under Gen. Grant, and the Confederate forces, under Gen. Beauregard, which resulted in the withdrawal, by Gen. Beauregard, of all his forces from the battle field to the strong position at Corinth. Reënforcements were required by the Federal army, and Gen. Pope was ordered to join it. On the 21st of April he arrived in transports up the Tennessee river at Pittsburg Landing. His force numbered between twenty and twenty-five thousand men, and were taken on some thirty transports. This withdrawal of the force of Gen. Pope put a stop to the progress of the Mississippi river expedition. The gunboats, however, were obliged to remain in such force as to prevent any movement of the Confederate gunboats up the river. Soon after the withdrawal of Gen. Pope, Com. Foote obtained leave of absence, and the command of the fleet was taken by Charles Ellet, jr., until the arrival of Charles H. Davis, the successor of Com. Foote.

As has been stated, Forts Pillow and Randolph were evacuated on the night of the 4th of June. This evacuation was in consequence of the withdrawal of a large portion of the Confederate army from Tennessee, and their abandonment of Corinth. The positions of Fort Pillow, Randolph, and Memphis could not be held under these circumstances, and were therefore wisely evacuated.

Nothing now remained to oppose the Federal fleet but the Confederate gunboats. On the 5th of June the fleet arrived within two miles of Memphis, and came to anchor for the night. On the 6th, at 4½ o'clock in the morning, the gunboats Benton, Cairo, Carondelet, Louisville, and St. Louis, and the four rams Monarch, Lancaster, No. 3, and Queen of the West, weighed anchor, and dropped slowly down toward the city. The Confederate gunboats were seen approaching in order of battle. This was in two lines, the first consisting of the Beauregard, Little Rebel, Gen. Price, and Gen. Bragg, the second of the Gen. Lovell, Gen. Van Dorn, Jeff. Thompson, and the Sumter. When within three fourths of a mile, a shot from the Little Rebel, the flag ship, fell within a short distance of the Cairo, which replied with a broadside, and soon the engagement became general. The Confederates had fewer guns than their opponents, but exceeded them in the number of gunboats. The scene of the battle was in front of the city of Memphis, and the shores were crowded with spectators. After half an hour two of the rams, Monarch and Queen of the West, which had been lying on the Arkansas side, in rear of the line of battle, steamed out toward the scene of action. The Queen of the West started directly for the Beauregard, and that gunboat fired at, but missed her. A second shot struck the ram but did her no injury, and she steamed steadily and swiftly toward her adversary. When she was within ten feet the latter swung round, and the ram missed her prey. Not discouraged, however, the Queen ran toward the Gen. Price, which fired several shots but did no damage, and thrust her iron prow into the wheelhouse of the Price, crushing it to pieces, and causing the vessel to leak so badly that she was run to the Arkansas shore, to prevent her from sinking. The Beauregard now determined to avenge the Price, and hurried toward the Queen, while the ram in full motion was dashing toward her foe. They bore down upon each other bravely, but the skilful pilot of the enemy contrived to evade the shock of the Queen, and struck her aft so heavily that the ram was disabled and began to leak. The Monarch, seeing the state of affairs, dashed boldly at the Beauregard. The latter fired four times at the ram, and struck her bulwarks once, the ball glancing harmlessly. She could not, however, avoid the unerring aim of the Monarch, which crashed through her bow, and caused her to fill in a few minutes and go down as far as her cabin, the shallowness of the water preventing her sinking lower, and the white flag she had run up

stopping further damage from the fleet. The Monarch then looked after her disabled consort, the Queen of the West, and towed her ashore, placing her in a position of security. The gunboats now increased their fire against the enemy, when the flag ship, having obtained an excellent range, threw a 50-pound ball from a rifled Parrott, striking the Gen. Lovell aft above the water line, tearing a great hole in her, through which the water rushed like a torrent. She began to sink at once, giving few of the officers and crew time to save themselves. In less than four minutes the vessel had sunk in seventy-five feet of water, and passed entirely out of sight. Some of the crew went down with the Lovell, but about fifty of them leaped into the river, and were struggling in the water, when the Benton's crew arrived in advance of several other cutters from the flotilla, and just in time to see the chimneys of the hostile gunboat disappear beneath the water. Many of the crew had already begun to swim for the shore. Some six or seven, however, were rescued by the cutter, but the current was so strong that a large number were carried off and drowned. The engagement still continued warm and desperate. The smoke of the battle so obscured the boats that it was difficult to see them at any distance, yet the levee of Memphis was black with the crowd of human beings. From the time the rams made their appearance, the Confederate gunboats had been steadily falling back, though continuing to fire heavily, before the advance of the Federal gunboats.

The Jeff. Thompson, Gen. Bragg, Sumter, and Van Dorn were the only vessels remaining, and these were so frequently struck and saw so little opportunity of escaping, that they turned their bows ashore. As soon as the Thompson reached the shore her officers and crew leaped off, and ran through the woods; but a shell exploding on the vessel, she took fire and was burned to the water's edge. The Gen. Bragg reached the shore about half a mile below the Thompson, and her officers and crew escaped. The Sumter followed next, and the Gen. Van Dorn, which was a swift vessel, alone escaped down the river. The Federal fleet now came to anchor before the city. The engagement had lasted over an hour. No one was killed on the fleet. The loss of the other side could not be stated. About one hundred were made prisoners. The other mortar boats, owing to a misconception of orders, were not engaged.

The following correspondence then ensued between Com. Davis and the city authorities:

UNITED STATES FLAG STEAMER BENTON,
OFF MEMPHIS, *June* 5, 1862.

SIR: I have respectfully to request that you will surrender the city of Memphis to the authority of the United States, which I have the honor to represent.

I am, Mr. Mayor, with high respect,
C. H. DAVIS, Flag Officer commanding, etc.
To His Honor the Mayor of the City of Memphis.

The answer of the mayor was as follows:

MAYOR'S OFFICE, MEMPHIS, *June* 6, 1862.

SIR: Your note of this date is received, and contents noted. In reply I have only to say that, as the civil authorities have no means of defence, by the force of circumstances the city is in your hands.

Respectfully, JOHN PARK, Mayor.
To C. H. DAVIS, Flag Officer commanding, etc.

Commander Davis wrote in reply as follows:

UNITED STATES FLAG STEAMER BENTON,
OFF MEMPHIS, *June* 6, 1862.

SIR: The undersigned, commanding the naval military forces of the United States in front of Memphis, has the honor to say to the Mayor and the city that Col. Fitch, commanding the Indiana brigade, will take military possession immediately.

Col. Fitch will be happy to receive the coöperation of His Honor the Mayor and the city authorities in maintaining peace and order. To this end he will be pleased to confer with His Honor the Mayor at the military headquarters at 3 o'clock this afternoon.

Yours, etc., C. H. DAVIS,
Flag Officer commanding, etc.
To the Mayor of the City of Memphis.

The military occupation of the city followed, and the appointment of a provost marshal. Memphis is the most populous and important town, on the Mississippi river, between St. Louis and New Orleans. Its population in 1860 was 22,625.

About the 10th of June the gunboats St. Louis, Mound City, Lexington, and Conestoga, with the transport New National, having on board the 46th Indiana regiment, Col. Fitch, left Memphis, on an expedition up the White river, to open communication with the army of Gen. Curtis, and to remove the obstructions in that river. The White river is formed by the junction of three small branches, which unite a few miles east of Fayetteville, Arkansas. It flows first northwesterly into Missouri, and after making a circuit of about one hundred miles, returns into Arkansas, and pursues a southeasterly course to the mouth of Black river. Thence its direction is nearly south, until it enters the Arkansas fifteen miles above its mouth. It is navigable by steamboats to the mouth of Black river, three hundred and fifty miles, in all stages of water.

As the expedition approached St. Charles, the Mound City, being in advance, was fired on from two concealed batteries. This was returned. Meantime the troops were landed below for the purpose of marching in the rear and capturing the batteries. At this juncture a ball from a siege gun on the bluff struck the forward and left side of the Mound City and penetrated the casemate and passed through the steam drum. The vessel was immediately filled with the escaping vapor and nearly every one on board was scalded; only twenty-three of the officers and crew, numbering one hundred and seventy-five, escaped uninjured. A horrible scene ensued. Many of the crew, frantic with pain, jumped overboard, and some were drowned. The boats from the Conestoga, which was coming up at the time, were sent to their relief, but the enemy fired on the men in the water with grape and canister from their field pieces, killing most of those who were

attempting to escape. Meantime Col. Fitch, learning the facts, pushed forward with his regiment and carried the works at the point of the bayonet. They consisted of two batteries, the lower of which mounted six field pieces, and the upper one three heavy siege guns. About thirty prisoners were taken, among whom was Col. Frye, commanding the post. This expedition failed to open communication with Gen. Curtis, as has been heretofore stated.

The military operations in Tennessee, which finally controlled the movements of the Mississippi river expedition, had paused after the capture of Nashville, as above described, but were soon resumed again. The first step consisted in fitting out a great expedition to proceed under Gen. Grant up the Tennessee river. More than fifty-seven steamers and two gunboats were required to transport and convoy the force. It was organized in five divisions, each consisting of infantry, cavalry, and artillery. The advance was under the command of Gen. Sherman, 2d division under Gen. Hurlbut, 3d division under Gen. McClernand, 4th division under Gen. L. Wallace, 5th division under Col. Lanman of the 7th Iowa regiment. On the 11th of March the transports began to arrive at Savannah in Tennessee. On the night of the 12th the Tyler and Lexington were sent up the river to reconnoitre as far as Eastport, forty miles above Savannah. The enemy was found constructing fortifications and with a considerable force. It was known that the Confederate forces were also concentrated along the lines of railroad south and southwest of the river.

The line of defence now adopted by the Confederate commander after his first line was broken up, had for its base the Charleston and Memphis railroad, the preservation of which was absolutely necessary to any pretence of resistance through northern Mississippi, Alabama, and Georgia. Along this railroad are Tuscumbia and Florence at the foot of the Muscle shoals in the Tennessee river and the junction with the Florence and Nashville railroad; Decatur near the head of the lower Muscle shoal; Huntsville and Bellefontaine; Stevenson, important as the junction with the railroad from Nashville through Murfreesboro' and Chattanooga, a strong position. All these points are east of Corinth. On the west of Corinth the railroad runs in a nearly straight line to Memphis, ninety-three miles distant; and northwest runs the road to Jackson, almost in the centre of west Tennessee.*

The Union line was the Tennessee river, extending from Paducah, Kentucky, to Eastport in Mississippi. The gunboats Lexington and Tyler, by moving up and down the river, prevented the erection of batteries. Above Eastport, at Chickasaw Bluffs and at some other points, Confederate batteries were placed to command the navigation of the river.

On the 5th of March, Gen. Beauregard assumed the command of the Confederate forces in this department, when he issued the following address to his soldiers:

HEADQUARTERS ARMY OF THE MISSISSIPPI,
JACKSON, TENN., *March* 5.

SOLDIERS: I assume this day the command of the army of the Mississippi, for the defence of our homesteads and liberties, and to resist the subjugation, spoliation, and dishonor of our people. Our mothers and wives, our sisters and children, expect us to do our duty, even to the sacrifice of our lives.

Our losses since the commencement of this war, in killed, wounded, and prisoners, are now about the same as those of the enemy.

He must be made to atone for the reverses we have lately experienced. Those reverses, far from disheartening, must nerve us to new deeds of valor and patriotism, and should inspire us with an unconquerable determination to drive back our invaders.

Should any one in this army be unequal to the task before us, let him transfer his arms and equipments at nce to braver, firmer hands, and return to his home.

Our cause is as just and sacred as ever animated men to take up arms; and if we are true to it and to ourselves, with the continued protection of the Almighty we must and shall triumph.

G. T. BEAUREGARD,
General Commanding.

Associated with Gen. Beauregard in command were Gens. Albert Sidney Johnston, Bragg, Polk, Pillow, Cheatham, and others. The Confederate force consisted not only of the troops from the adjacent States which had been in service for months, but also of new levies now called out by the governors on the requisition of President Davis. They were encamped principally at Corinth, with detachments at various points on the railroad, so situated that they could be easily concentrated on any point.

Corinth is at the intersection of the Mobile and Ohio and Memphis and Charleston railroads, in Tishemingo county, Mississippi, forty miles from Grand Junction, fifty-eight miles from Jackson, Tennessee, and about eighteen miles from Pittsburg on the Tennessee river. It is situated in a hilly, semi-mountainous country.

The Federal forces at first concentrated at Savannah, a small town of two hundred inhabitants, on the Tennessee river, about one hundred and seventy miles above Fort Henry. The number of transports which arrived by the 13th of March, was eighty-two. This force comprised all of Gen. Grant's original command, with an additional force of infantry, almost entirely from the State of Ohio. All the steamers that formed the regular line of packets between Louisville and New Orleans and between Louisville and St. Louis, were in the fleet, carrying from 1200 to 1500 men each, and heavily laden. The demonstrations of the inhabitants along the shore of the river were of the most extravagant character. One declared

* The distances of these places along the line of the Memphis and Charleston railroad are as follows: From Memphis to Germantown, 15 miles; to Collierville, 24; Lafayette, 31; Moscow, 39; La Grange, 49; Grand Junction, 52; Saulsbury, 58; Middleton, 69; Pocahontas, 75; Corinth, 93; Burns, 107; Iuka, 115; Tuscumbia, 145; Jonesboro, 163; Decatur, 188; Huntsville, 212; Bellefonte, 259; Stevenson, 272; Chattanooga, 309.

it to be "the second coming of Christ." The command of the army was taken by Gen. Grant soon after its arrival at Savannah, and it was advanced seven miles to Pittsburg Landing. Savannah was made a depot for stores, with only a few troops. Here troops and supplies were sent to Gen. Grant by Maj.-Gen. Halleck, both from St. Louis and Cairo. There had also been such a change in the position of the enemy before Gen. Buell at Nashville, that the original plan was altered, and he was directed by Maj.-Gen. Halleck to make a junction of his forces with those under Gen. Grant. By General War Order No. 3 of the President, dated March 11th, the Departments of Kansas and Kentucky, respectively under the command of Gen. Hunter and of Gen. Buell, were united with that of the Missouri, under the designation of the Department of the Mississippi, and of this consolidated Department Gen. Halleck was assigned the command.

It was the original plan of Gen. Buell to advance with his army in several columns upon northern Alabama over the principal roads leading to that region from Nashville. With this object in view, the divisions of Gens. Mitchell, Nelson and McCook left Nashville on the same day, and by different roads. But the Confederates, having retired from Murfreesboro and formed along the new line they proposed to defend, rendered necessary a corresponding change in the plan of Gen. Buell. A direct advance upon Alabama by Gen. Buell's forces would not only have involved an unnecessary amount of labor and slowness of movement, owing to the destruction of bridges over the watercourses, and other impediments, but the passage of the Tennessee into northern Alabama being practicable for a large army at a few places only, the Confederates could by means of the railroad have easily collected a large force to dispute it at any point. This concentration of the main body of the Confederate forces in localities within the contemplated field of the operations of Gen. Grant's army, not only gave to the latter an opportunity to employ the whole of his force to the best possible advantage, but enabled Gen. Halleck to order Gen. Buell to turn his army toward western Tennessee, to coöperate with Gen. Grant and cross the river. Thus combined, they were regarded as certain to be superior to the Confederate army in the number, armament, and fighting trim of their commands.

On the 28th of March, Gen. Buell left Nashville and passed the advance of his divisions at Columbia. On the 28th, 29th, and 30th the divisions of his army had crossed Duck river on a new bridge, and advanced through Columbia, distant eighty-two miles from Savannah.

Meantime most active preparations had been made to assemble a large Confederate force at Corinth, and to fortify that position, which is about eighteen miles south of Pittsburg Landing. The force of Gen. Grant was posted at Pittsburg and along both sides of the river toward Crump's Landing and Savannah, but kept in active service scouring the country. The importance of the approaching contest to the Confederate States could not be concealed. If Corinth fell, Memphis would also fall, and the whole territory of the Gulf States would be open to an army larger than that of the Potomac. The plan adopted by Gens. Johnston and Beauregard was to strike an unexpected blow before the arrival of Gen. Buell's forces. On the 3d of April, Gen. Johnston issued the following address to his soldiers:

HEADQUARTERS ARMY OF MISSISSIPPI,
CORINTH, MISS., *April* 3.

Soldiers of the Army of the Mississippi:

I have put you in motion to offer battle to the invaders of your country, with the resolution and discipline and valor becoming men, fighting, as you are, for all worth living or dying for. You can but march to a decisive victory over agrarian mercenaries sent to subjugate and despoil you of your liberties, property, and honor.

Remember the precious stake involved; remember the dependence of your mothers, your wives, your sisters, and your children on the result. Remember the fair, broad, abounding lands, the happy homes that will be desolated by your defeat. The eyes and hopes of eight million people rest upon you. You are expected to show yourselves worthy of your valor and courage, worthy of the women of the South, whose noble devotion in this war has never been exceeded in any time. With such incentives to brave deeds, and with the trust that God is with us, your general will lead you confidently to the combat, assured of success.

(Signed) A. S. JOHNSTON,
General Commanding.

The orders accompanying the address divided "the Army of the Mississippi" into three corps. Gen. Beauregard was proclaimed to be in command of the whole force. The first corps was assigned to Gen. Polk, and embraced all the troops of his former command, excepting detached cavalry and artillery, and reserves detached for the defence of Fort Pillow and Madrid Bend. The second corps was assigned to Gen. Bragg, and was to consist of the second division of the army of the Mississippi, less artillery and cavalry "hereafter detached." The third corps was assigned to Gen. Hardee, and consisted of "the Army of Kentucky." To Gen. Crittenden was assigned a command of reserves, consisting of not less than two brigades.

From two to three miles out on the road to Corinth from Pittsburg Landing lay the five divisions of Gen. Grant's army. The advance line was formed by three divisions: Brig.-Gen. Sherman's, Brig.-Gen. Prentiss's, and Maj.-Gen. McClernand's. Between these and the landing lay the two others, Brig.-Gen. Hurlbut's and Maj.-Gen. Smith's, commanded in his absence by Brig.-Gen. W. H. L. Wallace. On the extreme left of the line was one brigade of Gen. Sherman's division, while the other brigades were some two miles distant, forming the extreme right of the advance line. To the left, though rather behind a portion of the line

formed by Sherman's main brigades, lay Gen. McClernand's division, and between it and Gen. Sherman's brigade, on the extreme left, lay Gen. Prentiss's division. No preparations had been made for any means of defence in case of attack, although the position was an exposed one.

The information that Gen. Buell was near at hand, determined Gen. Beauregard to make the attack at once. The movement of his troops from Corinth commenced on the 3d of April. Owing to the difficulties of the roads, they did not reach the vicinity of the Federal forces until Saturday afternoon, the 5th. It was then determined that the attack should be made on the next morning, at the earliest hour practicable, and in three lines of battle: the first and second extending from Owl Creek, on the Confederate left, to Lick Creek on their right—a distance of about three miles—supported by the third and the reserve. The first line consisted of Gen. Hardee's corps, augmented on his right by Gladden's brigade of Bragg's corps, deployed in line of battle, with their respective artillery following immediately, and the cavalry in rear of the wings. The second line followed the first at a distance of five hundred yards, in the same order as the first. The corps under Gen. Polk followed the second line, at the distance of about eight hundred yards, in lines of brigades, deployed with their batteries in rear of each brigade, the left wing supported by cavalry. The reserve followed closely the third line in the same order, its right wing supported by cavalry. These two corps constituted the reserve, and were to support the front lines of battle by being deployed, when required, on the right and left, or otherwise act according to the exigencies of the battle.

At half past five on the morning of April 6, the Confederate lines and columns were in motion. Like an Alpine avalanche they came, attacking first the left of Gen. Grant, under Gen. Prentiss, who, with two thousand of his men, were soon made prisoners. This attack was in part a surprise. Scarcely had the men time to seize their weapons and form, after knowing of the approach of the Confederates. Gen. Grant himself was at Savannah at the commencement, but early reached the raging field. Gradually, as the Confederate line came up, the engagement had become general, and as Gen. Prentiss's division fell back, abandoning their camp, they were supported by Gen. Hurlbut, and thus for a time checked the progress of the Confederates. At the same time the left of Gen. Sherman's division on the right was forced back, and the brunt of the battle, in the centre, fell upon Gen. McClernand's division. Desperate as was their determination, yet at eleven o'clock this division had been pressed back in a line with Gen. Hurlbut. It still did some gallant fighting; once its right swept round and drove the Confederates for a considerable distance, but again fell back, and at the last it brought up near the position of the camps of Gen. Smith's division, commanded by W. H. L. Wallace. Thus the divisions of Prentiss, Sherman, and McClernand were driven back, their camps were all in the hands of the Confederates, and the whole front line, for which Hurlburt and Wallace were but the reserves, was gone, excepting Stuart's brigade of Sherman's division, on the extreme left. The position of this brigade was along the circuitous road from the Landing to Hamburg, some two miles distant from the former, and near the crossing of Lick Creek. They had remained isolated until after the division of Gen. Prentiss fell back, when the Confederates advanced upon them in such force as to be irresistible in their position, and they fell back a fourth of a mile and made a stand for three fourths of an hour. At this juncture a brigade of Gen. Wallace's reserve, under McArthur, was sent over to their support. They were, however, soon forced to fall back to one ridge, and then to another, and finally at twelve o'clock, badly shattered and disordered, they retreated to the right and rear of McArthur's brigade to reorganize.

Six hours had passed since the approach of the Confederates, and at this time only the divisions of Gens. Hurlbut and Wallace stood between the army and destruction or surrender. Still all was not lost. The divisions of Gens. Hurlbut and Wallace began to make a most gallant stand. The brigade of the latter had been sent to reënforce McArthur's, and thus reunited, filled the space in the line on the left made vacant by the falling back of Gen. Prentiss's division and Stuart's brigade of Gen. Sherman's division, and thus were on the left of Hurlbut's division. By the early breaking of Gen. Prentiss's line, the onset of the Confederates had been made to veer chiefly to the Union left. Here the contest continued stubborn. Four times the Confederates attempted to charge on Gen. Wallace's men. Each time the infantry poured in rapid volleys, and the artillery redoubled their efforts, thus compelling them to retreat with heavy slaughter. Farther to the right, Gen. Hurlbut's division, which had taken an advanced position, was compelled to fall back through its camp to a thick wood behind. Here, with open fields before them, they could rake the approach of the Confederates. Three times their heavy masses bravely charged upon the division, and each time they were repulsed with severe loss. The troops from the driven divisions were reorganized so far as available, and re-sent to the field. Thus the right of Gen. Hurlbut, which was almost wholly unprotected, and the weakness of which does not appear to have been discovered by the Confederates, was in a measure patched out. It had been previously determined that in case of an attack at Pittsburg Landing, the division under Gen. L. Wallace at Crump's Landing, five miles below, should come up on the right and flank the enemy. But no message was sent to this

division until nearly noon, and it missed the way on coming up, and did not arrive until night. The division of Gen. Hurlbut at length became exhausted, and fell back out of sight of their camps to a point within half a mile of the Landing. In consequence of losing this support, the division of Gen. Wallace, thus in isolated advance, was compelled to fall back, the last to leave the field. Just at this moment its commander was mortally wounded.

It was now half past four o'clock. The front line of the divisions had been lost since eleven o'clock, and the reserve line was gone too. The Confederates occupied the camps of every division except Smith's, commanded during his sickness by Gen. Wallace, who had just been wounded. The whole army was crowded in the region of Wallace's camp, and to a circuit of one half to two thirds of a mile around the Landing. The next repulse would put it into the river, and there were not transports enough to cross a single division before the enemy would be upon them. Nearly half the field artillery was lost, nearly all the camps and camp equipage. Prisoners had been taken in great numbers.

At this time a lull took place in the firing, the first which had occurred since sunrise. It was thought that the enemy were either preparing for the grand final rush that was to crown the day's success, or that they were puzzled by the last retreat, and were moving cautiously. These few minutes were golden ones for that driven and defeated army, and they were improved. Col. Webster, chief of staff, arranged the guns which he could collect of those that remained, in a sort of semicircle to protect the Union centre and left, upon which it was thought the enemy were now sure to advance. Corps of artillerists to man them were gathered from all the batteries. Twenty-two guns were thus placed in position, two of which were long 32's. In front was a victorious enemy; behind were the remnants of the repulsed divisions of the army driven within half a mile of the Landing, beyond which was a deep and rapid river. Gen. Wallace's division at Crump's Landing had not been heard from. Across the river now was seen the first glitter of the advance of Gen. Buell, but it could not be brought over in time to do much good. Suddenly a broad flash of light leaped out from the darkening woods, and the whistling leaden hail swiftly followed. The enemy were about to make their crowning effort for the day. Instantly the artillery replied, and as they approached nearer, the infantry fired volley after volley. At this time the gunboats, Lexington and Tyler, approached the mouth of Lick Creek, and were able with their guns to reach the field occupied by the Confederates near the river. This was a fire in their flank, which disconcerted their plans. Amid this terrible conflict darkness came on. The enemy had been held at bay.

Meantime Gen. Wallace had arrived with his division, and Gen. Buell with his forces, part of which took part in the battle of the afternoon, and it was decided after the sounds of battle had ceased, to attack the Confederates as soon as possible after daybreak. Gen. Wallace's division was to take the right and sweep back toward the position from which Gen. Sherman had been driven during the morning, and Gen. Nelson was to take the extreme left. Gen. Crittenden was to take a position during the night next to Gen. Nelson, and Gen. McCook with his division next to Crittenden. The space between Gens. McCook and Wallace was to be filled with the reorganized divisions of Gen. Grant's army. Stealthily the troops crept to their new positions, and lay down in line of battle on their arms. All through the night, Gen. Buell's men were marching up from Savannah to the point opposite Pittsburg Landing, and were ferried across, or were coming up on transports. At nine o'clock, the gunboats commenced a cannonade of the Confederate position, which was kept up all night. It produced little or no effect.

Gen. Beauregard thus reported his position on Sunday night: "At six o'clock P. M., we were in possession of all encampments between Owl and Lick creeks but one. Nearly all of his field artillery, about thirty flags, colors, and standards, over three thousand prisoners, including a division commander (Gen. Prentiss) and several brigade commanders, thousands of small arms, an immense supply of subsistence, forage, and munitions of war, and a large amount of means of transportation—all the substantial fruits of a complete victory—such indeed as rarely have followed the most successful battles; for never was an army so well provided as that of our enemy.

"The remnant of his army had been driven in utter disorder to the immediate vicinity of Pittsburg, under the shelter of the heavy guns of his iron-clad gunboats, and we remained undisputed masters of his well-selected, admirably provided cantonments, after over twelve hours of obstinate conflict with his forces, who had been beaten from them and the contiguous covert, but only by a sustained onset of all the men we could bring into action."

The Federal forces arranged for the battle of the next day were: the divisions of Gens. Nelson, Crittenden, McCook, Hurlbut, McClernand, and Sherman, including in the three latter the shattered and disorganized commands of Prentiss and W. H. L. Wallace, which were without commanders, and the fresh division of Gen. L. Wallace. These divisions were arranged in the order above named, beginning on the left. The change produced in the position of the Confederate forces, by the shells of the gunboats during the night, prevented them from opening the battle at daylight.

At seven o'clock in the morning, Gen. Nelson on the extreme left formed his line of battle, and advanced, with skirmishers thrown out, for

nearly a mile before meeting the enemy in force. They immediately became engaged. There was no straggling, as upon the previous day. Gen. Nelson slowly but steadily advanced, pushing the exhausted enemy before him until half past ten, when under cover of the timber and a furious cannonading they made a general rally. Suddenly the masses of the enemy were hurled with tremendous force against the Federal lines, which now halted, wavered, and fell back. At this moment Terrill's battery of 24-pounder howitzers rushed up, and in a few minutes was unlimbered and firing into the compact and advancing ranks of the enemy. Here was the turning point of the battle on the left. The enemy were only checked, not halted; then followed for two hours a contest of artillery and musketry at short range. The enemy began to waver, when Gen. Buell coming up, saw at a glance the chance and ordered a charge by brigades, at "double quick." The Confederates fell back for a quarter of a mile, became more confused, and at half past two that point of the field was cleared. The next divisions, of Gens. Crittenden and McCook, after an obstinate struggle, were equally successful. The divisions of Gens. McClernand and Hurlbut, nothing daunted by the reverses of the preceding day, fought with much bravery. On the right the contest was more severe, and longer continued. A design was manifested by the enemy to turn the flank of Gen. Wallace's division. This was thwarted, and the enemy steadily driven back until four P. M., when a general retreat took place on the right. Thus the original plan of the enemy was frustrated. It was his design to drive Gen. Grant into his transports and the river, or to capture his force in time to profit by the victory, and remove to the rear all the stores and munitions that would be taken. This was to be done before the arrival of Gen. Buell.

On the retreat of the Confederate army, the original ground, and even the tents of Gen. Grant's army, were recovered. No regular pursuit was attempted until the next day. The number of the Federal army engaged on Sunday, was estimated by Gen. Beauregard at five divisions of nine thousand men each, or forty-five thousand men. The reënforcements of Sunday night were estimated by him at twenty-five thousand from Gen. Buell's army, and eight thousand under Gen. Wallace, and the entire force on Monday fifty-three thousand. This estimate slightly exceeds the Federal force engaged, especially in the number of reënforcements furnished by Gen. Buell. On the other hand, the Confederate force was estimated at sixty thousand by the Union officers, which was undoubtedly an overestimate. Gen. Grant had a force somewhat less than the enemy on Sunday, but on Monday he outnumbered them. No official statement of numbers has been afforded on either side. The Federal loss was 1,735 killed, 7,882 wounded, and 3,956 taken prisoners. Total, 13,573. The Confederate loss was killed 1,728, wounded 8,012, missing 959. Total, 10,699.

At the close of the battle on the first day, Gen. Beauregard sent the following despatch to Richmond:

BATTLE FIELD OF SHILOH, *April* 6, }
via Corinth and Chattanooga. }

General S. Cooper, Adjutant-General:

We have this morning attacked the enemy in a strong position in front of Pittsburg, and after a severe battle of ten hours, thanks to Almighty God, gained a complete victory, driving the enemy from every position.

The loss on both sides is heavy, including our Commander-in-Chief, Albert Sidney Johnston, who fell gallantly leading his troops into the thickest of the fight.

(Signed) G. T. BEAUREGARD, Gen'l Com'd'g.

In consequence of the reception of this message, President Davis sent the following Message to the Confederate Congress, then in session at Richmond, on the 8th of April:

To the Senate and House of Representatives of the Confederate States of America:

The great importance of the news just received from Tennessee induces me to depart from the established usages, and to make to you this communication in advance of official reports. From official telegraphic despatches, received from official sources, I am able to announce to you, with entire confidence, that it has pleased Almighty God to crown the Confederate arms with a glorious and decisive victory over our invaders.

On the morning of the 6th, the converging columns of our army were combined by its Commander-in-Chief, Gen. A. Sidney Johnston, in an assault on the Federal army, then encamped near Pittsburg, on the Tennessee river.

After a hard-fought battle of ten hours, the enemy was driven in disorder from his position, and pursued to the Tennessee river, where, under cover of the gunboats, he was at the last accounts endeavoring to effect his retreat by aid of his transports. The details of this great battle are yet too few and incomplete to enable me to distinguish with merited praise all of those who may have conspicuously earned the right to such distinction, and I prefer to delay our own gratification in recommending them to your special notice, rather than incur the risk of wounding the feelings of any by failing to include them in the list.

When such a victory has been won over troops as numerous, well-disciplined, armed, and appointed, as those which have just been so signally routed, we may well conclude that one common spirit of unflinching bravery and devotion to our country's cause must have animated every breast, from that of the Commanding General to that of the humblest patriot who served in the ranks. There is enough in the continued presence of invaders on our soil to chasten our exultation over this brilliant success, and to remind us of the grave duty of continued exertion, until we shall extort from a proud and vain-glorious enemy the reluctant acknowledgment of our right to self-government.

But an All-wise Creator has been pleased, while vouchsafing to us his countenance in battle, to afflict us with a severe dispensation, to which we must bow in humble submission. The last long, lingering hope has disappeared, and it is but too true that Gen. Albert Sidney Johnston is no more. The tale of his death is simply narrated in a despatch from Col. William Preston, in the following words:

"Gen. Johnston fell yesterday at half past two o'clock, while leading a successful charge, turning the enemy's right, and gaining a brilliant victory. A Minié ball cut the artery of his leg, but he rode on until, from loss of blood, he fell exhausted, and died without pain in a few moments. His body has been intrusted to me by Gen. Beauregard, to be taken to New Orleans, and remain until directions are received from his family."

My long and close friendship with this departed

chieftain and patriot forbids me to trust myself in giving vent to the feelings which this sad intelligence has evoked. Without doing injustice to the living, it may safely be asserted that our loss is irreparable. Among the shining hosts of the great and good who now cluster around the banner of our country, there exists no purer spirit, no more heroic soul, than that of the illustrious man whose death I join you in lamenting.

In his death he has illustrated the character for which through life he was conspicuous—that of singleness of purpose and devotion to duty—with his whole energies. Bent on obtaining the victory which he deemed essential to his country's cause, he rode on to the accomplishment of his object, forgetful of self, while his very life-blood was fast ebbing away. His last breath cheered his comrades on to victory. The last sound he heard was their shout of victory. His last thought was of his country, and long and deeply will his country mourn his loss. JEFFERSON DAVIS.

On the 10th of April, President Lincoln, having received reports of the battles at Pittsburg Landing, or Shiloh, issued the following proclamation:

WASHINGTON, *April* 10, 1862.

It has pleased Almighty God to vouchsafe signal victories to the land and naval forces engaged in suppressing an internal rebellion, and at the same time to avert from our country the dangers of foreign intervention and invasion.

It is therefore recommended to the people of the United States that, at their next weekly assemblages in their accustomed places of public worship, which shall occur after the notice of this Proclamation shall have been received, they especially acknowledge and render thanks to our Heavenly Father for these inestimable blessings; that they then and there implore spiritual consolation in behalf of all those who have been brought into affliction by the casualties and calamities of sedition and civil war, and that they reverently invoke the Divine guidance for our national counsels, to the end that they may speedily result in the restoration of peace, harmony, and unity throughout our borders, and hasten the establishment of fraternal relations among all the countries of the earth.

In witness whereof I have hereunto set my hand and caused the seal of the United States to be affixed.

Done at the city of Washington, this tenth day of April, in the year of our Lord one thousand eight hundred and sixty-two, and of the independence of the United States the eighty-sixth.

ABRAHAM LINCOLN.

By the President—WM. H. SEWARD, Secretary of State.

On the 8th Gen. Sherman, with a body of cavalry and infantry, advanced on the Corinth road. His progress was at first checked by a force of the enemy's cavalry, which afterward was driven back. The roads were found in a bad state, in consequence of the heavy rain on Sunday night, and strewn with abandoned wagons, ambulances, and limber boxes. A general hospital, containing about two hundred and ninety wounded Confederate soldiers, was also found. The force of Gen. Sherman returned to camp at night.

It was charged against Gen. Grant that the commencement of the battle was a surprise to the Federal forces, and that he was absent from the field until some hours after. In reply he said: "As to the talk of our being surprised, nothing could be more false. If the enemy had sent us word where and when they would attack, we could not have been better prepared. Skirmishing had been going on for two days between our reconnoitring parties and the enemy's advance. I did not believe, however, that they intended to make a determined attack, but simply to make a reconnoissance in force. My headquarters were at Savannah, though I usually spent the day at Pittsburg. Troops were constantly arriving to be assigned to the different brigades and divisions. All were ordered to report at Savannah, making it necessary to keep an office and some one there. I was also looking for Buell to arrive, and it was important that I should have every arrangement complete for his crossing and transit to this side of the river."

Gen. Beauregard issued the preliminary orders for his troops to move from Corinth at one o clock on the morning of the 3d of April. The movement did not commence until during the forenoon. It was expected to reach the Federal lines in time to commence the attack on the 5th. They arrived too late in the afternoon of that day to attack. It could not have been with the advance of this force that "skirmishing had been going on for two days."

On the 9th of April, Maj.-Gen. Halleck, with a portion of his staff, left St. Louis for Pittsburg Landing, to assume command in the field. His first efforts were devoted to reorganizing the army. Two days after his arrival, an expedition was sent under convoy of the gunboats to destroy the railroad bridge over Bear Creek, seven miles inland from Chickasaw. This was successfully done by Gen. Sherman, and cut the communication between Richmond, Va., and Corinth. The state of the roads delayed for some days any movement of importance. Frequent skirmishes, however, took place with the Confederate infantry and cavalry hovering near. On the 22d of April, Gen. Pope, with his division, numbering about 25,000, arrived at Pittsburg Landing from New Madrid. On the 27th, orders were issued by Gen. Halleck for the army to hold itself in readiness for an immediate movement. Gen. Grant's divisions formed the right wing of the army, those of Gen. Buell the centre, and those of Gen. Pope the left wing. Gens. Grant and Buell retained the immediate command of their respective armies. The advance of the army was now gradually commenced. Day after day a division or a brigade was moved a few miles, and the outposts extended. On the 1st of May, Monterey was occupied. It is a small village in McNairy Co., Tenn., four miles from the Mississippi line, and about midway between Pittsburg Landing and Corinth. A few days previously, an expedition under Gen. Wallace had gone as far as Purdy, about twenty miles west of Pittsburg Landing, and destroyed the bridge of the railroad connecting Corinth with Jackson.

On the 2d of May, Gen. Beauregard issued the following address to his soldiers:

HEADQUARTERS OF THE FORCES AT CORINTH, MISSISSIPPI, *May* 2, 1862.

Soldiers of Shiloh and Elkhorn: We are about to meet once more, in the shock of battle, the invaders

of our soil, the despoilers of our homes, the disturbers of our family ties, face to face, hand to hand. We are to decide whether we are to be freemen or vile slaves of those who are free only in name, and who but yesterday were vanquished, although in largely superior numbers, in their own encampments, on the ever-memorable field of Shiloh. Let the impending battle decide our fate, and add a more illustrious page to the history of our revolution—one to which our children will point with noble pride, saying, "Our fathers were at the battle of Corinth." I congratulate you on your timely junction. With your mingled banners, for the first time during this war, we shall meet our foe in strength that should give us victory. Soldiers, can the result be doubtful? Shall we not drive back into Tennessee the presumptuous mercenaries collected for our subjugation? One more manly effort, and, trusting in God and the justness of our cause, we shall recover more than we have lately lost. Let the sound of our victorious guns be reëchoed by those of the army of Virginia on the historic battle field of Yorktown.

G. T. BEAUREGARD,
General Commanding.

J. M. Otey, Acting Assistant Adjutant-General.

On the 3d of May, the army, commanded by Gen. Halleck, numbering 108,000 men, was within eight miles of Corinth. The bridges burned had been rebuilt, and the roads had become dry enough to render transportation easy. Few can conceive the difficulty of moving such a mass of men with their tents, baggage, artillery, and supplies, over an uneven, marshy country, covered with woods, and without roads.

Corinth is a small village in the northeast corner of Mississippi, ninety miles east from Memphis, and about twenty miles west from the Tennessee river. The Memphis and Charleston railroad runs through it from east to west, and the Mobile and Ohio from north to south. The country between it and the Tennessee river is very uneven, broken into ridges of hills and abrupt valleys, and covered with a heavy forest. The bridges over the creeks had been destroyed; the roads over the marshes had been torn up, and timber had been felled in great quantities over them.

On the same day Gen. Paine, with his division, made a reconnoissance to Farmington, five miles northwest of Corinth, and found about 4,500 Confederate troops, who, on being attacked, retreated with a loss of 30 killed and 200 taken prisoners. At the same time an artillery reconnoissance to Glendale on the Charleston and Memphis railroad, destroyed two trestle bridges and some of the track.

At this time the organization of Gen. Halleck's force had been somewhat changed. Gen. Thomas was assigned to the command of the right wing, composed of five divisions, viz.: his own, Hurlbut's, Sherman's, that of Gen. Smith, deceased, and Gen. Davies'; the centre consisted of four divisions under Gens. McCook, Wood, Nelson, and Crittenden; the left under Gen. Pope, to which was added one division of Gen. Curtis's army from Arkansas. Gen. Grant was appointed second in command. The reserve under Gen. McClernand consisted of his own and Gen. Wallace's divisions. The advance upon Corinth was made with the extremity of each wing thrown back in echelons to prevent a flank attack.

Meantime the Confederate forces at Corinth were active in strengthening their position and accumulating reënforcements. Pensacola and New Orleans had at this time been captured by the Federal forces, and Gen. Lovell had with his force arrived at Corinth from the neighborhood of the latter city. On the 9th, a strong Confederate force drove in the Federal pickets beyond Farmington, and advanced upon the brigade occupying the farther side of the creek in front of the Federal camp. The brigade maintained its position for some time, but Gen. Pope, finding it would be necessary to move his whole force across the creek, contrary to orders, in order to sustain it, directed it to retire.

Great as was the army of Gen. Halleck, the Confederates were believed to be stronger, and the people of the Southern States now looked forward to a signal and brilliant victory.

The advance of the Federal lines was slow, and on the 21st their batteries were within three miles of Corinth. The skirmishing of the pickets now increased every day, and soon became constant along the entire line. Almost daily the artillery was engaged, and the hour for battle was close at hand.

The railroad communication to the northward and eastward of Corinth had been destroyed at Purdy and Glendale. With a view to prevent still further, so far as it was in his power, either the reënforcement or the retreat of the Confederate armies at Corinth, Gen. Halleck directed that the railroad to the southward of Corinth and in the direction of Mobile should be also cut. To effect this, Col. Elliott, with two regiments of cavalry, started on the night of the 27th, and early on the 30th reached Booneville, 24 miles south of Corinth. A large amount of stores was found and destroyed, consisting of five railroad cars loaded with small arms, five loaded with loose ammunition, six with officers' baggage, and five with subsistence stores, harness, saddles, &c. Some hundreds of sick Confederate soldiers were paroled. The trains, engines, and depot were burned.

On the 28th, Gen. Halleck sent the following despatch to Washington:

Headquarters Department Mississippi,
Camp on Corinth Road, *May* 28.

Hon. E. M. Stanton, Secretary of War:

Three strong reconnoitring columns advanced this morning on the right, centre, and left, to feel the enemy and unmask his batteries. The enemy hotly contested his ground at each point, but was driven back with considerable loss. The column on the left encountered the strongest opposition. Our loss was twenty-five killed and wounded. The enemy left thirty dead on the field. The losses at other points are not yet ascertained. Some five or six officers and a number of privates were captured. The fighting will probably be renewed to-morrow morning at daybreak. The whole country is so thickly wooded that we are compelled to feel our way.

H. W. HALLECK, Major-General.

The following despatches were sent on the 30th:

NEAR CORINTH, *May* 30, 1862.

Hon. E. M. Stanton, Secretary of War:

Gen. Pope's heavy batteries opened upon the enemy's intrenchments yesterday, about 10 A. M., and soon drove the rebels from their advanced battery.

Maj.-Gen. Sherman established another battery yesterday afternoon within one thousand yards of their works, and skirmishing parties advanced at daybreak this morning.

Three of our divisions are already in the enemy's advanced works, about three quarters of a mile from Corinth, which is in flames.

The enemy has fallen back of the Mobile railroad.

H. W. HALLECK.

NEAR CORINTH, *May* 30, 1862.

Hon. Edwin M. Stanton, Secretary of War:

Our advanced guard are in Corinth. There are conflicting accounts as to the enemy's movements. They are believed to be in strong force on our left flank, some four or five miles south of Corinth, near the Mobile and Ohio railroad.

H. W. HALLECK, Major-General.

HEADQUARTERS CAMP NEAR CORINTH, *May* 30.

Hon. E. M. Stanton, Secretary of War:

The enemy's position and works in front of Corinth were unexpectedly strong. He cannot occupy a stronger position in his flight.

This morning he destroyed an immense amount of public and private property, stores, provisions, wagons, tents, &c.

For miles out of the town the roads are filled with arms, haversacks, &c., thrown away by his flying troops.

A large number of prisoners and deserters have been captured, and are estimated by Gen. Pope at two thousand.

Gen. Beauregard evidently distrusts his army, or he would have defended so strong a position. His troops are generally much discouraged and demoralized. In all their engagements for the last few days their resistance has been weak.

H. W. HALLECK, Major-General.

The Confederate officers began to remove their sick from Corinth preparatory to an evacuation on Monday, the 26th of May. On the next day, Tuesday the 27th, Gens. Beauregard and Bragg were making arrangements for falling back, which process was completed in great haste on Thursday night, the 29th. On Wednesday the entire line of Gen. Halleck was advanced from one half to three quarters of a mile and up into easy range of the enemy's works. The heavy siege guns were put into position on that day on the works thrown up by the advanced column. This movement throughout was hotly contested, the enemy doubtless seeking to keep their opponents at a safe distance if possible, until their evacuation should be completed. They continued to show an unbroken front and to work their batteries with energy and without interruption throughout that and the next day. On Thursday morning operations were resumed with the same earnestness as on Wednesday. The enemy appeared still in position, and contested every inch of the Union advance with the utmost determination. At nine o'clock on that morning, however, their musketry firing ceased, and was not again resumed. After that hour there were no further close engagements. The batteries on both sides, however, were kept in play, though a gradual diminution of the enemy's fire was observable as the day wore away, and before night it had wholly ceased. During the night heavy explosions were heard in the enemy's works, which were conjectured to be the destruction of their magazines and ammunition, which subsequently proved true. Flames were also seen issuing from the town in the latter part of the night. These indications were plain to those in the advance of the Federal lines, and were understood to be the movements for an evacuation.

As no opposition was made to the advance on Friday morning, some officers dashed ahead to satisfy themselves of the enemy's position. The first party rode into the town at 6h. 30m. in the morning, and then was discovered the whole extent of the success gained. Destruction, waste, and desolation were visible on every hand. Huge piles of commissary stores were smouldering in the flames. The remains of buildings destroyed were conspicuous on the streets. The enemy had fled, taking care that what they could not carry away should at least not be left for the victors. One large warehouse, filled with provisions, was all that remained undamaged of boundless stores of similar goods, sufficient to withstand a much longer siege. Sacks were torn open, barrels broken, hogsheads knocked to pieces, and their contents mixed in common piles, upon and about which huge bonfires had been lit.

So complete was the evacuation that not only was the Confederate army successfully withdrawn, but they took every piece of ordnance. A large quantity of ammunition was left behind in a damaged state.

At Corinth the Confederate line of fortifications was about fifteen miles long, with strong batteries or redoubts at every road or assailable point. Between the fortifications and a marshy stream covering the whole front, the dense timber had been cut down to form a very strong abattis, through which no cavalry or artillery could have passed, nor even infantry except as skirmishers. The lines thrown up by the Federal troops at the end of the day's advance were mere rifle pits, while the fortifications around Corinth were, as stated above, a strong continuous line, constructed with great care and labor, and, independent of their position, were in themselves immeasurably stronger than the mere precautionary defences on the Federal part against any sudden sortie of the enemy. The Confederate works, moreover, were on the brow of a ridge considerably higher than any in the surrounding country, at the foot of which was a ravine correspondingly deep. The zigzag course of the line gave to the defenders the command of all the feasible approaches, and hundreds could have been mowed down at every step made by an assailing army.

At the time of the evacuation of Corinth the hot weather of summer had commenced and the period of low water in the rivers was close at hand. Even the Tennessee could not be relied upon as a route by which to transport

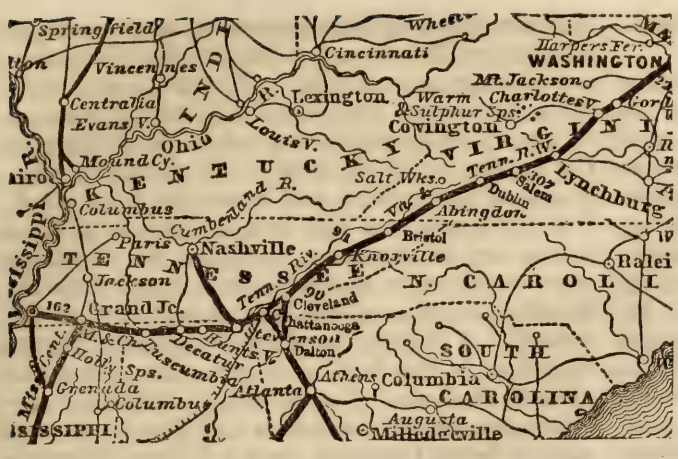
all the supplies required for the Federal army. Gen. Halleck consequently took immediate steps to open a new line direct to Columbus, Ky., to which place the railroad was speedily repaired. These circumstances would impose a limit upon the military operations of Gen. Halleck's army for some months. Even if Corinth was evacuated and a part of the Confederate force withdrawn entirely, no serious blow could be struck by Gen. Halleck. These considerations must have presented themselves to the Confederate Government at the time when Richmond was closely pressed by Gen. McClellan, and really in danger of capture. Without doubt they exerted an influence in producing the determination to evacuate Corinth. And when it became evident that the position could not be held against the force that was advancing upon it, they pointed out the manner in which this evacuation could be turned to advantage.

At this time Gen. McClellan had crossed the Chickahominy, Gen. Banks was retreating before Gen. Jackson up the Virginia valley, Forts Pillow and Randolph and the city of Memphis had surrendered, and a Federal force was making an attack on Vicksburg.

The pursuit of the retreating forces of Gen. Beauregard was made as follows: On the morning after the evacuation, Gen. Pope's forces entered the town about twenty minutes before seven o'clock, just as the last of the Confederate cavalry were leaving. One company of cavalry, being Gen. Pope's escort, pushed after them, and had a brisk skirmish, in which several were killed and captured. The pursuit, however, was arrested by the burning of a bridge over a swampy creek, and the cavalry returned. A brigade of cavalry and a battery under Gen. Granger were then sent out by Gen. Pope on the Booneville road. It left Farmington at noon on the 30th, and the same day came up with the rear guard of the enemy posted on Tuscumbia Creek eight miles south of Corinth. The next day they were driven out, and on Sunday, June 1, the pursuit was recommenced. Gen. Granger passed Rienzi only two hours behind the retreating army, and found the bridges between that place and Booneville so recently fired that the timbers were nearly all saved. That afternoon the advance overtook the retreating Confederate rear four miles from Booneville, and pursued it within one mile of the town, and halted for the night. At five o'clock on the next morning the town was entered, and skirmishing was kept up all day with the Confederates on every road leading westward or southward as far as Twenty Mile Creek. On the next day a reconnoissance with force was made toward Baldwin, and the Confederate force driven across Twenty Mile Creek; and on the 4th another reconnoissance was made by Col. Elliot via Blocklands, with similar results. On the 10th Baldwin and Guntown were occupied by Federal troops, which was the termination of the pursuit. Booneville, above mentioned, is twenty-four miles by the railroad from Corinth. The Confederate force fell back to Tupello. The position of the forces at Corinth remained unchanged until the 10th of June, when Maj.-Gen. Buell, under instructions from Gen. Halleck, moved his army along the line of railroad toward Chattanooga. He was then between Huntsville and Stevenson, when it became necessary to move upon Louisville to counteract the designs of Gen. Bragg. Meantime the army under Gen. Grant occupied the line of west Tennessee and Mississippi extending from Memphis to Iuka, and protecting the railroads from Columbus south, which were then their only channels of supply. On the 23d of July Gen. Halleck left the department to take the position of general-in-chief at Washington. Gen. Grant continued in the position above stated until a portion of his troops were withdrawn from Mississippi and sent to Kentucky and Cincinnati to give confidence to the new levies brought into the field upon the invasion of Kentucky by Gen. Bragg.

It will have been observed that the division of Gen. Buell's army, under the command of Gen. Mitchell, has not been spoken of as coöperating with the other divisions at Pittsburg Landing and Corinth. This division left Nashville on the same day with the others, but took the road to Murfreesboro. There it remained in occupation of the place and repairing the bridges until the 4th of April. Long before this time the Confederate troops, which occupied Nashville and retreated to Murfreesboro, had withdrawn and united with those under Gen. Beauregard on the new southern line of defence.

On the 4th of April, Gen. Mitchell marched to Shelbyville, the county seat of Bedford county, Tenn., twenty-six miles distant. On the 7th he advanced to Fayetteville, twenty-seven miles farther, and the next forenoon, the 8th, fifteen miles beyond, he crossed the State line of Alabama. Continuing his march six miles farther, and being within ten miles of Huntsville, Ala., he halted for the artillery and infantry to come up. No tents were pitched. The men lay round camp fires. Just as the moon was going down, the shrill bugle call was sounded. All were up, and in a few minutes ready to move. A battery was put in advance, supported by two brigades. Four miles from Huntsville, the shrill whistle of a locomotive was heard, and in a few minutes the train came in sight, and was stopped by the call of the brass guns of the battery. The train was captured together with 159 prisoners. On to the town was now the order. The citizens were quietly sleeping as the army entered. Says a spectator of the scene: "The clattering noise of the cavalry aroused them from their slumber ere the dawn of the morning, and they flocked to door and window, exclaiming with blanched cheek and faltering tongue, 'They come, they



come, the Yankees come!' Never in the history of any military movement was surprise so complete. Men rushed into the streets almost naked, the women fainted, the children screamed, the darkies laughed, and for a short time a scene of perfect terror reigned. This state of affairs soon subsided."

Col. Gazley, of the 37th Indiana regiment, was appointed provost marshal, and his regiment occupied the city as guard. Then commenced an examination of the results of this bloodless capture. At the railroad depot were found seventeen first-class locomotives and a great quantity of passenger and freight cars, and at the foundery two or three cannon, together with several small arms. Gen. Mitchell soon made good use of the engines. Before the close of day, one hundred miles of the Memphis and Charleston railroad were in his possession, stretching in one direction as far as Stevenson, and in the other as far as Decatur. At the latter place, the entire camp equipage of a regiment was captured. From Decatur he pushed on at once to Tuscumbia.

Thus, without the loss of a single life, Gen. Mitchell placed his army midway between Corinth and Chattanooga, prevented the destruction of a fine bridge at Decatur, opened communication with Gen. Buell, and also the navigation of the Tennessee. The occupation of Huntsville also cut off all communication between the east and west by the Memphis and Charleston railroad. The expedition east on the railroad, under Col. Sill, penetrated as far as Stevenson at the junction of the Chattanooga road, at which place five locomotives and an amount of rolling stock were captured. An expedition went as far south from Tuscumbia as Russelville. Lagrange and Florence were also visited, and Confederate property of the military kind was found.

This extension of Gen. Mitchell's lines to hold the railroad rendered his situation precarious. Soon the enemy began to gather in force and threaten him. His course however received the commendation of the War Department. He was raised to the rank of a major-general, and ordered to report directly to the department, and his force was constituted an independent corps. But he got no reënforcements. He was left in such a condition that he at first hardly had anything to report but that he had been gradually driven from those positions, the gaining of which had made him a major-general. On his right, the enemy were now in force, and picket skirmishing was constant. On his left, at Chattanooga, a strong force threatened his rear and the safety of Nashville. In his front, cavalry came up and attacked his line at times. Gen. Halleck sent to him 100,000 rations under convoy of a gunboat. Of these 40,000 were burned to prevent their capture. On the 24th of April, the retreat from Tuscumbia commenced. On the 26th the bridge at Decatur was crossed, when it was fired and burned. It was the only crossing of the Tennessee east of Florence, above the head of navigation, and west of Bridgeport near Chattanooga. The bridge was destroyed in an hour and a half, but before its destruction was complete, the enemy's cavalry appeared on the opposite side. Having returned to Huntsville, the right wing of the force commenced operations toward Chattanooga.

On the 30th of April, an expedition was sent to Bridgeport near Stevenson, the result of which placed under the control of Gen. Mitchell the bridge across the river. As there was no bridge below his position since the destruction of the one at Decatur, and as he had control of the one above near Chattanooga, and as his communication between the extremes of his line was by railroad, which was in his possession, and the Tennessee river lay in front of him, on the farther side of which was all the enemy he anticipated, he thus closed his report to the Secretary of War under date of May 1: "The campaign is ended, and I now occupy Huntsville in perfect security, while all of Alabama north of the Tennessee river floats no flag but that of the Union." It was stated that if Gen. Mitchell had been sustained with a sufficient force, he would have crossed the Tennessee river at its extreme southern point in Alabama, and reached Gunter's Landing—a march of forty miles thence would have placed in his possession Gadsden on the Coosa river, where he could have destroyed the steamboats on the river, or seized them and proceeded to Rome and destroyed large armories and founderies. From Gunter's Landing there is also a fine road to Rome, eighty miles distant. In two days his cavalry could have passed that distance, destroyed the founderies at Rome, and captured engines and cars enough at that place and Kingston to have enabled him to proceed up the road with an armed force to protect them in burning the bridges. This movement would have cut off Gen. E. Kirby Smith, then advancing upon Huntsville, from reënforcements or retreat. The Confederate forces in Knoxville, Greenville, and Cumberland Gap, in east Tennessee, and even in western Virginia, would all have been dangerously exposed by

little more extended operations along the railroads by Gen. Mitchell.

Subsequently he advanced upon Chattanooga, which compelled the Confederate forces in eastern Tennessee to make a backward movement. Only a single stem of railroad connects Chattanooga with Atlanta, and thence connects with other parts of Georgia, Alabama, and South Carolina, and its loss would compel evacuation above, as in the case of Bowling Green. Several expeditions were sent out by Gen. Mitchell during the month of May against small bands of cavalry upon the same side of the river. One or two skirmishes of considerable spirit, and with respectable numbers, also took place. On the 6th of June, Gen. Negley, from the opposite side of the river, made an attack with his artillery upon Chattanooga. This was replied to from some earthworks. On the next day a considerable force under Gen. E. K. Smith opened fire upon Gen. Negley, but were compelled to retire. Chattanooga was finally abandoned by the Federal force in consequence of the difficulty of procuring supplies.

On the advance of Gen. Buell, this division of his army under Gen. Mitchell was placed under the command of Gen. Rosseau, and Gen. Mitchell was ordered to the command at Port Royal, South Carolina.

The result of the military operations that have been thus far described, was at this time of the year such as to leave in the hands of the Confederate Government a large military force, which it could use without additional hazard wherever it pleased, while the Federal Government, struck with panic from other causes, was actually calling upon the governors of the loyal States to hurry forward to its protection even three months' volunteers. The acquisition of territory, however, was all on the side of the Federal Government, which had got its hands so full in proportion to its military preparations, that it must either relinquish some portion of it or submit to defeat somewhere, if its antagonist was active, skilful, and dexterous. This state of affairs culminated in the midst of the Virginia campaign, and it was decisive not only of that campaign, but it presented to the world magnificent displays of the skill and power of the respective antagonists.

It has been said that the Confederate Government had a large military force with which it was free to act, without additional hazard. This force consisted of part of the levies of the previous year, some of the levies raised by the governors of the States, under a call from President Davis in February of this year, and some of the troops beginning to come up under the conscription act passed by the Confederate Congress early in April. In Missouri the success of Gen. Curtis had been such as to drive out all the regular Confederate troops, and he had established himself just within the borders of Arkansas. But the requisition upon him to send ten regiments to the assistance of Gen. Halleck, so limited his ability for offensive operations, that the troops of Arkansas were to a considerable extent free to act wherever the Confederate Government needed. Kentucky and middle and western Tennessee had been evacuated by the Confederate forces, which held them at the beginning of the year. These forces congregated at Corinth, and upon its evacuation, the vast army was not in a condition, at that hot season of the year, to follow the fugitives any considerable distance, or to push forward its offensive operations, as has been before observed. A limited Confederate force was therefore kept in the field, to observe the operations of Gen. Halleck. The cessation of military operations against Charleston and Savannah, and also in North Carolina, by the Federal Government, caused the Confederate Government to keep no more than a force of observation in the field, and left it at liberty to concentrate its other troops wherever their presence might be most needed. These troops were therefore sent to Virginia, to engage in the campaign going on in that State.

The position and number of the Federal troops in Virginia at the beginning of the year have already been stated (*see* page 24). The distinct bodies of men were those under Gen. Wool at Fortress Monroe and Newport News; those under Gen. Hooker south of Washington; those under Gen. McClellan southwest of Washington; those under Gens. Keyes and Casey in and around Washington; those under Gen. Stone at and near Poolesville, and those under Gen. Banks near Darnestown with detachments on the Potomac to Williamsport. Cumberland was the headquarters of Gen. Kelly, and Grafton in western Virginia, on the line of the Baltimore and Ohio Railroad, the headquarters of Gen. Rosecrans, while Gen. Cox was up the Kanawha valley.

On the 5th of January Gen. Lander arrived at Hancock, on his way to Cumberland to relieve Gen. Kelly, who was sick. He found the enemy under Gen. Jackson, on the other side of the Potomac, in considerable strength. It had been designed for two months that Gen. Jackson should move northwest toward Romney; but he was delayed by the impression of the Confederate Government that the Federal army would make a general advance, and risk a battle during the winter. On the 3d or 4th of January he left Winchester and moved northward toward Hancock, a distance of forty miles, and attacked four companies of Federal troops stationed at Bath, driving them to Hancock, where, having been reënforced by Gen. Lander, they made a stand. Here Gen. Jackson made a feint attack by throwing some shells across the Potomac, which did only slight damage. He then moved westward with the intention of coming into Romney, on the Union left, by way of Springfield, and thus cut off the supplies from Cumberland and the railroad. The relative positions of Winchester, Hancock, and Romney are at the points of an equilateral triangle: Hancock north of Winchester, and Romney northwest.

The day before Gen. Jackson retired from before Hancock, Gen. Kelly, who was in Cumberland, sent an order to Col. Dunning, the commandant at Romney, to make an attack on the enemy's force stationed at Blue's Gap, a strong position, sixteen miles from Romney, on the road to Winchester. On the night of the 6th an expedition, consisting of the 4th, 5th, 7th, and 8th Ohio, 14th Indiana, and 1st Virginia, with two companies of cavalry and a battery, was sent to Blue's Gap, and made an attack upon the enemy, who, being in small force, were completely driven out. At this time Gen. Loring, with a considerable Confederate force, was within six miles of the gap, expecting the Federal column to push on and attack him. Meantime, as soon as Gen. Jackson left Hancock, Gen. Lander, anticipating his intentions, proceeded to Cumberland to Gen. Kelly, and assumed the chief command, and thence to Romney, where he arrived on the night of the Tuesday on which the expedition returned from Blue's Gap. Everything was put in readiness for a struggle. On Friday following it was reported that Gen. Jackson, in command of his right wing of ten thousand men, was within twelve miles east of Springfield, resting his men, and waiting for his other forces to get into position. His centre under Gen. Loring, about eight thousand strong, was at Blue's Gap, and his left wing of three thousand had moved up from toward Moorefield, and taken position on the New Creek road, some six miles in the rear of Romney. Thus, excepting at one point, Romney was completely surrounded by Gen. Jackson. If Gen. Lander could march north eight miles, to the Springfield crossing of the South Branch of the Potomac, before Gen. Jackson could march west twelve to Springfield, then Gen. Lander could get beyond him, or fight him with ten thousand men, at a less disadvantage than in Romney, where Gen. Jackson would concentrate twenty thousand. The entire force of Gen. Lander was about four thousand five hundred men. On Friday night everything was ready for the march. The sick, the hospital, and commissary stores were sent forward under a strong guard, and at midnight the rear guard of Gen. Lander withdrew from the town. It had rained during the day, and the rate of advance over the bad roads was a mile and a quarter to the hour. At five o'clock the next morning Gen. Lander reached Springfield. The men were so tired and exhausted that, after making fires of the fences, they lay down in files on the cold, wet ground and slept. In two hours they were again on the march. But Gen. Jackson, instead of following, went to Romney, and thence retired to Winchester, leaving the former place occupied by Gen. Loring. He also evacuated it after a few days, partly in consequence of Gen. Lander having gathered his forces, and prepared for a march upon it. Subsequently Moorefield was captured, and Bloomery Gap, by Gen. Lander. On the 11th of February Gen. Lander telegraphed to Gen. McClellan, the commander-in-chief, as follows: "The railroad was opened to-day to Hancock; also the telegraph. Papers taken, and my own reconnoissance to the south, prove the country clear, and Jackson and Loring in Winchester. The enemy have been driven out of this department."

The failure of Gen. Lander's health compelled him soon after to resign his command.

The time was now approaching when some movement should begin among the vast forces encamped in northeastern Virginia. With the Confederate Government, which still adhered to the defensive policy, the question was, whether it should maintain its advanced position before Washington, or fall back on Richmond? Its position was so well fortified that it could resist any attack in front, but would be in danger if either of its flanks were turned. Winchester, in the Shenandoah Valley, was the extreme point on the northwest occupied by the Confederate army, and Aquia Creek and Matthias Point on the southeast. This extent of line was too great to be maintained before the vast Federal forces organized in front. The flanks might thus be turned by the way of Leesburg on the north, or the Potomac on the south, and serious disaster would ensue. At the same time, the farther Gen. McClellan was drawn from his position before being encountered, so much the easier would his army be overcome, and at a greater cost to the North. These and similar considerations determined the Confederate Government to evacuate the position held by its army at Manassas. This measure was, however, not executed until March.

On the 30th of January, Gen. Beauregard, having been ordered to command in Kentucky and Tennessee, issued the following address to the soldiers at Manassas:

HEADQUARTERS FIRST CORPS ARMY OF THE POTOMAC,
Near CENTREVILLE, *January* 30, 1862.

Soldiers of the First Corps Army of the Potomac:

My duty calls me away, and to a temporary separation from you. I hope, however, to be with you again, to share your labors and your perils, and in defence of our homes and our rights, to lead you to new battles, to be crowned with signal victories.

You are now undergoing the severest trial of a soldier's life; the one by which his discipline and capacity for endurance are thoroughly tested. My faith in your patriotism, your devotion and determination, and in your high soldierly qualities, is so great that I shall rest assured you will pass through the ordeal resolutely, triumphantly. Still, I cannot quit you without deep emotion, without even deep anxiety, in the moment of our country's trials and dangers. Above all, I am anxious that my brave countrymen, here in arms, fronting the haughty array and muster of Northern mercenaries, should thoroughly appreciate the exigency, and hence comprehend that this is no time for the army of the Potomac—the men of Manassas—to stack their arms and quit, even for a brief period, the standards they have made glorious by their manhood. All must understand this, and feel the magnitude of the conflict impending, the universal personal sacrifices this war has entailed, and our duty to meet them as promptly and unblenchingly as you have met the enemy in line of battle.

To the army of the Shenandoah I desire to return my thanks for their endurance in the memorable march to

my assistance last July, their timely, decisive arrival, and for their conspicuous steadiness and gallantry on the field of battle.

Those of their comrades of both corps, and of all arms of the army of the Potomac, not so fortunate as yet to have been with us in conflict with our enemy, I leave with all confidence that on occasion they will show themselves fit comrades for the men of Manassas, Bull Run, and Ball's Bluff. G. T. BEAUREGARD,
General Commanding.

Twelve months had now nearly passed since the first soldiers of the Confederate army took the field, and their term of enlistment was about to expire. This fact is not only referred to in the address of Gen. Beauregard, but it was made the occasion of the following address by Gen. Johnston, now in command of the same forces:

HEADQUARTERS, DEPARTMENT OF NORTHERN VIRGINIA, *February* 4, 1862.

SOLDIERS: Your country again calls you to the defence of the noblest of human causes. To the indomitable courage already exhibited on the battle field, you have added the rarer virtues of high endurance, cheerful obedience, and self-sacrifice. Accustomed to the comforts and luxuries of home, you have met and borne the privations of camp life, the exactions of military discipline, and the rigors of a winter campaign. The rich results of your courage, patriotism, and unfaltering virtue are before you. Intrusted with the defence of this important frontier, you have driven back the immense army which the enemy had sent to invade our country, and to establish his dominion over our people by the wide-spread havoc of a war inaugurated without a shadow of constitutional right, and prosecuted in a spirit of ruthless vengeance. By your valor and firmness, you have kept him in check, until the nations of the earth have been forced to see us in our true character—not dismembered and rebellious communities, but an empire of confederate States, with a constitution safe in the affections of the people, institutions and laws in full and unobstructed operation, a population enjoying all the comforts of life, and a citizen soldiery who laugh to scorn the threat of subjugation.

Your country now summons you to a noble and a greater deed. The enemy has gathered up all his energies for a final conflict. His enormous masses threaten us on the west; his naval expeditions are assailing us upon our whole southern coast; and upon the Potomac, within a few hours' march, he has a gigantic army, inflamed by lust and maddened by fanaticism. But the plains of Manassas are not forgotten, and he shrinks from meeting the disciplined heroes who hurled across the Potomac his grand army, routed and disgraced. He does not propose to attack this army so long as it holds its present position with undiminished numbers and unimpaired discipline; but, protected by his fortifications, he awaits the expiration of your term of service. He recollects that his own ignoble soldiery, when their term of service expired, "marched away from the scene of conflict to the sound of the enemy's cannon," and he hopes that at that critical moment Southern men will consent to share with them this infamy. Expecting a large portion of our army to be soon disbanded, he hopes that his immense numbers will easily overpower your gallant comrades who will be left here, and thus remove the chief obstacle to his cherished scheme of Southern subjugation.

The Commanding General calls upon the twelve months' men to stand by their brave comrades who have volunteered for the war, to re-volunteer at once, and thus show to the world that the patriots engaged in this struggle for independence will not swerve from the bloodiest path they may be called to tread. The enemies of your country, as well as her friends, are watching your action with deep, intense, tremulous interest. Such is your position that you can act no obscure part. Your decision, be it for honor or dishonor, will be written down in history. You cannot, you will not, draw back at this solemn crisis of our struggle, when all that is heroic in the land is engaged, and all that is precious hangs trembling in the balance.

JOS. E. JOHNSTON, Major-General C. S. A.

It was not the purpose of Gen. McClellan while commander-in-chief to move on Centreville, but by the lower Chesapeake upon Richmond. His object was to capture and hold Chattanooga, Tenn., before the army of the Potomac advanced. In this, however, he was overruled by the President, who, on the 27th of January, issued an order, as above stated, for a general advance of all the armies on the 22d of February. This order was thus undoubtedly premature; and while it served to present the President before the country as anxious for a movement, it was really of no benefit to the cause, but, on the contrary, an actual injury. Previous to its issue a change had been made in the head of the War Department. Secretary Simon Cameron had resigned and was succeeded by Edwin M. Stanton; neither was a man of military education or experience.

The effects upon the Confederate States of the movements made in consequence of this order were thus described at Richmond: "Had not the impatience of the Northern people and the pressure of the European Cabinets forced the hand of McClellan, and had he been able to assemble and arrange his troops and stores in the position he desired, without a conflict to arouse the attention of the Southern people to what was going on, our condition in April and May would have been tenfold more dangerous than it now is. The disasters we have suffered are mortifying to us and exhilarate our enemies; but they have startled without crippling the Confederacy. Had it lain still two months more, with the army dwindling daily under the furlough system, disgusted with the inaction of stationary camps, while the Government was squabbling with the Generals and the people sinking into indifference, we would have been overrun between the 15th of April and the 1st of May."

Gen. Lander having cleared his department of the forces of the enemy, a movement was now commenced lower down the Potomac by a portion of Gen. Banks's command. On the 24th of February the 28th Pennsylvania regiment, Col. Geary, crossed the Potomac from Sandy Hook and took possession of Harper's Ferry. The object of this movement upon Harper's Ferry was to cover the reconstruction of the Baltimore and Ohio railroad, and at the same time to draw the attention of the Confederates to their left flank, which was threatened by the movement. The operations of crossing the Potomac and the occupation of Harper's Ferry and Charlestown were superintended by Gen. McClellan in person. The bridges were thrown over the Potomac by Capt. J. C. Duane, U. S. engineers, on the 26th of February, and on the same day Gen. Banks occupied Harper's Ferry permanently, and the advance took possession of Bolivar Heights. On the 27th reconnoissances were pushed forward to Charles-

town, and some prisoners taken; Loudon Heights were also occupied. On the 28th of February Charlestown was occupied by a strong force with the intention of holding it against any attack. On the 3d of March Martinsburg was occupied by the 13th Massachusetts, who left camp at Williamsport on the previous afternoon. This is an important town on the Baltimore and Ohio railroad between Harper's Ferry and Hancock. It is distant from the former fifteen miles, and is twenty miles north of Winchester, with which it is connected by a turnpike road. All the iron of the double track of the railroad had been removed excepting half a mile of track made of compound rails. On the 2d, Leesburg was occupied by Col. Geary. The retreat of the Confederate army had now commenced along its entire line from Aquia Creek to the Shenandoah. This movement threatening its left flank was undoubtedly the cause of this abandonment of Manassas. All their important positions were occupied by the Federal troops during the next ten days, including the strong one at Centreville. Winchester was evacuated by Gen. Jackson on the night of the 11th of March. Gen. Shields, in command of Gen. Lander's division, soon followed up this retreat, and on the 19th he discovered Gen. Jackson reënforced in a strong position near New Market, and within supporting distance of the main body of the Confederate army under Gen. Johnston. In order to draw him from this position Gen. Shields fell back rapidly to Winchester on the 20th, as if in retreat, having marched his whole command thirty miles in one day. On the next day the Confederate cavalry under Gen. Ashby showed themselves in sight of Winchester. On the 22d the entire command of Gen. Banks, with the exception of Gen. Shields's division, evacuated Winchester and marched for Centreville. This movement, and the masked position in which Gen. Shields placed his division, led the enemy to believe that the town was evacuated with the exception of a few regiments to garrison it. That afternoon at 5 o'clock Gen. Ashby attacked the pickets of Gen. Shields and drove them in, but was repulsed by a small force pushed forward by Gen. Shields for that purpose, who now made preparations for a contest in the morning. Only a small Confederate force appearing in the morning, Gen. Shields ordered a portion of his artillery forward to open fire and unmask it. This had the desired effect, when a battle ensued, during which Gen. Shields by an attack upon the Confederate left flank forced that wing back upon its centre and placed the enemy in a position to be routed by a general attack, which was made at five o'clock in the afternoon with great success. The Confederates were driven from the field. Two guns, four caissons, three hundred prisoners, and a thousand stand of small arms were captured. The force of Gen. Shields was between seven and eight thousand men. His loss in killed and wounded was between three and four hundred. On the previous evening the arm of Gen. Shields was broken above the elbow by the fragment of a shell. The Confederate loss in killed and wounded was large. Considerable numbers were subsequently found in the houses of the inhabitants as the force of Gen. Banks advanced. The Confederate force was estimated at near ten thousand men. The brigades of Gens. Jackson, Smith, Garnett, and Longstreet were engaged, and prisoners were taken from the 2d, 4th, 5th, 21st, 23d, 27th, 28th, 33d, 37th, and 42d Virginia; 1st regiment of the Provisional Army, and an Irish battalion. For these movements Gen. Shields was complimented by the War Department in the following despatch:

WAR DEPARTMENT, *March* 26, 1862.

To Brig.-Gen. Shields:

Your two despatches relative to the brilliant achievement of the forces under your command have been received. While rejoicing at the success of your gallant troops, deep commiseration and sympathy are felt for those who have been victims in the gallant and victorious contest with treason and rebellion.

Your efforts as well as your success proves that Lander's brave division is still bravely led, and that wherever its standard is displayed rebels will be routed and pursued. To you and to the officers and soldiers under your command the Department returns thanks. EDWIN M. STANTON, Secretary of War.

The following was also received by Gen. Shields:

HEADQUARTERS ARMY OF THE POTOMAC, SEMINARY, *March* 27, 1862.

To Brig.-Gen. Shields:

The Commanding General congratulates you and the troops under your command upon the victory gained by your energy and activity and their bravery on the 23d. He is pained to learn that the wound you have received in the skirmish on the day before is more serious than at first supposed.

By command of

Maj.-Gen. GEO. B. McCLELLAN.

S. WILLIAMS, Assist. Adj.-Gen.

The following congratulations and instructions were sent to Gen. Banks:

FAIRFAX SEMINARY, *March* 27, 1862.

To Maj.-Gen. Banks:

The General Commanding congratulates you and the brave troops under your command on the splendid achievement commenced in your department, news of which he has just received. He desires you to follow up rapidly the enemy's troops as far as Strasburg if possible. S. WILLIAMS, Assistant Adjutant-General.

This little affair at Winchester is said to have caused orders to be issued which were attended with momentous consequences. They will be stated hereafter. It occurred on the date of March 23d.

The evacuation by the Confederate army of their positions before Washington was conducted in a most successful manner. When the Union troops entered their intrenchments, all were gone. Their evacuation had been effected by means of the railroad from Manassas to Gordonsville, while the state of the roads was such as to prevent an immediate active campaign by the Union army. Their retreat was arrested at the Rappahannock river, and a new line formed for the purpose of defence. It stretch-

ed from the Rappahannock by a circle to Cumberland Gap near the extreme southwestern part of the State, embracing the Central and the Virginia and Tennessee railroads, the chief cities of Virginia, and the valley of the James river with its canal and railroads. It was simply a line of defence, and assumed as a necessity in view of the immense Federal force that had been marshalled and put quietly in position.

The design of Gen. McClellan, as above stated, was, so far as he was master of his own movements, to attack Richmond by the water line, on the ground that such a movement would certainly force the Confederate army out of Manassas. By the James river, Richmond could be approached by transports and gunboats of light draft, and without a long line for the transportation of supplies. At this time the President as commander-in-chief issued the following order:

EXECUTIVE MANSION,
WASHINGTON, *March* 8, 1862.

General War Order, No. 2.

Ordered, I. That the Major-General commanding the Army of the Potomac proceed forthwith to organize that part of said army destined to enter upon active operations (including the reserve, but excluding the troops to be left in the fortifications about Washington), into four army corps, to be commanded according to seniority of rank, as follows:

First Corps, to consist of three divisions, and to be commanded by Maj.-Gen. I. McDowell.

Second Corps, to consist of three divisions, and to be commanded by Brig.-Gen. E. V. Sumner.

Third Corps, to consist of three divisions, and to be commanded by Brig.-Gen. S. P. Heintzelman.

Fourth Corps, to consist of three divisions, and to be commanded by Brig.-Gen. E. L. Keyes.

II. That the divisions now commanded by the officers above assigned to the commands of corps, shall be embraced in and form part of their respective corps.

III. The forces left for the defence of Washington will be placed in command of Brig.-Gen. James Wadsworth, who shall also be Military Governor of the District of Columbia.

IV. That this order be executed with such promptness and despatch, as not to delay the commencement of the operations already directed to be undertaken by the Army of the Potomac.

V. A fifth army corps, to be commanded by Maj.-Gen. N. P. Banks, will be formed from his own and Gen. Shields's (late Gen. Lander's) division.

ABRAHAM LINCOLN.

In compliance with this order of the President, Gen. McClellan, on the 13th, issued an order dividing "the active portion of the army of the Potomac" into army corps as follows:

The corps of Gen. McDowell was composed of the divisions of Gens. Franklin, McCall, and King.

The corps of Gen. Sumner was composed of the divisions of Gens. Richardson, Blenker, and Sedgwick.

The corps of Gen. Heintzelman was composed of the divisions of Gens. Kearney, Hooker, and Fitz John Porter.

The corps of Gen. Keyes was composed of the divisions of Gens. Couch, Smith, and Casey.

The corps of Gen. Banks was composed of the divisions of Gens. Williams and Shields.

On the 11th of March, the President issued another order relieving Gen. McClellan from the command of all the military departments except that of the Potomac, and re-arranging the departments as follows:

EXECUTIVE MANSION,
WASHINGTON, *March* 11, 1862.

General War Order, No. 3.

Maj.-Gen. McClellan having personally taken the field at the head of the Army of the Potomac until otherwise ordered, he is relieved from the command of the other military departments, he retaining command of the Department of the Potomac.

Ordered, further, That the two departments now under the respective commands of Gens. Halleck and Hunter, together with so much of that under Gen. Buell as lies west of a north and south line indefinitely drawn through Knoxville, Tenn., be consolidated and designated the Department of the Mississippi, and that until otherwise ordered, Maj.-Gen. Halleck have command of said department.

Ordered, also, That the country west of the Department of the Potomac and east of the Department of the Mississippi be a military department, to be called the Mountain Department, and that the same be commanded by Maj.-Gen. Fremont.

That all the Commanders of Departments, after the receipt of this order by them respectively, report severally and directly to the Secretary of War, and that prompt, full, and frequent reports will be expected of all and each of them. ABRAHAM LINCOLN.

The effect of this order was to put under the charge of the Secretary of War a class of duties which had heretofore been under the direction of the highest military command. It relieved Gen. McClellan from the supervision of military operations in any other department than his own. He retained still under his immediate command the five corps of the army of the Potomac, as is manifest by his despatches, dated March 27, to Gens. Banks and Shields, after the battle at Winchester. It also shows that the corps of Gen. Banks was at that date expected to operate under his command, although he had then embarked a portion of his army to Fortress Monroe.

Assuming the distinct command of the Army of the Potomac, as his forces were now designated, for the purpose of conducting a campaign, Gen. McClellan issued the following address to his soldiers:

HEADQUARTERS ARMY OF THE POTOMAC,
FAIRFAX COURT HOUSE, VA., *March* 14, 1862.

Soldiers of the Army of the Potomac:

For a long time I have kept you inactive, but not without a purpose. You were to be disciplined, armed, and instructed; the formidable artillery you now have, had to be created; other armies were to move and to accomplish certain results. I have held you back that you might give the death blow to the rebellion that has distracted our once happy country. The patience you have shown, and your confidence in your General, are worth a dozen victories. These preliminary results are now accomplished. I feel that the patient labors o many months have produced their fruit; the Army of the Potomac is now a real army—magnificent in material, admirable in discipline and instruction, excellently equipped and armed—your commanders are all that I could wish. The moment for action has arrived, and I know that I can trust in you to save our country. As I ride through your ranks, I see in your faces the sure presage of victory; I feel that you will do whatever I ask of you. The period of inaction has passed.

I will bring you now face to face with the rebels, and only pray that God may defend the right. In whatever direction you may move, however strange my actions may appear to you, ever bear in mind that my fate is linked with yours, and that all I do is to bring you, where I know you wish to be—on the decisive battle field. It is my business to place you there. I am to watch over you as a parent over his children; and you know that your General loves you from the depths of his heart. It shall be my care, as it has ever been, to gain success with the least possible loss; but I know that, if it is necessary, you will willingly follow me to our graves, for our righteous cause. God smiles upon us, victory attends us; yet I would not have you think that our aim is to be attained without a manly struggle. I will not disguise it from you: you have brave foes to encounter, foemen well worthy of the steel that you will use so well. I shall demand of you great, heroic exertions, rapid and long marches, desperate combats, privations, perhaps. We will share all these together; and when this sad war is over we will return to our homes, and feel that we can ask no higher honor than the proud consciousness that we belonged to the Army of the Potomac.

GEO. B. McCLELLAN,
Major-General Commanding.

The Prince de Joinville, in a narrative of the campaign on the peninsula, has described with much detail the reasons for the evacuation of Manassas by the Confederate forces, and the change of the plan for the campaign under Gen McClellan. He states as follows:

"While we were riding forward, grave events were occurring in the highest regions of the army. There exists in the American army, as in the English, a commander-in-chief, who exercises over the head of all the generals a supreme authority, regulates the distribution of the troops, and directs military operations. These functions, which have been greatly curtailed in the British army since the Crimean war, were still exercised in all their vigor in America. From the aged General Scott, who had long honorably discharged them, they had passed to General McClellan. We learned, on reaching Fairfax, that they had been taken away from him. It is easy to understand the diminution of force and the restrictions upon his usefulness thus inflicted upon the general-in-chief by a blow in the rear at the very outset of his campaign.

"Yet this was but a part of the mischief done him. McClellan had long known, better than anybody else, the real strength of the rebels at Manassas and Centreville. He was perfectly familiar with the existence of the 'wooden cannon' by which it has been pretended that he was kept in awe for six months. But he also knew that till the month of April the roads of Virginia are in such a state that wagons and artillery can only be moved over them by constructing plank roads—a tedious operation, during which the enemy, holding the railways, could either retreat, as he was then actually doing, or move for a blow upon some other point. In any event, had McClellan attacked and carried Centreville, pursuit was impossible, and victory would have been barren of results. A single bridge burned would have saved Johnston's whole army. Such are the vast advantages of a railway for a retreating army—advantages which do not exist for the army which pursues it.

"We have the right, we think, to say that McClellan never intended to advance upon Centreville. His long-determined purpose was to make Washington safe by means of a strong garrison, and then to use the great navigable waters and immense naval resources of the North to transport the army by sea to a point near Richmond. For weeks, perhaps for months, this plan had been secretly maturing. Secrecy as well as promptness, it will be understood, was indispensable here to success. To keep the secret it had been necessary to confide it to few persons, and hence had arisen the long ill feeling toward the uncommunicative general.

"Be this as it may, as the day of action drew near, those who suspected the general's project, and were angry at not being informed of it; those whom his promotion had excited to envy; his political enemies (who is without them in America?); in short, all those beneath or beside him who wished him ill, broke out into a chorus of accusations of slowness, inaction, incapacity. McClellan, with a patriotic courage which I have always admired, disdained these accusations, and made no reply. He satisfied himself with pursuing his preparations in laborious silence. But the moment came in which, notwithstanding the loyal support given him by the President, that functionary could no longer resist the tempest. A council of war of all the divisional generals was held; a plan of campaign, not that of McClellan, was proposed and discussed. McClellan was then forced to explain his projects, and the next day they were known to the enemy. Informed no doubt by one of those female spies who keep up his communications into the domestic circles of the Federal enemy, Johnston evacuated Manassas at once. This was a skilful manœuvre. Incapable of assuming the offensive, threatened with attack either at Centreville, where defence would be useless if successful, or at Richmond, the loss of which would be a great check, and unable to cover both positions at once, Johnston threw his whole force before the latter of the two.

"For the Army of the Potomac this was a misfortune. Its movement was unmasked before it had been made. Part of its transports were still frozen up in the Hudson. Such being the state of affairs, was it proper to execute as rapidly as possible the movement upon Richmond by water, or to march upon Richmond by land? Such was the grave question to be settled by the young general in a miserable room of an abandoned house at Fairfax within twenty-four hours. And it was at this moment that the news of his removal as general-in-chief reached him; the news, that is, that he could no longer count upon the coöperation of the other armies of the Union, and that the troops under his own orders were to be divided into four grand *corps* under four separate chiefs named in order of rank—a change which would throw into subaltern positions some young gen-

erals of division who had his personal confidence. It is easy to see that here was matter enough to cast a cloud upon the firmest mind. But the general's resolution was promptly taken.

"To follow the Confederates by land to Richmond at this season of the year was a material impossibility. An incident had just proved this to be so. Gen. Stoneman, with a flying column, had been sent in pursuit of the enemy. This column came up with the enemy on the Rappahannock, along the railway to Gordonsville, and had two engagements with him of no great importance. Then came the rain. The fords were swollen, the bridges carried away, the watercourses could no longer be passed by swimming; they were torrents. Stoneman's column began to suffer for want of provisions, and its situation was perilous. In order to communicate with the army, Stoneman had to send two of McClellan's aides-de-camp, who had accompanied him, across a river on a raft of logs tied together with ropes.

"Such was the country before the army. Furthermore, the enemy was burning and breaking up all the bridges. Now with the wants of the American soldier and the usual extravagance of his rations, and with the necessity of transporting everything through a country where nothing is to be found, and where the least storm makes the roads impassable, no army can live unless it supports its march upon a navigable watercourse or a railway. In Europe our military administration assumes that the transportation service of an army of one hundred thousand men can only provision that army for a three days' march from its base of operations. In America this limit must be reduced to a single day. I need only add that upon the roads to Richmond there were viaducts which it would have required six weeks to reconstruct.

"The land march was therefore abandoned, and we came back to the movement by water. But this operation also was no longer what it had been when McClellan had conceived it. The revelation of his plans to the enemy had allowed the latter to take his precautions. The evacuation of Manassas had preceded instead of following the opening of the Federal campaign. The movement by water could no longer be a surprise. Unfortunately it was also to lose the advantages of a rapid execution."

The movement of troops had been as follows: The last detachment of the Confederate army left Manassas on the 9th of March. On the morning of the 10th Gen. McClellan moved the Army of the Potomac toward the deserted position. The object of moving to Manassas was to verify its evacuation, to take the chance of cutting off the enemy's rear guard, to deceive the enemy, if possible, as to the real intentions of Gen. McClellan, and to gain the opportunity of cutting loose from all useless baggage, and to give the troops a few days' experience in bivouac and on the march. After reaching Manassas, Gen. McClellan returned to Washington on the 13th, and the army at once countermarched, and on Sunday the 16th it was massed in new positions near Alexandria, ready to embark with the least possible delay. During the ensuing week it began to embark on transports at Alexandria for Fortress Monroe. The number of transports promised was to be sufficient to convey fifty thousand men, but the number collected was found to be hardly enough for the conveyance of half that number. Instead of moving the whole army with its equipage at once, as it had been intended, a number of trips were required. The embarkation commenced on the 17th of March.

By reference to the order of the President issued on the 8th of March (*see* p. 84), it will be seen that the army was divided into five corps. Of these, the corps of Gens. Banks and McDowell did not embark. Of the second corps, under Gen. Sumner, one division, that of Gen. Blenker, was withdrawn and sent to Gen. Fremont in the Mountain Department. There remained therefore to be embarked, two divisions under Gen. Sumner, three under Gen. Heintzelman, and three under Gen. Keyes —being in all eight divisions. The Prince de Joinville, in his statement of the numbers of the entire army, says it consisted of "11 divisions of infantry, 8,000 to 10,000 strong; 1 division of regulars (infantry and cavalry), 6,000 strong; 350 pieces of artillery. The total effective force may have been 120,000 men." From this number are to be deducted the corps of Gen. McDowell and the division of Gen. Blenker. This will make the effective force of Gen. McClellan embarked for Fortress Monroe about eighty-five thousand men. Two weeks were occupied in transporting this force to Fortress Monroe.

It has been stated that Gen. Blenker's division was withdrawn from Gen. Sumner's corps, and sent to Gen. Fremont in the Mountain Department. This was done one or two days before Gen. McClellan sailed. The reason given was "political pressure" exercised to get a command for Gen. Fremont. No military reason was stated for this withdrawal. The following letter from President Lincoln to Gen. McClellan, produced at a court martial in Washington, thus explains it:

WASHINGTON, *April* 9, 1862.

Maj.-Gen. McClellan:

MY DEAR SIR: Your despatches complaining that you are not properly sustained, while they do not offend me, do pain me very much.

Blenker's division was withdrawn from you before you left here, and you know the pressure under which I did it; and, as I thought, acquiesced in it—certainly not without reluctance.

After you left I ascertained that less than twenty thousand unorganized men, without a single field battery, were all you designed to be left for the defence of Washington and Manassas Junction; and part of of this even was to go to Gen. Hooker's old position.

Gen. Banks's corps, once designed for Manassas Junction, was diverted and tied up on the line of Winchester and Strasburg, and could not leave it without again exposing the Upper Potomac and the Baltimore and Ohio railroad. This presented (or would present, when McDowell and Sumner should be gone) a great

temptation to the enemy to turn back from the Rappahannock and sack Washington.

My explicit order that Washington should, by the judgment of all the commanders of corps, be left entirely secure, had been neglected. It was precisely this that drove me to detain McDowell. I do not forget that I was satisfied with your arrangement to leave Banks at Manassas Junction; but when that arrangement was broken up, and nothing was substituted for it, of course I was not satisfied; I was constrained to substitute something for it myself.

And now allow me to ask, "Do you really think I should permit the line from Richmond, *via* Manassas Junction, to this city, to be entirely open, except what resistance could be presented by less than twenty thousand unorganized troops?" This is a question which the country will not allow me to evade.

There is a curious mystery about the number of troops now with you. When I telegraphed you on the 6th, saying that you had over one hundred thousand with you, I had just obtained from the Secretary of War a statement taken, as he said, from your own returns, making one hundred and eight thousand then with you, and *en route* to you.

You now say you will have but eighty-five thousand when all *en route* to you shall have reached you. How can the discrepancy of twenty-three thousand be accounted for?

As to Gen. Wool's command, I understand it is doing for you precisely what a like number of your own would have to do, if that command was away.

I suppose the whole force which has gone forward for you is with you by this time; and, if so, I think it is the precise time for you to strike a blow. By delay the enemy will relatively gain upon you; that is, he will gain faster by fortifications and reënforcements than you can by reënforcements alone.

And, once more, let me tell you it is indispensable to you that you strike a blow. I am powerless to help this. You will do me the justice to remember I always insisted that going down the bay in search of a field, instead of fighting at or near Manassas, was only shifting and not surmounting a difficulty; that we would find the same enemy and the same or equal intrenchments at either place. The country will not fail to note—is now noting—that the present hesitation to move upon an intrenched enemy is but the story of Manassas repeated.

I beg to assure you that I have never written you or spoken to you in greater kindness of feeling than now, nor with a fuller purpose to sustain you so far as in my most anxious judgment I consistently can. But you must act.

Yours, very truly, A. LINCOLN.

When Gen. McClellan sailed he supposed that Gen. McDowell's corps would follow him, and it was not until he was before Yorktown that he received the first intimation to the contrary. The reason of this change should also be stated.

By reference to a preceding page, it will be seen that the battle of Winchester took place on the 23d of March, about the time the army of the Potomac was embarking. It startled the Government by revealing a much stronger force of the enemy in their immediate front than they had supposed. At the same time the number of troops at Washington being limited, it was decided that one of the two corps which had not embarked (either McDowell's or Sumner's) should be withheld, and the decision fell upon Gen. McDowell. The same question came up in Congress on the 26th of May, after Gen. Jackson had made his brilliant dash up the Shenandoah, and driven Gen. Banks across the Potomac. Although it may be anticipating some events, it is proper that the explanation of the withdrawal of McDowell's corps should be here noticed. In the Senate, Mr. Wilson of Massachusetts, chairman of the Committee on Military Affairs, said: "I will state that the Secretary of War is not responsible for the movements charged upon him by the Senator from Kentucky. The President alone is responsible for whatever has occurred, both for arresting the advance of General McDowell to Yorktown, and withdrawing a portion of Gen. Banks's forces. The order arresting the advance of Gen. McDowell was made by the President, with the approval of the Secretary of War, General Hitchcock, and several other military men. It was given for the best of purposes, and I am sure there was no intrigue about it, nor personal objects gained. It may have been an error; but, if so, it was an error committed by the President for an honest and patriotic purpose, under the advice of the military men whom he consulted. I understand the fact to be that the President gave written orders—in fact I have seen the orders—that the number of men necessary for the defence of Washington should be left here, and that that number should be agreed upon by the commanders of the various corps of the army. The commanders of corps held a consultation, and decided that forty-five thousand men were necessary to be held for the defence of this city. All the forces were ordered to be withdrawn from this city, with the exception of nineteen thousand, and four thousand of that number were sent for. Nearly all of the regiments left here were recently brought into the service, and four or five of them were cavalry regiments, not mounted, and not in a condition for service. Under these circumstances, apprehending precisely what has taken place, the President withheld thirty thousand men under Gen. McDowell. Ten thousand of this force, under Gen. Franklin, at the urgent request of Gen. McClellan, were sent forward to Yorktown, but McDowell was held back with twenty thousand men on the Rappahannock to protect the capital and menace Richmond. The President then, in order to concentrate a force here and threaten Richmond, and aid Gen. McClellan's movements, ordered Gen. Shields to unite with Gen. McDowell, thus making an army of about forty thousand men, the intention of which was to move on Richmond by land, so as to cover Washington in their movement. This left Gen. Banks a small force, and a movement has been made upon him, and he has been compelled to evacuate the Shenandoah Valley and recross the Potomac. These movements were directed by the President; and he is alone responsible for them. In doing what he did, I have no doubt he was actuated by honest purposes, and he had the sanction and support of his military advisers, including the Secretary of War."

Mr. Trumbull of Illinois said: "While the Senator from Massachusetts is making his state-

ment, I should like to inquire of him if it was not at the urgent and repeated request of Gen. McClellan that troops should be sent to him to aid in his attack upon Richmond that this has been done?"

Mr. Wilson of Massachusetts: "In response to the Senator's question, I will say that I understand that Gen. McClellan desired to have the forces reserved under Gen. McDowell sent forward to him by the steamers. Upon his request, Gen. Franklin with his division was sent forward to Yorktown. The President, to protect Washington, and at the same time to aid Gen. McClellan by menacing Richmond, withdrew Gen. Shields's division from Gen. Banks, thus concentrating on the Rappahannock forty thousand men. This force could move on Richmond, or act directly for the protection of Washington, according to circumstances. Yesterday the President, in view of what has occurred, stated that this force of twenty thousand men, which he had reserved, and for which he takes the entire responsibility, had been reserved by him in apprehension of precisely such a movement of the enemy threatening this city as has already taken place.

"The President may have made a mistake in withdrawing so much of the force of Gen. Banks, but I am sure he acted according to the best lights he possessed. Gen. Banks has been forced to retrace his steps, to abandon the Shenandoah Valley, and to recross the Potomac."

On Dec. 10, before a court martial at Washington, Gen. McClellan, in answer to the question, What communication he received from the President through Gen. Franklin, &c.? said: "The substance of the communication of Gen. Franklin from the President was that the President assumed the responsibility of the change of destination of Gen. McDowell's corps, regarding that corps necessary for the defence of Washington, although the troops actually left in Washington and in front of it, disposable for its defence, were rather more than double the garrison fixed by the engineer and artillery officers, and considerably more than the largest number recommended by any of the corps commanders to be left in the vicinity of Washington."

The following orders of Gen. McClellan will show his plans for the protection of Washington:

HEADQUARTERS, ARMY OF THE POTOMAC, *March* 16, 1862.

Brig.-Gen. James S. Wadsworth, Military Governor of the District of Columbia:

SIR: The command to which you have been assigned, by instruction of the President, as Military Governor of the District of Columbia, embraces the geographical limits of the district, and will also include the city of Alexandria, the defensive works south of the Potomac, from the Occoquan to Difficult Creek, and the post of Fort Washington. I enclose a list of the works and defences embraced in these limits. Gen. Banks will command at Manassas Junction, with the divisions of Williams and Shields, composing the Fifth Army Corps, but you should, nevertheless, exercise vigilance in your front, carefully guard the approaches in that quarter, and maintain the duties of advanced guards. You will use the same precautions on either flank. All troops not actually needed for the police of Washington and Georgetown, for the garrisons north of the Potomac, and for other indicated special duties, should be removed to the south side of the river. In the centre of your front you should post the main body of your troops, in proper proportions, at suitable distances toward your right and left flanks. Careful patrols will be made to thoroughly scour the country in front from right to left.

It is specially enjoined upon you to maintain the forts and their armaments in the best possible order, to look carefully after the instruction and discipline of their garrisons, as well as all other troops under your command, and by frequent and rigid inspection to insure the attainment of these ends.

The care of the railways, canals, depots, bridges, and ferries within the above-named limits will devolve upon you, and you are to insure their security and provide for their protection by every means in your power. You will also protect the depots of the public stores and the transit of the stores to the troops in actual service.

By means of patrols you will thoroughly scour the neighboring country south of the eastern branch, and also on your right, and you will use every possible precaution to intercept mails, goods, and persons passing unauthorized to the enemy's lines.

The necessity of maintaining good order within your limits, and especially in the capital of the nation, cannot be too strongly enforced. You will forward and facilitate the movement of all troops destined for the active part of the Army of the Potomac, and especially the transits of detachments to their proper regiments and corps.

The charge of all new troops arriving in Washington, and of all troops temporarily there, will devolve upon you. You will form them into provisional brigades, promote their instruction and discipline, and facilitate their equipments. Report all arrivals of troops, their strength, composition, and equipment, by every opportunity. Besides the regular reports and returns which you will be required to render to the Adjutant-General of the army, you will make to these headquarters a consolidated morning report of your command every Sunday morning, and a monthly return on the first day of each month.

The foregoing instructions are communicated by command of Maj.-Gen. McClellan.

Very respectfully, your obedient servant,

———— ————,
Assistant Adjutant-General.

HEADQUARTERS, ARMY OF THE POTOMAC, *March* 16, 1862.

To Maj.-Gen. N. P. Banks, Commanding Fifth Corps, Army of the Potomac:

SIR: You will post your command in the vicinity of Manassas, intrench yourself strongly, and throw cavalry pickets well out to the front. Your first care will be the rebuilding of the railway from Washington to Manassas and to Strasburg, in order to open your communications with the valley of the Shenandoah. As soon as the Manassas Gap railway is in running order, intrench a brigade of infantry—say four regiments, with two batteries—at or near the point where that railway crosses the Shenandoah. Something like two regiments of cavalry should be left in that vicinity to occupy Winchester, and thoroughly scour the country south of the railway and up the Shenandoah Valley, as well as through Chester Gap, which might perhaps be occupied advantageously by a detachment of infantry well intrenched. Block houses should be built at all the railway bridges occupied by grand guard, Warrenton Junction or Warrenton itself, and also some still more advanced points on the Orange and Alexandria railroad, as soon as the railroad bridges are repaired.

Great activity should be observed by the cavalry. Besides the two regiments at Manassas, another regiment of cavalry will be at your disposal to scout toward the Occoquan, and probably a fourth toward

Leesburg. To recapitulate, the most important points that should engage your attention are as follows:

First—A strong force, well intrenched, in the vicinity of Manassas, perhaps even Centreville, and another force, a brigade, also well intrenched near Strasburg.

Second—Block houses at the railroad bridges.

Third—Constant employment of cavalry well to the front.

Fourth—Grand guards at Warrenton, and in advance as far as the Rappahannock, if possible.

Fifth—Great care to be exercised to obtain full and early information as to the enemy.

Sixth—The general object is to cover the line of the Potomac and Washington.

The foregoing is communicated by order of Maj.-Gen. McClellan.

———— ————,
Assistant Adjutant-General.

On the 1st of April Gen. McClellan addressed the following additional note to Gen. Banks:

HEADQUARTERS, ARMY OF THE POTOMAC,
ON BOARD COMMODORE, *April* 1, 1862.

Maj.-Gen. N. P. Banks, Commanding Fifth Army Corps:

GENERAL: The change in affairs in the valley of the Shenandoah has rendered necessary a corresponding departure, temporarily at least, from the plan we some days since agreed upon.

In my arrangements I assume that you have a force amply sufficient to drive Jackson before you, provided he is not reënforced largely. I also assume that you may find it impossible to find anything toward Manassas for some days, probably not until the operations of the main army have drawn all the rebel force toward Richmond.

You are aware that Gen. Sumner has for some days been at Warrenton Junction, with two divisions of infantry, six batteries, and two regiments of cavalry, and that a reconnoissance to the Rappahannock forced the enemy to destroy the railroad bridge at Rappahannock Station, on the Orange and Alexandria railroad. Since that time our cavalry have found nothing on this side of the Rappahannock in that direction, and it seems clear that we have no reason to fear any return of the rebels in that quarter. Their movements near Fredericksburg also indicate a final abandonment of that neighborhood.

I doubt whether Johnston will now reënforce Jackson with a view to offensive operations. The time has probably passed when he could have gained anything by so doing.

I have ordered one of Sumner's divisions (that of Richardson) to Alexandria for embarkation. Blenker's has been detached from the Army of the Potomac, and ordered to report to Gen. Fremont. Abercrombie is probably at Warrenton Junction to-day; Geary at White Plains.

Two regiments of cavalry have been ordered out, and are now on the way to relieve the two regiments of Sumner. Four thousand infantry and one battery leave Washington at once for Manassas. Some three thousand more will move in one or two days, and soon after three thousand additional.

I will order Blenker to move on Strasburg and report to you for temporary duty; so that, should you find a large force in your front, you can avail yourself of his aid. As soon as possible, please direct him on Winchester, thence to report to the Adjutant-General of the Army for orders; but keep him until you are sure what you have in front.

In regard to your own movements, the most important thing is to throw Jackson well back, and then to assume such a position as to enable you to prevent his return. As soon as the railway communications are reëstablished, it will be probably important and advisable to move on Staunton; but this would require communications and a force of 25,000 to 30,000 for active operations. It should also be nearly coincident with my own move on Richmond. At all events, not so long before it as to enable the rebels to concentrate on you and then return to me.

I fear that you cannot be ready in time; although it may come in very well with a force less than I have mentioned, after the main battle near Richmond. When Gen. Sumner leaves Warrenton Junction, Gen. Abercrombie will be placed in immediate command of Manassas and Warrenton Junction, under your general orders. Please inform me frequently by telegraph and otherwise as to the state of things in your front. I am, very truly yours,

GEO. B. McCLELLAN,
Maj.-Gen. Commanding.

P. S. From what I have just learned, it would seem that the two regiments of cavalry intended for Warrenton Junction have gone to Harper's Ferry. Of the four additional regiments placed under your orders, two should as promptly as possible move by the shortest route on Warrenton Junction.

I am, sir, very respectfully, your obedient servant,

GEO. B. McCLELLAN,
Maj.-Gen. Commanding.

HEADQUARTERS, ARMY OF THE POTOMAC,
STEAMER COMMODORE, *April* 1, 1862.

To Brig.-Gen. L. Thomas, Adj.-Gen. U. S. A.:

GENERAL: I have to request that you will lay the following communication before the Hon. Secretary of War. The approximate numbers and positions of the troops left near and in rear of the Potomac are about as follows:

Gen. Dix has, after guarding the railroads under his charge, sufficient troops to give him five thousand men for the defence of Baltimore, and one thousand nine hundred and eighty-eight available for the eastern shore, Annapolis, &c. Fort Delaware is very well garrisoned by about four hundred men. The garrisons of the forts around Washington amount to ten thousand men, other disposable troops now with Gen. Wadsworth being about eleven thousand four hundred men. The troops employed in guarding the various railroads in Maryland amount to some three thousand three hundred and fifty-nine men. These it is designed to relieve, being old regiments, by dismounted cavalry, and to send them forward to Manassas. Gen. Abercrombie occupies Warrenton with a force which, including Col. Geary's at White Plains, and the cavalry to be at their disposal, will amount to some seven thousand seven hundred and eighty men, with twelve pieces of artillery.

I have the honor to request that all the troops organized for service in Pennsylvania and New York and in any of the Eastern States, may be ordered to Washington. This force I should be glad to have sent at once to Manassas—four thousand men from Gen. Wadsworth to be ordered to Manassas. These troops, with the railroad guards above alluded to, will make up a force under the command of Gen. Abercrombie to something like eighteen thousand six hundred and thirty-nine men. It is my design to push Gen. Blenker from Warrenton upon Strasburg. He should remain at Strasburg long enough to allow matters to assume a definite form in that region before proceeding to his ultimate destination. The troops in the valley of the Shenandoah will thus—including Blenker's division, ten thousand and twenty-eight strong, with twenty-four pieces of artillery, Banks's Fifth Corps, which embraces the command of Gen. Shields, nineteen thousand six hundred and eighty-seven strong, with forty-one guns, some three thousand six hundred and fifty-three disposable cavalry, and the railroad guard, about twenty-one hundred men—amount to about thirty-five thousand four hundred and sixty-seven men.

It is designed to relieve Gen. Hooker by one regiment—say eight hundred and fifty men—being, with five hundred cavalry, thirteen hundred and fifty men on the Lower Potomac. To recapitulate: At Warrenton there are to be seven thousand seven hundred and eighty; at Manassas, say ten thousand eight hundred and fifty-nine; in the Shenandoah Valley, thirty-five thousand four hundred and sixty-seven; on the Lower

Potomac, thirteen hundred and fifty—in all, fifty-five thousand four hundred and fifty-six. There would then be left for the garrisons in front of Washington and under Gen. Wadsworth some eighteen thousand men, exclusive of the batteries, under instructions. The troops organizing or ready for service in New York, I learn, will probably number more than four thousand. These should be assembled at Washington, subject to disposition where their services may be most needed.

I am, very respectfully, your obedient servant,
GEO. B. McCLELLAN,
Maj.-Gen. Commanding.

Some explanation of these orders is to be found in answers of Gen. McClellan to interrogatories before the court martial above mentioned. In one answer he said: "The force left disposable for the defence of Washington was about 70,000 men, independent of the corps of Gen. McDowell." Again, he said: "My recollection of the suggestions as to the forces to be left varied from forty to fifty thousand. I think Gen. McDowell proposed the latter number. Of one thing I am confident: that, with the facts fresh in my mind, I thought that I left more than was suggested by any corps commander."

As to the necessity that Gen. McDowell should remain for the defence of Washington, he said: "I think that Gen. McDowell was correct in his opinion that it was safe and proper for him to unite with the Army of the Potomac. I think that immediately after the occupation of Hanover Court House by a portion of the Army of the Potomac, there was no rebel force of any consequence between Hanover Court House and Gen. McDowell. I think that the main object of Jackson's movement against Gen. Banks was to prevent reënforcements from being sent to the Army of the Potomac, and expressed that opinion in a telegram to the President within a day of the time I received information of Jackson's movements. I think that if Gen. McDowell had moved direct upon Hanover Court House, instead of in the direction of Front Royal, Jackson would have rapidly retraced his steps to join the main rebel army at Richmond. With a strong army of our own in the vicinity of Richmond, and threatening it, I do not think that the rebels would have detached a sufficient force to seriously endanger the safety of Washington."

Before Gen. McClellan left Washington, an order was issued placing Gen. Wool and all his troops under his command, and he was expressly authorized to detail a division of about 10,000 men from the troops under Gen. Wool and to attach them to the active army. After operations had commenced on the peninsula, on the 3d of April Gen. McClellan received an order from the Secretary of War countermanding all this. No explanation of this has ever been made.

The design of Gen. McClellan was to make a sure and rapid movement upon Richmond, but other causes still occurred to defeat this purpose. The contest between the Monitor and Merrimac took place on the 9th of March (*see* NAVAL OPERATIONS), and the insecurity of the transports, while the navy really had not entire control of the James river, caused the troops to be landed at Fortress Monroe, and the march to be commenced overland from that point.

About the 1st of April the force above stated had reached Fortress Monroe, Gen. McClellan arrived on the 2d, and commenced active operations. On the 4th of April the following order was issued from the War Department:

WAR DEPARTMENT, WASHINGTON, *April* 4, 1862.

Ordered, 1.—That the portion of Virginia and Maryland lying between the Mountain Department and the Blue Ridge shall constitute a military department, to be called the Department of the Shenandoah, and be under the command of Maj.-Gen. Banks.

2.—That the portion of Virginia east of the Blue Ridge and west of the Potomac and the Fredericksburg and Richmond railroad, including the District of Columbia and the country between the Potomac and the Patuxent, shall be a military district, to be called the Department of the Rappahannock, and be under the command of Maj.-Gen. McDowell.

By order of the PRESIDENT.
EDWIN M. STANTON, Secretary of War.

The effect of this order was to take from under the control of Gen. McClellan the forces of Gens. Banks and McDowell, and the direction of all military operations in his department west of the Richmond and Fredericksburg railroad, and in lower Maryland, and to confine him strictly to the remainder of eastern Virginia. On the 11th of April, the following order was sent to Gen. McDowell:

WAR DEPARTMENT, *April* 11, 1862.

Maj.-Gen. McDowell Commanding:

SIR: For the present, and until further orders, you will consider the national capital as especially under your protection, and make no movement throwing your force out of position for the discharge of this primary duty.

EDWIN M. STANTON, Secretary of War.

On the 5th of April, firing was opened by the enemy at Yorktown on the extreme Federal right, to repel a bold reconnoissance. While this was going on, Gen. McClellan heard for the first time that Gen. McDowell was withdrawn from his command. Yorktown is a post village, port of entry, and shire town of York county, Virginia. It is situated on rising ground on the right bank or south side of York river, eleven miles from its mouth. It is seventy miles east-southeast of Richmond, and had before the war about sixty houses, four hundred and fifty inhabitants, and several thousand tons of shipping.

The army of the Potomac had commenced its march upon this place wholly in the dark as to the nature of the country, or the position and strength of the enemy. The maps which were furnished by the commanders at Fortress Monroe were found to be entirely erroneous. The peninsula is bounded on the north by York river, which is commanded by Yorktown and Gloucester, on either side. Both places were strongly fortified to obstruct the entrance of the river by gunboats. The Confederate batteries mounted fifty-six guns, many of which were

rifled one-hundred pounders, and could have sunk the entire fleet of these gunboats. The James river, which bounded the peninsula on the south, was in full possession of the enemy. The line of defence at Yorktown was selected with great judgment. Taking advantage of the highest ground on the peninsula at that place, and projecting a line of intrenchments and forts bearing a little southwest to a point connecting with the head of Warwick river, the enemy had continued his works down that stream to James river, making the entire distance from point to point eight and a half miles. While the flat and marshy surface of the peninsula, together with streams constantly fed with copious supplies of water from the swamps, afforded peculiar means of defence, it was equally unfavorable to offensive operations, especially when distant from the harbor for supplies and with bad roads. The country was also covered with dense forests of pine, which formed a valuable shield to the positions of the enemy.

From the 5th to the 8th, when the unfavorable weather suspended active hostilities on both sides, there were frequent skirmishes, and firing by artillery, to prevent the enemy from constructing further defences and mounting additional guns, with few casualties on either side. On the 8th, 9th, and 10th there was a succession of extraordinary storms of rain and hail with some sleet and snow. The enemy took advantage of this weather to complete their defences. Much work was done in the interval by the Federal army in making and corduroying roads to the depots, &c.

When the army left Fortress Monroe, Gen. Keyes with three divisions proceeded along the James river until he reached the Warwick. In seeking for a ford he discovered the Confederate line of defence. Dykes had been erected in different parts of this stream, converting it into a kind of pond. These dams were defended by redoubts, artillery, and rifle pits.

The supplies of the army consisted in provisions for two days, which each soldier had taken. After these two days the army was entirely dependent on the wagons for subsistence. It was therefore necessary to construct roads. These were made by cutting down trees of equal size, and from one foot to eighteen inches in diameter, and placing the pieces from twelve or eighteen feet in length, side by side, on the ground. All the infantry that were not on picket duty on the outposts, were employed up to their knees in mud and water in this labor. By this means the cannon and wagons arrived at places where otherwise it would have been impossible to have brought them.

In order to avoid the delays of a siege, Gen. McClellan had formed a plan to turn the position at Yorktown. This was to be done by effecting a landing on the Severn river, north and in the rear of Gloucester, by which this latter position might be carried, and thus render the York river less difficult of entrance by the gunboats. The Federal force could then have advanced up the left bank of the York river, in the direction of West Point, and rendered the position of the Confederate army most perilous, if they had persisted in holding it. The execution of this movement had been confided to the corps of Gen. McDowell, which was to have embarked the last of all, at Alexandria, and arrive at Yorktown at the moment when the rest of the army, coming from Fortress Monroe, appeared before that place. This corps of Gen. McDowell was detained, as has already been stated. The effect of its detention is thus stated by Prince De Joinville:

"We received the inexplicable and unexplained intelligence that this corps had been sent to another destination. The news was received by the army with dissatisfaction, although the majority could not then foresee the deplorable consequences of an act performed, it must be supposed, with no evil intention, but with inconceivable recklessness. Fifteen days earlier this measure, although it would always have been injurious, would not have had so bad an effect; for new arrangements might have been made. Now, it was the mainspring removed from a great work already begun. It deranged everything. Among the divisions of the corps of Gen. McDowell there was one—that of Franklin—which was regretted more than all the rest, both on account of the troops themselves and of the officers commanding them. The commander-in-chief had carefully superintended its organization during the winter. He held it in great esteem and earnestly demanded its restoration. It was sent back to him, without any explanation, in the same manner as it had been withdrawn. This splendid division—eleven thousand strong—arrived, and for a moment the commander thought of intrusting to it alone the storming of Gloucester; but the idea was abandoned."

The next step was to search the Confederate line of defence for weak points. It was believed that if any were found and forced, the result would be, that the enemy would, as is usual in such cases, believe that his position was turned at both extremities, and his forces would become demoralized. Then if he was vigorously pushed with overwhelming force, a serious, if not fatal disaster might be inflicted on his army. This point was supposed to exist about the centre of the line, on Warwick river or creek, below Winn's Mills and near Lee's Mills. Here the Federal forces had thrown up a considerable work, with wings for riflemen, in which guns were mounted. Directly opposite the enemy, were protected by a demi-lune with two embrasures, with long infantry epaulements extending from each wing. An open field some six or seven hundred yards in width intervened. The enemy's works rested on the skirts of a pine forest, while the Federal were in the centre of the field. The forest extended like a curtain clear across the north edge of the field, in which sharpshooters on either side were posted.

On the 16th four Federal batteries of light artillery, under Capts. Ayres, Mott, Kennedy, and Wheeler, opened furiously upon the opposite work, and soon drove the enemy's cannoneers to shelter. Detachments consisting of companies E, F, D, and K, of a Vermont regiment, were ordered forward through the woods to capture the Confederate work. These brave men pushed forward firmly under a scattering fire of musketry, and were struggling through the creek, when the enemy, in superior force, opened upon them a galling fire of rifles and musketry. They still went forward unfalteringly, and their ranks were rapidly thinning, when they were recalled. Not more than half their number had crossed the stream. They reluctantly obeyed, but soon it became more difficult to return than it had been to advance. The enemy suddenly opened a sluice above, and almost overwhelmed them with a flow of water which reached their armpits. They maintained their order firmly, however, under cover of the batteries, which with the sharpshooters kept the enemy within their intrenchments, and in a short time extricated themselves, bringing away all their dead and wounded except six. The casualties exceeded one hundred and fifty. The attempt to force through the enemy's line was afterward abandoned, having presented unforeseen difficulties.

Sharpshooting was a feature of the early part of the campaign on the peninsula. An officer thus describes one or two scenes:

"The operations of our fellows were extremely interesting. One man was securely posted behind an embankment with a glass, and upon discovering an enemy, he signalized the active riflemen. The latter, covered by rifle pits or trees, were constantly blazing away, and at each successful shot would make some satisfactory sign. One of them afforded considerable amusement by his daring antics. Depositing his rifle every now and then behind a tree, he would dash across the field from his cover to our bastion and back again quickly, courting a shot, while his comrades watched for a victim. He must have made twenty trips while we observed him. Once or twice the enemy's balls knocked up the dust a few feet from him, and quicker than thought a leaden messenger would be sent after the unlucky enemy. We left the saucy fellow continuing his hazardous pranks."

The siege of Yorktown was now commenced in earnest. The Federal army was encamped before it in line of battle order. The arrangement of the columns, however, was influenced by the nature and topography of the position invested. It is thus summarily described by Prince de Joinville:

"The last operation, like that on Gloucester, not being accomplished, nothing remained but to begin a regular siege against Yorktown. All this wandering in the dark had, unfortunately, consumed much time, and the siege itself would consume much more, although it should be pushed with the greatest energy. Ten thousand laborers were unceasingly employed cutting through the woods and forming roads, trenches, and batteries. It was a curious spectacle. A straight arm of the sea, fringed by a thick and strong vegetation, mixed with trees of all kinds, living and dead, entangled with withes and moss, approached in a serpentine form to the front of the attack. The first parallel was made. The wood which surrounded us was an admirable protection. This arm of the sea was covered with bridges. Roads were cut along its margin in the midst of tulips, flowers of Judea, and azaleas in full bloom. From this natural parallel others were formed by the hands of man, and we rapidly approached the place. The defenders opened a terrific fire on those works that they could see, as well as upon those which they supposed were in progress. Shells whistled on every side through the large trees, cutting down branches, frightening horses, but otherwise doing very little harm. Nobody cared about it. In the evening, when all the laborers returned in good order, with their rifles on their backs, and their shovels on their shoulders, the fire became more furious, as if the enemy had marked the hour of their return. We went to this cannonade as to a show; and when, on a beautiful night in spring time, the troops gayly marched along to this martial music through the flowering woods; when the balloon, with which we made our reconnoissances, was floating in the air, we seemed to be spectators at a fête, and for a moment were made to forget the miseries of war.

"The siege, however, still went on. Powerful artillery, with great difficulty, had been brought up; 100 and even 200-pounder rifled cannon, and 13-inch mortars were ready to batter the place. Fourteen batteries were constructed, armed, and appointed. If our fire had not been yet opened, it was because it was designed to open all our batteries together along the whole line; and for this reason we waited until nothing was wanting to complete all our preparations. We could not, however, resist the desire to try the 200-pounders. These enormous pieces were handled with incredible ease. Four men sufficed to load and aim them, without any more difficulty than in the working of our old 24-pounders. At a distance of three miles their fire was admirably precise. One day one of these immense pieces had a kind of duel with a rifled piece of somewhat smaller caliber, in position on the bastions at Yorktown. The curious among us mounted on the parapet to see where the missiles might fall, and, while they communicated their observations to one another, the sentry on the lookout would announce when the enemy was about to fire in turn; but the distance was so great that, between the discharge and the arrival of the projectile, everybody had time to descend without any hurry, and to place himself under the shelter of the parapet. Such, however, was the precision of the fire that we were sure to see the enormous projectile passing over the very

spot where the group of observers had been standing but a moment before; then it would bound along and tear up the earth some fifty or sixty yards off, and its inflammable composition would burst with a loud explosion, throwing into the air a cloud of dust as high as the water jets of St. Cloud.

"It was evident that with the powerful means at our disposal the capture of Yorktown was but a work of time. Shattered beneath the tremendous fire which was about to be opened upon it, without casemates to cover their soldiers, without any other defence than outworks and palisades, the place had not even the chance of opposing a lengthened resistance. Everything was ready for the final blow. Not only was a terrific bombardment about to be opened upon the town, not only were the most select troops set apart to follow up this bombardment by a grand assault, but the steam transports only awaited a sign to push immediately up the York river, and to land Franklin's troops at the upper part of the stream, on the line of retreat of the Confederate army. A part of these troops were also to remain on board the transports. They would have taken but a few hours to traverse by water the distance it would have taken the enemy's army two days at least to march by land. Driven from the lines of Yorktown by a powerful attack, pursued sword in hand, intercepted on the route by fresh troops, that army would have been in a most critical position, and the Federals would have obtained what they so much desired—an astonishing military success.

"A great success of the Federal army before Yorktown was therefore of vital importance to the Government at Washington. Unfortunately, the Confederate leaders and generals were of the same opinion, and, as able and resolute men, they took the best means to render it impossible."

On the nights of the 3d and 4th of May, Yorktown and the Confederate lines of the Warwick river were evacuated. This work, doubtless commenced several days before, and was conducted with great skill and energy. On the 3d the fire of the enemies batteries was redoubled in severity. This was done to mask their retreat, and it was highly successful. The absence of all signs of them on the morning of the 4th, caused their lines to be closely examined, when it was soon ascertained that they were abandoned. The capture of this strong position of Yorktown and its armament with scarcely any loss of life, was a brilliant military success.

The impossibility for the navy to coöperate with the army, the want of forces to turn the flank of the enemy, as had been originally planned, and their obstinate courage and efforts to prevent the capture of Yorktown, had caused the delay of a month before that place. During this time the defences of Richmond had been pushed forward, and the spring time of the year had so far passed away, that the hot season was at hand, which would produce diseases in the low lands of the peninsula, and thus greatly aid the enemy. The loss thus far on the Federal side was about three hundred. That of the Confederates has not been ascertained. They left in their works at Yorktown two 3-inch rifled cannon, two 4½-inch rifled cannon, sixteen 32-pounders, six 42-pounders, nineteen 8-inch columbiads, four 9-inch Dahlgrens, one 10-inch columbiad, one 10-inch mortar, and one 8-inch siege howitzer, with carriages and implements complete. Each piece was supplied with 76 rounds of ammunition. At Gloucester there was captured nine 9-inch Dahlgrens, two 32-pounders rifled, five 32-pound navy guns, five 42-pound carronades; making at both places a total of seventy-three guns and much ammunition.

Their force has been estimated at 100,000 men. Some of the Federal soldiers were killed and horses injured by the explosion of instruments of destruction left by the enemy. It was at this time that New Orleans was captured.

The next important point before the Federal army was the city of Williamsburg. There were two roads to that city: one direct from Yorktown; and the other, from the left of the Federal army, crossed Warwick river at Lee's Mills, and uniting with the first formed a fork near Williamsburg.

This city is the capital of James City county, and is situated near the narrowest part of the peninsula between the James and York rivers, and is three miles from James river and about five and a quarter from York river. It is one of the oldest towns in the State, and contained a population of about fifteen hundred.

As soon as the evacuation of Yorktown was known, the entire cavalry and horse artillery with five divisions of infantry were advanced in pursuit. Gen. Franklin's division was ordered to move at once by water to the vicinity of West Point to endeavor to check the retreat of the enemy, and to be supported by other divisions as rapidly as water transportation could be obtained. The remaining divisions were massed near Yorktown, ready to move by land or water, as might be necessary. Gen. McClellan meanwhile remained at Yorktown until Monday noon, the 5th, pushing the movement of the troops to West Point by water and awaiting the development of events. It was not until that time that he was made aware of the serious resistance encountered at Williamsburg. All the information up to that time indicated nothing more than an affair of a rear guard. As soon as the true state of affairs was known he moved rapidly to the front and assumed the immediate command.

Gen. Stoneman had led the advance, with his cavalry and four batteries of artillery, on the direct road from Yorktown. After the bridge had been constructed over Warwick river, Gen. Smith advanced on the narrow road from the Federal left to Yorktown. He encountered a Confederate force, which fell back before him.

A report of this was sent to the commander-in-chief, who ordered Gen. Stoneman on the other road to press forward, and endeavor to intercept this retiring force before its junction with the main body, which was supposed to be at Williamsburg. Gen. Stoneman pushed forward with all the rapidity possible in the miry condition of the roads, and as he came out at the point where the road from Warwick Creek united, he was saluted by an artillery fire from numerous fieldworks known as Fort Magruder. A vain attempt was made to take this work with cavalry, during which Major Williams displayed great bravery, but the column was forced to retreat and await the arrival of the infantry. Gen. Smith's division subsequently arrived, but the lateness of the hour and the heavy rain caused the attack to be put off.

The pursuit by Gen. McClellan's forces had been so rapid that the Confederate officers found it to be necessary to give it a check, in order to continue their retreat with success. This led to the battle of Williamsburg on the next day, and the retreat of the Confederate army. Their plan for the campaign was thus developed. It was to delay the Federal army as long as practicable at Yorktown, and thus secure time to place Richmond in a defensive condition, and also to meet them in final battle near the marshes of the Chickahominy river.

The Confederate position at Williamsburg consisted of thirteen works, extending nearly across the peninsula. Excepting two or three narrow roads, it was approachable only through dense forests. These roads were made worse by a heavy rain which commenced on Sunday afternoon, the 4th, and continued during the next day.

When Sunday night came, the division of Gen. Smith, of Keyes's corps, had reached Gen. Stoneman's position after he fell back from Fort Magruder. Gen. Hancock's brigade formed the advance of this division. Gen. Hooker, of Heintzelman's corps, was approaching on the left by the road from Warwick river. His force consisted of the 11th Massachusetts, 5th, 6th, and 7th Wisconsin, 26th Pennsylvania, Sickles's New York brigade, and four batteries. Thus the advance of the Federal line had arrived within about two and a half miles of the works at Williamsburg. The Union troops slept on their arms without tents, without food, and in a hard rain. The Confederates determined to make the attack in the morning upon the Federal left and rear. About eight o'clock they threw out a body of infantry on their right, which soon exchanged fire with the advance of Gen. Hooker's division. This continued intermittently for some time. Some light batteries became engaged, and drove the enemy back until they came within range of his heavy guns, when the former suffered severely. Bramhall's battery lost all its horses, the guns became mired, and the forces of the enemy pressing upon it in greatly increased numbers, it was lost. Encouraged by this success, the enemy pushed forward, and Gen. Hooker was finally forced to give way and fall back, leaving his wounded, about two thousand in number, behind. The Confederates followed him as he fell back, until the division of Gen. Kearney came up and restored the battle. At the same time the enemy was strongly reënforced, and the fight was sharp and fierce. The state of the roads had prevented an earlier arrival of Gen. Kearney's division. His intrepidity was brilliantly shown on this occasion, although Gen. Heintzelman commanded the joint divisions. Meantime the part of the army on the road to the right remained passive. A single division only had come up. Of this the brigade of Brig.-Gen. Peck, of Couch's division of Gen. Casey's corps, was ordered by Gen. Sumner, who was in chief command, into the woods on the left toward the point where the battle was raging against Gen. Hooker's division. This brigade was composed of the 93d, 98th, and 102d Pennsylvania, the 55th and 62d New York, and West's battery. Placed on the right of that division, with other regiments amounting to six thousand men, it stopped the Confederate advance by repulsing with great obstinacy every attempt made. Supported later in the day by Gen. Palmer's brigade, they formed a strong centre.

Gen. Smith's division had formed on the right of the Federal line, and at an early hour a reconnoissance was made with a view of finding a route to the enemy's left flank. One was finally found, which had been overflowed with water by the enemy, and another was cut through the woods. The only obstacles to reaching the flank were two forts, strong from position and construction. To explore this route in force, and if possible occupy these works, Gen. Hancock was sent forward in the afternoon with his brigade. This consisted of the 6th and 7th Vermont, 5th Wisconsin, 33d and 49th New York, and Kennedy's battery. The two works were found to be unoccupied, and garrisoned by his men. A third at a distance he attacked with artillery and silenced. The enemy, seeing the fatal consequences to themselves from this attack, if successful, sent out two brigades to drive back the Federal force. The latter allowed them to come up, and received them with a most destructive fire of artillery. The enemy unshaken pushed forward within thirty yards of the cannon's mouth, when they wavered. Gen. Hancock, seizing the moment, ordered his brigade to charge upon them with the bayonet, which they could not withstand, and broke and fled, leaving their dead and wounded on the field. Gen. McClellan now arrived, and gave orders to support Gen. Hancock, and to press the advantage already gained in that direction. In a few minutes seven thousand men were on the march for that point. Night fell before they reached it, and no more was done that day. The ploughed land and the day's rain made a soft bed on which the weary soldiers sank down during that night.

The success of Gen. Hancock on the Confed-

erate left flank caused them to retreat that night, and at daylight all the forts on the Federal front and Williamsburg itself were found completely abandoned by the entire Confederate army. On the roads and in the woods were found the Confederate dead left unburied, and the wounded in their agonies. Their loss in killed and wounded was estimated at nearly a thousand.

Gen. McClellan evidently had not anticipated so serious a resistance at Williamsburg. In a despatch to the Secretary of War on Sunday evening the 4th, he says: "Our cavalry and horse artillery came up with the enemy's rear guard in their intrenchments about two miles on this side of Williamsburg. A brisk fight ensued just as my aid left. Smith's division of infantry arrived on the ground and, I presume, carried his works, though I have not yet heard. The enemy's rear is strong, but I have force enough up there to answer all purposes."

The force that was actually before Williamsburg would have been routed on the next day, if they had not been sustained by the arrival of fresh troops. These troops were delayed greatly by the bad roads. They were a portion of those whom Gen. McClellan, unaware of the great difficulty of the roads, and uninformed of the true state of the case by correct reports of the front, supposed were before Williamsburg. As it was, Gen. Hooker's division alone for hours withstood the enemy, even within hearing of other troops who were unable to come earlier to his relief.

In the evening after his arrival Gen. McClellan sent a despatch to the Secretary of War, in which he says: "After arranging for movements up York river, I was earnestly sent for here. I find Gen. Joe Johnston in front of me in strong force—probably greater a good deal than my own.

"I shall run the risk of at least holding them in check here while I resume the original plan.

"My entire force is considerably inferior to that of the rebels, who will fight well; but I will do all I can with the force at my disposal."

On a subsequent day Gen. McClellan took occasion to address three of the regiments of Gen. Hancock's brigade, which was engaged on the enemy's left. His remarks indicate the importance which he afterward ascribed to the action of the brigade on that day.

To the men of the Fifth Wisconsin regiment he said:

My Lads: I have come to thank you for the bravery and discipline you displayed the other day. On that day you won laurels of which you may ever be proud—not only you, but the army, the State, and the country to which you belong. Through you we won the day, and Williamsburg shall be inscribed upon your banner. I cannot thank you too much, and I am sure the reputation your gallantry has already achieved will always be maintained.

To the Seventh Maine regiment he said:

Soldiers of the Seventh Maine: I have come to thank you for your bravery and good conduct in the action of yesterday. On this battle plain you and your comrades arrested the progress of the advancing enemy, and turned the tide of victory in our favor. You have deserved well of your country and your State, and in their gratitude they will not forget to bestow upon you the thanks and praise so justly your due. Continue to show the conduct of yesterday, and the triumph of our cause will be speedy and sure. In recognition of your merit you shall hereafter bear the inscription "Williamsburg" on your colors. Soldiers, my words are feeble; but from the bottom of my heart I thank you.

To the Thirty-third New York regiment he addressed the following:

Officers and Soldiers of the Thirty-third: I have come to thank you in person for your conduct and bravery on the 5th of May. I will say to you as I have said to the other regiments engaged with you at that part of the field, that all did well—did all that I could have expected. The other troops engaged elsewhere fought well and did their whole duty, too; but you won the day, and to you and your comrades belongs the credit of the victory of Williamsburg.

You acted like veterans! Veterans of many battles could not have done better. You shall have "Williamsburg" inscribed upon your flag. I have accorded the same privilege to the other regiments engaged with you.

You have won for yourselves a name that will last you through life.

Soldiers, again I thank you.

It has been stated that the division of Gen. Franklin, belonging to the corps of Gen. McDowell, was subsequently sent to the army of Gen. McClellan. This division arrived previous to the surrender of Yorktown, and remained on board of the transports in order to proceed up the York river as soon as the enemy's batteries might be taken. The division was delayed on the 5th by the weather. On the 6th it left Yorktown, and landed at Brick House Point on the same day. This is the point where the Pamunkey river enters the York river and on the right bank of the latter. The Pamunkey is navigable for gunboats of light draft some twenty miles above White House. It unites with the Mattapony and forms the York river. On the tongue of land between the two rivers at their junction is West Point opposite to Brick House Point. From West Point a railroad runs to Richmond, and crosses the Pamunkey at White House. Although at this time an insignificant village, West Point was anciently a place of considerable pretensions. It is about twenty-five miles by water from Yorktown and about thirty-five by railroad from Richmond. The troops were landed on the same night, and encamped on a plain surrounded on three sides by woods, and on the fourth bounded by the river. That evening a part of the division of Gen. Sedgwick, under Gen. Dana, arrived. During the next day the enemy were discovered in the woods, and made an attack in which they had the advantage for a short time, but were repulsed and driven a considerable distance. Two batteries were brought to bear, which caused them to press upon the Federal left. The gunboats then opened upon them and did effective service, contributing materially to the success of the day. The divi-

sion of Gen. Porter subsequently arrived on transports, but no further skirmishing took place at that position.

The success at Williamsburg proved to be more complete than had been at first expected. The strong works of the enemy, the town, and his sick and wounded being taken, indicated that his loss had been great, and that his retreat was rapid and disorderly. The retreat was followed up by the Federal cavalry for one or two days, and constant skirmishing kept up with the Confederate rear guard. The terrible condition of the roads rendered a more active pursuit out of the question. Three days were spent by the army at Williamsburg looking after their wounded, who were scattered through the woods, and waiting for provisions from Yorktown, the arrival of which was delayed by the state of the roads.

At this date a serious blow was given to the Confederate strength by the loss of Norfolk, the destruction of the Merrimac, and the breaking up of their blockade of the James river, which had been caused by the Merrimac taking a position off Craney Island. On the 7th President Lincoln arrived at Fortress Monroe, and after examining the fortress and the camp at Newport News, urged a movement on Norfolk, which had already been reported as abandoned in consequence of the advance of the army of the Potomac up the peninsula. An expedition was accordingly organized, under the direction of Maj.-Gen. Wool which embarked at Fortress Monroe during the night of the 9th of May, and landed at Willoughby's Point, a short distance from the Rip Raps and eight miles from Norfolk, at daylight on the 10th. The force consisted of the 10th New York, Col. Bendix; 20th do., Col. Weber; 99th do.; 1st Delaware, Col. Andrews; 16th Massachusetts, Col. Wyman; 58th Pennsylvania, Col. Bailey; a battalion of mounted rifles, and a company of 4th regular artillery. Gens. Mansfield and Weber proceeded over a good road on the direct route to Norfolk, but finding the bridge over Tanner's Creek on fire, and a small force of the enemy on the opposite side with three small howitzers, a march of eight miles was then made by the Princess Anne road, around the head of the creek to Norfolk. The defences of the city were found to have been abandoned. At the limits of the city Gen. Wool was met at half past four in the afternoon by the mayor and a committee of the council, who surrendered it. He immediately took possession, and appointed Brig.-Gen. Vielé military governor, with directions to see that the citizens were protected in "all their civil rights." The troops bivouacked on the field outside of the limits of the city for the night. As soon as these ceremonies were completed, and the custom house and other U. S. property taken possession of, Gen. Wool and his aid for the occasion, Secretary Chase, returned to Fortress Monroe. About four o'clock the next morning, a bright light was observed from Fortress Monroe, in the direction of Craney Island, which was supposed at first to be a signal of some description from the Confederate iron-clad steamer Merrimac or Virginia. It was closely watched by the officers of the picket boats, as well as by the various naval vessels of the fleet, and precisely at half past four o'clock an explosion took place, which made the earth tremble for miles around. In the midst of the bright flames that shot up through the distant blaze, the timber and iron of the monster steamer could be seen flying through the air, while immense volumes of smoke rose up and for a time obscured everything. No doubt was entertained that the Merrimac had ceased to exist, and had doubtless been abandoned by the crew.

A naval reconnoissance was immediately sent out toward Norfolk. The fortifications on Craney Island were found to have been abandoned. They were in four or five separate sections, and constructed by the most skilful engineers. They were left in excellent condition, as were also the extensive barracks which had accommodated during the winter a garrison of over two thousand men. The forts were finely sodded, and all the appurtenances for immediate service were in readiness, with supplies of ammunition in sheds near each of the forty heavy guns mounted in different parts of the works. On the main front of the island, commanding the approaches by the river channel, the works were casemated. Nine of these casemates were finished, in each of which were nine or ten-inch guns, principally Dahlgrens, and the work of erecting five more casemates was in progress at the time of the evacuation, in one of which a gun was mounted. The whole number of guns mounted was thirty-nine, of which two were Parrotts and a number rifled Dahlgrens. There were also about six guns in the works which had not been mounted. None of them had been removed.

On the line of the river leading from Craney Island to Norfolk there were not less than six heavy earthworks, mounting in all about sixty-nine cannon, all of which were in position, except those that were in the works near the Naval Hospital. These had been taken to Richmond.

Not far above Craney Island was the river barricade. Although the river is here nearly a mile wide, a line of piles had been driven from shore to shore, with the exception of an opening in the centre of the channel for vessels to pass in and out. Here were two steam pile-drivers which had been used for this work, and near the opening was moored the hulk of the old frigate United States, which it was proposed to sink in case Federal vessels should have succeeded in passing the fortifications.

Immediately commanding this river barricade was a casemated battery, forming a half circle, and mounting eleven heavy guns. On the opposite bank of the river was another battery, with two or three other small works, before

old Fort Norfolk on one side of the river, and the Naval Asylum batteries on the other, were reached.

In addition to the amount of ammunition left in the sheds of the batteries, the magazines, of which there was a great number, were well filled. The amount of powder in the magazines was estimated at five thousand pounds, and the fixed ammunition could be enumerated by the cargo. All the workshops, storehouses, and other buildings at the Gosport navy yard were burned, and the dry dock had also been partially blown up with powder on the night after Norfolk was surrendered. While this was taking place, another party was engaged in burning the shipping and steamboats in the harbor. There is no doubt this vast sacrifice was permitted by the Confederate Government, only to enable it to summon to Richmond the troops in and about Norfolk under Gen. Huger. They were about eighteen thousand in number.

At the same time when this movement was made on Norfolk, steps were taken to open the blockade of James river. On the 8th of May the gunboats Galena (iron clad), Aroostook, and Port Royal started up the river, and were successful in silencing the batteries at its mouth and on its banks. They were subsequently joined by the Monitor and Naugatuck, and on the 18th were repulsed by a heavy battery at Drury's Bluff, about eight miles below Richmond. (*See* NAVAL OPERATIONS.) The blockade of the river below that point was raised.

Meantime the army of Gen. McClellan was advancing toward Richmond. On the 8th of May the advance was beyond Williamsburg, on the 11th it was at Barnhamsville, on the 13th at New Kent Court House, and on the 15th at the White House. This was the point where the railroad from West Point to Richmond crossed the Pamunkey river. It took its name from a fine building, once the property of Gen. Washington, but now of his heirs. The railroad was in good order, and locomotives and cars, brought on the transports, were immediately placed on the track. It was intended that the supplies of the army, as it advanced, should be taken over this road. The Pamunkey river, at the White House, was of sufficient depth to float large vessels, and an immense amount of stores was there collected. A reconnoissance was made on the 16th by one of the smaller gunboats, with two companies of infantry under Major Willard, and one section of Ayres' battery, up the Pamunkey river, a distance of twenty-five miles, to a point known as Russell's Landing. A steamboat, a propeller, and fifteen small schooners were found in flames upon their arrival. Most of these vessels were loaded with corn. On the same day the Confederate troops, consisting chiefly of a corps of observation, were driven over the Chickahominy on the main road to Richmond, at Bottom's Bridge, which was burned. When the Federal troops arrived within a half mile of the bridge, a brisk fire of artillery from the opposite side opened upon them. The Confederate army had now retreated across the Chickahominy, determined beyond that river to dispute the possession of Richmond. The Chickahominy river is formed by the junction of Horsepen Branch, Rocky Branch, North Run, and Brook Run, near Meadow Bridge, five miles directly north of Richmond. All these streams, and several others too small to have names, rise within ten miles northwest of Richmond, in a rough, unfertile country, exceedingly broken and unfit for cultivation.

Meadow Bridge is nearly north of Richmond, five miles in a direct line by railroad, and is the outlet of a considerable swamp, and the place of crossing for Meadow Bridge road and the Virginia Central and Louisa railroad. The stream at this bridge is an insignificant brook, receiving another creek from the Richmond side, a short distance below. Less than two miles from Meadow Bridge is the bridge of the Mechanicsville turnpike, four and one half miles from the Confederate capital and fifteen from Hanover Court House.

Two miles further on, it receives a small creek with the name of Brandy Run, and from this point it grows considerably wider, more sluggish, with swampy shores at intervals, and low banks often overflowed. Near this place is a small bridge, and a road crosses, but little used.

Four miles from Mechanicsville turnpike bridge is New Bridge, in a direct line northeast from the city six miles, and seven and a half miles by the road. Four miles farther, and directly east from the city, is a military bridge. From this bridge three miles farther to Bottom's Bridge the banks of the stream are quite swampy, but it is still of no considerable size, although several creeks have emptied their waters into it. A mile before reaching Bottom's Bridge it is crossed by the Richmond and York River railroad, running to White House and West Point. The course of the river from its source is east-southeast, so that it is constantly leaving Richmond, and at Bottom's Bridge is fifteen miles away from the city. Its nearest point is at Mechanicsville bridge. The bank of the stream on the north side is for the most part rolling bluffs, covered with forests, with an occasional opening, where can be seen finely situated plantations. Upon the south side of the stream, and from one to two miles from the bank, a considerable bluff extends the entire distance to the vicinity of the lower military bridge. This bluff is highest opposite New Bridge, where a point of it is known as Lewis Hill. A road runs along on the brow of this hill, and there are some very fine residences situated upon it, which, as it is only some three or four miles, at most, from the city, are very desirable locations. Other bridges were constructed by orders of Gen. McClellan.

The soil along the York River railroad is of too pliable a nature to admit of the transportation of heavy guns, or, in fact, any others, at the time of severe rains. The same may be said

of all the localities between the Chickahominy and Richmond. After the passage of a hundred teams it becomes necessary to construct new roads. Some days passed in bringing up the rear of the army, in making preparations to cross the Chickahominy, and in securing the conveyance of the supplies for the army. The railroad from the White House became the base for this purpose, and was kept open until the 25th of June. Meantime the Federal army was diminishing in numbers, while the Confederates were gathering troops by every method they could devise. Prisoners were taken, who belonged to regiments which had opposed Gen. Burnside in North Carolina. And Norfolk had been sacrificed to send her troops to Richmond. The conscription act, passed by the Confederate Congress in April, made every man between the ages of eighteen and thirty-five years a soldier. The new levies were now collecting before Richmond.

On the evening of the 21st Gen. McClellan sent the following despatch to the War Department: "I have just returned from Bottom's Bridge; have examined the country on the other side, and made a reconnoissance on the heels of theenemy, who probably did not like the skirmish of yesterday. The bridge will be repaired by to-morrow morning, and others constructed. All the camps have advanced to-day."

On the next day the troops began to cross both at Bottom's Bridge and at the railroad bridge, and took up a position one and a half miles beyond. Reconnoissances made during the day gave no assurance that the Confederates were in any considerable force near at hand, but led to the impression that it was their purpose to make a stand in a selected position near Richmond. On the next day, the 23d, the advance was within seven miles of Richmond. The Confederates were at the same time attacked with shells on the opposite side of the river near New Bridge. This was followed up on the next day with more skirmishing. During these days, since the army had reached the river, the unusual quantity of rain that fell had rendered the roads almost impassable for artillery, at the same time it had greatly retarded the construction of the numerous bridges which Gen. McClellan wished to build over the Chickahominy. There were two principal objects now before the commander-in-chief: one was to capture Richmond, and the other to secure supplies for his army. For this latter purpose, it was necessary for him to be prepared to defend the railroad against every attack upon it. The Confederate general, Johnston, by having possession of the bridges over the river on the north of Richmond, could at any moment throw a force over and attack Gen. McClellan's line of supplies. The river therefore was necessarily made passable to the Federal army at all times, to enable the commander to mass his troops on either side as might be necessary.

While arrangements were making to render the position of the Army of the Potomac safe and secure its successful advance upon Richmond, Gen. McClellan began to look anxiously for the expected coöperation of Gen. McDowell. It was evident that the retreat of the enemy could be made but very little farther. The campaign had ripened for the battle, and the conflict must be near at hand. The enemy had always declared that Richmond would never be captured so long as any men were left to defend it. They had shown their willingness to wait, and no one believed they would retire within the defences of Richmond until they were forced to do it by the disastrous issue of a battle.

On the 17th of May, the War Department sent the following instructions to Gen. McClellan. Unfortunately the reënforcements spoken of therein, were destined never to arrive:

WAR DEPARTMENT,
WASHINGTON CITY, D. C., *May* 17, 1862.

Maj.-Gen. George B. McClellan, Commanding Army of the Potomac before Richmond:

Your despatch to the President, asking for reënforcements, has been received and carefully considered. The President is not willing to uncover the capital entirely, and it is believed that even if this were prudent, it would require more time to effect a junction between your army and that of the Rappahannock, by the way of the Potomac and York rivers, than by a land march.

In order, therefore, to increase the strength of the attack upon Richmond at the earliest possible moment, Gen. McDowell has been ordered to march upon that city by the shortest route. He is ordered—keeping himself always in position to cover the capital from all possible attack—so to operate as to put his left wing in communication with your right, and you are instructed to coöperate so as to establish this communication as soon as possible. By extending your right wing to the north of Richmond, it is believed that this communication can be safely established, either north or south of the Pamunkey river. In any event, you will be able to prevent the main body of the enemy's forces from leaving Richmond and falling in overwhelming force upon Gen. McDowell. He will move with between thirty-five and forty thousand men.

A copy of the instructions to Maj.-Gen. McDowell is with this. The specific task assigned to his command has been to provide against any danger to the capital of the nation. At your earnest call for reënforcements, he is sent forward to coöperate in the reduction of Richmond, but charged, in attempting this, not to uncover the city of Washington, and you will give no orders either before or after your junction, which can keep him out of position to cover this city. You and he will communicate with each other by telegraph or otherwise as frequently as may be necessary for efficient coöperation.

When Gen. McDowell is in position on your right, his supplies must be drawn from West Point, and you will instruct your staff officers to be prepared to supply him by that route.

The President directs that Gen. McDowell retain the command of the Department of the Rappahannock, and of the forces with which he moves forward.

By order of the President.

EDWIN M. STANTON, Secretary of War.

On the 26th, an order was given for a movement, the design of which was to open a communication with Gen. McDowell, as well as to scatter a force known to be collecting near Hanover Court House to threaten the right of Gen. McClellan and his communications.

About four o'clock on the morning of the 27th, the division of Gen. Morrell, of Gen. Por-

ter's corps, commenced its march in a heavy rain which had continued all night. It turned off from the road to New Bridge, and took that to Hanover Court House. The whole column marched fifteen miles steadily, with great rapidity, and with very little straggling. Soon after noon the enemy's pickets were met and driven in. This was near the railroad and about four miles from the Court House. The advance, consisting of Gen. Martindale's brigade, composed in part of the 18th and 22d Massachusetts, 2d Maine, and 25th New York, had met the enemy in considerable force. The latter regiment suffered severely by the enemy on either flank, until the artillery opened its fire. This continued for half an hour, when the arrival of Gen. Butterfield's brigade soon settled the affair. After an advance of a mile farther the Federal force halted. During this halt the enemy marched so as to flank it and made an attack upon its left, when a severe battle ensued, which finally resulted near sundown in driving the enemy from the field. The Federals, in both contests, had fifty-four killed, and one hundred and ninety-four wounded and missing. The loss was chiefly in the 25th New York. The Confederate force was estimated at eight thousand, and wounded prisoners were taken to the hospitals belonging to fourteen different regiments. Their loss was between two and three hundred killed and wounded, and about five hundred taken prisoners. The expedition was under the command of Gen. Porter. The battle was near Peak's Station,

on the Virginia Central railroad. Fredericksburg, the headquarters of Gen. McDowell, was distant about forty-five miles, and his advance was at Bowling Green, distant only fifteen miles. This was the moment for the junction of the two armies. Prince de Joinville thus speaks of the actions of this hour:

"It needed only an effort of the will, the two armies were united, and the possession of Richmond certain! Alas! this effort was not made. I cannot recall those fatal moments without a real sinking of the heart. Seated in an orchard in the bivouac of Porter, amid the joyous excitement which follows a successful conflict, I saw the Fifth cavalry bring in whole companies of Confederate prisoners, with arms and baggage, their officers at their head. But neither the glad confidence of the Federals nor the discouragement of their enemies deceived me, and I asked myself how many of these gallant young men who surrounded me, relating their exploits of the day before, would pay with their lives for the fatal error which was on the point of being committed. Not only did not the two armies unite, but the order came from Washington to burn the bridges which had been seized. This was the clearest way of saying to the army of the Potomac and to its chief that in no case could they count on the support of the armies of upper Virginia."

Gen. McClellan, in his testimony before the court martial at Washington in the case of Gen. McDowell on Dec. 10, said:

"I have no doubt, for it has ever been my opinion, that the army of the Potomac would have taken Richmond, had not the corps of Gen. McDowell been separated from it. It is also my opinion that had the command of Gen. McDowell joined the army of the Potomac in the month of May, by way of Hanover Court House from Fredericksburg, we would have had Richmond in a week after the junction. I do not hold General McDowell responsible for a failure to join with me on any occasion. I believe that answers the question."

The principal bridge burned was the one over the South Anna river, one of the tributaries of the Pamunkey river. It was on the line of the Richmond and Fredericksburg railroad, and five hundred feet long. The report of the destruction of this bridge, made from the army at the time, says: "It cuts off the communication by railroad between Richmond and the forces under Gen. Jackson." On the 29th the expedition returned to its original camp.

The explanation of this failure on the part of Gen. McDowell to coöperate with the army of Gen. McClellan at this critical moment, involves a statement of the military operations which had been taking place in the Department of the Potomac, the Mountain Department, and the Department of the Shenandoah, and which culminated at this time. On the Confederate side, the design of these military operations was not only to prevent this junction of Gen. McDowell with Gen. McClellan, but also to prevent any reënforcement whatever to the latter. In this last object they were also partly successful.

The corps of Gen. McDowell was not allowed to embark for Fortress Monroe with the other forces of Gen. McClellan by order of the President, as has been stated. The Department

of the Rappahannock created soon after, and placed under the command of Gen. McDowell, became the field of his operations. The division of Gen. Franklin having been sent to Gen. McClellan, the forces of Gen. McDowell consisted of the divisions of Gens. McCall and King. These forces were in Virginia, southwest of Washington. On the 15th of April the order for their advance was issued. On the night of that day the advance reached Catlett's Station. On the 17th the march again commenced, and, six miles out, the pickets of the enemy were found and driven in, and several skirmishes took place during the day. On the morning of the 18th the small force of the enemy were driven across the bridges into Fredericksburg, which place they were not prepared to defend, and soon after abandoned it, having destroyed everything of value to themselves which could not be carried away. On the next day the city was surrendered by the authorities. It was so completely under the guns of the Federal force planted opposite the town, that any resistance in its unprotected state would have been useless. The Confederate force which retired before the advance, consisted of one regiment of infantry and one of cavalry. On the 23d of April Gen. McDowell was ordered by the President not to occupy Fredericksburg for the present, but to prepare the bridges and his transportation. On the 30th he was authorized to occupy it. On the 4th of May the bridges across the Rappahannock had been restored, and the city was occupied by the Federal troops. At the same time when the order was given to Gen. McDowell to advance upon Fredericksburg, an order was given to Gen. Shields to withdraw with his division from the corps of Gen. Banks in the Department of the Shenandoah, and to join the corps of Gen. McDowell. Upon the issue of this order detaching Gen. Shields from the command of Gen. Banks, the War Department was warned by experienced military officers that disaster would certainly follow from it. Gen. Shields immediately moved to comply with the order, and on the 19th his division encamped half a mile south of Catlett's Station. He was ordered then to Fredericksburg, and reached Falmouth on the 22d of May.

On the 17th of May the following instructions were given to Gen. McDowell:

WAR DEPARTMENT,
WASHINGTON CITY, D. C., *May* 17, 1862.

To Maj.-Gen. McDowell, Commanding Department of the Rappahannock:

GENERAL: Upon being joined by Shields's division, you will move upon Richmond by the general route of the Richmond and Fredericksburg railroad, coöperating with the forces under Gen. McClellan now threatening Richmond from the line of the Pamunkey and York rivers. While seeking to establish as soon as possible a communication between your left wing and the right wing of Gen. McClellan, you will hold yourself always in such position as to cover the capital of the nation against a sudden dash by any large body of the rebel forces.

Gen. McClellan will be furnished with a copy of these instructions, and will be directed to hold himself in readiness to establish communication with your left and to prevent the main body of the enemy's army from leaving Richmond and throwing itself upon your column before a junction between the two armies is effected. A copy of his instructions in regard to the employment of your forces is annexed.

EDWIN M. STANTON, Secretary of War.

A few days previously a small force had crossed over to Fredericsburg by order of Gen. McDowell, but the main body of his corps remained at Falmouth, where it could sustain the advance if necessary. The enemy had retired only a short distance from the town. So far as related to numbers, the division of Gen. Shields was not needed by Gen. McDowell; but the soldiers of the former had been on many a hard field, while those of the latter had hardly stood the shock of battle. The division of Gen. Shields, just from a march of one hundred and ten miles, was appointed to take the advance upon the enemy. This division consisted of the following brigades: first brigade, Gen. Kimball, 4th and 8th Ohio, 14th Indiana, and 7th Virginia; second brigade, Gen. Terry, 7th, 29th, and 66th Ohio, and 7th Indiana; third brigade, Gen. Tyler, 5th Ohio, 1st Virginia, 84th and 110th Pennsylvania; fourth brigade, Col. Carroll acting brig.-gen., 7th and 62d Ohio, 13th Indiana, and 39th Illinois.

On Saturday evening, May 24, the order was received for the division of Gen. Shields and other forces, to fall back.

The following was the order:

WASHINGTON, *May* 24, 1862.

Maj.-Gen. McDowell:

Gen. Fremont has been ordered, by telegraph, to move to Franklin and Harrisonburg, to relieve Gen. Banks, and capture or destroy Jackson and Ewell's forces. You are instructed, laying aside for the present the movement on Richmond, to put twenty thousand men in motion at once for the Shenandoah, moving on the line, or in advance of the line, of the Manassas Gap railroad. Your object will be to capture the force of Jackson and Ewell, either in coöperation with Gen. Fremont, or, in case want of supplies or transportation interfered with his movement, it is believed that the force which you move will be sufficient to accomplish the object alone. The information thus far received here makes it probable that, if the enemy operates actively against Gen. Banks, you will not be able to count upon much assistance from him, but may have even to release him. Reports received this moment are that Banks is fighting with Ewell, eight miles from Harper's Ferry. ABRAHAM LINCOLN.

The reply of Gen. McDowell to this order was as follows:

HEADQUARTERS, DEPARTMENT OF THE RAPPAHANNOCK,
May 24, 1862.

Hon. E. M. Stanton, Secretary of War:

The President's order has been received, and is in process of execution. This is a crushing blow to us.

IRVIN McDOWELL, Major-General.

To this the President responded as follows:

WASHINGTON, *May* 24, 1862.

Maj.-Gen. McDowell:

I am highly gratified by your alacrity in obeying my orders. The change was as painful to me as it can possibly be to you or to any one.

Everything now depends upon the celerity and vigor of your movements. A. LINCOLN.

The reply of Gen. McDowell to this message is important, as showing the probabilities

that his movement would be unsuccessful. It was as follows:

HEADQUARTERS, DEPARTMENT OF THE RAPPAHANNOCK, OPPOSITE FREDERICKSBURG, *May* 24, 1862.

His Excellency the President:

I obeyed your order immediately; for it was positive and urgent, and, perhaps, as a subordinate, there I ought to stop; but I trust I may be allowed to say something in relation to the subject, especially in view of your remark that everything depends upon the celerity and vigor of my movements; I beg to say that coöperation between Gen. Fremont and myself to cut off Jackson and Ewell is not to be counted upon, even if it is not a practicable impossibility; next, that I am entirely beyond helping distance of Gen. Banks, and no celerity or vigor will be available as far as he is concerned; next, that by a glance at the map it will be seen that the line of retreat of the enemy's forces up the valley is shorter than mine to go against him. It will take a week or ten days for the force to get to the valley by the route which will give it food and forage, and by that time the enemy will have retreated. I shall gain nothing for you there, and lose much for you here. It is, therefore, not only on personal grounds that I have a heavy heart in the matter, but I feel that it throws us all back, and from Richmond north we shall have all our large mass paralyzed, and shall have to repeat what we have just accomplished.

I have ordered Gen. Shields to commence the movement to-morrow morning. A second division will follow in the afternoon. Did I understand you aright that you wish that I personally should accompany this expedition? Very respectfully,

IRVIN McDOWELL.

The division of Gen. Shields, accompanied by other portions of McDowell's forces, was on the march at noon of the next day, and moved fifteen miles, and the next day, the 26th, encamped six miles beyond Catlett's Station. Early the next morning, moving again, it passed Manassas Junction during the day, where it met a portion of the force driven from Front Royal, and learned that Gen. Banks was flying before Gen. Jackson, and halted at Haymarket. Twelve days previous this division had left Gen. Banks's army to join Gen. McDowell, on his way, as it was believed, to coöperate with Gen. McClellan before Richmond. It had been the division of Gen. Lander, and had become familiar with the Shenandoah Valley, up which they had pursued the enemy from the Potomac to the northern base of the Massanutten Mountains. Now the work of a whole winter and spring was before them to do over again. In coöperation with Gen. Fremont's forces they prepared to aid in cutting off the retreat of Gen. Jackson after having driven Gen. Banks across the Potomac. On the 27th a column under Gen. Kimball, embracing, as a part of it, the entire division of Gen. Shields, commenced its march for Front Royal, which, without serious opposition, it was expected to reach in three days, and Strasburg in four.

The advance of Gen. McDowell at the time it was countermanded had reached Bowling Green, fifteen miles from Hanover Court House, which was two days later occupied by a force from Gen. McClellan's army under Gen. Porter.

The order creating the Mountain Department was issued by the President on the 11th of March. It was supposed at this time that the plan of the campaign for Gen. Fremont was to move up the left bank of the Big Sandy river in Kentucky, to Prestonville and Pikeville, through Cumberland Gap to Knoxville, and thus command the southern railroad, and cut off any retreat from or any reënforcements to Richmond. On the 29th Gen. Fremont, at Wheeling, assumed the command, and Gen. Rosecrans retired and took command of Gen. Pope's corps under Gen. Grant. The new department was bounded on the east by that of the Potomac under Gen. McClellan, and on the west by that of the Mississippi under Gen. Halleck. Active preparations had been made by Gen. Rosecrans for the spring campaign. On the same day Gen. Fremont issued an order assigning Brig.-Gen. B. F. Kelly to the command of the railroad district, consisting of all of western Virginia, north and east of the counties of Jackson, Roane, Calhoun, Braxton, Lewis, Barbour, and Tucker inclusive, and west of the Alleghanies, Maryland, and Pennsylvania.

Military operations in this department, under Gen. Fremont, commenced about the 1st of April. Gen. Milroy, who had been some time holding the pass of Cheat Mountain in Randolph county in the northern part of the State, advanced twelve miles to Camp Greenbrier, thence nine miles in a northeasterly direction to Camp Alleghany, a position occupied by the enemy, who retreated before him. On the 10th he had occupied Monterey, being an advance of sixteen miles. This position was evacuated by the Confederates, and also Huntersville. The next day he moved toward McDowell, distant ten miles, and occupied it and advanced subsequently to Fort Shenandoah eight miles. Thus far Gen. Milroy had followed the retreating foe from Monterey in the direction of Staunton in the Shenandoah Valley.

On the 3d of May Gen. Fremont left Wheeling and arrived at New Creek on the Baltimore and Ohio railroad, and on the 5th, accompanied by his staff and body guard, and one or two regiments of infantry and a battery, he advanced about six miles; on the 7th he reached Petersburg, a small town twelve miles beyond Moorefield, and forty-four from New Creek. Gen. Schenck's brigade had left Petersburg on the 3d. Their aim was to effect a junction with Gen. Milroy, whose situation was becoming exposed in consequence of forces of the enemy advancing from the east. Gen. Milroy in his advance had driven the Confederates beyond the Shenandoah Mountains, the boundary of Gen. Fremont's department, and had made his headquarters at McDowell. On the 5th of May the 32d Ohio regiment was advanced beyond the Shenandoah Mountains, about sixteen miles from McDowell, for the double purpose of scouting and foraging. The 75th Ohio and 3d Virginia, with Hyman's battery, were encamped at the foot of the mountain on the west side, and the remainder of Gen. Milroy's force was at

McDowell. This is a small town on the Bull Pasture river at the foot of mountains bearing the same name, and about forty miles distant from Harrisonburg in the Shenandoah Valley, where Gen. Banks's forces then were. To prevent the junction of these forces, or to cut them up before Gen. Milroy could be reënforced, Gen. Jackson collected all the Confederate forces in the region, and marched against him. On the 7th he attacked the 32d Ohio, which fell back with the loss of their camp equipage and baggage, through lack of transportation. At the same time the force west of the mountain fell back in order to McDowell, where a stand was determined upon. Gen Milroy at the earliest moment sent despatches to Gen. Schenck, who was thirty miles distant, to hasten to his assistance. In the afternoon the enemy appeared in large force on the tops of the mountains in the rear of the town, arranging for an attack. A force was immediately sent forward by Gen. Milroy to occupy the hilltops adjacent to the ones upon which the enemy appeared, more for the purpose of skirmishing and reconnoitring than for bringing on a battle. A fierce contest ensued, which was increased by the arrival of Gen. Schenck with his brigade, and continued until night. The forces of the enemy being manifestly greatly superior, Gen. Milroy determined to retreat. The march was commenced at midnight, and at daybreak they had retired thirteen miles. After a halt of two hours it was continued with the enemy pressing upon them. Upon reaching the camp of Gen. Schenck, arrangements were made for protection. Every hill was surmounted with cannon, and ten different regiments were placed to support them, and for over thirty hours the artillery by a constant fire kept the enemy at a distance. On the morning of the 14th all of the enemy had disappeared, which was subsequently explained by the arrival of Gen. Fremont with Blenker's division. The Federal loss in this conflict was twenty killed, one hundred and seventy-seven wounded, and two missing. The Confederate loss was forty killed, and two hundred wounded. It was nearly a flight of the Federal forces, and only the arrival of Fremont probably saved it from final capture. The Federal loss in tents, baggage, and stores was great. The enemy were present in much superior numbers.

Gen. Fremont now made his headquarters at Franklin, eighty miles south of New Creek, twenty-four miles from Monterey, and sixty-five from Staunton. Here he remained quietly, reorganizing and refreshing his forces for ten days. This repulse of his advance, with his withdrawal to Franklin, now gave Gen. Jackson the opportunity to carry out the plans against Gen. Banks as soon as the moment came for their execution. Consequently no further movement of importance was made on the part of Gen. Fremont until he was ordered to hurry to the relief of Gen. Banks. This order was received by him on Saturday, the 24th of May, under the form of a despatch from the Secretary of War, directing him to fall back with his entire command to the support of Gen. Banks. That evening the order was given to be ready for a movement early on the following morning. As early as half past three o'clock on Sunday morning the noise of preparation was heard, and at six o'clock the army was in motion.

It seems that when Gen. Fremont was ordered to go to the relief of Gen. Banks, the order prescribed the route by which he should go. (*See* p. 109.) This route, thus specified by the President, would have brought Gen. Fremont in the rear of Gen. Jackson; whereas that taken by Gen. Fremont brought him in front of Gen. Jackson. But Gen. Fremont, judging it to be an impracticable route, took the responsibility of going by another. The President telegraphed to him, saying: "You are ordered to go so and so. I hear of you elsewhere. What does this mean?" To which Gen. Fremont replied, giving the reasons, viz.: that he knew of a shorter and easier route by which he could more effectually perform the service desired, and on which his half-famished troops would meet their transportation and supplies. He also stated that when one is "in the field," it is essentially difficult to obey literally orders transmitted from one necessarily unaware of present exigencies, but that if it was expected of him so to do, he would do it. To this the President, with characteristic simplicity, replied that he was satisfied.

The first six miles of the road were indescribably bad, owing to the recent rains and the heavy wagons that had been passing over it. Wounded and sick had been left at Franklin, but the entire train of wagons was taken. At night the army bivouacked about a mile beyond the upper crossing of the South Branch of the Potomac on the road to Petersburg. The distance marched was fourteen miles. On Monday, the 26th, the advance reached Petersburg after noon, having marched sixteen miles, and halted until the next morning. Orders were here issued that knapsacks, tents, and baggage of every description, which could possibly be dispensed with, should be left behind. Five days' rations of hard bread were given to the troops, and on Tuesday, the 27th, after marching twelve miles, they halted on the highlands east of the village of Moorefield. On Wednesday, the 28th, the army advanced ten miles, passing over Hunting Ridge, and about two o'clock halted to rest and await supplies. The roads continually grew worse, and the rain fell steadily. Thursday, no movement was made. A small force under Col. Downey, on a reconnoissance, encountered a small body of Confederate cavalry. On Friday, the 30th, an advance of twenty miles was made, and the army bivouacked at Wardensville. A heavy rain fell during the afternoon. On Saturday, the 31st, the last of the intervening mountain ranges was crossed, and the western

barrier of the Shenandoah Valley alone remained to be traversed. The troops pushed on twelve miles through the rain, and halted at night where the Winchester and Strasburg roads divide. On the narrow ridges, along which the path wound in constant ascent, there was no plane or table land for camp. That rainy night the tired troops dropped and slept by the roadside or in the swimming fields. The next morning, Sunday, June 1, the advance moved at six o'clock, and at eight the whole column was in motion on the road to Strasburg. In about an hour and a half later a skirmish ensued near Strasburg, and Gen. Fremont had reached the position to coöperate with the force of Gen. McDowell against the advance of the enemy upon Gen. Banks.

After the battle of Winchester, on the 23d of March, the retiring Confederate forces in the Shenandoah Valley were followed up by Gen. Banks. On the 1st of April he moved from Strasburg to Woodstock, where his entrance was disputed by a force of cavalry, infantry, and artillery under Col. Ashby. They however retreated to Edinburg, destroying one railroad and two turnpike bridges. The advance was subsequently continued with occasional skirmishes, and on the 26th Harrisonburg was occupied. A considerable body of Confederate troops was in the neighborhood, but in a position from which a retreat could easily be made.

The order of the President, which divided the army in Virginia into five corps, placed the fifth under the command of Gen. Banks. It was to be composed of his division and that of Gen. Shields, which had previously been commanded by Gen. Lander. This was the force now encamped near Harrisonburg. About the 15th of May an order was issued from the War Department withdrawing the division of Gen. Shields from the corps of Gen. Banks, and directing him to report immediately at Catlett's Station on the Orange and Alexandria railroad, as above stated. At the same time orders were given to Gen. Banks to fall back to Strasburg and fortify. Gen. Shields left at once, and on his arrival at Catlett's Station he was ordered to join Gen. McDowell at Fredericksburg immediately.

At Strasburg the Massanutten range of mountains rise in the middle of the valley, and divide it. Strasburg is favorably located for defence against an attack from the south by the western valley. But the eastern valley, by opening out at Front Royal, affords another road to the Potomac, and also a good plank road, which runs direct to Winchester, going round Strasburg.

Gen. Banks had not actually fallen back to Strasburg when Gen. Shields marched over the mountain and down the eastern branch of the valley to Front Royal. At that very time an attack was expected on the front, and a portion of his forces had been daily skirmishing with a Confederate force in the gap of the Massanutten Mountains. It was also known that Gen. Jackson, having attempted to dislodge Gen. Milroy in the Mountain Department, was returning to the Shenandoah Valley, and that Gen. Ewell was with a strong force on the road running from Harrisonburg to Gordonsville, and also that Gen. Taylor was still higher up the valley with another Confederate force. In addition, Gen. Jackson could be easily reënforced from Gordonsville. With this force menacing the valley, Gen. Banks was left with less than six thousand men, including cavalry and artillery, to defend the whole valley, and that, too, before he had time to prepare himself for resistance by fortifications.

Eastward of Front Royal there was another force under Gen. Geary, charged with the protection of the Manassas Gap railroad. The headquarters of Gen. Geary were at Rectortown, and there were only between seven and eight hundred troops at Front Royal. Still farther east, at Catlett's Station, on the Orange and Alexandria railroad, about ten miles south of Manassas Junction, was the brigade of Gen. Duryea, consisting of three New York and one Pennsylvania regiment. These forces formed the connection between Gen. Banks and the main body of the army of the Rappahannock, under Gen. McDowell, at Fredericksburg.

The enemy, knowing the position and strength of these forces, formed a plan to capture the entire force of Gen. Banks. This plan was to be executed on the proper signal being given from Richmond. At this time Gen. McClellan was within fifteen miles of Richmond. Gen. McDowell had been reënforced by Gen. Shields, and orders were expected every hour for him to advance toward Richmond. It was all-important for the defence of that capital that reënforcements should be prevented from reaching Gen. McClellan. After the junction of Gens. Shields and McDowell, dense columns of smoke could be seen at evening ascending for miles south of Fredericksburg, which were caused by the burning of bridges to retard the Federal advance. Something greater than the mere burning of bridges was needed; for it was not only necessary to prevent the Federal reënforcements to Gen. McClellan, but also to gain time to accumulate the Confederate forces before Richmond from such parts of the South as they could be taken, and by the levies of the conscript law. The moment had come for the dash on Gen. Banks, and the signal from Richmond was given. Meanwhile Gen. Banks, according to the orders of the War Department, had fallen back, and now occupied Strasburg. The first movement of the enemy, who had retired from their advance on Fremont, and were already concentrated under Gens. Jackson and Ewell for the purpose, was to advance a heavy column rapidly up the valley between the Blue Ridge and Massanutten mountain range to Front Royal, with the design of capturing the force there, and then press on by a good plank road to Winchester, and

thus get in the rear of Gen. Banks. The guard at Front Royal consisted of the 1st Maryland regiment, Col. Kenly, with three companies of the 29th Pennsylvania, two rifled guns of Knapp's battery, and two companies of the 5th New York cavalry. To their bravery is due the partial defeat of the Confederate plan. On Friday noon, May 23, the enemy were reported to be approaching, and Col. Kenly formed in a position about one mile east of the Shenandoah river. The fight commenced by a strong dash of cavalry under Col. Ashby upon this position. After a contest of two hours the enemy were repulsed with considerable loss. Finding that a large force of infantry was approaching to the aid of the cavalry, Col. Kenly ordered his men to fall back to the west side of the Shenandoah and to destroy the bridges after them. This was done in good order and the smaller bridge destroyed; but a flanking force of the enemy fording above came upon them before the larger one was destroyed. Col. Kenly immediately got his guns in position and formed his men, and another struggle ensued, which checked the enemy a couple of hours longer. Finding the force of the enemy increasing, he placed his artillery in the rear and commenced falling back. This was continued for three miles, when the force was overwhelmed by a charge of the enemy, their lines broken, and no further resistance could be made. Col. Kenly was severely wounded, but afterward recovered. This check retarded the Confederate advance.

The news of this affair reached Gen. Banks that evening, with such details as convinced him that the enemy were at hand with a force from fifteen to twenty thousand strong. It was evident to him from the large Confederate force, composed as it must be of all their troops in the valley concentrated, that they were close upon him for some purpose not yet developed. That purpose must be nothing less than the defeat of his own command, or its possible capture by occupying Winchester, and thus intercepting supplies or reënforcements and cutting off all opportunity for retreat. Under this interpretation of the enemy's plans, one of three courses was open for him to pursue: first, a retreat across the little North Mountain to the Potomac river on the west; second, an attack on the enemy's flank on the Front Royal road; third, a rapid movement direct upon Winchester with a view to anticipate the occupation of the town by the enemy, and thus place his own command in communication with its original base of operations in the line of reënforcements by Harper's Ferry, and secure a safe retreat in case of disaster.

To remain at Strasburg was to be surrounded; to move over the mountains was to abandon his train at the outset, and to subject his command to flank attacks, without possibility of succor; and to attack the enemy in such overwhelming force could only result in certain destruction. It was, therefore, determined by Gen. Banks that to enter the lists with the enemy in a race or a battle, as he should choose, for the possession of Winchester, the key of the valley, was, for him and his force, the path to safety.

Accordingly, the advance guard was called in, and at three o'clock on the next morning several hundred disabled men, left in charge by Gen. Shields's division, were put upon the march to Winchester, followed by the wagon train under escort of cavalry and infantry. The rear was protected by nearly the whole force of cavalry and six pieces of artillery. The attack of the enemy was expected in the rear. When all the column except the rear guard had passed Cedar Creek, three miles from Strasburg, information was received from the front that the enemy had attacked the train and was in full possession of the road at Middletown. The danger being now in front, the troops were ordered to the head of the column and the train to the rear. After this change the head of the column encountered the enemy in force, fifteen miles from Winchester, who were attacked with artillery and infantry and driven back some two miles. The neglect of the enemy to attack the train and throw it into confusion when at the head of the column secured a successful continuation of the march. On the remainder of the route to Winchester, the enemy pressed the main column with the utmost vigor, and defeated at every point all efforts of detachments to effect a junction with it. At five o'clock in the afternoon the advance guard arrived at Winchester, and Gen. Banks became satisfied that the force of the enemy was not less than twenty-five thousand men. His command consisted of two brigades of less than four thousand men, with nine hundred cavalry, ten Parrott guns, and one battery of smooth six pounders. To this should be added the 10th Maine regiment of infantry and five companies of Maryland cavalry, stationed at Winchester. During the night Gen. Banks determined to test the strength of the enemy by actual collision, and measures were promptly taken to prepare the troops. The rolling of musketry was heard during the latter part of the night, and before the break of day a sharp engagement occurred at the outposts. Soon after four o'clock the artillery opened its fire, which continued without cessation until the close of the engagement.

The main body of the Confederates was hidden during the early part of the action by the crest of a hill and the woods in the rear.

Their force was massed apparently upon the Federal right, and their manœuvres indicated a purpose to turn them upon the Berryville road, where, it appeared subsequently, they had placed a considerable force with a view of preventing reënforcements from Harper's Ferry. But the steady fire of the Federal lines held them in check until a small portion of the troops, on the right of the Federal line, made a movement to the rear. This was done under the erroneous impression that an order to withdraw had been given. No sooner was this observed by the enemy than its regiments swarmed upon the

crest of the hill, advancing from the woods upon the Federal right, which, still continuing its fire, steadily withdrew toward the town.

The overwhelming Confederate force thus suddenly showing itself, made further resistance unwise, and orders were sent to the left to withdraw, which was done in an orderly manner. By this engagement the enemy were held in check five hours.

The retreat was now continued in three parallel columns, each protected by an efficient rear guard, in the direction of Martinsburg, with the hope of meeting reënforcements. The pursuit of the enemy was prompt and vigorous, and the retreat rapid and without loss. At Martinsburg the columns halted two hours and a half, and the rear guard remained in the rear of the town until seven in the evening, and arrived at the river at sundown, forty-eight hours after the first news of the attack on Front Royal. It was a march of fifty-three miles, thirty-five of which were performed in one day. The scene at the river when the rear guard arrived was of the most animated and excited description. A thousand camp fires were burning on the hillside; a thousand carriages of every description were crowded upon the banks of the broad stream between the exhausted troops and their coveted rest. The ford was too deep for the teams to cross in regular succession; only the strongest horses, after a few experiments, were allowed to essay the passage over before morning. The single ferry was occupied by the ammunition trains, the ford by the wagons. The cavalry was secure in its form of crossing. The troops only had no transportation. No enemy appeared in sight. Fortunately there were several boats belonging to the pontoon train brought from Strasburg, which were launched and devoted exclusively to the soldiers. Gen. Banks says in his report: "There never were more grateful hearts in the same number of men than when at midday, on the 26th, we stood on the opposite shore." The loss was as follows: killed, 38; wounded, 155; missing, 711; total, 904. The wagon train consisted of nearly five hundred wagons, of which fifty-five were lost. All the guns were saved. The loss of the enemy has not been stated.

On the morning of the 28th, Gen. Jackson issued the following address to his soldiers:

HEADQUARTERS, V. D.,
WINCHESTER, *May* 28, 1862.

General Order, No. 53.

Within four weeks this army has made long and rapid marches, fought six combats and two battles, signally defeating the enemy in each one, capturing several stands of colors and pieces of artillery, with numerous prisoners and vast medical and army stores, and finally driven the boastful host, which was ravishing our beautiful country, into utter rout. The General commanding would warmly express to the officers and men under his command his joy in their achievements, and his thanks for their brilliant gallantry in action, and their obedience under the hardships of forced marches, often more painful to the brave soldier than the dangers of battle.

The explanation of the severe exertions to which the commanding General called the army, which were endured bythem with such cheerful confidence in him, is now given in the victory of yesterday. He receives this proof of their confidence in the past with pride and gratitude,and asks only a similar confidence in the future. But his chief duty to-day, and that of the army, is to recognize devoutly the hand of a protecting Providence in the brilliant successes of the last three days, which have given us the result of a great victory without great losses, and to make the oblation of our thanks to God for his mercies to us and our country in heartfelt acts of religious worship. For this purpose the troops will remain in camp to-day, suspending as far as practicable all military exercises, and the chaplains of the regiments will hold divine service in their several charges at 4 o'clock P. M., to-day.

By order of Maj.-Gen. JACKSON.
R. D. DANBY, Asst. Adj.-Gen.

When the news of the attack on the Maryland regiment at Front Royal on the 23d, reached Gen. Geary, who, with his force, was charged with the protection of the Manassas Gap railroad, he immediately began to move to Manassas Junction. His troops hearing the most extravagant stories of the fate of the Maryland regiment, and supposing they were about to be swallowed up, burnt their tents and destroyed a quantity of arms. Gen. Duryea, at Catlett's Station, became alarmed on learning of the withdrawal of Gen. Geary, took his three New York regiments, leaving the Pennsylvania one behind, and hastened back to Centreville, and telegraphed to Washington for help. He left a large quantity of army stores behind, and also for two days his camp equipage. A panic prevailed at Catlett's Station and Manassas Junction for two days. At night the camps were kept in constant alarm by the sentinels firing at stumps or bowing bushes, which they mistook for Confederate guerillas. The alarm spread to Washington, and Secretary Stanton issued orders calling for the militia of the loyal States to defend that city.

The following is the despatch sent to the Governor of Massachusetts:

WASHINGTON, *May* 25, 1862.

To the Governor of Massachusetts:

Intelligence from various quarters leaves no doubt that the enemy in great force are marching on Washington. You will please organize and forward immediately all the militia and volunteer force in your State. EDWIN M. STANTON, Secretary of War.

This alarm at Washington, and the call for its defence, produced a most indescribable panic in the cities of the Northern States, on Sunday, the 25th, and two or three days afterward.

The Governor of New York, on Sunday night, the 25th, telegraphed to Buffalo, Rochester, Syracuse, and other cities as follows:

Orders from Washington render it necessary to forward to that city all the available militia force. What can Buffalo do? E. D. MORGAN.

Governor Curtin, of Pennsylvania, issued the following order:

HEADQUARTERS PENNSYLVANIA MILITIA,
HARRISBURG, *May* 26.

General Order, No. 23.

On pressing requisition of the President of the United States in the present emergency, it is ordered that

the several major-generals, brigadier-generals, and colonels of regiments, throughout the Commonwealth, muster, without delay, all military organizations within their respective divisions or under their control, together with all persons willing to join their commands, and proceed forthwith to the city of Washington or such other points as may be indicated by future orders.

By order A. G. CURTIN, Governor and Commander-in-Chief.

(Signed) A. L. RUSSELL, Adjt.-Gen.

The Governor of Massachusetts issued the following proclamation:

Men of Massachusetts!—The wily and barbarous horde of traitors to the people, to the Government, to our country, and to liberty, menace again the national capital. They have attacked and routed Maj.-Gen. Banks, are advancing on Harper's Ferry, and are marching on Washington. The President calls on Massachusetts to rise once more for its rescue and defence.

The whole active militia will be summoned by a general order, issued from the office of the Adjutant-General, to report on Boston Common to-morrow; they will march to relieve and avenge their brethren and friends, and to oppose with fierce zeal and courageous patriotism the progress of the foe.

May God encourage their hearts and strengthen their arms, and may He inspire the Government and all the people!

Given at Headquarters, Boston, 11 o'clock, this (Sunday) evening, May 25, 1862.

JOHN A. ANDREW.

Over three thousand men responded on Monday.

The Governor of Rhode Island issued the following order:

PROVIDENCE, *May* 25, 1862.

Citizens of the State capable of bearing arms will at once report themselves to the nearest military organizations.

The commandants of the chartered and volunteer military companies will at once organize their companies, and the men so reporting into companies of eighty-three men rank and file, and report to these headquarters, when they will be armed, equipped, and moved under the direction of the Commander-in-Chief to Washington, to protect the national capital from the advance of the rebels who are now rapidly approaching.

Gen. Robbins is directed to organize and command the first regiment, and will order his brigade under arms and form it into a regiment.

The second regiment will be under command of Capt. Bliss, of the United States Army.

The Providence Marine Corps of artillery will be placed under the command of Lieut.-Col. E. C. Gallup as captain, and he is directed to organize the same.

Col. Shaw is ordered to assemble the National Guard for organization.

Rhode Island troops will move through Baltimore, and if their progress is impeded by the rebel mob of that city, they will mete out to it the punishment which it has long merited. Our regiments will move to Washington to defend the capital in common with thousands of our patriotic countrymen, who will rush to arms to ward off the danger which is imminent.

WM. SPRAGUE.

AUG. HOPPIN, Assistant Adjutant-General.

The Governor of Ohio issued the following proclamation:

COLUMBUS, O., *May* 26.

To the Gallant Men of Ohio: I have the astounding intelligence that the seat of our beloved Government is threatened with invasion, and am called upon by the Secretary of War for troops to repel and overwhelm the ruthless invaders.

Rally, then, men of Ohio, and respond to this call, as becomes those who appreciate our glorious Government. Three classes of troops will be accepted:

First. For three years, or during the war.

Second. For a term of three months.

Third. For guard duty within the limits of the State.

All are requested to report for duty at Camp Chase, where the organization will take place.

The number wanted from each county has been indicated by special despatches to the several Military Committees.

Everything is valueless to us if our Government is overthrown.

Lay aside, then, your ordinary duties, and help to bear afloat the glorious flag unfurled by our fathers.

DAVID TOD, Governor.

At the same time the Secretary of War at Washington, caused the following order to be issued:

WASHINGTON, *May* 25, 1862.

Ordered. By virtue of the authority vested by an act of Congress, the President takes military possession of all the railroads in the United States, from and after this date, until further orders, and directs that the respective railroad companies, their officers and servants, shall hold themselves in readiness for the transportation of troops and munitions of war, as may be ordered by the military authorities, to the exclusion of all other business.

By order of the Secretary of War.

M. C. MEIGS, Quartermaster-General.

When the alarm thus indicated in the headquarters of Government had disseminated itself throughout the military and social ramifications of society, the excitement was almost tumultuous. In Baltimore, crowds pursued persons suspected of sympathy with the cause of the South, until all such disappeared from the streets. The display of flags was demanded from public buildings. Almost half a million of men offered themselves for the defence of Washington within twenty-four hours after the issue of the proclamations.

Meanwhile Gen. Jackson, having seen Gen. Banks safely escaping to the ford of the Potomac, turned away from further pursuit to carry out the other details of his plan, little conceiving of the panic his movements had occasioned in the departments at Washington and the offices of the Governors of States. In fact a captured despatch from Gen. Johnston to Gen. Jackson shows that the chief object of Gen. Jackson's movement was to prevent reënforcements to Gen. McClellan. The effect of this causeless panic on the part of the authorities at Washington was extremely disastrous to the Federal cause; fully as much so as the groundless fears for the safety of the capital, which determined the detention of Gen. McDowell's corps from the army of the Potomac in the beginning of the month of April. The War Department manifestly did not realize the self-evident fact, that Washington being strongly fortified, its surest defence consisted in the presence of a large army threatening Richmond from the peninsula.

On the 28th Gen. Jackson advanced upon Harper's Ferry from Charlestown, driving in before him a Federal reconnoitring force consisting of the 111th Pennsylvania infantry, Col. Schlan-

decker; the 1st Maryland cavalry, Major Deems, and a section of Reynolds's battery. Small bodies of the enemy appeared in the neighborhood during that and the ensuing day, as if with the object of alluring the Federal forces from their strong defensive position to one where they could be more easily attacked and overpowered. This was the opinion of the Federal commander. The whole force of Gen. Jackson was not before Harper's Ferry. Finding the strength of front presented against him, he determined to collect all the plunder he could convey with prisoners, and retire. To effect this object more securely and to deceive his enemy respecting his movements, he left a force with Gen. Ewell, which became his rear guard, and which made the demonstration upon Harper's Ferry. Gen. R. Saxton, who was in command at Harper's Ferry, fearing a flank movement on the part of the enemy, crossing the Potomac above and occupying Maryland Heights on the Maryland side at the same time that an attack should be made in front, determined to defeat it. He therefore withdrew his forces from Bolivar Heights on the Virginia side to an inner line of defence, on the heights known as Camp Hill, immediately above the town of Harper's Ferry. The occupation of this inner line presented a twofold advantage: First, that being much less extended, it could be held by a smaller force—the enemy, from the nature of the ground, being unable to bring into action a larger force than the Federal; secondly, that it would enable Gen. Saxton to bring his naval battery on the Maryland Heights to bear upon the enemy, as they advanced down the declivity of Bolivar Heights into the valley which separates it from Camp Hill. They would thus be exposed for a considerable time to a heavy fire from this formidable battery, where great elevation would enable it to throw shells directly over the heads of the Federal forces on Camp Hill into the face of the advancing foe. With the force rendered by this contraction of his front available for other purposes, he deemed it prudent to occupy the crest of the hill above the naval battery, on the Maryland shore, to frustrate any attempt of the enemy to take this hill in the rear and turn his batteries against him.

On Friday night, the 30th, about dark, the enemy advanced beyond Bolivar Heights to storm the works on Camp Hill. The batteries on Camp Hill, and the one on Maryland Heights, opened upon them. The scene at this time was very impressive. The night was intensely dark; the hills around were alive with the signal lights of the enemy; the rain descended in torrents; vivid flashes of lightning illumined at intervals the green and magnificent scenery, while the crash of the thunder, echoing among the mountains, drowned into comparative insignificance the roar of Federal artillery.

After an action of about one hour's duration the enemy retired. He made another unsuccessful attack at midnight, with regiments of Mississippi and Louisiana infantry, and after a short engagement disappeared. Signal lights continued to be seen in every direction.

A reconnoissance the next day developed that the rear of the Confederate force passed through Charlestown about one hour before the arrival of the Federal reconnoitring force from Harper's Ferry.

Gen. Jackson was now on his retreat. If he had not accomplished all that he aimed at, the result will show that he was completely successful in cutting off nearly all reënforcements to Gen. McClellan. The fear of having his own retreat cut off now caused his rapid movements. Gen. Fremont from the west, and Col. Kimball with the division of Gen. Shields from the east, were on the march to intercept him. The Confederate movements, which had been made to prevent the retreat of Gen. Jackson from being cut off, consisted in the march of Gen. Smith up the Shenandoah from Strasburg to prevent Gen. Fremont from crossing over, as he was ordered, to Harrisonburg. If Gen. Fremont could have successfully crossed to this point, he might have taken up a position so far in the rear of Gen. Jackson as to have effectually cut him off. It has been said that it was impossible for Gen. Fremont to cross to Harrisonburg. When he received the order to come to the aid of Gen. Banks he was at Franklin, sixty-five miles from Staunton, and a less distance from Harrisonburg. Instead of taking this route, he marched a hundred miles to Strasburg. The Confederate forces which attacked Gen. Milroy and drove him back from McDowell, crossed the mountains, whence they retired to Staunton or Harrisonburg. This was some three weeks previous. The enemy also expected Gen. Fremont to cross to New Market or Harrisonburg, thus showing that no local obstacles prevented. The means of transportation were limited; the supplies could hardly have been found by that route.

On Thursday, the 29th, Gen. Jackson ordered a retrograde movement, and sent off his train and prisoners. Early Friday morning, he left camp between Halltown and Charlestown, and his advance rested the first night at or near Middletown, and the next day (Saturday) entered Strasburg. On Saturday morning, Gen. Ewell, disappearing from Harper's Ferry with the rear guard, followed Gen. Jackson, and encamped on Saturday night at Middletown, thus performing a march of thirty-four miles in one day.

Where now were the pursuers of Gen. Jackson, who were to cut off his retreat? On Saturday night the advance of Gen. Fremont arrived at Brent's Gap, about six miles northwest of Strasburg. It was at noon of the previous day that Gen. Fremont was expected to be in Strasburg by Gen. Shields, who was advancing from the east, having been ordered to be in Front Royal at that hour, which he was. The ad-

vance of Gen. Fremont's force on Sunday, June 1, encountered the enemy three or four miles from Strasburg, on the road to Winchester. Gen. Jackson had arrived in Strasburg on the previous day, and tarried to secure the safe arrival and departure of all his force. This encounter of the advance of Gen. Fremont was with the rear of Gen. Jackson. Col. Cluseret, with the 60th Ohio and 8th Virginia and a battery, formed this advance. The contest was with artillery, and was continued by Col. Cluseret until about noon, when he was ordered to retire under the hope of drawing Gen. Jackson on to attack the position which Gen. Fremont had in the meanwhile taken. He had formed a line of battle in a strong position, with Gen. Milroy on the left, Gen. Schenck on the right, and Gen. Stahl in the centre, with Blenker's division in reserve. In this affair five of the 8th Virginia and two of the 60th Ohio were wounded. While Gen. Jackson's rear was thus engaged with the advance of Gen. Fremont, the main body of his troops was pushing on through Strasburg, which was accomplished on Sunday. Thus Gen. Jackson reached Strasburg just in time to pass between Gen. McDowell on the one side, and Gen. Fremont on the other. The advance of Gen. McDowell reached Strasburg soon after the advance of Gen. Fremont. The afternoon wore away without any appearance of Gen. Jackson. The truth was that the attack on the advance of Gen. Fremont was made to divert his attention from the retreating movement Gen. Jackson was then making. A reconnoissance was made during the night beyond Strasburg. On Monday morning, June 2, Gen. Fremont pushed on to Strasburg only to find that Gen. Jackson was on his way to Woodstock unchecked and uninjured. The advance of Gen. Fremont's main force as it entered Strasburg met the 1st New Jersey and the 1st Pennsylvania cavalry under Gen. Bayard, then just coming in, as a part of Gen. McDowell's force.

Meanwhile the force of Gen. Shields which had been ordered to coöperate, had left Manassas Junction, and halted at Haymarket on Tuesday, the 27th of May, as has been stated. On the 28th this division, followed by other troops from Gen. McDowell's corps, advanced as far as Rectortown, thirteen miles, having passed over steep and rocky roads through Thoroughfare Gap. On Thursday, the 29th, it started at five o'clock P. M., with orders to be in Front Royal, twenty-eight miles distant, on the next day at noon, at which time Gen. Fremont was to reach Strasburg. Their entire train was left behind and at the appointed time their advance brigade, under Gen. Kimball, struck the enemy at Front Royal, completely routing them and taking a number of prisoners and a large amount of commissary and quartermaster's stores. On the next day a party of eighteen cavalry entered the outskirts of Strasburg. Finding that the enemy had retired before Gen. Fremont, and that he was following them, Gen. Shields moved up the east side of the Massanutten range of mountains to Luray, while Gen. Fremont advanced on the west side. Gen. Shields was in hopes of striking the enemy at New Market, but finding the Whitehouse and Columbia bridges burned, he resolved to push on further up the east side of the Shenandoah, to intercept the enemy at Conrad's Store (Miller's Bridge), Port Republic, or Waynesborough on the railroad eleven miles east of Staunton. Col. Carroll, in command of the 4th brigade, moved rapidly forward with one regiment, followed by the remainder of the brigade. A violent rain on the night of the 3d caused a delay, and various portions of the command were separated by rapid streams overflowing their banks. He, however, reached Port Republic in advance of the enemy.

At this time forces were gathering in other quarters. The 5th New York cavalry, Col. De Forrest, left Williamsport on Friday night, the 30th, at the time the attack at Harper's Ferry was made, and advanced to Martinsburg on Saturday morning, the 31st, and occupied the town. On the 2d of June Gen. Banks, having recrossed the Potomac, reached Bunker Hill, twelve miles from Winchester. Also by special train from Baltimore, Gen. Sigel arrived at Harper's Ferry on Sunday evening, June 1. During the next forenoon, he inspected the positions of the forces, and ordered a march at four o'clock in the afternoon. The next morning the advance of his division, consisting of Gen. Cooper's brigade, was beyond Charlestown, pushing forward to Winchester, where a junction was formed with Gen. Banks.

Meantime Gen. Fremont was in full chase of the swift-footed foe. Finding that the enemy had escaped him at Strasburg, and being joined by an advance of Gen. McDowell's, consisting of Gen. Bayard's cavalry, he ordered the cavalry and artillery to the front, and pursuit to be given.

A stand was made several times by the retreating enemy, during Monday, the 2d. A mile and a half beyond Strasburg, at a narrow and defensible pass called Fisher's Hill, the road, after crossing a bridge, turns abruptly to the right, and curving to the left passes the base of a thickly wooded hill with a deep ravine on the right, and continues up the hill through a deep and densely wooded defile. Here the first stand was made by the rear guard under Gen. Ewell. His artillery occupied elevated positions overlooking the road on his front for a mile, and commanding a range of hills adjacent to the road on the right of Gen. Milroy. Finding it to be impossible to drive the enemy's centre, Gen. Milroy chose other elevated positions for his guns on the right, and a fierce contest ensued for several hours. The enemy at night encamped three miles beyond Woodstock, while the forces of Gen. Fremont occupied the town.

The pursuit was commenced at seven o'clock

on the next morning, Tuesday, June 3. The advance to Edinburg was made without incident. A military bridge constructed by Gen. Banks across Stony Creek, a swift, wide stream, was half burned by the flying enemy. The delay in repairing the bridge and crossing gave the enemy time to move to Mt. Jackson, eight miles beyond Edinburg, where he halted until noon of the next day, the 4th, when he was again in motion, owing to the approach of Gen. Fremont's advance. One mile beyond Mt. Jackson, is a long bridge over the Shenandoah, a river too swift and deep to be forded. Gen. Jackson left his artillery in position long enough to delay the advance of Gen. Bayard's cavalry, then crossed the bridge before the guns of his pursuers could be brought up, and burned the bridge in face of their cavalry. The bridge was rebuilt by noon of the next day, the 5th, and the army of Gen. Fremont was again in motion. At three o'clock the advance entered New Market, a distance of seven miles, and encamped two miles beyond. On the 6th, Friday, the advance reached Harrisonburg about two o'clock P. M. None of the enemy were seen on the way. Almost every bridge, however small, was found to have been burned. Information was immediately received that a body of Confederate cavalry was near the town. Cannon were planted on the highlands north, and a force of cavalry, under Col. Wyndham, was sent out to reconnoitre, with instructions to engage the enemy if the force was only two or three companies, but not if it was in force and supported by infantry. Some three miles beyond the town, Col. Wyndham discovered the Confederate cavalry and made an effort to oppose them, but unfortunately came upon a large force of infantry, which opened such a volley upon him that his troops were thrown into confusion, and suffered severely, and he himself was taken prisoner. Later in the day Gen. Bayard and Col. Cluseret with a force of cavalry and infantry encountered the enemy. One regiment, the Bucktail rifles of Pennsylvania, numbering one hundred and twenty-five, under Col. Kane, suffered a severe loss of fifty-five men. This small force was rashly led against an overwhelming Confederate mass. The Union forces were finally withdrawn, and the enemy subsequently disappeared. Among the killed of the Confederate force was Col. Ashby, a brave and dashing cavalry officer. The forces of Gen. Fremont remained at Harrisonburg on Saturday, the 7th of June. A reconnoissance was made by Gen. Milroy, about seven miles on the road to Port Republic, where the enemy was found in a position well protected by woods. It seems that Gen. Jackson, before reaching the final bridge across the Shenandoah, determined to fight Gen. Fremont, and thereby check his pursuit. For this purpose he had chosen his position as above stated, at a spot called Cross Keys, near Union Church.

At six o'clock on Sunday morning, June 8, the army of Gen. Fremont began to move, and at half past eight his advance opened upon the enemy. Gen. Fremont says:

"The battle began with heavy firing at eleven o'clock, and lasted, with great obstinacy and violence, until four in the afternoon, some skirmishing and artillery firing continuing from that time until dark."

The right wing was under Gen. Schenck, the left under Gen. Stahl, and the centre under Gen. Milroy. The right wing was not assailed, except by skirmish fighting. The contest was hot on the centre, and Gen. Milroy forced the enemy back from point to point. He had penetrated the centre, and almost reached the enemy's guns, when the order to retire was given. This filled him with indignation, but he obeyed.

Gen. Stahl's brigade was all engaged. Of this, the 45th New York and the 27th Pennsylvania first met the enemy, and being threatened by superior numbers, the 8th New York was sent to support them on the left, and the 41st New York on the right. These regiments were soon all engaged, and the enemy appeared to be bearing heavily upon this wing of the army. It finally gave way, and the whole line was ordered back to a more favorable position. The enemy did not advance, but commenced a retreat. The army encamped that night on the ground where their line was first formed in the morning. They drove the enemy's pickets and skirmishers over it at first, for no attempt was made on the other side to support them. The place where the fighting occurred, and the dead and wounded were strewn over the field, was in the enemy's possession all night.

The loss was very severe on both sides. In Gen. Stahl's command the loss was 69 killed, wounded 254, missing 79. The total loss was estimated by Gen. Fremont, immediately after the battle, at 125 killed and 500 wounded. The enemy's loss was less than this, owing to the shelter of their forces.

The despatch of Gen. Fremont to the War Department, dated on the next morning, says:

"There was no collision with the enemy after dark last night. This morning we renewed the march against him, entering the woods in battle order; his cavalry appearing on our flanks. Gen. Blenker had the left, Gen. Milroy the right, and Gen. Schenck the centre, with a reserve of Gen. Stahl's and Gen. Bayard's brigades."

Port Republic is a small town on the south fork of the Shenandoah river, near which is the bridge by which the river is crossed. It is a few miles distant from Cross Keys, where the conflict between Gens. Fremont and Jackson's forces took place. It has already been stated that Col. Carroll, in command of the advance of Gen. Shields's division up the east side of the Shenandoah, arrived at Port Republic in advance of Gen. Jackson. This means, in advance of the main force of the enemy. On Saturday, the 7th, Col. Carroll received orders to move forward to Waynesborough, distant some thirty-five or thirty-seven miles, by the

way of Port Republic, for the purpose of destroying the railroad depot, track, and bridge, at that place, and to seize Gen. Jackson's train and throw his force upon Gen. Jackson's flank. Col. Carroll marched in obedience to these orders, on Saturday afternoon. His infantry, cavalry, and artillery had in the mean time come up, and he started for Conrad's Store with less than a thousand of the former, with one hundred and fifty cavalry, and with a single battery of six guns.

Halting, in the night, six miles before reaching Port Republic, Col. Carroll sent forward a party of scouts, who returned with the information that Gen. Jackson's train was parked near Port Republic, with a drove of beef cattle herded near by, and the whole guarded by about two or three hundred cavalry. On learning this he pushed forward, with the design of capturing the train and cattle, as his orders directed. He halted some two miles from the town, made a reconnoissance, and received further information confirming the report of his scouts, and then dashed into the town with his cavalry and two pieces of artillery, driving the enemy's cavalry out and taking possession of the bridge. He halted there for his infantry to come up, and disposed his pieces and little force to prevent a repulse from the train guard, when, before he had occupied the village any length of time, he was attacked by a force of the enemy superior to his own, and forced to retire and abandon his further march to Waynesborough. Thus the enemy recovered possession of the bridge and held it.

Col. Carroll brought his forces to a stand at the first defensible position, about two miles north of the town. At this time the conflict was going on between Gens. Fremont and Jackson at Cross Keys, several miles distant, and it was over this bridge that Gen. Jackson must retreat or be placed between the forces of Gens. Fremont and Shields. At two o'clock in the afternoon Gen. Tyler arrived to the aid of Col. Carrol.. As commanding one of the brigades of Gen. Shields's division, he had also been ordered to proceed to Waynesborough. He left Columbia Bridge on the 7th, and reached Naked Creek on the same day, and went into camp under orders to march at four A.M. When within six miles of Port Republic he learned of the engagement of Col. (acting brig.-gen.) Carroll, and pressed forward immediately with infantry and artillery to his support, and reached him at two P. M.

Gen. Tyler in his report thus explains his proceedings: "From Col. Daum I learned the enemy had eighteen pieces of artillery, planted so as to completely command all the approaches to the town, and from the engagement with Gen. Carroll that morning, had obtained the range of the different points. Immediately on the arrival of my command, Col. Daum urged an attack with the combined force of infantry and artillery, to which I so far consented as to order the infantry into position under cover of a thick wood which skirted the road, and commenced observing the enemy's position myself, which appeared to me one to defy an army of 50,000 men. I at once sent for Col. Carroll, Lieut.-Col. Schriber, Capts. Clark and Robinson, who had been over the ground; they all agreed in the opinion that an attack would result in the destruction of our little force."

The infantry was ordered back to bivouac for the night, and early in the morning Gen. Tyler was informed that the enemy were advancing evidently with the intention of outflanking him on his left. Forces were ordered up to counteract this movement, which was sucessfully done. The enemy retired into the woods, and a part crossed over and joined the forces attacking the right wing. The engagement now became very heavy on the right, additional troops having been brought up on both sides. Under cover of this conflict, the enemy threw another force into the woods, pressed down upon the battery on the left, and with a sudden dash captured it. The contest continued until Gen. Tyler, perceiving additional reënforcements for the enemy approaching, about ten o'clock ordered his troops to fall back, with a view of retreating until he should meet reënforcements. The retreat, he says, "save the stampede of those who ran before the fight, was as orderly as the advance." The number of his force is stated at three thousand, and that of the enemy much larger. This was evidently the rear guard of Gen. Jackson's army, which had been engaged, and some reenforcements were sent back to it. Gen Jackson retired from before Gen. Fremont on Sunday night, and on Monday morning crossed the bridge at Port Republic, and while the main body continued to retreat, Gen. Tyler was thus held in check.

Meanwhile Gen. Fremont, as has been stated, commenced his march for Port Republic that morning, with his army in battle array. During the afternoon his whole army reached the river opposite the town, and he learned that a portion of Gen. Shields's division had engaged the enemy on both Sunday and Monday on the other side of the river. During the march of Gen. Fremont's forces from the battle field of the preceding day to the river, they could hear brisk cannonading, and see the heavy volumes of smoke arising from the valley where the contest was going on. When they arrived the Confederate force was gone. Thus closed the pursuit of Gen. Jackson with a portion of the forces of four major-generals of the U. S. army on his line of retreat, beside those of Brig.-Gen. Shields. The loss of men on both sides occasioned by this expedition was not very great either in killed, wounded, or prisoners. No accurate details are at present accessible; but the destruction of Federal stores was vast.

On the night of the arrival of Gen. Fremont's forces at the river, an alarm was raised in camp. Horses were harnessed, and men placed

in a condition for an immediate movement, but affairs finally became quiet, and part of a night's rest was obtained. On the next morning, the 10th, orders to march were issued, and the army was soon in motion back to Harrisonburg, a distance of twelve miles, which it reached in a pitiless storm during the afternoon. On Wednesday it moved eighteen miles to New Market, and on Thursday reached Mt. Jackson, seven miles, and encamped for rest. Some forces of Gen. Jackson's army returned to Harrisonburg almost as soon as the Federal troops had left it. The division of Gen. Shields also fell back to New Market.

The force of Gen. Jackson was generally estimated by his opponents at twenty-five thousand men. The following regiments were included in it: the 1st, 2d, 10th, 13th, 21st, 25th, 31st, 33d, 37th, 42d, 52d, 57th, and 58th Virginia; the 6th, 8th, and 9th Louisiana; 1st Maryland; 21st North Carolina; 16th Mississippi, and 15th Alabama regiments of infantry, and the 2d regiment of Confederate infantry, and Major Wheat's battalion of Louisiana Tigers. The cavalry included the 2d, 6th, 7th Virginia, 1st Maryland, about twenty eight companies. The artillery exceeded thirty pieces in number.

The force of Gen. Fremont, on leaving Franklin, was stated to be about twenty thousand men. Throughout the entire period of this expedition the storms of rain were incessant, and the roads in an unusually bad condition.

A review of the facts thus stated shows that there was no concert of action between the forces actively engaged in the pursuit. The controlling head, the War Department, from which the orders to pursue issued, was too far distant from the scene of operations.

It should be stated in this connection, that on the very day on which Gen. Jackson attacked the 1st Maryland under Col. Kenly at Front Royal, the 23d of May, the Confederate General, Heath, in the western part of the Mountain Department, advanced rapidly and boldly with nearly three thousand men and attacked Col. Crook, acting brig.-gen., at Greenbrier Bridge, thirty-five miles from McDowell, and nine miles from Camp Alleghany. The command of Col. Crook consisted of the 36th and 44th Ohio and some batteries. The advance of Gen. Heath was met with so much vigor and promptness, that his forces were soon defeated, with the loss of his four pieces of artillery, and one hundred and fifty killed and wounded, and three hundred stand of arms, and a number taken prisoners. On his retreat, the Greenbrier Bridge was burned to check or prevent pursuit. This affair occurred on the day previous to the reception of the order by Gen. Fremont to march to the aid of Gen. Banks. The ill success of this enterprise was such that it failed to cause any diversion from Gen. Fremont's command.

This exploit of Gen. Jackson, undoubtedly one of the most brilliant and successful of the war, if its objects are considered, introduced into the whole campaign in Virginia a disturbing element of considerable magnitude. It diverted large masses of men from movements designed to accelerate events on the peninsula, delayed the advance of Gen. McClellan, and deprived him of the reënforcements he expected. The time required for the transfer of troops in the South and Southwest, where the Confederate campaign had been a failure, to Richmond, the most important position of the Confederacy, was thus gained, and when Gen. McClellan was next prepared to move, he found the enemy in accumulating force in front of him.

On the 25th of May, Gen. McClellan issued a general order which was read throughout the camps, directing the troops as they advanced beyond the Chickahominy, to be prepared for battle at a moment's notice, and to be entirely unencumbered, with the exception of ambulances —to carry three days' rations in their haversacks, leaving their knapsacks with their wagons, which were on the eastern side of the river, carefully parked. Besides practical directions as to conduct, this order says to officers and soldiers: "Let them bear in mind that the Army of the Potomac has never yet been checked, and let them preserve in battle perfect coolness and confidence, the sure forerunners of success. They must keep well together, throw away no shots, but aim carefully and low, and above all things rely upon the bayonet."

The divisions from the corps of Gens. Heintzelman and Keyes were among the first to cross the Chickahominy. They took a position on the right bank somewhat advanced therefrom. The right wing rested near New Bridge, the centre at Seven Pines, and the left flank on the White Oak Swamp. Gen. Sumner's corps remained on the east side of the river. On the 30th, the Confederate Gen. Johnston made arrangements for an attack upon the Federal army, for the purpose of cutting off, if possible, the corps of Gen. Heintzelman and Keyes before they could be joined by Gen. Sumner. He selected the divisions of Gens. Longstreet, Huger, G. W. Smith, D. H. Hill, and Whiting. His plan was that Gens. Hill and Longstreet should advance by the road to Williamsburg and make the attack in front, and that Gen. Huger should move on the road to Charles City and attack in flank the troops assailed by Gens. Hill and Longstreet. Gen. Smith was ordered to the junction of the New Bridge road and the Nine Mile road, and to be in readiness to fall on the right flank of Gen. Keyes and to cover the left of Gen. Longstreet. The forces of Gens. Hill, Longstreet, and Smith were in position early on the morning of Saturday, May 31, and waited until afternoon for Gen. Huger to get into position. Prince de Joinville, who was a competent spectator, thus describes the scenes which followed this attack:

"At the moment it was thus attacked the

Federal army occupied a position having the form of a V. The base of the V is at Bottom Bidge, where the railroad crosses the Chickahominy. The left arm stretches toward Richmond, with this railroad and the road from that city to Williamsburg. There stood the left wing, composed of four divisions echeloned, one behind the other, between Fair Oaks and Savage stations, and encamped in the woods on both sides of the road. The other arm of the V, the right, follows the left bank of the river; that is the right wing. There are these five divisions and the reserve. Should one desire to communicate from one extremity to the other of those two wings, going by Bottom's Bridge, the way is very long, not less than 12 or 15 miles. In an air line the distance, on the contrary, is very trifling, but between the two arms of the V flows the Chickahominy. It was to connect both arms, in the space between them, that the construction of 3 or 4 bridges had been undertaken, only one of which was serviceable on the 31st of May. It had been built by Gen. Sumner, nearly halfway between Bottom's Bridge and the most advanced point of the Federal lines. It saved the army that day from a disaster." The other bridges were not ready. They were structures of logs, and time was required to build them. The approaches were always bad, and the tedious labor of corduroying long distances was necessary.

"It was against the left wing of the army that every effort of the enemy was directed. That wing had its outposts at Fair Oaks station, on the York river railroad, and at a place called Seven Pines, on the Williamsburg road. There the Federals had thrown up a redoubt in a clearing, where a few houses were to be seen, and constructed abatis, to increase the field for sharpshooting of the troops posted there. The rest of the country was completely covered with woods. The previous day there had been a frightful storm, with torrents of rain, and the roads were frightful.

"All at once, about one o'clock in the afternoon, the weather being dark and gloomy, a very spirited fusilade is heard. The pickets and sentries are violently driven in; the woods which surround Fair Oaks and Seven Pines are filled with clouds of the enemy's sharpshooters. The troops rush to arms and fight in desperation; but their adversaries' forces constantly increase, and their losses do not stop them. The redoubt of the Seven Pines is surrounded, and its defenders die bravely. Col. Bailey, of the artillery, among others, there upon his pieces finds a glorious death. In vain Gens. Keyes and Naglee exhaust themselves in a thousand efforts to keep their soldiers together: they are not listened to. In this moment of confusion they perceive a little French battalion, known as the Garde Lafayette, which has remained in good order. They rush to it, place themselves at its head, charge the enemy and retake a battery. The battalion loses a fourth of its men in this charge; but, like true Frenchmen, always and everywhere the same, they cry, "They can call us the Garde Lafourchette now?" alluding to an offensive nickname that had been given them.

"Meanwhile Heintzelman rushes to the rescue with his two divisions. As at Williamsburg, Kearney arrives in good time to reëstablish the fight. Berry's brigade, of this division, composed of Michigan regiments and an Irish battalion, advances firm as a wall into the midst of the disordered mass which wanders over the battle field, and does more by its example than the most powerful reënforcements. About a mile of ground has been lost, fifteen pieces of cannon, the camp of the division of the advanced guard, that of Gen. Casey; but now we hold our own. A sort of line of battle is formed across the woods, perpendicularly to the road and the railroad, and there the repeated assaults of the enemy's masses are resisted. The left cannot be turned, where is the White Oak Swamp, an impassable morass; but the right may be surrounded. At this very moment, in fact, a strong column of Confederates has been directed against that side. If it succeeds in interposing between Bottom's Bridge and the Federal troops, which hold beyond Savage's Station, the entire left wing is lost. It will have no retreat, and is doomed to yield to numbers; but precisely at this moment—that is to say, at 6 o'clock in the evening—new actors appear on the scene. Gen. Sumner, who has succeeded in passing the Chickahominy, with Sedgwick's division, over the bridge constructed by his troops, and who, like a brave soldier, has marched straight through the woods to the sound of the cannon, arrived suddenly on the left flank of the column with which the enemy is endeavoring to cut off Heintzelman and Keyes.

"He plants in the clearing a battery which he has succeeded in bringing with him. They are not those rifled cannon, the objects of extravagant admiration of late, good for cool firing and long range in an open country: these are the true guns for a fight—twelve-pound howitzers,* the old pattern, throwing either a round projectile, which ricochets and rolls, or a heavy package of grape. The simple and rapid discharging of these pieces makes terrible havoc in the opposing ranks. In vain Johnston sends against this battery his best troops, those of South Carolina—the Hampton Legion among others. In vain he rushes on it himself; nothing can shake the Federals, who, at nightfall, valiantly led by Gen. Sumner in person, throw themselves upon the enemy at the point of the bayonet, and drive him furiously, with frightful slaughter and fear, back as far as Fair Oaks Station.

"Night put an end to the combat. On both sides nothing was known of the result of the battle but what each one had seen with his

* They were "Napoleon" guns.—[Ed.

own eyes. Friends and enemies, lost in woods they were unacquainted with, lay down amid heaps of dead and wounded, wherever darkness overtook them. The fatigue of this obstinate struggle as well as the obscurity of the night had imposed on the combatants one of those tacit truces so frequent in war.

"Evidently Johnston had flattered himself, in throwing all his forces on the four divisions of the left wing, that he could annihilate them before any aid could come to them from the main body of the army on the left bank of the Chickahominy. For the moment he had recoiled before the energetic resistance of those four divisions, and also before the furious and unforeseen attack of Sumner's troops. No doubt he had counted on the terrible storm of the previous day to have swelled the Chickahominy so as to render the establishment of a bridge impossible, or to sweep away in its overflowing waters those already established; but the capricious river baffled his plans, as it did some hours later those of his adversaries. The effect of the deluge was not immediate; the rise in the water delayed its appearance 24 hours. Was this unhoped-for delay turned to account with all desirable activity on the part of the Federals? That is a question which will remain always in dispute, as are so many others of the same kind, which form one of the necessary chapters of the history of most great battles.

"It was only at one o'clock in the afternoon that the action had commenced. We had waited some time to ascertain if the attack on that side was not a feint, intended to draw the Federal troops to that point while the bulk of the enemy's forces was hastening to debouch on the left bank. We had been promptly relieved of our uncertainty by the violence of the attack and by the reports of the aeronauts, who saw the entire Confederate army marching to the point of attack.

"Then Sumner had received orders to cross the water with his two divisions. He had executed the movement with rapidity, marching at the head of his column, without any other guide than the sound of the cannon, and he arrived at the right moment and at the critical place. But some persons thought then, and still think, that if, at the moment Sumner received the order to cross the river, the same order had been given to all the divisions of the right wing, it would have been practicable. We fancy what might have happened if, in place of throwing 15,000 men on Johnston's flank, 50,000 had been thrown. Sumner's bridge, doubtless, would not have answered for the crossing of so many. At midnight the tail end of his column was still crossing, struggling against all the difficulties which bridges formed of trunks of trees that turn under the feet, muddy sloughs and a dark night—the darkness rendered still deeper by the thickness of the woods—present to horses and artillery. Several bridges were, however, ready to be thrown across at other points. It was necessary to work without a moment's loss to construct them, and not be disturbed by the obstacles the enemy would not have failed to present to the undertaking. A brigade was displayed for full effect and scarecrow fashion, opposite the points naturally marked out for crossing; but the stake was so large, the result so important, and the occasion itself so unforeseen and so favorable for playing a decisive part, that nothing, in our opinion, should have prevented that operation from being attempted.

"Here, again, was evident that American slowness which belongs much more to the character of the army than that of its chief. It was not until 7 o'clock in the evening that the idea of securing all the bridges without delay, and causing the whole army to cross at daybreak to the right bank of the Chickahominy, was entertained.

"It was now too late. Four hours had been lost, and the opportunity—that moment so fleeting, in war as in other circumstances—had gone. The rise, on which Johnston had vainly counted, and which had not hindered Sumner from crossing, came on during the night. The river rose suddenly from two feet, and continued to swell with rapidity, carrying away the new bridges. tearing up and sweeping off the trees which formed the planking of Sumner's bridges, and covering the entire valley with its overflowing waters. Nothing could cross.

"At the earliest dawn of day the combat was resumed with great fury on the left bank. The enemy came on in a body, but without order or method, and rushed upon the Federals, who, knowing that they were inferior in numbers and without hope of being supported, did not attempt to do more than resist and hold their ground. They fought with fierce determination on both sides, without any noise, without any cries, and whenever they were too hardly pressed they made a charge with the bayonet. The artillery, placed on the eminences in the rear, fired shell over the combatants. Ah! I could have wished that all those who, forgetful of the past, and impelled by I do not know what kind of egotistical calculation, have lavished their encouragement on the fatal rebellion of slaveowners, could have been present at this fratricidal struggle. I could have wished them, as a punishment, a sight of this terrible battle field, where the dead and dying were piled up by thousands. I wished that they could have seen those temporary ambulances formed around the few habitations found here and there. Oh! what misery—oh! what suffering! The ambulances had something about them particularly horrible. The houses were altogether too few to contain the smallest proportion of the wounded, and they were therefore compelled to lay them outside; but although they did not make any complaints, and bore their fate with the most stoical courage, their exposure in one position beneath the rays of the sun of the middle

of June soon became intolerable. They were then to be seen putting forth all their remaining strength, and crawling to seek a little shade. I will always remember a bed of roses, whose sweet-scented flowers I was admiring while conversing with one of my friends, when he drew my attention to one of these unfortunate men, who had just died beneath its bushes. We looked at each other without saying a word, the heart being oppressed with the most painful emotion. Mournful scenes, from which the pen of the writer, like the eye of the spectator, hastened to turn away.

"Toward midday the fire gradually diminished, then ceased. The enemy retreated; but the Federals were not in a position to pursue them. No one then knew what a loss the Southerners had just suffered in the person of their commander, Gen. Johnston, who was severely wounded. It was to his absence that was owing, in a great measure, the unskilful attacks against the Federal army in the morning. When the firing ceased at midday, the Confederates, tired of the prolonged strife which they had been sustaining, and being no longer commanded, were, it is said (for in the midst of these immense woods one sees nothing, and is compelled to guess everything), in a state of inextricable confusion. Who can say what would have been the result if at this moment the 35,000 fresh troops left on the other side of the Chickahominy had appeared on the flank of this disordered mass after having successfully crossed the bridges?

"Such is the history of this singular battle, which, although complicated by incidents superior to human will, must not be taken otherwise than as a type of American battles. The conflict was a bloody one, for the North had lost 5,000 men, the South at least 8,000; but the results were barren on one side as on the other. Although the losses of the enemy were much greater than those of the Federals, the result was especially distressing to the latter. They had lost a rare opportunity of striking a decisive blow. These occasions did not return, and therefore, in the circumstances in which they were placed, the result was against them."

The crossing of Gen. Sumner's corps commenced about four o'clock in the afternoon. At that time the head of the advance, Gen. Gorman's brigade, turned from the swamps on the left bank of the river to cross by the bridge built by Gen. Sumner,—a battery moved next, then Gen. Burns's brigade, then artillery, and finally Gen. Dana's brigade, all of Gen. Sedgwick's division. In consequence of the morasses, all the batteries except Kirby's were left behind; but all the troops except the 19th Massachusetts, which was detached to assist the artillery, were moved swiftly onward to the scene of action. Gen. Richardson's division was detained until quite late in the evening by the obstructed causeway. At seven o'clock, it was in the position to which it had been assigned. It took no part in the battle on Saturday.

Now was the time to capture the city. The retreat of the army caused great consternation at Richmond. The Confederate force had retired in confusion, and if they had been sharply followed up, the gates of the city would have been reached, if friend and foe had not gone in together. It is useless to speculate on possibilities. The force with which Gen. McClellan commenced his march had been diminished before Yorktown and Williamsburg, and by constant skirmishing. It garrisoned Yorktown and Williamsburg, and occupied the White House, and the line of the railroad. It had received no reënforcements up to this time except the division of Franklin. It was also impossible for him to move the corps of Gens. Porter and Franklin over the Chickahominy at the decisive moment, as even the bridge on which Gen. Sumner had crossed had been so far destroyed by the river, which was swollen by the rains of Friday and Saturday, that it was impassable for a single horseman. The three corps which had been engaged in the battles of Saturday and Sunday were too much cut up and wearied, by their conflict with superior numbers, to be able to pursue the retreating Confederates, particularly as they might probably have been met at the outworks of the city by fresh troops, in numbers fully equal to themselves, and a strong artillery in position. He was in no condition to risk anything. He had fought the enemy in equal or superior numbers, and they had retired in confusion. The corps of Gen. McDowell, if on hand now, might have taken Richmond, but without it the commanding general was not strong enough to risk its immediate attack. There were other considerations to govern his conduct. He was leading an invading army without reserves to fall back upon. A repulse would have ended in serious, if not complete disaster. Such a result to the peninsular campaign would have been fatal to the cause to which the Army of the Potomac was devoted. It would have convinced foreign powers that there was such a degree of military strength in the Confederacy as to render the immediate recognition of its independence both safe and politic. But there was probably one consideration which outweighed all others, and exerted a decisive influence upon the movements. This was the certain and safe reception of sufficient supplies. The single line of railroad was not capable of transporting them. The horses were kept on half forage, and if the distance had been increased, the army itself would have suffered. What hope was there of holding Richmond, even if it had been taken, with a line of transportation not capable of bringing forward sufficient to sustain the army, and one which, from the inadequate force to guard it, was liable at any moment to be broken up? Finally, for many days after the battle, the fields and roads were in such condition as to render it impossible to move any amount of artillery over them. To have advanced without

it would have placed infantry in front of works armed with heavy guns.

The danger of his position was soon demonstrated to the commanding general. It was determined in Richmond at this time, to penetrate the lines of the Federal army, and make a full and thorough reconnoissance of its position and strength. For this purpose, early on the 8th of June, Gen. J. E. B. Stuart, with the 1st, Col. Fitz Hugh Lee; 9th, Col. F. H. Fitz Hugh Lee; and 4th Virginia cavalry, Lieut. Gardner; the Jeff. Davis troop, with two pieces of flying artillery, a 12-pound howitzer, and a 6-pound rifled English piece, numbering about fifteen hundred men, left Richmond and proceeded down the Charlottesville turnpike. That night they encamped at Ashland, not deeming it safe to proceed after dusk, and communicated by signal rockets with Richmond. As soon as day dawned, they proceeded carefully and cautiously, and penetrated the Federal lines. Near Hanover Court House, two or three small bodies of Federal cavalry were met, and skirmishing ensued, but the latter, being unable to withstand the heavy Confederate force, were quickly routed. The camps of these Federal outposts were visited and destroyed; wagons on the road were overtaken and burnt, and the entire route from Ashland by Hanover Court House to Tunstall's Station, on the York River railroad, was to this force a continuous scene of triumph and destruction. Commissary and quartermasters' stores were seized and burned; prisoners and horses were taken and sent to the rear. The amount of property destroyed, however, was very small.

Upon approaching the railroad, cars were heard advancing, and the whistle sounded. By orders, every man was instantly dismounted and ranged beside the track. Thinking the force to be a friendly one, the train was stopped, when one company of the troop opening fire, disclosed its character. The train was immediately started under full steam for the Chickahominy, and despite logs placed on the track, made its escape. It consisted chiefly of uncovered platform cars, on which were some soldiers who were fired upon and killed or wounded. A detachment was immediately sent toward the White House on the Pamunkey river, where a number of wagons loaded with stores, and four transport vessels were found. Two of the vessels with their stores were destroyed, and a few wagons at Garlick's Landing. New Kent Court House was made the rendezvous whither the main body had gone, and where they were soon joined by this detachment. Here a halt was made until midnight. Some prisoners were taken, and sutlers' stores consumed or destroyed. At midnight they quietly moved by a lonely road toward the Chickahominy, and passing near a considerable body of the Federal forces, they reached its banks a little before dawn on Sunday, the 11th, and were ready to cross. They had arrived far below the bridges, and where deep water flows, and knew not how to cross. Their perplexity is thus described by a Confederate writer: "Here was an awful situation for a gallant band! Directed to Blind Ford, it was fifteen feet deep! The enemy had blocked up all the main roads, and had thousands scouring the country, eager to entrap or slaughter it. And without means to cross! Quietly taking precautions against all surprise, strict silence being enjoined upon the prisoners, first one horseman plunged into the flood, and then another at different points—all too deep; no ford discoverable, no bridge! The horses, it was thought, would follow each other, and swim the stream—it was tried, and the horses carried away by the current! Breaking into small parties, the cavalrymen swam and reswam the river with their horses, and when some fifty or more had been landed, a strange but friendly voice whispered in the dark, 'The old bridge is a few yards higher up—it can be mended!' 'Twas found, and mended it could be! Quietly working, tree after tree was felled, earth and twigs and branches were carried and piled up on the main props; old logs were rolled and patched across the stream; yet after long and weary labor the bridge was built, and the long and silent procession of cavalry, artillery, prisoners and spoils, safely and quietly passed this frail impromptu bridge, scarcely any sounds being heard but the rush of waters beneath. Once across and in the swamps, all was industry and expedition. Artillery axles sank low in the mire—ten Yankee horses were hitched to each piece, and as the first rays of morning crimsoned the tree tops, the long line rapidly sought the shade of woods away from the Federal lines. Yet the troops had not proceeded far when the advance was halted. 'Who comes there?' cried the Federal horsemen in the swamp. 'Who goes there?' calls another, and quicker than thought the advance guard dashes away into the open ground; the Federals fire half a dozen shots, and rush in pursuit. Into the thicket some half dozen Federal horsemen dart and are surrounded and made prisoners."

The crossing was made thirteen miles from Gen. McClellan's headquarters, and five miles from his pickets. They were now soon within the lines of the Confederate army. The delay caused by the vigorous skirmishing with the enemy encountered, caused them afterward to make so much haste to escape, that the amount of property destroyed was small, and estimated at fifty thousand dollars. Three hundred mules and some prisoners were taken away. This small force of the enemy's cavalry had passed entirely round and in the rear of the Federal army. The hope for the coöperation of Gen. McDowell amid these perilous scenes was again, for the third time, now rekindled in the mind of Gen. McClellan, and not entirely in vain. On the 10th of June, Gen. McDowell wrote as follows:

June 10, 1862.

Maj.-Gen. G. B. McClellan, Commanding Department of Virginia, before Richmond:

For the third time I am ordered to join you, and hope this time to get through. In view of the remarks made with reference to my leaving you and not joining you before, by your friends, and of something I have heard as coming from you on that subject, I wish to say I go with the greatest satisfaction, and hope to arrive with my main body in time to be of service. McCall goes in advance by water. I will be with you in ten days with the remainder by Fredericksburg.

IRVIN McDOWELL,
Major-General Commanding.

On the 12th, he again wrote, as follows:

HEADQUARTERS DEPARTMENT OF THE RAPPAHANNOCK,
MANASSAS, *June* 12, 1862.

Maj.-Gen. G. B. McClellan, Commanding Department of Virginia, before Richmond:

The delay of Maj.-Gen. Banks to relieve the division of my command in the valley beyond the time I had calculated on, will prevent my joining you with the remainder of the troops I am to take below at as early a day as I named. My third division (McCall's) is now on the way. Please do me the favor to so place it that it may be in a position to join the others as they come down from Fredericksburg. IRVIN McDOWELL,
Major-General Commanding.

Contrary to the expectation of both, the division of Gen. McCall was the only one of Gen. McDowell's corps which subsequently reached the army of the Potomac.

On the next day after the battle of Fair Oaks, above described, Gen. McClellan recovered without resistance the stations of Fair Oaks and Seven Pines, and the two armies were once more in the same position as before.

On the 2d of June President Davis issued the following address to the Confederate army:

EXECUTIVE OFFICE, *June* 2, 1862.

To the Army of Richmond:

I render to you my grateful acknowledgments for the gallantry and good conduct you displayed in the battles of the 31st of May, and the 1st instant, and with pride and pleasure recognize the steadiness and intrepidity with which you attacked the enemy in position, captured his advanced intrenchments, several batteries of artillery, and many standards, and everywhere drove them from the open field.

At a part of your operations it was my fortune to be present. On no other occasion have I witnessed more of calmness and good order than you exhibited while advancing into the very jaws of death, and nothing could exceed the prowess with which you closed upon the enemy when a sheet of fire was blazing in your faces.

In the renewed struggle in which you are on the eve of engaging, I ask and can desire but a continuance of the same conduct which now attracts the admiration and pride of the loved ones you have left at home.

You are fighting for all that is dearest to men; and, though opposed to a foe who disregards many of the usages of civilized war, your humanity to the wounded and the prisoners was the fit and crowning glory to your valor.

Defenders of a just cause, may God have you in His holy keeping! JEFFERSON DAVIS.

Gen. McClellan now set to work to complete in a substantial manner the bridges across the Chickahominy and put the two wings of his army in communication with each other in spite of any inundations. Entrenchments were then thrown up along the whole line. The right wing, consisting of the divisions of Gens. McCall, Morrell, and Sykes, was posted on the left bank of the Chickahominy from Beaver Dam Creek to a point below New Bridge. The centre, consisting of Gens. Smith's, Sedgwick's, and Richardson's divisions, was stretched in a line from Golding on the right bank of the river to a point south of the York river railroad. The left wing, consisting of Gens. Hooker's, Kearney's, and Couch's divisions, extended from the left of Gen. Richardson's posision to a point considerably south of the Williamsburg stage road, on the borders of White Oak swamp. The Confederate line pressed so close to the Federal line on the right bank of the river that neither could advance a regiment outside their respective breastworks without provoking a contest. In this position the two armies remained until near the close of the month.

The demonstration in the rear of the Federal army had convinced the commanding general that a change of position might become necessary, and some vessels loaded with ammunition, provisions, and other supplies were wisely sent to James river near City Point, but no further steps for this purpose were taken.

On Wednesday, the 25th of June, the first movement on the part of Gen. McClellan was made. This consisted in directing Gen. Hooker to take up an advanced position of a mile on Fair Oaks farm, near the Williamsburg road leading directly to Richmond. It was calculated that this movement might be followed by a general resistance on the part of the Confederates, which would renew the battle of Fair Oaks, and by the advantage of the bridges the whole army could be concentrated. If the battle was not renewed then it would be one step in advance toward Richmond. The ground Gen. Hooker was ordered to occupy was taken, lost and retaken with a loss of from four to five hundred men. He was ably supported by Brig.-Gens. Grover and Sickles. During the ensuing night information was received that Gen. Jackson, returned from the Shenandoah Valley, was in force near Hanover Court House. This indicated that the Confederate army had now been concentrated, and the object of Gen. Jackson in that position was to attack the Federal communications, and cut them off by seizing the York river railway in their rear. The advance upon Richmond could not therefore be further prosecuted by the diminished forces of the Federal army. Gen. Hooker was consequently recalled from his advanced position on the next day.

It appears that on the 25th a council of all the Confederate generals was held at Richmond. Gens. Lee, Baldwin, Jackson, A. P. Hill, D. H. Hill, Huger, Longstreet, Branch, Wise, Anderson, Whiting, Ripley, and Magruder were present. It was determined that Gen. Jackson should move upon the right flank of the Federal army, and if Gen. McDowell remained inactive in his position near Fredericksburg, then a general and simultaneous attack was to be made upon the whole line of Gen. McClellan.

A demonstration along the Richmond road made at that time by Gen. McDowell would have rendered the flank march of Gen. Jackson entirely impracticable. This demonstration was feared by Gen. Lee; but he was unaware that it had then been determined at Washington to concentrate the corps of Gen. McDowell with the other forces before Washington and form the army of Virginia under Gen. Pope. The order for that purpose was issued on the 27th, at Washington, the 2nd day after the council of officers at Richmond; and thus prevented entirely the movement feared by Gen. Lee. (See page 126.)

On the 26th Gen. Jackson reached Ashland, there to commence his flanking operations. His advanced guard drove in the little Federal force posted there and pushed on without loss of time to Hanover Court House, where he threw forward Gen. Branch's brigade between the Chickahominy and the Pamunkey rivers to establish a junction with Gen. Hill, who was to cross the former stream at Meadow Bridge. It was the movement of Gen. Hill's troops, seen pouring out of Richmond by the Federal army, in the direction where Gen. Jackson was known to be, which convinced them of the serious work at hand on their right. Gen. D. H. Hill began his offensive operations about 1 P. M. by an attack upon Mechanicsville and met with a brave resistance. Gen. McCall's Pennsylvania reserves were stationed there supported by Gen. Morrell and Gen. Sykes, and strongly intrenched for defence. Storming attacks were made again and again with fury, and were as often repelled with a cool determination. In vain Gen. D. H. Hill sent his aids in quest of Gen. Branch. The latter did not arrive until night, when the conflict had ended.

At this time eight divisions of the Federal army were on the right bank of the Chickahominy occupying entrenchments fronting Richmond. Before these troops lay the mass of the Confederate army also in entrenched positions. Upon the left bank of the river connected by numerous bridges was Gen. Fitz-John Porter with two divisions and Gen. Sykes' regulars. It was against this latter force that the Confederate attack was made. Two separate armies of great force were thus about to attack Gen. McClellan, and his position was extremely critical. If he concentrated on the left bank of the Chickahominy, he abandoned the attempt to capture Richmond, and risked a disastrous retreat upon the White House and Yorktown with the entire Confederate army in pursuit, and where he could hope for no support. If he moved to the right bank of the river, he risked the cutting off of his communications with the White House by the enemy, who might seize the railroad over which his supplies came. He would then be forced to open new communications with James river, and move at once in that direction. There he would receive the support of the navy, and if reënforced could operate against Richmond or Petersburg, the fall of the latter place involving the fall of the former. This latter movement had been thought of some time previous, and transports, with a prudent foresight, had been sent to the James river. It was now determined upon. The distance from Fair Oaks to the James river was about seventeen miles. A single road only existed by which the baggage and stores could be moved. This was exposed in front to the enemy, who, by several roads radiating from Richmond, could throw a considerable force at once upon different points. The activity with which this movement was performed was such that it was nearly completed before it was anticipated by the enemy.

During the night in which Gen. D. H. Hill was held in check at Mechanicsville, the whole of Gen. Porter's baggage was sent over to the right bank of the river and united with the long train which was to set out on the evening of the 27th for James river. At the same time orders were given to reship or destroy all the stores along the railroad to White House and to evacuate that depot. This duty was assigned to Gen. Stoneman with a flying column. He was also ordered to delay the advance of the enemy and to fall back after the execution of these orders on Yorktown. All this was successfully done.

For the next day, Friday, the 27th, the orders to Gen. McCall on the extreme right were to fall back on the bridges thrown across the Chickahominy at Gaines's Mill. Joining the other troops of Gen. Porter's corps, consisting of the division of Gen. Morrell and the regulars of Gen. Sykes, their duty was to make a stand in front of the bridges in order to give the army time to execute its general movement. Gen. Porter, with this force, was not to cross the bridges until evening, and then to destroy them. The manner in which these orders were executed will now appear.

Scarcely had the morning of the 27th dawned, when the Confederate forces, under Gen. D. H. Hill, that had been held in check the previous evening, opened a tremendous fire of artillery upon the front of Gen. McCall, who, upon seeing the brigade of Gen. Branch, ordered on the previous day to support Gen. Hill, advancing to attack his right, began to fall back, fighting, further down the stream. This secured the crossing of the Chickahominy at Mechanicsville to the Confederates, and the first reënforcements ordered from their main body during the night, consisting of the veteran corps of Gen. Longstreet, and the division of Gen. A. P. Hill, now arrived. An order to advance was now given all along the Confederate line, except the right wing under Gen. Magruder, which now confronted Gen. McClellan on the right bank of the Chickahominy. The divisions of Gens. A. P. Hill, Anderson, and Whiting formed the centre, and moved toward Coal Harbor, while Gens. Jackson, D. H. Hill, and Longstreet formed the left nearer the Pamunkey river. Apprehensions were still entertained by Gen.

Lee of the approach of Gen. McDowell, and it was not until he received reliable intelligence of the latter's inactivity that he resolved upon a general attack. As soon, therefore, as he was informed that Gen. Jackson had reached Coal Harbor, steps were taken for an immediate attack on the retiring corps of Gen. Porter, which was supposed to be the mass of Gen. McClellan's army, and which had taken up the position it was ordered to hold on the left bank before the bridges. The Confederate attack was opened by the columns of Gen. D. H. Hill, Anderson, and Pickett. These brave masses rushed with "thundering hurrahs" upon the musketry of Gen. Porter's corps, and whole ranks went down under the terrible fire that met them. After a fierce struggle the Confederate troops began to give way, and at length all orders and encouragements were vain. They were falling back in the greatest disorder. Immediately Gen. Cobb appeared on the field with his legion, and the 19th North Carolina, and 14th Virginia, and renewed the attack, but all their efforts were in vain. Broken to pieces and disorganized, the fragments of that legion came rolling back from the charge. The 19th North Carolina lost eight standard bearers, and most of their officers were either killed or wounded. The shattered regiments of Gens. Hill and Anderson were again led up, but their foes quietly and coolly held out against every attack that was made. During this moment of success for the Federal army, Gen. McClellan hastened to throw upon the left bank all the troops not absolutely necessary to guard the lines in front of Richmond. It was nearly night when some of the divisions reached the river, and at this time the Confederate left and reserves had been brought up. The weight of their attack was made on the Federal left, where the troops had sustained an unequal fight all day, and were worn out, having fired almost their last cartridge. The left gave way and disbanded. This disorder extended until it reached the centre ot the Federal lines, which fell back in increasing confusion, until the fresh brigades of Gens. Meagher and French were met. The vigorous shouts of these troops, and the placing a few guns anew in battery and opening fire served to check the enemy, who paused at this final determination, and darkness closed the contest at Gaines's Mill.

The left wing, under Gen. Porter, subsequently supported from the main body, had accomplished the purpose of holding the Confederates in check, and that night the train of five thousand wagons, the seige train, a herd of twenty-five hundred oxen, and other material was in motion for James river. During the night the troops of Gen. McClellan repassed the bridges of the Chickahominy in perfect order, destroying them after they had passed. The field of battle, with the dead, and those most seriously wounded, a few guns and some prisoners, was abandoned. The corps of Gen. Keyes in the advance toward James river took possession of the road across the White Oak Swamp, and the principal lines of communication by which the Federal army could be annoyed by their enemies.

Meantime the Confederate officers and men supposed, from the manner in which the day closed, leaving them in possession of the field of battle and its spoils, that Gen. McClellan was completely cut off from his base of retreat. The capture or destruction of the entire Federal army was regarded as certain. The rejoicing bordered on frenzy. Their demonstration on the 28th was made to the White House, where the immense stores which were expected to fall into their hands were found to have been destroyed, and nothing but ruins remained. The burial of the dead, and the care for the wounded, and repose for the troops, and uncertainty as to the position of the Federal army, caused the day to pass without any movement of the Confederate troops. The mass of them were now on the left bank of the Chickahominy, over which the bridges had been destroyed, while Gen. McClellan's army united was on the right bank. Time now was worth everything to them. Before they could be attacked, however, it was necessary for the Confederate force to rebuild the bridges, or to fall back some distance to the Mechanicsville bridge. It was not until the reports of the state of affairs at the White House were made in the afternoon of the 28th, and the statements of prisoners, that Gen. Lee comprehended the real movements of Gen. McClellan, and that he was on his way to James river to form a junction with the fleet. The twelve brigades of Gens. D. H. Hill and Longstreet were instantly put in motion to give the death blow to the enemy, whom they supposed now to be flying.

The position of Gen. McClellan on Saturday night was such that the Confederate officers, who were unaware of his design, were confident of his capture. Having abandoned, and, as they supposed, been driven from all his strongholds on the north side of the Chickahominy, cut off from all communication with his supplies at the White House, and with the Chickahominy in his rear, and the divisions of Gens. Longstreet, Magruder, and Huger in his front, all hopes of his escape were thought to be impossible.

The morning of the 29th was spent by Gen. McClellan's troops in destroying all that could not be carried away from the camps. A complete railroad train, locomotive, tender and cars, which had been left on the track, was sent headlong over the broken bridge into the river. Nothing was left but three siege guns which could not be moved.

The corps of Gens. Sumner and Franklin had been left in the works at Fair Oaks with instructions to evacuate and protect the baggage and supply trains on their way to the river. Hardly had they commenced to fall back on the railroad and Williamsburg turnpike, when the enemy, perceiving the movement, pressed forward, giving the former barely time to place

their men in position. The attack was commenced by the Confederates about two o'clock P. M., about one mile and a half above Savage's Station, and the conflict continued until near night. The enemy, advancing in solid masses to within a short distance of the artillery, suffered severely and were repulsed. During the night Gens. Sumner and Franklin fell back to White Oak Swamp bridge.

On the morning of Monday, the 30th of June, all the troops and all the trains were in safety beyond White Oak bridge, which presented a new obstacle to the Confederates. Gens. Sumner and Franklin were left to act as a rear guard, and hold the passage of the White Oak Swamp, whilst Gens. Heintzelman, with the divisions of Gens. Hooker, Kearny, Sedgwick, and McCall, were placed at the point of intersection of the roads leading from Richmond, called Charles City cross roads. These movements protected the trains until they arrived at the James river, precisely at the time when the transports with provisions and ammunition and hospital stores arrived from Fortress Monroe.

The advance of the Confederate force was actively resumed early in the morning. Gens. D. H. Hill, Whiting, and Ewell, under the command of Gen. Jackson, crossed the Chickahominy by the Grapevine bridge, and followed the Federal retreat by the Williamsburg road and Savage's Station. Gens. Longstreet, A. P. Hill, Huger, and Magruder took the Charles City road with the intention of cutting off the Federal retreat. At the White Oak Swamp the left wing under Gen. Jackson came up with the Federal force under Gens. Franklin and Sumner, about 11 A. M. They had crossed the stream and burned the bridge behind them. An artillery fire was opened upon both sides, which continued with great severity and destruction until night. The result of this battle was to prevent the further advance of the enemy in this direction, which was the single line of road over which the trains had passed.

Late on the same day, a battle was fought between the forces under Gen. Heintzelman and the main force of the enemy, which attempted to advance by the Charles City road to cut off the retreat. This force was led by Gens. Longstreet, A. P. Hill, and Huger. The former, however, being called away, the command devolved upon Gen. Hill. As the masses advanced upon the Federal batteries of heavy guns they were received with such a destructive fire of artillery and musketry as threw them into disorder. Gen. Lee sent all his disposable troops to the rescue, but the Federal fire was so terrible as to disconcert the coolest veterans. Whole ranks of the Confederate troops were hurled to the ground. Says an actor in the conflict, "The thunder of the cannon, the cracking of the musketry from thousands of combatants, mingled with the screams of the wounded and the dying, were terrific to the ear and to the imagination." The conflict thus continued within a narrow space for hours, and not a foot of ground was won by the Confederates. Night was close at hand. The Federal lines were strengthened and the confidence of the Confederate general began to falter. The losses of his exhausted and worn out troops in attempting to storm the batteries were terrible. Orders were given to Gen. Jackson to cover the retreat in case the army should have to fall back, and directions were sent to Richmond to get all the public property ready for removal. The Federal forces, perceiving the confusion, began step by step to press forward. The posture of affairs at this time is thus related by a Confederate officer: "The enemy, noticing our confusion, now advanced, with the cry, 'Onward to Richmond!' Yes, along the whole hostile front rang the shout, 'Onward to Richmond!' Many old soldiers who had served in distant Missouri and on the plains of Arkansas wept in the bitterness of their souls like children. Of what avail had it been to us that our best blood had flowed for six long days?—of what avail all our unceasing and exhaustless endurance? Everything, everything seemed lost, and a general depression came over all our hearts. Batteries dashed past in headlong flight; ammunition, hospital and supply wagons rushed along, and swept the troops away with them from the battle field. In vain the most frantic exertion, entreaty and self-sacrifice of the staff officers! The troops had lost their foot-hold, and all was over with the Southern Confederacy.

"In this moment of desperation Gen. A. P. Hill came up with a few regiments he had managed to rally, but the enemy was continually pressing nearer and nearer; louder and louder their shouts, and the watchword, 'On to Richmond!' could be heard. Cavalry officers sprang from their saddles and rushed into the ranks of the infantry regiments, now deprived of their proper officers. Gen. Hill seized the standard of the Fourth North Carolina regiment, which he had formerly commanded, and shouted to the soldiers, 'If you will not follow me, I will perish alone.' Upon this a number of officers dashed forward to cover their beloved general with their bodies; the soldiers hastily rallied, and the cry 'Lead on, Hill; head your old North Carolina boys!' rose over the field. And now Hill charged forward with this mass he had thus worked up to the wildest enthusiasm. The enemy halted when they saw these columns, in flight a moment before, now advancing to the attack, and Hill burst upon his late pursuers like a famished lion. A fearful hand to hand conflict now ensued, for there was no time to load and fire. The ferocity with which this combat was waged was incredible. It was useless to beg the exasperated men for quarter; there was no moderation, no pity, no compassion in that bloody work of bayonet and knife. The son sank dying at his father's feet; the father forgot that he had a child—a dying child; the brother did not see that a brother was expiring a few paces from

him; the friend heard not the last groans of a friend; all natural ties were dissolved; only one feeling, one thirst, panted in every bosom —revenge. Here it was that the son of Major Peyton, but fifteen years of age, called to his father for help. A ball had shattered both his legs. 'When we have beaten the enemy then I will help you,' answered Peyton; 'I have here other sons to lead to glory. Forward!' But the column had advanced only a few paces farther when the major himself fell to the earth a corpse. Prodigies of valor were here performed on both sides. History will ask in vain for braver soldiers than those who have fought and fell. But of the demoniac fury of both parties one at a distance can form no idea. Even the wounded, despairing of succor, collecting their last energies of life, plunged their knives into the bosoms of foemen who lay near them still breathing.

"The success of General Hill enabled other generals to once more lead their disorganized troops back to the fight, and the contest was renewed along the whole line, and kept up until deep into the night; for everything depended upon our keeping the enemy at bay, counting, too, upon their exhaustion at last, until fresh troops could arrive to reënforce us. At length, about half past ten in the evening, the divisions of Magruder, Wise, and Holmes, came up and deployed to the front of our army.

"So soon as these reënforcements could be thrown to the front our regiments were drawn back, and as far as possible reorganized during the night, the needful officers appointed, and after the distribution of provisions, which had also fortunately arrived, measures were adopted for the gathering up of the wounded and the burial of the dead."

In this conflict Gen. McCall was taken prisoner by the Confederates.

During the same day an attack was made upon the corps of Gen. Porter by the divisions of Gens. Wise and Holmes near Malvern Hill, but without success.

On the night of the 30th all the divisions of the Federal army were united at Malvern Hill, a strong position where the whole train, including the siege guns, were sheltered. The army was thus in communication with its transports and supplies. Five days of incessant marching and fighting had passed, during which many had been sun struck by the heat, and others from exhaustion had quitted the ranks and fell into the procession of sick and wounded. Attacked by a force far superior to itself, it had succeeded in reaching a position where it was out of danger and from which, if reënforced, it could have advanced.

Gen. McClellan immediately put his army in a position for defence by arranging his batteries along the high grounds so as not to interfere with the defence by the infantry of the sort of glacis upon which the enemy would be obliged to advance to the attack. About four P. M. on the 1st of July, the Confederate forces advanced to storm the position. But a destructive fire of grape mowed them down until the fragments of their divisions were compelled to seek shelter in the woods. The position being within range of the gunboats they also opened a destructive fire with their hundred pounders upon the enemy. The attack was a failure, the loss of the Confederates being immense while that of the Federal troops was insignificant. On the evening after the battle the exhausted enemy retired to Richmond to appear no more, and the army of the Potomac took up a position at Harrison's Bar, a spot chosen by the engineers and naval officers as the most favorable for defence and for receiving supplies.

These battles were fought at a time when the military strength of the Confederate States had been brought into the field and concentrated at Richmond. Thus the Confederate army greatly outnumbered the Federal force, reduced by losses during the campaign and by sickness, on the banks of the Chickahominy. No official reports have appeared of the losses on either side. They were not far from fifteen thousand men. On the 3d of July the War Department published a despatch from Gen. McClellan dated at Berkeley, Harrison's Bar, stating that he had lost but one gun, which broke down and was abandoned, and that the rear of his train was then within a mile of camp and only one wagon abandoned.

On the 4th of July Gen. McClellan issued the following address to his army:

HEADQUARTERS, ARMY OF THE POTOMAC,
CAMP NEAR HARRISON'S LANDING, *July* 4, 1862.

SOLDIERS OF THE ARMY OF THE POTOMAC: Your achievements of the past ten days have illustrated the valor and endurance of the American soldier. Attacked by superior forces, and without hopes of reënforcements, you have succeeded in changing your base of operations by a flank movement, always regarded as the most hazardous of military operations. You have saved all your guns except a few lost in battle, taking in return guns and colors from the enemy.

Upon your march you have been assailed, day after day, with desperate fury, by men of the same race and nation, skilfully massed and led. Under every disadvantage of number, and necessarily of position also, you have in every conflict beaten back your foes with enormous slaughter.

Your conduct ranks you among the celebrated armies of history. None will now question what each of you may always, with pride, say: "I belonged to the Army of the Potomac." You have reached this new base complete in organization and unimpaired in spirit. The enemy may at any time attack you—we are prepared to meet them. I have personally established your lines. Let them come, and we will convert their repulse into a final defeat.

Your government is strengthening you with the resources of a great people. On this, our nation's birthday, we declare to our foes, who are rebels against the best interests of mankind, that this army shall enter the capital of the so-called Confederacy; that our national Constitution shall prevail, and that the Union, which can alone insure internal peace and external security to each State, must and shall be preserved, cost what it may in time, treasure, and blood.

GEO. E. McCLELLAN,
Major-General Commanding.

On the 5th President Davis issued the following address to the Confederate army:

RICHMOND, *July* 5, 1862.

To the Army in Eastern Virginia:

SOLDIERS; I congratulate you on the series of brilliant victories which, under the favor of Divine Providence, you have lately won, and as the President of the Confederate States, do heartily tender to you the thanks of the country, whose just cause you have so skilfully and heroically served. Ten days ago, an invading army, vastly superior to you in numbers and the material of war, closely beleaguered your capital and vauntingly proclaimed its speedy conquest; you marched to attack the enemy in his intrenchments; with well directed movements and death-defying valor, you charged upon him in his strong positions, drove him from field to field over a distance of more than thirty-five miles, and despite his reënforcements compelled him to seek safety under the cover of his gunboats, where he now lies cowering before the army so lately derided and threatened with entire subjugation. The fortitude with which you have borne toil and privation, the gallantry with which you have entered into each successive battle, must have been witnessed to be fully appreciated; but a grateful people will not fail to recognize you and to bear you in loved remembrance. Well may it be said of you that you have "done enough for glory;" but duty to a suffering country and to the cause of constitutional liberty, claims from you yet further effort. Let it be your pride to relax in nothing which can promote your future efficiency; your one great object being to drive the invader from your soil, and, carrying your standards beyond the outer boundaries of the Confederacy, to wring from an unscrupulous foe the recognition of your birthright, community, and independence.

[Signed] JEFFERSON DAVIS.

Early in July Gen. Halleck resigned his command of the army of the West, and in obedience to an order of the President assumed, on the 23d of July, the duties of general-in-chief of the entire army of the United States. This was the position held by Gen. McClellan, previous to his departure from Washington to conduct the peninsular campaign. Its duties had been subsequently performed by the Secretary of War, under the supervision of President Lincoln, assisted by the counsel of Maj.-Gen. Hitchcock, an elderly officer of the army. Gen. Halleck, upon assuming these duties, had his attention immediately called to the army of the Potomac. He thus relates his action in relation to it:

"The first thing to which my attention was called on my arrival here (at Washington), was the condition of the army at Harrison's Landing, on the James river. I immediately visited Gen. McClellan's headquarters for consultation. I left Washington on the 24th and returned on the 27th. The main object of this consultation was to ascertain if there was a possibility of an advance upon Richmond from Harrison's Landing, and if not to favor some plan of uniting the armies of Gen. McClellan and Gen. Pope on some other line. Not being familiar with the position and numbers of the troops in Virginia and on the coast, I took the President's estimate of the largest number of reënforcements that could be sent to the army of the Potomac.

"On the day of my arrival at Harrison's Landing Gen. McClellan was of opinion that he would require at least 50,000 additional troops. I informed him that this number could not possibly be sent; that I was not authorized to promise him over 20,000, and that I could not well see how even that number could be safely withdrawn from other places. He took the night for considering the matter, and informed me the next morning that he would make the attempt upon Richmond with the additional 20,000, but immediately on my return to Washington he telegraphed that he would require 35,000, a force which it was impossible to send him without leaving Washington and Baltimore almost defenceless. The only alternative now left was to withdraw the army of the Potomac to some position where it could unite with that of Gen. Pope, and cover Washington at the same time that it operated against the enemy. After full consultation with my officers, I determined to attempt this junction on the Rappahannock, by bringing McClellan's forces to Aquia Creek.

"Accordingly, on the 30th of July, I telegraphed to him to send away his sick as quickly as possible, preparatory to a movement of his troops. This was preliminary to the withdrawal of his entire army, which was ordered by telegraph on the 3d of August. In order that the transfer to Aquia Creek might be made as rapidly as possible, I authorized Gen. McClellan to assume control of all the vessels in the James river and Chesapeake Bay, of which there was then a vast fleet. The quartermaster-general was also requested to send to that point all the transports that could be procured. On the 5th I received a protest from Gen. McClellan, dated the 4th, against the removal of the army from Harrison's Landing. On the 1st of August I ordered Gen. Burnside to immediately embark his troops at Newport News, transfer them to Aquia Creek, and take position opposite Fredericksburg. This officer moved with great promptness, and reached Aquia Creek on the night of the 3d. His troops were immediately landed, and the transports sent back to Gen. McClellan.

"About this time I received information that the enemy were preparing a large force to drive back Gen. Pope, and attack either Washington or Baltimore. The information was so direct and trustworthy that I could not doubt its correctness. This gave me serious uneasiness for the safety of the capital and Maryland, and I repeatedly urged upon Gen. McClellan the necessity of promptly moving his army so as to form a junction with that of Gen. Pope. The evacuation of Harrison's Landing, however, was not commenced till the 14th, eleven days after it was ordered."

The following correspondence, respecting this removal of the army of the Potomac, took place between Gen. McClellan and Gen. Halleck:

BERKELEY, Va., *August* 4, 12 M.

Maj.-Gen. Halleck, Commander-in-Chief:

Your telegraph of last evening is received. I must confess that it has caused me the greatest pain I ever experienced, for I am convinced that the order to withdraw this army to Aquia Creek will prove disastrous in

the extreme to our cause. I fear it will be a fatal blow. Several days are necessary to complete the preparations for so important a movement as this, and while they are in progress, I beg that careful consideration may be given to my statement. This army is now in excellent discipline and condition. We hold a debouche on both banks of the James river, so that we are free to act in any direction, and, with the assistance of the gunboats, I consider our communications as secure.

We are twenty-five miles from Richmond, and are not likely to meet the enemy in force sufficient to fight a battle until we have reached fifteen to eighteen miles, which brings us practically within ten miles of Richmond. Our longest line of land transportation would be from this point twenty-five miles, but with the aid of the gunboats we can supply the army by water, during its advance, certainly to within twelve miles of Richmond. At Aquia Creek we would be seventy-five miles from Richmond, with land transportation all the way. From here to Fortress Monroe is a march of about seventy miles, for I regard it as impracticable to withdraw this army and its material, except by land. The result of the movement would thus be to march one hundred and forty-five miles to reach a point now only twenty-five miles distant, and to deprive ourselves entirely of the powerful aids of the gunboats and water transportation. Add to this the certain demoralization of this army, which would ensue; the terrible depressing effect upon the people of the North, and the strong probability that it would influence foreign Powers to recognize our adversaries; and these appear to me sufficient reasons to make it my imperative duty to urge in the strongest terms afforded by our language, that this order may be rescinded, and that, far from recalling this army, it may be promptly reënforced to enable it to resume the offensive.

It may be said that there are no reënforcements available. I point to Gen. Burnside's force, to that of Gen. Pope, not necessary to maintain a strict defence in front of Washington and Harper's Ferry; to those portions of the Army of the West not required for a strict defence there. Here, directly in front of this army, is the heart of the rebellion. It is here that all our resources should be collected to strike the blow which will determine the fate of this nation. All points of secondary importance elsewhere should be abandoned, and every available man brought here. A decided victory here, and the military strength of the rebellion is crushed. It matters not what partial reverses we may meet with elsewhere, here is the true defence of Washington; it is here, on the bank of the James river, that the fate of the Union should be decided.

Clear in my conviction of right, strong in the consciousness that I have ever been, and still am, actuated solely by love of my country, knowing that no ambitious or selfish motives have influenced me from the commencement of this war; I do now what I never did in my life before, I entreat that this order may be rescinded. If my counsel does not prevail, I will, with a sad heart, obey your order to the utmost of my power, devoting to the movement, which I clearly foresee will be one of the utmost delicacy and difficulty, whatever skill I may possess, whatever the result may be, and may God grant that I am mistaken in my forebodings. I shall at least have the internal satisfaction that I have written and spoken frankly, and have sought to do the best in my power to arrest disaster from my country.

GEO. B. McCLELLAN, Major General.

GEN. HALLECK TO GEN. McCLELLAN.

WASHINGTON, *Aug* 6, 1862.

Maj.-Gen. Geo. B. McClellan, Commanding, &c., Berkeley, Va.:

GENERAL — Your telegram of yesterday was received this morning, and I immediately telegraphed a brief reply, promising to write you more fully by mail. You, General, certainly could not have been more pained at receiving my order than I was at the necessity of issuing it. I was advised by high officers, in whose judgment I had great confidence, to make the order immediately on my arrival here, but I determined not to do so until I could learn your wishes from a personal interview; and even after that interview I tried every means in my power to avoid withdrawing your army, and delayed my decision as long as I dared to delay it. I assure you, General, it was not a hasty and inconsiderate act, but one that caused me more anxious thought than any other of my life. But after full and mature consideration of all the pros and cons, I was reluctantly forced to the conclusion that the order must be issued. There was to my mind no other alternative.

Allow me to allude to a few of the facts of the case. You and your officers, at our interview, estimated the enemy's forces in and around Richmond at 200,000 men. Since then you and others report that they have received and are receiving large reënforcements from the south. General Pope's army, now covering Washington, is only 40,000. Your effective force is only about 90,000. You are thirty miles from Richmond, and Gen. Pope eighty or ninety. With the enemy directly between you, ready to fall with his superior numbers upon one or the other, as he may elect, neither can reënforce the other in case of such an attack.

If Gen. Pope's army be diminished to reënforce you, Washington, Maryland, and Pennsylvania would be left uncovered and exposed. If your force be reduced to strengthen Pope, you would be too weak to even hold the position you occupy should the enemy turn round and attack you in full force. In other words, the old Army of the Potomac is split into two parts, with the entire force of the enemy directly between them. They cannot be united by land without exposing both to destruction, and yet they must be united. To send Pope's forces by water to the peninsula is, under present circumstances, a military impossibility. The only alternative is to send the forces on the peninsula to some point by water—say Fredericksburg—where the two armies can be united. Let me now allude to some of the objections which you have urged.

You say that to withdraw from the present position will cause the certain demoralization of the army, which is now in excellent condition and discipline. I cannot understand why a simple change of position to a new and by no means distant base will demoralize an army in excellent discipline, unless the officers themselves assist in the demoralization, which I am satisfied they will not. Your change of front from your extreme right at Hanover Court House to your present position was over thirty miles, but I have not heard that it demoralized your troops, notwithstanding the severe losses they sustained in effecting it.

A new base on the Rappahannock, at Fredericksburg, brings you within about sixty miles of Richmond, and secures a reënforcement of forty or fifty thousand fresh and disciplined troops. The change, with such advantages, will, I think, if properly represented to your army, encourage rather than demoralize your troops. Moreover, you yourself suggested that a junction might be effected at Yorktown, but that a flank march across the peninsula would be more hazardous than to retire to Fort Monroe. You will remember that Yorktown is two or three miles further from Richmond than Fredericksburg is. Besides the latter is between Richmond and Washington, and covers Washington from any attack by the enemy.

The political effect of the withdrawal may at first look unfavorable, but I think the public are beginning to understand its necessity; and that they will have much more confidence in a united army than in its separate fragments. But you will reply, Why not reënforce me here, so that I can strike Richmond from my present position? To do this, you said at our interview that you required 50,000 additional troops. I told you that it was impossible to give you so many. You finally thought you would have "some chance" of success with 20,000; but you afterward telegraphed to me that you would require 35,000, as the enemy was being largely reënforced.

If your estimate of the enemy's strength was correct, your requisition was perfectly reasonable; but it was

utterly impossible to fill it until new troops could be enlisted and organized, which would require several weeks. To keep your army in its present position until it could be so reënforced would almost destroy it in that climate. The months of August and September are almost fatal to whites who live on that part of James river, and even after you got the reënforcements asked for, you admitted that you must reduce Fort Darling and the river batteries before you could advance on Richmond. It is by no means certain that the reduction of these fortifications would not require considerable time, perhaps as much as those at Yorktown. This delay might not only be fatal to the health of your army, but in the mean time Gen. Pope's forces would be exposed to the heavy blows of the enemy, without the slightest hope of assistance from you.

In regard to the demoralizing effect of a withdrawal from the peninsula to the Rappahannock, I must remark that a large number of your highest officers—indeed a majority of those whose opinions have been reported to me—are decidedly in favor of the movement. Even several of those who originally advocated the line of the peninsula now advise its abandonment. I have not inquired, and do not desire to know, by whose advice or for what reason the Army of the Potomac was separated into two parts, with the enemy before them. I must take things as I find them. I find our forces divided, and I wish to unite them. Only one feasible plan has been presented for doing this. If you or any one else had presented a better one, I certainly should have adopted it; but all of your plans require reënforcements which it is impossible to give you. It is very easy to ask for reënforcements, but it is not so easy to give them when you have no disposable troops at your command. I have written very plainly, as I understand the case, and I hope you will give me credit for having carefully considered the matter, although I may have arrived at different conclusions from your own. Very respectfully, your obedient servant,

H. W. HALLECK, General-in-Chief.

(Official Copy.) J. C. KELTON, Assistant Adj.-Gen.

Thus the campaign was closed. The once proud Army of the Potomac was withdrawn from the peninsula to Aquia Creek and Alexandria, and its corps were immediately ordered into the field to reënforce the army of Gen. Pope southeast of Washington, and to act under his command.

By an order of the President on the 27th of June, Maj.-Gen. Pope, who had been in command of a force in the West, entered upon the chief command of the army of Virginia.

The following is the order of the President creating the Army of Virginia, and putting Gen. Pope in command, dated June 27, 1862:

I. The forces under Maj.-Gens. Fremont, Banks, and McDowell, including the troops now under Brig.-Gen. Sturgis, at Washington, shall be consolidated and form one army, to be called the Army of Virginia.

II. The command of the Army of Virginia is specially assigned to Maj.-Gen. John Pope as Commanding General.

The troops of the Mountain Department, heretofore under command of Gen. Fremont, shall constitute the first army corps, under the command of Gen. Fremont.

The troops of the Shenandoah Department, now under Gen. Banks, shall constitute the second army corps, and be commanded by him.

The troops under the command of Gen. McDowell, except those within the fortifications and the city of Washington, shall form the third army corps, and be under his command.

The creation of the several separate and independent commands which constituted the forces west and southwest of Washington had always been looked upon with distrust. Hence the consolidation of these forces under one commander was regarded with much satisfaction by the public, as a wise and prudent measure.

The appointment of Gen. Pope to the chief command was not favorably received by Maj.-Gen. Fremont. Consequently the following order was issued from the War Department:

WAR DEPARTMENT, WASHINGTON, *June* 27, 1862.

Maj.-Gen. John C. Fremont, having asked to be relieved from command of the First Army Corps of the Army of Virginia, because, as he says, the position assigned him by the appointment of Maj.-Gen. Pope as commander-in-chief of the Army of Virginia is subordinate and inferior to those heretofore held by him, and to remain in the subordinate command now assigned him would, as he says, largely reduce his rank and consideration in the service—

It is ordered by the President that Maj.-Gen. John C. Fremont be relieved from command.

Second, that Gen. Rufus King be and he is hereby assigned to the command of the First Army Corps of the Army of Virginia, in place of Gen. Fremont, relieved by order of the President.

EDWARD M. STANTON, *Secretary of War.*

On the next day Gen. Fremont issued an order declaring his resignation of the command of his forces and assigning it to Brig.-Gen. Schenck. The ground upon which the resignation of Gen. Fremont was made, was understood to be that Gen. Pope, who had been appointed to the command of the army of Virginia, was his inferior in rank, and he could not consistently command a corps under him. Gen. Schenck, on assuming command, issued the following order:

Brig.-Gen. Schenck, in assuming the new position to which the General commanding has done him the honor thus to assign him, desires to express his great satisfaction that it will only somewhat change his relation to the troops which have heretofore been under his command, but without separating him from them. He takes this occasion to say to the officers and men with whom he has been connected, that he congratulates himself on having those who have so commended themselves by their discipline, obedience, and general good conduct, still left in his division. He regrets for similar reasons to part with Capt. Rigby, his officers and men; and he confidently hopes, as to the troops whose accession to the brigade will extend his command, that the relation between himself and them, as well as with all his old companions, will continue to be mutually agreeable and advantageous.

By order of Brig.-Gen. SCHENCK.

DONN PIATT, Captain and A. A.-G.

At night of the same day he learned that Gen. Rufus King had been ordered to the command of that corps, and sent in his request to be relieved of command in that portion of the army. But on the subsequent day, still further learning that Gen. King had been detached and Gen. Sigel ordered to the same command, he withdrew his resignation.

Meantime Maj.-Gen. Pope was making his arrangements to take the field. On the 14th of July he issued the following address to his army:

To the Officers and Soldiers of the Army of Virginia:

By special assignment of the President I have assumed command of this army. I have spent two weeks in learning your whereabouts, your condition, and your wants, in preparing you for active operations and in placing you in a position from which you can act

promptly and to the purpose. These labors are nearly completed, and I am about to join you in the field. Let us understand each other. I have come to you from the West where we have always seen the backs of our enemies—from an army whose business it has been to seek an adversary and beat him when found; whose policy has been attack and not defence. In but one instance has the enemy been able to place our Western armies in a defensive attitude. I presume I have been called here to pursue the same system, and to lead you against the enemy. It is my purpose to do so and that speedily. I am sure you long for an opportunity to win the distinction you are capable of achieving; that opportunity I shall endeavor to give you. In the mean time I desire you to dismiss certain phrases I am sorry to find much in vogue amongst you. I hear constantly of taking strong positions and holding them—of lines of retreat and bases of supplies. Let us discard such ideas. The strongest position a soldier should desire to occupy is one from which he can most easily advance against the enemy. Let us study the probable line of retreat of our opponents, and leave our own to take care of itself. Let us look before us, and not behind. Success and glory are in the advance—disaster and shame lurk in the rear. Let us act on this understanding, and it is safe to predict that your banners shall be inscribed with many a glorious deed, and that your names will be dear to your countrymen forever.

(Signed) JOHN POPE, Maj.-Gen. Commanding.

Subsequent orders issued by Gen. Pope at this time indicate the manner in which he proposed to conduct the campaign, as follows:

HEADQUARTERS OF THE ARMY OF VIRGINIA, WASHINGTON, *July* 18, 1862.

General Orders, No. 5:

Hereafter, as far as practicable, the troops of this command will subsist upon the country in which their operations are carried on. In all cases supplies for this purpose will be taken by the officers to whose department they properly belong, under the orders of the commanding officer of the troops for whose use they are intended. Vouchers will be given to the owners, stating on their face that they will be payable at the conclusion of the war upon sufficient testimony being furnished that such owners have been loyal citizens of the United States since the date of the vouchers.

Whenever it is known that supplies can be furnished in any district of the country where the troops are to operate, the use of trains for carrying subsistence will be dispensed with as far as possible.

By command of Maj.-Gen. POPE.

GEO. D. RUGGLES, Col. A. A.-G. and Chief of Staff.

HEADQUARTERS OF THE ARMY OF VIRGINIA, *July* 18, 1862.

General Orders, No. 6:

Hereafter in any operations of the cavalry forces in this command no supply or baggage trains of any description will be used unless so stated especially in the order for the movement. Two days' cooked rations will be carried on the persons of the men, and all villages and neighborhoods, through which they pass, will be laid under contribution in the manner specified by General Orders, No. 5, current series, from these headquarters, for the subsistence of men and horses.

Movements of cavalry must always be made with celerity, and no delay in such movements will be excused hereafter on any pretext.

Whenever the order for the movement of any portion of the army emanates from these headquarters, the time of marching and that to be consumed in the execution of the duty will be specifically designated, and no departure therefrom will be permitted to pass unnoticed without the gravest and most conclusive reasons.

Commanding officers will be held responsible for strict and prompt compliance with every provision of this order. By command of Maj.-Gen. POPE.

GEO. D. RUGGLES, Col. A. A.-G. and Chief of Staff.

Another order was issued on the same day, declaring that the inhabitants along the lines of railroads and telegraphs and the routes of travel, would be held responsible for any injury done to track, line, or road, or for any attacks on trains or stragglers by bands of guerillas in their neighborhood. In cases of damage to roads the citizens, within five miles, would be turned out in mass to repair the damage. If a soldier or legitimate follower of the army was fired upon from any house, the same should be razed to the ground. By another order all disloyal citizens within the lines of the army, or within the reach of its respective officers, were to be arrested at once. Those taking the oath of allegiance, and giving sufficient security for its observance, were to be allowed to remain; all others were to be conducted to the South, beyond the extreme pickets, and if again found anywhere within the lines, were to be treated as spies and subjected to the extreme rigor of military law. These orders of Gen. Pope were followed by the pillaging of private property and by insults to females to a degree unknown heretofore during the war. The Confederate Government, by way of retaliation, issued an order declaring that Gen. Pope and the commissioned officers serving under him, were "not entitled to be considered as soldiers, and therefore not entitled to the benefit of cartel for the parole of future prisoners of war. Ordered, further, that in the event of the capture of Maj.-Gen. Pope, or any commissioned officer serving under him, the captive so taken shall be held in close confinement so long as the orders aforesaid shall continue in force, and unrepealed by the competent military authority of the United States, and that in the event of the murder of an unarmed citizen or inhabitant of this Confederacy by virtue or under pretence of the order hereinbefore recited, it shall be the duty of the commanding general of the forces of this Confederacy to cause immediately to be hung, out of the commissioned officers prisoners as aforesaid, a number equal to that of our own citizens thus murdered by the enemy."

The main divisions of Gen. Pope's army were now stationed at Culpepper Court House and Fredericksburg. Culpepper Court House is about seventy miles from Washington and equally distant from Richmond. The route crosses the Long Bridge at Washington, thence through Alexandria, Fairfax, Manassas, Warrenton, &c. Fredericksburg is connected with Washington by steamboat navigation on the Potomac to Aquia Creek, thence by railroad, fifteen miles, to Fredericksburg, which is sixty miles by railroad from Richmond. Gen. Pope, although not personally in the field until the 27th of July, had been engaged in concentrating his forces. His delay in taking the field was occasioned by the absence of Maj.-Gen. Halleck, who arrived at Washington on the 23d of July, and entered upon the duties of general-in-chief.

A show of force had been kept up in the Shenandoah Valley, and east of the Blue Ridge, by the Confederate Government throughout the month of July, chiefly for the purpose of preventing reënforcements to Gen. McClellan. The knowledge which it had of the position and strength of the Federal forces made it manifest that no reënforcement to the Army of the Potomac would come from any other quarter. The departure of the division of Gen. Burnside from Newport News, where it had been for some weeks ready to coöperate with Gen. McClellan in any forward movements to Aquia Creek on the 1st of August, was immediately known in Richmond. It showed not only that no reënforcements were coming to the Army of the Potomac, but also that this army would soon evacuate the peninsula. The star of their fortune now appeared to be in the ascendant. The day, so long and anxiously looked for, had come, in which they should be able to take their great and powerful adversary at a disadvantage, and demonstrate to civilized nations their own military strength and ability to win that independence which they had proclaimed. Consultations were immediately held at Richmond, and their purposes were soon formed. It was resolved to abandon the defensive policy and to repeat the exploit which Gen. Jackson had performed by driving Gen. Banks out of the Shenandoah Valley, on a scale of national magnitude. Rumors were set afloat that Tennessee, Kentucky, and the whole of Virginia were to be recovered at once; Maryland liberated from her oppression, and not only Washington and Baltimore captured, but also Harrisburg and Philadelphia in the east, and Cincinnati in the west. It was a magnificent enterprise for a people situated like those in the Confederate States at that time. Measures were immediately adopted for the execution of these plans. Gen. McClellan was to be left to retire from the peninsula without any further attacks than were necessary to cover their real designs, and their forces were to be prepared for an immediate movement northward. The Confederate forces at this time were greater than ever before. Not less than one hundred and fifty thousand men were at Richmond and in communication with it. All this force, excepting a strong corps of observation, was to be precipitated at once upon Maryland.

The preparations to advance into Maryland which were making at Richmond, were immediately known at Washington and awakened great anxiety. An order was issued to Gen. Cox in western Virginia to send his main forces, with all possible despatch, by railroad to join Gen. Pope. To facilitate the withdrawal of the army from Harrison's Landing, as stated by Gen. Halleck, and to gain time also by a demonstration against the enemy, Gen. Pope was ordered to push his forces across the Rappahannock, and occupy Culpepper and threaten Gordonsville. At the same time President Lincoln issued the following order, calling out an additional three hundred thousand men to serve for nine months:

WAR DEPARTMENT, WASHINGTON, *August* 4, 1862.

Ordered First—That a draft of three hundred thousand militia be immediately called into the service of the United States, to service for nine months, unless sooner discharged. The Secretary of War will assign the quotas to the States, and establish regulations for the draft.

Second—That if any State shall not by the 15th of August furnish its quota of the additional three hundred thousand volunteers authorized by law, the deficiency of volunteers in that State will also be made up by a special draft from the militia. The Secretary of War will establish regulations for this purpose.

Third—Regulations will be prepared by the War Department, and presented to the President, with the object of securing the promotion of officers of the army and volunteers for meritorious and distinguished services, and of preventing the nomination and appointment in the military service of incompetent or unworthy officers. The regulations will also provide for ridding the service of such incompetent persons as now hold commissions.

By order of the PRESIDENT.

EDWIN M. STANTON, Secretary of War.

The Confederate army began to move immediately after the 1st of August, and the divisions of Gens. Jackson, Ewell, and Hill were hurried to the Rapidan river, which is the south fork of the Rappahannock. On Friday, the 8th of August, Gen. Pope reached Culpepper Court House, from his last encampment near Washington, the county seat of Rappahannock. At the same time the corps of Gen. Banks was in motion in the direction of Culpepper. The corps of Gen. Sigel was encamped at Sperryville, twenty miles from Culpepper, and on the road from Washington, Rappahannock county. At Culpepper Court House was Brig.-Gen. Crawford, with his brigade belonging to Gen. Banks's corps, and Gen. Ricketts's division, belonging to Gen. McDowell's corps. They had arrived two days previous from Warrenton with Gen. McDowell, who took command of all the forces then at Culpepper. Gen. Bayard with his cavalry had been guarding the fords of the Rapidan from Racoon Ford to a point fourteen miles below, and south of the railroad at Burnett's Ford, where he connected with the cavalry of Gen. Buford. At noon on Friday he sent information to Culpepper Court House that the enemy had early that morning crossed the river and driven in his pickets with such force that he was obliged to retire before them. He was retiring to the north and east side of Robertson's river, about eight miles from Culpepper, there to await a supporting force. The numbers of the enemy he estimated at two regiments of infantry, two pieces of light artillery, and three small regiments of cavalry. Gen. Buford at the same time reported the enemy to be advancing in heavy force upon Madison Court House, thus leaving it in doubt whether the movement was directed toward Culpepper or Madison. Wishing to maintain the communication with Fredericksburg at all hazards, Gen. Pope resolved to concentrate at Culpepper, in order to keep his forces interposed between

the main body of the enemy and the lower fords of the Rappahannock. He accordingly immediately ordered Brig.-Gen. Crawford to march to Gen. Bayard with his brigade, which consisted of the 28th New York, 10th Maine, 46th Pennsylvania, 25th Connecticut, with ten pieces of artillery. He proceeded rapidly to the front, and occupied a position about seven miles from Culpepper, immediately in rear of the line of Gen. Bayard's cavalry. Soon after, Gen. Pope ordered the remainder of Gen. Banks's corps to move rapidly from Hazel River bridge, nine miles from Culpepper, where it was the night before, to the scene of expected conflict. By eight o'clock that night, the head of Gen. Banks's column was descried marching around the village to its destination, which it reached before midnight. That point was immediately in the rear of Gen. Crawford. Gen. Sigel was at the same time ordered up from Sperryville by a forced march of twenty miles, his advance reaching Culpepper late in the afternoon, where it was halted.

Throughout Friday night and Saturday forenoon, skirmishing was continued between Gen. Bayard's cavalry and the advance of the enemy, until the latter had advanced within long range of Gen. Crawford's artillery. The enemy soon developed a strong force, and occupied both sides of Cedar Mountain, a sugar-loaf eminence situated two miles west of the Orange and Alexandria railroad at Mitchell's Station. The artillery of the enemy opened early in the afternoon of Saturday, but he made no advance until near five o'clock, at which time a few skirmishers were thrown forward on each side under cover of a heavy wood, in which his force was concealed. A strong force was pushed forward in the rear of the skirmishers, and Gen. Banks advanced to the attack. The engagement did not fairly open until after six o'clock P. M., but for an hour and a half was furious and unceasing. The report of Gen. Banks to Gen. Pope had expressed the opinion that no action was imminent that afternoon, and it was not until after it was fully commenced that the latter ordered Gen. McDowell to advance Gen. Ricketts's division to the support of Gen. Banks, and also Gen. Sigel to bring his men on the ground as soon as possible. At 7 P. M., when Gen. Pope arrived, the action was raging fiercely, but Gen. Banks held the position he took early in the morning. During the action he had fallen back about one mile from the spot where it first commenced, but without any disorder or confusion. The enemy were evidently pressing close, and the artillery was firing at short range. The division of Gen. Ricketts pushed forward and occupied the right of Gen. Banks, taking the place of his right wing, which was ordered to mass upon the centre. Before this change could be effected it was quite dark, and the musketry firing ceased, but the artillery kept up an intermittent firing until near midnight. The Federal troops rested on their arms during the night in line of battle. At daylight the next morning the enemy fell back two miles, and still higher up the mountain, and the pickets of Gen. Pope advanced and occupied the ground. The army rested during the day. Monday was spent in burying the dead and in getting off the wounded, and during the night the enemy disappeared, leaving many of his dead unburied and his wounded on the ground. The slaughter on both sides was severe; much of the fighting having been hand to hand. A cavalry and artillery force under Gens. Buford and Bayard was thrown forward in pursuit, and followed the enemy to the Rapidan, over which his rear guard passed about ten o'clock on Tuesday morning. The Federal loss was fifteen hundred killed, wounded, and missing, of whom near three hundred were taken prisoners. Gen. Pope also lost two Napoleon guns, fifteen hundred muskets, and considerable ammunition. The Confederate loss was severe, among whom were Gens. Winder and Trimble. The battle commenced with the advance of Gen. Ewell, consisting of ten thousand men, who were reënforced by Gen. Jackson with five thousand more, and the balance of his command got into position early in the night.

On the Federal side the contest was maintained entirely by the command of Gen. Banks, and was conducted with great skill and bravery. The object of this attack on the part of Gen. Lee was undoubtedly to feel the strength and temper of Gen. Pope's army. His forces retired across the river, a few miles toward Gordonsville, to await the approach of the main army, while Gen. Pope pushed forward his whole force in the direction of the Rapidan, where he occupied a strong position, extending from Robertson's Rise on the right to near Racoon Ford on the left.

On the 16th a party of Confederate cavalry were surprised and captured at Louisa Court House. Upon them were found important despatches, including an autograph letter from Gen. Lee, which informed the Federal Government that Gen. Lee was moving by forced marches the main body of the Confederate army to attack Gen. Pope before a junction could be formed between him and the Army of the Potomac. Thus their plan was to throw overwhelming forces upon him, cut off his rear, and annihilate, if possible, his entire army. In consequence of this reliable information, Gen. Halleck, the general-in-chief, on the 17th ordered Gen. Pope not to cross the Rapidan, but advised him to take a position in rear of the North Fork, where he could be more easily reënforced. This movement was commenced by Gen. Pope on the 18th, and during the 19th the main body of his forces was behind that river, and prepared to hold its passes.

Ten miles above Fredericksburg the Rappahannock river receives the two tributaries which form it. The southern stream is called the Rapidan, the northern one is called the North Fork. This latter is the stream behind which Gen. Pope was advised to

retire, and which he effected on the 18th and the subsequent day. Below the junction of the tributaries the stream is called the Rappahannock. This junction is twenty miles below the spot where the Culpepper or Orange and Alexandria railroad crosses the North Fork.

Gen. Lee commenced reconnoitring on the day that Gen. Pope retired, and at night a considerable body of his troops had crossed the Rapidan. On the 19th he crossed with a large force, comprising cavalry, infantry, and artillery.

Gen. Pope had thus far received some reenforcements from Gen. Burnside, who landed at Fredericksburg from the mouth of the James river on the 4th of August. On the 6th, at six P. M., Gen. Reno, with his division of Gen. Burnside's corps, left camp to march to Gen. Pope. On the 10th Gen. King, of McDowell's corps, hurried forward to Culpepper Court House for the same purpose, and on the 13th Gen. Stevens, with six regiments of his division, and four of Gen. Wright's, which had been detached from Port Royal, S. C., followed. Thus nearly forty regiments of infantry, fully armed and provided with trains and a large force of artillery and cavalry, were sent forward from Fredericksburg. He was also authorized to call the main portion of Gen. Cox's forces from western Virginia.

The Orange and Alexandria railroad, which runs from Alexandria, and connects with the Virginia Central railroad at Gordonsville, was, at the end near Alexandria, the route by which Gen. Pope received his supplies. The stations on that part of the road were as follows: Alexandria, to Springfield, 9 miles; to Burke's, 14 miles; to Fairfax, 18 miles; to Union Mills, 23 miles; to Manassas Junction, 27 miles; to Bristol, 31 miles; to Catlett's, 38 miles; to Warrenton Junction, 41 miles; to Bealeton, 47 miles; to Rappahannock, 51 miles; to Brandy, 56 miles; to Culpepper, 62 miles; to Mitchell's, 69 miles. The road crosses the North Fork at the Rappahannock station, ten miles beyond Warrenton Junction. At Manassas Junction the Manassas Gap railroad comes in from the northwest. The first station west of Manassas Junction is Gainesville, distant 8 miles; the next is Thoroughfare, distant from Manassas Junction 14 miles. At the Warrenton Junction comes in from the northwest the Warrenton railroad. It connects Warrenton with Warrenton Junction. All these positions were in the rear of Gen. Pope's army on the North Fork, and were involved in the subsequent movements.

When the retreat of Gen. Pope commenced, Gen. Sigel's command was in the advance, Gen. Reno's held the left in the vicinity of Mitchell's Station, on the line of the Orange and Alexandria railroad, and Gen. McDowell's forces, supported by Gen. Banks, occupied the right centre. At half-past ten on the night of the 18th of August, Gen. Sigel commenced moving back toward Culpepper. Previous to this hour, however, the troops in the rear were in motion. The night was dark and cold, and the march slow in consequence of the immense train of transportation wagons placed in advance of the troops. The usual camp fires were extinguished, excepting those necessary for the safe passage of the trains, and all unnecessary noise was avoided. At midnight the advance of Gen. Sigel reached Cedar Mountain, the scene of the late battle, and at a late hour on Tuesday morning, the 19th, it reached Culpepper. The forces of Gen. McDowell, including Gen. King's division, had then passed through the town. Gen. Banks's division was at an encampment on the right of the road, and Gen. Sigel brought up the rear. Far as the eye could reach, there was to be seen nought but moving masses of infantry, cavalry, and artillery; beyond that it could catch an occasional glimmer of the white-covered tops of the wagon trains slowly winding up the distant hills. All the sick and wounded, excepting eighty-five men whose injuries were of such a kind as to prevent their removal, and all the stores of the medical department, had been sent off by railroad before five o'clock that afternoon. The rear guard of the army consisted of the cavalry under Gen. Bayard. The movement of the troops during the day, although made in different directions, all tended toward one point, the Rappahannock station on the railroad, at which was the bridge crossing the North Fork. During the forenoon of the 19th, the advance crossed, and the rear, which was that day under Gen. Sigel, encamped at night some four miles from the bridge. All night, long army trains, infantry, and artillery were moving across the bridge, and by noon on the 20th the cavalry composing the rear guard made its appearance just on the west side of the bridge, and was then drawn up in line of battle to meet the enemy's cavalry, with whom Gen. Bayard had been skirmishing from Cedar Mountain. About one o'clock the Confederate cavalry made a charge, but accomplished nothing except wounding a few men. The Federal cavalry then came across the bridge, and the retreat behind the North Fork of the Rappahannock was complete.

During the afternoon and night, the Confederate artillery came up. On the next day, the 21st, being Thursday, an attempt was made by them to cross a few miles above the bridge. The New York battery of Crowell and the Third Maryland regiment, stationed at the ford, would have been driven off except for the additional batteries sent to their support. At the same time an attack was made at Kelly's Ford; this was also repulsed. An attack of the enemy was expected during the night, and the Federal force slept on their arms. Early the next morning a Confederate battery opened at the spot where the first attempt to cross was made, which kept up a fire for some time. A little farther up the stream a bridge was discovered which the enemy had erected during the night. A Federal battery opened, which slackened fire soon after and appeared to be silenced by the

batteries of the enemy. It was apparently withdrawn, when the enemy began to cross. The batteries of Gen. Sigel's command again opened upon their approach, and they were here also driven back. It was on this occasion that Gen. Henry Bohlen lost his life. Attempts to cross were also made at other fords. On Friday afternoon and night of the 22d, rain fell so heavily as to swell the river and make it unfordable between the mountains and a few miles back of Warrenton Springs, which checked the efforts of the enemy. The firing of artillery at nearly all the fords was kept up on the 23d and 24th with more or less spirit, but with no special results. On the 23d the bridge at the Rappahannock station was burned by Gen. Ricketts. While this was going on during the 24th, Gen. Lee made a flank movement, advanced higher up, and attempted to throw a portion of his force over at Waterloo bridge, about twelve miles above the Rappahannock bridge, which was burned. This attempt was defeated. The strategy of the movements of Gen. Pope consisted in the hope that by his falling back across and holding the fords of the North Fork, sufficient time would be gained for the Army of the Potomac to come to his aid.

On Friday evening, the 22d, while the Federal force was thus in possession of the fords of the Rappahannock, a body of Confederate cavalry under Gen. Stuart, consisting of detachments of the 1st, 4th, and 9th Virginia cavalry, made a dash upon Catlett's Station on the Orange and Alexandria railroad, thirty-five miles from Washington, and thirteen miles in the rear of the Rappahannock station. They met with only slight resistance. There were a great number of trains in a circle round the station at the time, which first occupied their attention; but a terrible storm of rain setting in a few moments after their arrival, the wagons could not be destroyed by fire, and only few were injured. They remained some hours, and left at four o'clock in the morning, their pickets having been driven in. They took away over two hundred horses of Gen. Pope's train, and twenty from Gen. McDowell's. They took all Gen. Pope's baggage and everything belonging to his staff officers. All the sick were taken from the hospitals, and most of them put on the captured horses to ride. A few were killed on both sides, and the number of prisoners taken was about two hundred. This force had crossed the North Fork at Porter's Ford, two miles above White Sulphur Springs. The Federal force at Catlett's consisted of a small guard from the Pennsylvania regiment under Col. Kane, and the Purnell Legion of Maryland. In the neighborhood were other trains likewise having small guards, upon some of which an attack was made.

After a body of the Confederate force had crossed at Waterloo bridge on the 24th, as above stated, an attack was made upon them by order of Gen. Pope, with the hope of cutting them off. This was unsuccessful, but the enemy was compelled to retire, move farther up the river, and enter the valley which lies between the Blue Ridge and the Bull Run mountains. The object of this movement was to get in the rear of Gen. Pope and cut off his supplies from Washington.

It put the Confederate army in such a position that it could move either upon Washington or upon Leesburg, for the purpose of crossing into Maryland. Nevertheless, Gen. Pope was successful in preventing the enemy from crossing at any of the fords of the North Fork, and compelling him to move still higher up on the west side of the Bull Run mountains. Thus, during eight days, Gen. Lee had advanced no nearer to Washington. It now remained for Gen. Pope to guard the passes of these mountains in order to prevent the approach of the enemy any nearer to Washington, or to meet him after crossing the mountains and defeat him. On the other hand it was the object of Gen. Lee to pass the mountains and take Gen. Pope in the rear if possible. At all events it was necessary for him to get rid of the army of Gen. Pope if he intended to cross over the Potomac into Maryland.

When it appeared doubtful if the North Fork river could be held long enough to effect a junction of the forces of Gen. McClellan with those of Gen. Pope, a part of the former were ordered to land at Alexandria and move out by railroad as rapidly as possible. After this movement of Gen. Lee, the remainder of Gen. McClellan's forces were ordered to land at Alexandria, and Gen. Burnside was ordered to evacuate Fredericksburg and Aquia Creek.

As soon as Gen. Pope discovered that a large force of the enemy was turning his right toward Manassas, and that the divisions which he expected to be there from Alexandria had not arrived, he broke up his camps at Warrenton and Warrenton Junction and marched rapidly back in three columns. At this time the corps of Gen. Heintzelman from Gen. McClellan's army had reached Warrenton Junction, although without artillery, wagons, or horses for the field and general officers. One division of the corps of Gen. Porter from Gen. McClellan's army coming by the way of Fredericksburg, arrived at Bealston's Station, eleven miles south of Warrenton Junction in advance of Gen. Heintzelman, about four thousand five hundred strong. The other division was at Kelly's Ford. This corps had marched night and day to join the army under Gen. Pope, and was broken down with excessive labor. Both these divisions were immediately concentrated at Warrenton Junction. When Gen. Pope determined to fall back he had no other course to pursue, except to detach a sufficient force to defeat the Confederate troops attempting to turn his flank, and still preserve his front before the main body of the Confederate army. The reason assigned by Gen. Pope for not pursuing the latter course was the lack of a sufficient force to maintain his front after a suitable body had been detached to defeat Gen. Jackson on his flank. He estimates the number of his troops at forty

thousand, before the arrival of Gen. Heintzelman with ten thousand. The Confederate army before him was not less than eighty thousand in number. On evacuating Warrenton and Warrenton Junction, Gen. McDowell was ordered to march rapidly with his own corps and that of Gen. Sigel, and the division of Gen. Reynolds, by the turnpike upon Gainesville, the first station west of Manassas Junction, on the Gap railroad, for the purpose of intercepting any reënforcements coming through Thoroughfare Gap to Gen. Jackson, who he learned was on the railroad. At the same time Gen. Reno, from Gen. Burnside's corps, and Gen. Kearny, from Gen. Heintzelman's corps, were ordered to march upon Greenwich, so as to support Gen. McDowell if necessary. Greenwich is a little south of Gainesville, and a little southwest of Manassas Junction. The division of Gen. Hooker, under Gen. Pope, moved back upon Manassas, on the line of the railroad. Gen. Porter was ordered to remain with his corps at Warrenton Junction until relieved by Gen. Banks marching from Fayetteville, and then to push forward in the direction of Gainesville, where the main collision with the enemy was expected.

On Tuesday night, the 26th, the pickets at Manassas Junction were driven in, and two companies of Pennsylvania infantry, one company of Pennsylvania cavalry, and a battery of artillery stationed there were surprised and attacked by a large force under Gen. Ewell. The Union force, after a brief skirmish, retreated across Bull Run. There, at Union Mills, were the 11th and 12th Ohio regiments under Col. Scammon, being a portion of Gen. Cox's division brought on from western Virginia. They immediately advanced to meet the Confederate force, and early on Wednesday morning, the 27th, a conflict took place between Manassas Junction and Bull Run. This continued for a couple of hours, when Col. Scammon was forced to retire across Bull Run bridge, which he attempted to hold. About noon, after considerable loss, he was obliged to retire along the railroad in the direction of Alexandria, halting at a point midway between Centreville and Fairfax Court House. About two o'clock on the same morning, the New Jersey brigade under Brig.-Gen. Taylor, being a portion of Gen. Franklin's division of Gen. McClellan's army, left their encampment near Alexandria, and proceeding out the Fairfax road some distance, made a detour to the left, and during the forenoon arrived on the old battle ground near Manassas. The enemy, being aware of their approach, were drawn up to meet them. As they emerged from the woods the enemy opened upon them with a severe fire of artillery. Gen. Franklin, having no artillery, was compelled either to make a charge or retire. He resolved to charge upon the enemy's battery, but as these were supported by infantry, it proved ineffectual, and he then fell back in order to Sangster's Station, toward Fairfax, holding the enemy in check. At this station two Ohio regiments, sent to reënforce him, came up, who were at first mistaken for a body of the enemy. The troops of Gen. Taylor were now thrown into confusion, but finding out the mistake, rallied and joined in an attack upon the enemy, who now retired toward Manassas. Gen. Taylor then fell back to Fairfax Court House, having left one regiment at Sangster's Station as a guard. The losses during these actions were about three hundred.

On the same night of the 26th, when Manassas Junction was taken, a body of Confederate cavalry, being a detachment of the force of the enemy at Manassas, made an attack upon a railroad train at Bristow's Station, four miles from Manassas Junction. This train was the one which had conveyed, a few hours previous, the division of Gen. Hooker to Warrenton Junction, and was now returning empty. The cars were destroyed and the track torn up for a considerable distance. This force was increased by the arrival of more troops from Gen. Ewell's division, who had taken Manassas Junction, where was an immense depot of Federal stores valued at nearly one million of dollars. This was the body of the enemy which Gen. Pope had designed to intercept by ordering Gen. McDowell to fall back on Gainesville. Unfortunately, his order was too late, for the first reënforcements to Gen. Jackson, then in the rear of Gen. Pope, had passed through Thoroughfare Gap and Gainesville, and were in possession of Manassas at the time when the order was given to Gen. McDowell. The stores captured at Manassas served to sustain the Confederate army in extending its march into Maryland. Vast quantities, however, were burned, because, as Gen. Lee reported, "they had captured more than they could use or carry away." On the 23d, the next day after the attack upon Catlett's Station, Gen. Halleck had sent a despatch to Gen. Pope in these words: "By no means expose your railroad communication with Alexandria. It is of the utmost importance in sending your supplies and reënforcements." Gen. Pope, in his report, says: "The movement of Gen. Jackson toward White Plains and in the direction of Thoroughfare Gap, while the main body of the enemy confronted me at Sulphur Springs and Waterloo bridge, was well known to me, but I relied confidently upon the forces which I had been assured would be sent from Alexandria, and one strong division of which I had ordered to take post on the works at Manassas Junction. I was entirely under the belief that these would be there, and it was not until I found my communication intercepted that I was undeceived. I knew that this movement was no raid, and that it was made by not less than twenty-five thousand men."

The army of Gen. Pope was now on the 27th on the retreat in three columns. The one moving back along the railroad toward Manassas Junction, under Gen. Hooker, was the first to encounter the Confederate forces in the

rear. It was the advance of the same force, a portion of which had repulsed Col. Scammon and Gen. Taylor in separate actions during the forenoon. That portion of the force had ceased to follow them beyond Sangster's Station, as they would thereby have been drawn away from the main body, and also from the support of Gen. Lee's army marching upon White Plains and Thoroughfare Gap, and because Gen. Pope was falling back upon them. Upon the approach of Gen. Hooker's force to Bristow's Station the Confederate forces fell back about one and a half miles across Kettle Run, and formed upon its left bank. Their main body was at Manassas, a little farther in the rear, to which their line of battle extended. A severe action ensued, which terminated at dark. Gen. Ewell's force was driven from the field, with the loss of his camp equipage and about three hundred killed and wounded. Gen. Hooker's division had brought with them only forty rounds of ammunition, and at night there were only five rounds to the man left. Upon learning this fact, Gen. Pope immediately sent back orders to Gen. Porter to march with his corps at one o'clock that night, so as to be with Gen. Hooker at daylight in the morning, the 28th, with Morell's division, and also directed him to communicate with Gen. Banks the order to move forward to Warrenton Junction. All trains were ordered this side of Cedar Run, and to be protected by a regiment of infantry and a section of artillery. Owing to insurmountable obstacles and the limited time given him to make the march, Gen. Porter did not arrive as early as expected.

The position of Gen. Jackson after the defeat of Ewell on the night of the 27th was dangerous. Without reënforcements he must retreat before the powerful foe in front. Only two routes were open for him. The one by which he had come, which was through Gainesville and Thoroughfare Gap; and the other toward Centreville. If he attempted the first one, he would meet the forces of Gens. McDowell and Sigel, and the Pennsylvania reserve under Gen. Reynolds, who were already at Gainesville, whither they had been ordered two days previous by Gen. Pope. His only course of safety was to fall back toward Centreville, which he did that night, and took position on the farther line of Bull Run. At noon on the 28th Manassas was occupied by the troops of Gen. Pope, and on the same day Gen. Heintzelman's corps, consisting of the divisions of Gens. Hooker and Kearny, pushed on to Centreville, and entered the place soon after the rear of Gen. Jackson had retired. At this time Gen. Reno, who had coöperated with Gen. McDowell, had reached Manassas Junction, and Gen. Porter was at Broad Run, where he had been ordered to halt. It was now of the utmost importance to Gen. Lee that Gen. Jackson should be reënforced, or he might be cut off. Foreseeing the danger, Gen. Lee had ordered Gen. Longstreet to proceed on the 24th from Warrenton by way of Thoroughfare Gap, a pass in the Bull Run mountains, fifteen miles west of Centreville, and unite with Gen. Jackson. The advance of Gen. Longstreet appears to have reached Thoroughfare Gap on the evening of the 28th, and encountered Gen. Ricket's division, which retired that night to Bristow's Station. The enemy was thus free to join Gen. Jackson both by Thoroughfare and Hopeville Gaps. The advance of Gen. Jackson retiring to join Gen. Longstreet encountered, near Gainesville on the Warrenton turnpike, Gen. Gibbon's brigade of King's division—or all of King's division—which was a part of Gen. McDowell's force. The division behaved handsomely, and suffered severe loss. The contest closed with the darkness, and the division retired to Manassas Junction before day of the 29th. The road was open for the union of Gen. Longstreet with Gen. Jackson, and the junction was effected on the morning of the 29th, at 10 A. M., in person and with large force.

Hopeville is about three miles northeast of White Plains, on the road from White Plains to Aldie. The road across the mountains is some three miles north of Thoroughfare Gap. Gen. Halleck in his report says: "McDowell had succeeded in checking Lee at Thoroughfare Gap; but the latter took the road from Hopeville to Haymarket, and hastened to the relief of Jackson, who was already in rapid retreat."

The next morning found Gen. King's division fallen back from Warrenton turnpike toward Manassas Junction. It had been driven back by the forces of Gen. Jackson. The passage of the Gap was no longer disputed, and reenforcements to Gen. Jackson were passing through during the whole day. Gen. Lee, in his despatch to Richmond, says that Gen. Longstreet reached Gen. Jackson on the 29th. The posture of affairs was now changed. The overwhelming forces of Gen. Lee were at hand, and it became a question with Gen. Pope what the consequences to him might be. He seems to have apprehended the facts. He cautioned Gen. Porter, in his order, not to go farther in his march to effect a junction with Gen. Heintzelman than might be necessary, adding, "as he might be obliged to retire behind Bull Run that night for subsistence, if nothing else." It is worthy of notice that the movements of Gen. Jackson for the last two days had been in the direction of Thoroughfare Gap, in order to be nearer the approaching reënforcements, which he was confident would surely come. Soon after daylight on the next morning, the 29th, the contest began on the part of Gens. Sigel and Reynolds's divisions of Gen. McDowell's corps and the Confederate forces. The divisions were on the west toward Gainesville. The plan of Gen. Pope was for Gen. Heintzelman, with Gens. Hooker, Kearny, and Reno, to proceed from Centreville toward Gainesville and attack the enemy on that side, and Gen. Porter, with Gen. King's division, to make another attack from the south, and Gens. McDowell and Sigel

from the west, thus attacking them on three sides. The contest, as has been stated, commenced early in the morning on the part of Gens. Sigel and Reynolds, and was continued rather feebly until the afternoon, when Gen. Heintzelman's corps joined Gen. Sigel, and soon after Gen. Longstreet had joined Gen. Jackson. Here Gen. Grover's brigade of Gen. Hooker's division made a brilliant bayonet charge through two lines of the enemy and into a third one, losing thirty per cent. of its force in twenty minutes. Gen. McDowell also brought his whole corps into the field in the afternoon, and, as Gen. Pope says, "taking a conspicuous part in that day's operations." Gen. Porter, reduced by the withdrawal of Gen. King's division, was on the direct road to Gainesville, along the railroad from Manassas Junction, holding in check a large force of the enemy's right wing, strongly posted to guard the flank of that portion confronting Gen. Pope's right. About 7 P. M. Gen. Heintzelman's right division under Gen. Kearny turned the enemy's left toward Sudley Springs and went into action, driving them back fully a mile. Thus the day ended successfully for the Federal arms. The entire force of Gen. Pope, except Gen. Banks's corps, was thus engaged with the two wings of Gen. Lee's army. The loss on this day by Gen. Pope was reported at eight thousand, which was an overstatement. Both parties slept upon their arms that night on the same spot, near the old battle ground of Bull Run. The contest was renewed the next day, the 30th. The object now with Gen. Pope was, if possible, to maintain his position. The design of the enemy appeared to be to accumulate such a force on his right as to crush the Federal left and occupy the road to Centreville in its rear. Gen. Lee, of the Confederate army, thus reports the action of this day: "The enemy, being reënforced, renewed the attack on the afternoon of the 30th, when a general advance of both wings of the army was ordered, and after a fierce combat, which raged until after nine o'clock, he was completely defeated and driven beyond Bull Run. The darkness of the night, his destruction of the stone bridge after crossing, and the uncertainty of the fords, stopped the pursuit." The only additional force brought into this part of the field on this day by Gen. Pope was the corps of Gen. Porter, which was moved from the extreme left to the centre, travelling a distance of six miles. Gen. Pope, in his report, thus describes the conflict of the 30th: "The enemy's heavy reënforcements having reached him on Friday afternoon and night, he began to mass on his right for the purpose of crushing our left, and occupying the road to Centreville in our rear. His heaviest assault was made about five o'clock in the afternoon, when, after overwhelming Fitz John Porter, and driving his forces back on the centre and left, mass after mass of his forces was pushed against our left. A terrible contest, with great slaughter, was carried on for several hours, our men behaving with firmness and gallantry under the immediate command of Gen. McDowell. When night closed our left had been forced back about half a mile, but still remained firm and unshaken, while our right held its ground. Gen. Franklin, with his corps, arrived after dark at Centreville, six miles in our rear, whilst Sumner was four miles behind Franklin. I could have brought up these corps in the morning in time to have renewed the action, but starvation stared both men and horses in the face, and, broken and exhausted as they were, they were in no condition to bear hunger also. I accordingly retired to Centreville that night in perfect order."

It appears that the contest with artillery commenced early in the day, and but little damage was done on either side. Early in the afternoon an attempt was made to break the line of Gen. Porter stationed on Gen. Pope's centre. This was unsuccessful, but caused a severe loss to Gen. Porter. In the latter part of the afternoon the enemy's forces were concentrated upon the corps of Gen. McDowell on the left of the centre. The batteries there, Lapine's 5th Maine, Thompson's New York, and Howell's, not being sufficiently supported by infantry, were soon captured, and McDowell's troops were driven irresistibly back. The right and centre still maintained their positions, but the disaster on the left, and the apprehended design of the enemy to occupy the road to Centreville in their rear, made it necessary for them to fall back. In doing so the bridge across Bull Run was destroyed. The field of battle with its dead and wounded was left in the hands of the enemy. The right wing of the army was this day commanded by Gen. Heintzelman, and did not give one inch of ground to the enemy until ordered so to do after the repulse received by the left wing. The losses on both sides were severe, but have never been officially made public. The report of Gen. Pope was made before the reports of his subordinate officers were received. These, in consequence of his absence in the West, had not been made near the close of the year. The entire loss of Gen. Pope was estimated at between 15,000 and 20,000.

At Richmond the following despatch was received from Gen. Lee:

HEADQUARTERS ARMY NORTHERN VIRGINIA, GROVETOWN, *Aug.* 30, P. M., *via* Rapidan.

To President Davis:

This army achieved to-day, on the plains of Manassas, a signal victory over the combined forces of Gens. McClellan and Pope. On the 28th and 29th each wing, under Gens. Longstreet and Jackson, repulsed with valor attacks made on them separately. We mourn the loss of our gallant dead in every conflict, yet our gratitude to Almighty God for His mercies rises higher each day. To Him and to the valor of our troops a nation's gratitude is due. R. E. LEE.

This was followed on the 2d of September by the following Message of President Davis to the Confederate Congress:

To the Senate and House of Representatives of the Confederate States:

I have the gratification of presenting to Congress

two despatches from Gen. Robert E. Lee, commanding the army of Northern Virginia, communicating the result of the operations north of the Rappahannock.

From these despatches it will be seen that God has again extended His shield over our patriotic army, and has blessed the cause of the Confederacy with a second signal victory on the field already memorable by the gallant achievement of our troops.

Too much praise cannot be bestowed upon the skill and daring of the commanding general who conceived, and the valor and bravery of the troops who executed, the brilliant movement whose result is now communicated. After having driven from their intrenchments an enemy superior in numbers, and relieved from siege the city of Richmond, as heretofore communicated, our toilworn troops advanced to meet another invading army, reënforced not only by the defeated army of Gen. McClellan, but by the fresh corps of Gens. Burnside and Heintzelman.

After forced marches, with inadequate transportation, and across streams swollen to unusual height, by repeated combats, they turned the position of the enemy, and, forming a junction of their columns in the face of greatly superior forces, they fought the decisive battle of the 30th, the crowning triumph of their toil and valor. JEFFERSON DAVIS.

At Washington, on Saturday, the 30th, the War Department invited the citizens to go out to the battle field and assist in taking care of the wounded soldiers. A large number responded to the invitation. From three to seven o'clock P. M. the streets swarmed with people and conveyances loaded with blankets and baskets and rolls of lint. Every public carriage and vehicle was impressed into the service. A thousand persons at least went out. More would have gone on Saturday morning, but the invitation was recalled, and passes refused. The entire movement turned out as ill advised. Very few persons were allowed to go far enough to find the wounded they sought, and some were made prisoners by the Confederates. The movement thus begun at Washington instantly extended through all the principal cities of the Northern States. In Boston, Massachusetts, which will serve as an illustration of the others, the greatest excitement prevailed on Sunday, the 31st. A despatch had been received on the previous evening from Washington, by Gov. Andrew, asking that the surgeon-general of the State should send on twenty surgeons with hospital supplies as soon as possible. This demand was made public at an early hour in the morning, with the notice that contributions would be received at Tremont Temple. Those notices were also read from pulpits, which is the usual manner of advertising on Sunday in New England, and many congregations were immediately dismissed to procure contributions. At an early hour these contributions began to be received at the Temple, and continued to pour in during the whole day—old sheets for bandages, shirts, dressing gowns, pillows, liquors, jellies and sweetmeats of all kinds—in a word, every variety of article which could suggest itself to a kind heart as necessary to the comfort of the wounded soldier. Bundles and packages of every conceivable size and shape were momentarily arriving. Ladies brought bundles, who were never seen to carry bundles before, and stout gentlemen in gold spectacles were seen driving heavy laden carts through the streets, or lending a hand at the boxes. All these articles were received at the side doors of the Temple and taken within, where corps of packers inclosed them in boxes, which were then taken out of the main entrance to the express wagons, which crowded the streets. Thus twenty-one hundred cases were packed, and all sent forward by the evening train, except about one hundred and fifty. At the same time subscriptions were taken at stands on the sidewalks, and over five thousand dollars collected.

Meantime the following correspondence took place between Gens. Pope and Lee:

CENTREVILLE, *August* 31, 1862.

SIR: Many of the wounded of this army have been left on the field, for whom I desire to send ambulances. Will you please to inform me whether you consent to a truce until they are cared for?

I am, sir, your obedient servant, JOHN POPE.
Maj.-Gen. U. S. Army, Commanding.

To Commanding Officer Confed. forces, near Groveton.

HEADQUARTERS ARMY OF NORTHERN VIRGINIA, *August* 31, 1862.

Maj.-Gen. Pope, U. S. A., Commanding, &c.

SIR: Consideration for your wounded induces me to consent to your sending ambulances to convey them within your lines. I cannot consent to a truce nor a suspension of the military operations of this army. If you desire to send for your wounded, should your ambulances report to Dr. Guilet, Medical Director of this army, he will give directions for their transportion. The wounded will be paroled, and it is understood that no delay will take place in their removal.

Very respectfully, your obedient servant,
R. E. LEE, General.

On Sunday, the 31st, the Confederate army was put in motion toward the Little River turnpike for the purpose of turning the right of Gen. Pope. During Sunday night and Monday morning, Gen. Pope, anticipating this design of the enemy, changed his front by causing his right wing to fall back to the heights of Germantown. Thus when the enemy reached Ox Hill on Monday, he discovered Gen. Pope's army in his front on these heights. The ultimate design of the enemy was to cut the rear of Gen. Pope in the direction of Fairfax Court House. The Little River turnpike runs from Middleburg to Alexandria, and intersects the Centreville turnpike about a mile east of Fairfax Court House. Germantown is a small village between Fairfax Court House and Centreville, and about one fourth of the whole distance beyond the former.

Meanwhile, during the conflict on Friday and Saturday, Gen. Banks, with his command, was covering the extreme left of Gen. Pope's line, to keep off reënforcements for the enemy, and to be used as a reserve. He crossed to Bristow's Station, on the railroad four miles beyond Manassas Junction, and on Sunday was approached by a large Confederate force, before which he fell back and joined Gen. Pope. The bridge at Bristow's Station having been destroyed by the enemy at the time of their attack upon it, and that over Bull Run not having

been repaired, he destroyed the property of the United States before retiring. This consisted of some 200 railroad cars, 5 locomotives, and a large quantity of fixed ammunition, ordnance stores, &c. The enemy, however, obtained great spoil. On the same day, Sunday, Sept. 1, Fredericksburg was evacuated by Gen. Burnside. Falmouth Station was burned, and a quantity of commissary stores. The bridge erected in place of the old railroad bridge, the wire bridge, and the boat bridge were destroyed. The evacuation of Aquia Creek followed.

Gen. Pope states that by the reports of the commanders of corps of his army it consisted, on the 1st of September, of less than 60,000 men. The position taken by his orders on this day was as follows: The division of Gen. Couch and one brigade of Gen. Sumner's corps were at Fairfax Court House. Gen. Hooker was posted at or in front of Germantown, and had command of his own troops and those at Fairfax. Gen. McDowell's corps was stationed on the Warrenton turnpike about two miles west of Fairfax. Gen. Reno was pushed north of the turnpike at a point about two and a half miles east of Centreville, and supported by Gen. Kearny's division of Gen. Heintzelman's corps.

Late in the afternoon, the Confederates, composed of infantry and cavalry, approached Germantown by the Little River turnpike, and were met by Gen. Hooker at that place and by Gen. Reno farther west. The conflict raged for an hour, when they concentrated their force on the left of Gen. Reno's line, which was commanded by Gen. Stevens. Their intention was to turn his left flank. Gen. Stevens was soon killed by a bullet through his head, and his troops were driven back. The Confederate force now began to advance on the main body of Gen. Reno, which was short of ammunition, when the division of Gen. Kearny came up and took the position occupied by the troops of Gen. Stevens. Night had now set in, rendered thickly dark by a thunder storm. The rain fell in torrents, and the position of the contending armies was revealed only by the flashes of lightning. At this time, Gen. Kearny, anxious to know the nature of the ground upon which he expected so soon to fight, rode out to examine it. Inadvertently he passed the line of his own pickets and approached those of the Confederate force, when he was shot by one of them. He was soon missed from his camp, and not being found, Gen. Birney took command of the division. During the next day, his body was brought in under a Confederate flag of truce. Thus two most valuable officers and brave soldiers were slain in this conflict. After Gen. Birney had taken command, he ordered a bayonet charge to be made by Col. Egan, commanding the 1st and 40th, and Col. Ward, of the 38th New York regiments, before which the Confederate force retired.

By morning, on the 2d of September, the whole of Gen. Pope's army was massed behind Difficult Creek, between Germantown, Flint Hill, and Fairfax. On that day orders were issued by the general-in-chief for the Army of Virginia to fall back within the defences of Washington. The object of the general-in-chief in giving this order was "to reorganize the different corps, to get the stragglers back into the ranks, and to supply deficiencies of ammunition, clothing, &c." This movement was executed on the 2d and 3d of September. During these days might be seen on the roads leading to Alexandria and the fortifications around Washington, the worn and bleeding fragments of the once proud armies of the North, as they straggled in from their fifteen bloody days of fighting and retreating. There were the remnants of the decimated regiments of Maine, New York, New Jersey, Pennsylvania, Ohio, and Michigan—stragglers belonging to every army corps, wounded, weak, and dispirited, retiring before a victorious enemy to obtain safety in the fortifications. Many of them had fought their way up the peninsula, contesting almost every inch from Williamsburg against bullets and bayonets until they stood in sight of the spires of Richmond at a distance of four miles, and then were required to abandon their position and withdraw.

The Confederate force which was repulsed near Centreville, on Monday night, September 2, moved toward Vienna, about twelve miles west from Washington, for the purpose of making a demonstration near the Chain Bridge, and the fords of the Potomac above Washington. The chief object in this movement was to divert the attention of the Federal officers from what Gen. Lee was doing elsewhere. The withdrawal of the army of Gen. Pope left the field clear for the Confederate army to follow it, and assault the strong fortifications of Washington, or to pass over the Potomac into Maryland. The assault upon the fortifications of Washington was not to be thought of. But the invasion of Maryland might be followed by such a welcome from the mass of the citizens, and such coöperation, as to enable Gen. Lee not only to hold a portion of the State, but to attack Washington in the rear, and perhaps invade Pennsylvania. In any event it would be a demonstration to the Federal Government, and to nations in Europe, of the vigorous energy and strength of the Confederate Government. Accordingly, on the 31st of August, while Gen. Pope was resting his exhausted forces at Centreville, Gen. Lee drew off the main body of the Confederate army and moved to Leesburg. Thence he moved to the Potomac, near Point of Rocks, and crossed at Noland's Ford, five miles below, and at a ford three miles above on the 5th. His force consisted of the divisions of Gens. Longstreet, Jackson, Ewell, A. P. Hill, and D. H. Hill. It proceeded along the eastern slope of the Catoctin Mountains, in the direction of Frederick, Maryland. On the night of the 5th the advance reached White Oak Springs, about three miles from that city, which is fifty

miles from Centreville. On the same night information was received at Frederick of the approach of the Confederate force, and it produced much excitement. A large number of the inhabitants fled toward Pennsylvania and Baltimore. Frederick, the capital of the State of Maryland, is forty-four miles northwest of Washington, and sixty miles west of Baltimore. It is the second city of the State in wealth and commercial importance, and the third in population, containing 8,143 inhabitants. The military force in the city consisted of only one company, which could make no opposition. The Federal provost marshal removed all the military stores possible, and, leaving enough for the hospitals, in which there were about six hundred patients, burned the remainder. About ten o'clock the next morning, the 6th, the Confederate troops quietly entered the city. These soldiers were in a destitute condition, in respect to clothes and shoes, yet the most scrupulous regard was had to private property. They had no tents, nor were burdened with any baggage. Their only trains were ammunition trains. If enduring great hardships without a murmur, and most bravely and heroically fighting, are evidences of good soldiers, seldom has the world witnessed better than those who composed the army of Gen. Lee. A Confederate provost marshal was appointed (Bradley Johnson), and a proclamation issued to the citizens, stating that the army came as friends, and not as enemies, to relieve the people of Maryland from the tyranny by which they were oppressed; that they did not purpose to interfere with any non-combatants, or to disturb private property, or to inquire into the opinions of citizens; and that whatever stores they required would be paid for, either in Confederate notes or United States Treasury notes, as the seller might prefer. At night the soldiers were all ordered to their camps outside of the city. Meantime foraging parties were sent out in various directions, which returned at evening with droves of sheep, cattle, hogs, and horses. These droves were all taken toward the Potomac. Pickets were thrown out from Frederick both east and west for considerable distances. On Sunday they were reported to have advanced within seven miles of Westminster, causing a great excitement in the town, but disappeared during the night. No Confederate force, however, came farther east at that time than Uniontown, twenty miles from Westminster. The main body encamped for some days on a line between Frederick and the Potomac river. Recruiting offices were opened in the city, and citizens invited to enlist. Very few volunteers, however, were obtained.

On the 8th, Gen. Lee issued the following address to the people of Maryland:

HEADQUARTERS, ARMY OF NORTHERN VIRGINIA, NEAR FREDERICKTOWN, *Sept.* 8, 1862.

To the People of Maryland:

It is right that you should know the purpose that has brought the army under my command within the limits of your State, so far as that purpose concerns yourselves.

The people of the Confederate States have long watched with the deepest sympathy the wrongs and outrages that have been inflicted upon the citizens of a Commonwealth allied to the States of the South by the strongest social, political, and commercial ties, and reduced to the condition of a conquered province.

Under the pretence of supporting the Constitution, but in violation of its most valuable provisions, your citizens have been arrested and imprisoned, upon no charge, and contrary to all the forms of law.

A faithful and manly protest against this outrage, made by a venerable and illustrious Marylander, to whom in his better days no citizen appealed for right in vain, was treated with scorn and contempt.

The government of your chief city has been usurped by armed strangers; your Legislature has been dissolved by the unlawful arrest of its members; freedom of the press and of speech has been suppressed; words have been declared offences by an arbitrary decree of the Federal executive; and citizens ordered to be tried by military commissions for what they may dare to speak.

Believing that the people of Maryland possess a spirit too lofty to submit to such a government, the people of the South have long wished to aid you in throwing off this foreign yoke, to enable you again to enjoy the inalienable rights of freemen, and restore the independence and sovereignty of your State.

In obedience to this wish, our army has come among you, and is prepared to assist you with the power of its arms in regaining the rights of which you have been so unjustly despoiled.

This, citizens of Maryland, is our mission so far as you are concerned. No restraint upon your free will is intended—no intimidation will be allowed within the limits of this army at least. Marylanders shall once more enjoy their ancient freedom of thought and speech. We know no enemies among you, and will protect all of you in every opinion.

It is for you to decide your destiny freely and without constraint. This army will respect your choice, whatever it may be; and, while the Southern people will rejoice to welcome you to your natural position among them, they will only welcome you when you come of your own free will.

R. E. LEE, General Commanding.

On the 10th Gen. Lee began to evacuate Frederick, and by the 12th his entire force had left. His forces moved in the direction of Hagerstown. That same night the city was occupied by the advance of Gen. McClellan's army, under Gen. Hooker.

On the afternoon of the 10th, Hagerstown was entered by a Confederate force. On the 6th and 7th the banks of the town, anticipating this approach, removed their specie to Harrisburg and other places east for safety. The Government stores there were also removed.

Meantime, on the first approach of the Confederate army across the Potomac, the greatest excitement prevailed in Pennsylvania, especially in York and Adams counties, and through the Susquehanna and Cumberland valleys. The farmers sent away their wives, children, and cattle, and hastened to take up arms. In many of the towns of the State stores were closed, bells rung, guns fired, public meetings held, and citizens in their excitement assembled in mass to drill. On the 10th Gov. Curtin issued an order calling upon all the able bodied men of Pennsylvania to organize immediately for the defence of the State, and to be ready

for marching orders upon an hour's notice. On the 11th he issued a call for fifty thousand of the freemen of the State to enter immediate service to repel the imminent danger of invasion. On the same day he addressed the following despatch to the mayor of Philadelphia:

We have reliable information this evening that the rebel generals have moved their entire army from Frederick to Cumberland Valley, and their destination is now Harrisburg and Philadelphia. We need every available man immediately. Stir up your population to-night. Form them into companies, and send us twenty thousand to-morrow. No time can be lost in massing a force on the Susquehanna to defend the State and your city. Arouse every man possible and send him here.

Gov. Bradford, of Maryland, also issued a proclamation calling upon the citizens to organize without delay such a force as might effectually assist in defending their homes and firesides. The effect of these appeals, especially in Pennsylvania, was to bring to the governor a response from more than seventy-five thousand men. Harrisburg, the capital, overflowed with troops. The excitement, however, was not confined to Pennsylvania. In the adjacent States, troops under the first call for three hundred thousand men were hurried to Washington and to Harrisburg. It created another military excitement, and volunteers promptly came forward in all the States to fill up the call of the President.

On the 2d of September, the following order was issued by the general-in-chief:

WAR DEPARTMENT, ADJUTANT-GENERAL'S OFFICE, WASHINGTON, *September* 2, 1862.

General Orders, No. 122.

Maj.-Gen. McClellan will have command of the fortifications of Washington, and of all the troops for the defence of the capital.

By command of Maj.-Gen. HALLECK.

E. D. TOWNSEND, Assist. Adj.-Gen.

When Gen. McClellan arrived at Washington from Harrison's Landing, he was in the department of Gen. Pope, which included the District of Columbia. This was about the middle of August. Subsequent to that time he was without a command, excepting a body of ninety-six men, until this order was issued. Each corps of his army had been sent forward to Gen. Pope In fact the active forces under the command of Gen. Pope consisted of the Army of Virginia, embracing the corps of Gens. McDowell, Banks, Sigel, a portion of Gen. Cox's force from western Virginia, a part of Gen. Burnside's force from North Carolina, about ten regiments from Port Royal in South Carolina, under Gen. Stevens, and the Army of the Potomac, consisting of the corps of Gens. Heintzelman, Sumner, Porter, and Franklin, and the divisions of Gens. McCall and Couch, without including the troops stationed in the fortifications around Washington. With this force he was not able to withstand the overwhelming march of the Confederate army. Yet this same Confederate army was the force which the Army of the Potomac, under Gen. McClellan, single handed and unaided, was required to meet and conquer, and thus obtain the capital of the Confederacy, which was in their possession. In this unequal struggle no dishonor ever tarnished the Army of the Potomac.

On the 4th of September, Gen. McClellan, having received the order above stated, issued another assuming command of the forces above mentioned, together with some new levies which had arrived at Washington under the call of the President for three hundred thousand men. His order assuming the command acted like an electric shock upon these dispirited, defeated masses. It was as follows:

HEADQUARTERS, WASHINGTON, *Sept.* 4, 1862.

General Orders, No. 1.

1. Pursuant to General Orders No. 122, from the War Department, Adjutant-General's Office, of the 2d instant, the undersigned hereby assumes command of the fortifications of Washington and of all troops for the defence of the capital.

2. The heads of the staff departments of the Army of the Potomac will be in charge of their respective departments at these headquarters.

3. In addition to the consolidated morning reports required by circular of this date from these headquarters, reports will be made by corps commanders as to their compliance with the assignment to positions heretofore given them, stating definitely the ground occupied and covered by their command, and as to what progress has been made in obedience to orders already issued to place their commands in condition for immediate service. GEO. B. McCLELLAN, Maj.-Gen.

Official: S. WILLIAMS, Assist. Adj.-General.

It was now known that Gen. Lee had marched into Maryland, and the orders given to Gen. McClellan were to pursue him with all the troops which were not required for the defence of Washington. On the next day most of his army was in motion, and rapidly advanced into Maryland. Gen. Couch's division, consisting of three brigades, commanded by Gens. Howe, Devens, and Cochrane, on the morning of the 6th had reached the road from Rockville to Great Falls, eight miles beyond Tenallytown. Other corps were rapidly pressing on. Three days after assuming command, on the 7th, at six P. M., he left Washington to take the field. That night he passed through Rockville, fifteen miles from Washington, stopping only long enough to refresh his horses. On the morning of the 10th, the army had advanced to Damascus, thirty-four miles from Washington and sixteen miles from Frederick. The first movements of the army were such as to occupy positions which commanded all the lower fords of the Potomac, thus presenting to the Confederate army the alternative of meeting him in battle, or retiring before him, and crossing the Potomac higher up, which would take them further from Washington, and oblige them to retreat through the Shenandoah Valley.

Meantime Gen. Lee, after his successes against Gen. Pope, had no reason to apprehend that the same army would soon be in pursuit of him; yet, like a prudent commander, he, upon learning of the approach of Gen. McClellan, immediately took precautions to secure his own safety. His army had met with no such

welcome from the citizens of Maryland as to give any hope that the State would, under any circumstances, rise in opposition to the Federal Government. On the contrary the people had shown that it was the Government of their choice. Very few recruits had joined the Confederate army, and no contributions of importance had been made to it. The following is a copy of Gen. Lee's order of march, found at Frederick, on the 13th of September. It discloses his plans:

[CONFIDENTIAL.]

HEADQUARTERS, ARMY OF NORTHERN VIRGINIA, *Sept.* 9, 1862.

Special Order, No. 191.

III. The army will resume its march to-morrow, taking the Hagerstown road. Gen. Jackson's command will form the advance, and after passing Middleton with such portion as he may select, take the route toward Sharpsburg, cross the Potomac at the most convenient point, and by Friday morning take possession of the Baltimore and Ohio railroad, capture such of the enemy as may be at Martinsburg, and intercept such as may attempt to escape from Harper's Ferry.

IV. Gen. Longstreet's command will pursue the main road as far as Boonsboro', where it will halt with reserve, supply, and baggage trains of the army.

V. Gen. McLaws, with his own division and that of Gen. R. H. Anderson, will follow Gen. Longstreet, on reaching Middleton will take the route to Harper's Ferry, and by Friday morning possess himself of the Maryland Heights, and endeavor to capture the enemy at Harper's Ferry and vicinity.

VI. Gen. Walker with his division, after accomplishing the object in which he is now engaged, will cross the Potomac at Check's Ford, ascend its right bank to Lovettsville, take possession of Loudon Heights, if praticable, by Friday morning, keep the ford on his left, and the road between the end of mountain and the Potomac on his right. He will, as far as practicable, coöperate with Gen. McLaws and Gen. Jackson in intercepting the retreat of the enemy.

VII. Gen. D. H. Hill's division will form the rear guard of the army, pursuing the road taken by the main body. The reserve artillery, ordnance, and supply trains will precede Gen. Hill.

VIII. Gen. Stuart will detach a squadron of cavalry to accompany the commands of Gens. Longstreet, Jackson, and McLaws, and with the main body of the cavalry will cover the route of the army, and bring up all stragglers that may have been left behind.

IX. The commands of Gens. Jackson, McLaws, and Walker, after accomplishing the objects for which they have attached [been detached?], will join the main body of the army at Boonsboro' or Hagerstown.

X. Each regiment on the march, will habitually carry its axes in the regimental ordnance wagons for use of the men at their encampments to procure wood, &c.

By command of Gen. R. E. LEE.

(Signed) R. H. CHILTON, A. A.-General.

For Maj.-Gen. D. H. HILL, Comd'g Division.

It is clear from this order that Gen. Lee intended first to capture the garrison at Harper's Ferry, and then to enter Pennsylvania by the Cumberland Valley; at all events, that he had no idea of abandoning Maryland until forced to do so by the battles of South Mountain and Antietam. He evacuated Frederick, and taking the road to Hagerstown crossed the Catoctin Mountains, passed through the valley in which Middletown is situated, and drew up his forces along the crest of South Mountain there to await the advance of Gen. McClellan. At the same time he detached a portion of his force, amounting to twenty-five thousand men, and sent them to Harper's Ferry by the route of Williamsport, where they crossed the Potomac. The chief command of this force was given to Gen. Jackson. It embraced his division with those of Gens. A. P. Hill and Walker, and one or two others. By this route, although longer, they were more certain to reach Harper's Ferry without the knowledge of the Federal Government than if their movement had been more direct. The distance from Frederick to Williamsport was thirty miles, and from Williamsport to Harper's Ferry thirty miles.

The advance of Gen. McClellan entered Frederick on the 12th, and he immediately sent forward cavalry and artillery to follow and harass the Confederate rear. Gen. Pleasanton was in command of the cavalry, and several skirmishes took place during the succeeding days. The line of the Federal army extended from the Potomac river in the region of Point of Rocks in a northeasterly direction to the region near Frederick, and thence in an easterly and southerly direction along the Baltimore and Ohio railroad to Baltimore. On Saturday the 13th, the main column of Gen. McClellan's army reached Frederick, and was received with the highest demonstrations and encamped two miles beyond. The same afternoon the Confederate rear was driven by his advance out of Middletown, which was held by the latter during the night. West of Frederick and running nearly due south is the Catoctin range of mountains, a continuation of the Blue Ridge. On the south it terminates in Maryland at Point of Rocks, but still continues in Virginia. On the north it unites at the Pennsylvania State line with the South Mountain range, which, tending to the southwest, slopes down to the Potomac at Knoxville four miles east of Harper's Ferry. Between these two ranges, nestles the loveliest valley in Maryland—the valley of Catoctin. The village of Middletown, ten miles from Frederick, is in the centre of this valley. On Sunday morning, the 14th, the Confederate army were found posted on the east side of the South Blue Ridge Mountain and stretching on a line from north to south from points immediately opposite Middletown and Jefferson, both of which villages are about eight miles from Frederick. Middletown is on the road to Hagerstown and Jefferson on the direct road to Harper's Ferry. The right of the Federal army, at that time under Gen. Burnside, rested on Middletown, and the left under Gen. Franklin on Jefferson. Early in the morning, the advance beyond Middletown overtook the Confederate rear, who retreated slowly, contesting the road toward Boonsboro' step by step. The conflict that ensued during the morning was chiefly with artillery, and came to closer quarters in the afternoon. At this time the Confederate line of battle was formed with the left resting upon Turner's Gap and the turnpike road toward Hagerstown which passes through the gap, and the right covering Crampton's Gap.

Preparations for moving the main body of the Federal army had commenced at daylight, and shortly after the whole army was advancing rapidly toward the mountains followed by the ambulances, artillery, and baggage wagons. Middletown was reached with ease, beyond which was now the scene of conflict. As they approached the field the long black lines of infantry were halted and opened to make way for the artillery and ammunition trains which advanced to their positions.

The battle of South Mountain really commenced at a bridge over Catoctin Creek half a mile west of Middletown, where Confederate artillery had been posted to dispute the passage. Dislodged from this position it retreated to a stronger one up the mountain side. The main body was massed on wooded bluffs to the right and left for a distance of more than two miles. On the right of Turner's Gap they were stormed out of their stronghold by Gen. Burnside's corps. Gen. Cox's Kanawha division in Gen. Reno's corps, attacked and carried the crest on the left of the gap. Of this division, the 23d Ohio, known as the "psalm singers of the Western Reserve," here came in contact with the 23d South Carolina, and the encounter was most stormy. So desperate were the Carolinians in the fight that before a single man surrendered he would beat his gun against a rock or tree to render it useless to his enemy. The Kanawha division was supported by the divisions of Gens. Wilcox, Rodman, and Sturgess. After very severe fighting they repulsed several attacks of the enemy, and retained entire possession of the crest. About 3 P. M., Gen. Hooker attacked the heights on the right of the pass, the Pennsylvania reserves leading, and after a desperate resistance carried the crest about dark, and held it. Shortly before dark Gen. Gibbon's brigade of Gen. Hooker's corps, attacked by the main road, and after an obstinate conflict gained the entrance to the pass some time after dark. Only by a display of equal valor in all the other regiments, and often at close quarters, was the enemy driven over the crest of the mountain into the valley on the west side of the South Mountain. In the centre and on the left, equally desperate was the battle. A severe fire of artillery had been opened all along the front. Under cover of this, the infantry advanced, and poured in a fire of musketry; this continued until 3 o'clock P. M. when the battle raged at its height. Success being soon gained on the right, desperate charges were made with the bayonet before which the Confederate troops wavered, broke, and fell back in confusion. The loss sustained by the Union forces was 2,325 killed and wounded. Among the killed was Gen. Reno, who was shot through the body. Turner's Gap, where the last desperate stand of the Confederate force on the right was made, is two miles from the base of the mountain. Six miles south is Crampton's Gap, through which passes the road from Jefferson to Roherville. This strong position on the left was carried by Gen. Franklin's corps, after a succession of brilliant bayonet charges. Gen. Franklin had followed the line of the Potomac closely. On Saturday he reached Sugar Loaf Mountain, and drove out the Confederate cavalry occupying it for a signal station. On Sunday, he passed through the small village of Burkitsville, and advanced about a mile, when he met the Confederate pickets at the South Mountain range, and near Crampton's Gap. The gap was strongly held by a Confederate force under Gen. Howell Cobb, and his artillery immediately opened fire upon the Federal advance, which was under the command of Gen. Slocum. The division of Gen. Slocum consisted of three brigades under Gens. Bartlett, Torlitt, and Newton. These were formed in line of battle and ordered to advance up the side of the mountain. They had proceeded only a short distance before they came under the fire of a strong Confederate force concealed behind a stone wall running along the base of the gap. At this point a desperate hand to hand fight ensued which lasted nearly an hour, when the Confederate troops were routed. They did not attempt to make a stand again until they reached the crest of the mountain, where they turned and prepared to hold the Federal advance at bay. It came rushing up, composed of New Jersey, New York, and Pennsylvania regiments, until the top of the mountain was gained, when another bloody struggle ensued. The Confederate force finally gave way and fell back in disorder down into the valley, leaving four hundred prisoners, three regimental colors, two pieces of artillery, and three thousand stand of arms. The Federal loss in this affair was one hundred and five killed, and four hundred and forty-eight wounded. The Confederate loss was still larger. The seizure of this gap exposed the flank of Gen. Lee's army, and brought the Federal left into Pleasant Valley, and within five miles of Harper's Ferry. That night the Federal army occupied the battle ground, and the Confederate army fell behind Antietam Creek and took a position admirably adapted for defence.

Meantime the Federal garrison at Winchester and Martinsburg had been ordered to Harper's Ferry, and the commanding officer at that post had been advised to confine his defence, in case he was attacked by a superior force, mainly to the position of Maryland Heights, which could be held a long time against overwhelming numbers. A large amount of artillery and stores had been collected at Harper's Ferry by the Federal Government, which it would have been necessary to destroy or leave to the enemy if the troops there had been withdrawn. It was therefore determined by the general-in-chief (Halleck) to hold the position until Gen. McClellan could relieve it, or open communication so that it could be evacuated in safety.

On Friday, the 12th of September, two days before the battle of South Mountain, the Confed-

erate force of Gen. Jackson, which had been ordered to Williamsport and thence to Harper's Ferry, commenced an attack on Maryland Heights. As early as the 15th of August Col. Miles, then in command, received orders from Gen. Wool, commanding the department, to fortify Maryland Heights, which is considered to be the key of the position. He, however, disobeyed the orders, and did nothing to improve its defences. On the 5th of September Col. Thomas H. Ford took command of the force stationed on the heights, and, apprehending an attack from the Confederate army, sent a requisition to Col. Miles for reënforcements and for tools necessary to erect defensive works. He received reënforcements, but not the tools; and with a few borrowed axes constructed a slight breastwork of trees near the crest of the hill on the same day upon which the advance of Gen. Jackson appeared. The forces at Harper's Ferry had been increased that day to about thirteen thousand men, of whom twenty-five hundred were cavalry, by the arrival of Gen. Julius White with the garrison from Martinsburg. Gen. White, although entitled to the command, waived his right in favor of Col. Miles. The only position fortified by Col. Miles was Bolivar Heights behind the town of Harper's Ferry. This is commanded by Maryland Heights and by Loudon Heights situated on the Virginia side of the Potomac and on the right bank of the Shenandoah.

The attack of the Confederate force was renewed, on the morning of the 13th, on the forces stationed on Maryland Heights, and they were driven behind the breastwork. This was soon after attacked, and the enemy were repulsed. Subsequently, through the precipitate flight of a portion of the troops and the premature retreat of the remainder, in consequence of a mistake of orders, the heights were about midday entirely abandoned. Col. Miles, who had visited the position early in the morning, left Col. Ford with permission to exercise his discretion in determining whether to hold or abandon the heights. Subsequently Col. Miles sent to him the following order.

HARPER'S FERRY, *Sept.* 13, 1862.

Col. Ford, Commanding Maryland Heights:

Since I returned to this side, on close inspection I find your position more defensible than it appears when at your station, covered as it is at all points by the cannon of Camp Hill. You will hold on, and can hold on until the cows' tails drop off.

Yours, D. S. MILES, Col. 21st Infantry.

The answer of Col. Ford to this order, as stated by Col. Miles, did not indicate that he had the slightest intention of giving up the heights.

Col. Ford, after the events above mentioned, disobeyed this order of Col. Miles, abandoned the position, and withdrew his forces across the river. It was only necessary, after this disgraceful retreat, for the enemy to plant their batteries and the position of Harper's Ferry must surely fall. The heights were not, however, immediately occupied by the enemy, and on the next morning a detachment of the 39th volunteers, sent there by Col. D'Utassy, returned with four field pieces and a wagon load of ammunition. On the 13th the Confederate force began to establish batteries on Loudon Heights, and on the next day opened fire from those heights and also from Maryland Heights. On the night of the 13th, Col. Miles sent a despatch to Gen. McClellan that the position could not be held forty-eight hours longer without reënforcements. This was the night before the battle of South Mountain. On the night of the 14th, the cavalry force under Col. Davis cut their way through the enemy's lines and reached Greencastle, Penn., in safety on the next morning, having captured by the way an ammunition train belonging to the corps of the Confederate general Longstreet. Early in the morning of the 15th Col. Miles surrendered. At that time Gen. McClellan's left wing was in Pleasant Valley, within five miles of him. It has been stated that the ammunition for the batteries was nearly exhausted, and for this reason the place became no longer tenable. The enemy, not perceiving the white flag that had been raised, continued their fire some time afterward, by which Col. Miles was mortally wounded by the fragment of a shell. The principal fighting took place on Saturday; there was very little on Sunday, and none worthy of mention on Monday, when the surrender took place. The military mistake was in abandoning Maryland Heights. No enemy could have occupied the village, or disturbed the railroad or pontoon bridges so long as they were held. Provisions and forage for a siege of four or five days could have been readily transferred to the heights by a road made some months previous. There are abundant springs of good and cool water gushing out from its rocky and wooded sides. When these and the other heights came into the possession of the enemy, surrender or destruction were the only alternatives to Col. Miles. If his entire force had been transferred to Maryland Heights, the Confederate force present could not for many days have taken Harper's Ferry. By the terms arranged for the surrender, the officers were allowed to go on parole with side arms and private property, and the privates with everything except equipments and guns. The forces which surrendered were as follows:

Col. Downye, 3d Maryland Home Brigade.....	600	65th Illinois.....	850
Col. Maulsby, 1st Maryland Home Brigade.....	900	Graham's battery..	110
115th New York...	1,000	McGrath's battery.	115
120th New York...	1,000	15th Indiana batt'y.	142
39th New York....	530	Phillips's N. Y. battery.....	120
111th New York...	1,000	Potts's battery....	100
125th New York...	1,000	Rigby's battery ...	100
32d Ohio.....	654	Scatt'd companies.	50
12th New York S.M.	504	Officers connected with Headquarters and Commissary Department	50
37th Ohio.....	900		
9th Vermont.....	800	Total.....	11,583

The following guns were surrendered: 12

2-inch rifled, 6 James's rifled, 6 24-pound howitzers, 4 20-pound Parrott guns, 4 12-pounders, 4 12-pound howitzers, 2 10-inch Dahlgrens, 1 50-pound Parrott, and 6 6-pound guns.

The Federal loss in killed and wounded was reported at about two hundred; the Confederate loss has not been stated. In the latter part of the year the circumstances attending this surrender were examined by a court of inquiry at Washington, in accordance with whose suggestions Col. Ford and other officers were dismissed from the United States army. The conduct of Col. Miles was stated in their report to have exhibited "an incapacity amounting almost to imbecility."

The surrender of this position with so little resistance was followed by serious consequences. It took place on the 15th. On the next day, the 16th, most of the Confederate force left it in great haste, crossed the pontoon bridge into Maryland, and joined Gen. Lee at Antietam in time to engage in the great battle on the next day, the 17th. Without the assistance of this force Gen. Lee's army would undoubtedly have been badly defeated and his retreat into Virginia probably cut off. That the importance of their aid was known to their commander, is manifest from the haste of the evacuation and the subsequent celerity of their movements. By their arrival the Confederate army outnumbered the Federal army in the battle of Antietam.

The battle on which was staked "the invasion of Maryland" in the view of the Federal, and "the deliverance of Maryland" in the view of the Confederate Government, but in reality the sovereignty of the Union, was now near at hand.

On the morning of the 15th the whole right wing and centre of Gen. McClellan's forces were pushed forward in pursuit of the enemy, who were found in the strong position made memorable by the battle of the Antietam. The troops were not up in sufficient force to make the attack on that day; but soon after night fell the greater part were in bivouac behind the heights on the left bank of the Antietam, sheltered from, but within range of the enemy's batteries.

On the left the three divisions of Gen. Franklin were ordered to occupy Roherville, and to push in the direction of Brownsville in order to relieve Harper's Ferry if possible. During the morning Gen. Franklin received intelligence of the surrender of Harper's Ferry, and found the enemy in force in a strong position near Brownsville. As he had but two divisions with him, the third not having yet arrived, he was not in sufficient force to dislodge the enemy, and was obliged to content himself with watching them and endeavoring to hold them in check.

The morning of the 16th was occupied in reconnoissances of the enemy's position, in rectifying the position of the Federal troops, and perfecting the arrangements for the attack. Very sharp artillery firing took place without any material loss on the Federal side. The position of Gen. McClellan's forces on that morning was as follows: Gen. Hooker's corps was on the right, next that of Gen. Sumner, with Gen. Mansfield's corps in the rear; in the centre was Gen. Porter's corps, only two divisions being present; on the left was Gen. Burnside's ninth corps. Gen. Franklin was still in Pleasant Valley.

At about 3 P. M., Gen. Hooker crossed the Antietam by the bridge in the village on the Hagerstown road and an adjacent ford, and soon gained the crest of the height on the right bank of the stream. He then turned to his left and followed down the ridge under a strong opposition, until brought to a stand still by the darkness. During the evening Gen. Mansfield was ordered to follow Gen. Hooker so as to be in a position to support him at daybreak.

At daylight on the 17th, Gen. Hooker attacked the forces in his front, and for a time drove them before him. The enemy however rallying, and strengthened from their supporting columns, repulsed him. Gen. Mansfield's corps was then drawn to Gen. Hooker's support, and the two masses repelled the enemy. Gen. Mansfield was killed and Gen. Hooker wounded at this crisis, and obliged to withdraw from the field. Shortly afterward Gen. Sumner's corps reached this portion of the field and soon became hotly engaged. This corps suffered greatly at this period of the contest, Gens. Sedgwick and Crawford being wounded, and portions of the line were compelled to fall back. The enemy were here, however, checked by the Federal artillery. Gen. Franklin shortly arrived to the relief of Gen. Sumner's line with two divisions of his corps, one of which, that of Gen. W. F. Smith, drove back the enemy and recovered the lost ground. The enemy did not retake it. Gens. Richardson's and French's divisions held the extreme left of the Federal right with tenacity during the day. Gen. Richardson was wounded.

In the centre Gen. Porter's corps was held as a reserve with cavalry and horse artillery.

The contest on the right had been most obstinate, and the several corps which participated in it had lost heavily.

Gen. Burnside's corps on the left was ordered early in the day to carry the bridge across the Antietam at Rohrback's farm, and to attack the enemy's right. The approaches to the bridge being in the nature of a defile, and being swept by batteries of the enemy, the opposite bank of the Antietam was only reached after a severe struggle. It was afternoon before the heights were in his possession. The enemy were driven back, and a portion of their line in disorder. By the most desperate efforts, however, the enemy rallied their retreating regiments, strengthened their line with all their available fresh troops, and opened batteries on the hills, from positions which the amphitheatrical character of the ground, it seems, abundantly furnished. Gen. Burnside

could not maintain his advantage, and was obliged to withdraw from the extreme position which he had gained near Sharpsburg to one slightly in rear of it. He, however, held his bank of the river completely, and maintained much ground beyond it which he had taken from the enemy. During the advance on the left Gen. Rodman was wounded.

The Federal artillery is represented to have played an important part during this battle.

Notwithstanding substantial and decided successes of the day, the Federal forces had suffered so severely during the conflict, having lost 11,426 in killed and wounded, and among them many general and superior officers, that it was deemed prudent by Gen. McClellan to reorganize and give rest and refreshment to the troops before renewing the attack. The 18th was accordingly devoted to those objects. On the night of the 18th, however, Gen. Lee withdrew his forces hastily across the Potomac, abandoning further contest with the Union forces, and yielding all hope of further remaining on the Maryland soil.

The Confederate army is supposed to have lost nearly 30,000 men during its brief campaign in Maryland. The Federal forces captured 39 colors, 13 guns, more than 15,000 small arms, and more than 6,000 prisoners.

On the 20th, Harper's Ferry was evacuated by the Confederate troops, which fell back in the direction of Charlestown and Winchester. Gen. McClellan took a position along the left bank of the Potomac, and active movements were suspended for a short time in order to prepare for a vigorous advance.

Early in June the guerilla operations became troublesome in some of the lower counties of Kentucky. At Madisonville, in Hopkins county, a descent was made by a small body of them at night. The county clerk's office was broken open and the records of the court carried off or destroyed. In other cases horses and other property were taken. Their own friends, equally with Union citizens, were robbed. In Jessamine, Mercer, Boyle, and Garrard counties bridges over the streams were burned. On the 5th of July Lebanon was taken. It is at the termination of the Lebanon branch of the Louisville and Nashville road. About the same time Murfreesborough in Tennessee was captured by a strong guerilla force under Col. Forrest. Vigorous opposition was however made by the small body of Federal troops stationed there. The 9th Michigan regiment, however, was captured entirely by surprise, with Brig.-Gens. Duffield and Crittenden, of Indiana. On the 18th of July an attack was made by Col. John Morgan on a small Federal force stationed at Cynthiana, Ky. Subsequently he was overtaken near Paris by Gen. Green C. Smith and defeated. About the same time Henderson was occupied by citizens of Kentucky and other States, acting the part of guerillas, and the hospital and other stores carried off. At the same time Newburg, in Indiana, on the Ohio river, was occupied by a band from Kentucky. They soon, however, left. The activity of the bands under Col. Morgan produced a great excitement in the interior of the State. Many towns were visited and much plunder obtained. It had been his conviction that large numbers of the citizens would flock to his standard. In this he was greatly mistaken, and the indifference and hostility of the people, together with the preparations to resist him, checked his movements. Active operations continued in Tennessee, whither Col. Morgan retired. Clarksville was captured with large military stores, and about the 22d of August a considerable body of Confederate cavalry attacked the Federal force at Gallatin, and after a severe contest repulsed the latter.

The increase of guerilla operations in Kentucky about the 1st of September, with the manifestations of the existence of a Confederate force, indicated some hostile movements. It was soon known that the Confederate general E. Kirby Smith was approaching from Knoxville in Tennessee. On the 22d of August he left Jacksborough with a train of one hundred and fifty wagons, and passed through Big Creek Gap. So difficult were some parts of the route in Tennessee that for two or three days the rear of the trains was only able to reach at night the point from which the advance started in the morning. Rations failed, and the men were obliged for several days to subsist on green corn. Hungry, thirsty, footsore, and choking with dust, his men marched steadily on to a land of plenty. The ordnance stores were brought safely through without the loss of a wagon. On Saturday, August 30, a battle took place between his forces and a Federal force near Richmond, Ky., in which the latter were defeated. Richmond is the capital of Madison county, situated about fifty miles south-southeast of Frankfort, the capital of the State. The Federal force there consisted of one Ohio regiment and five Indiana regiments and part of a sixth, two Kentucky regiments, all raw troops, and a squadron of Kentucky cavalry, under the command of Brig.-Gens. Mahlon D. Manson and Crufts, with nine field pieces. It made an attack upon this Confederate column under Gen. Smith at Rogersville about four miles from Richmond, and after a severe battle, continuing from six o'clock in the morning until night, it was entirely defeated, with a large number killed and wounded and with the loss of eight field pieces. Gen. Nelson, who had come from Lexington, arrived at the commencement of the retreat, and endeavored to rally the troops, was wounded and obliged to retire. At that time the Legislature of the State was in session, and it met on Sunday evening, and passed resolutions adjourning to Louisville, &c. The archives of the State and about one million of treasure from the banks of Richmond, Lexington, and Frankfort were transferred during the night to Louisville.

At the same time the governor of the State issued the following proclamation:

FRANKFORT, KY., *August* 31, 1862.

To the People of Kentucky:

A crisis has arisen in the history of the commonwealth which demands of every loyal citizen of Kentucky prompt and efficient action. The State has been invaded by an insolent foe, her honor insulted, her peace disturbed, and her integrity imperilled. The small but gallant army, raised upon the emergency of the occasion for her defence, under the brave and chivalric Nelson, has met with a temporary reverse, and the enemy is advancing for the accomplishment of his purpose—the subjugation of the State. He must be met and driven from our border, and it is in your power to do so. I, therefore, as Governor of the Commonwealth, deem it my duty to call upon every loyal citizen of Kentucky to rally to the defence of the State; not a moment is to be lost. I appeal to you as Kentuckians, as worthy sons of those who rescued the dark and bloody ground from savage barbarity, by the memories of the past of your history, and by the future of your fame, if you are but true to yourselves, to rise in the majesty of your strength and drive the insolent invader of your soil from your midst. Now is the time for Kentuckians to defend themselves. Each man must constitute himself a soldier, arm himself as best he can, and meet the foe at every step of his advance. The day and the hour, the safety of your homes and firesides, patriotism and duty, alike demand that you rush to the rescue. I call upon the people, then, to rise up as one man, and strike a blow for the defence of their native land, their property, and their homes. Rally to the standard, wherever it may be nearest, place yourselves under the commanders, obey orders, trust to your own right arm and the God of battle, and the foe will be driven back, discomfited and annihilated. To arms! to arms!! and never lay them down till the Stars and Stripes float in triumph throughout Kentucky. I but perform my duty in thus summoning you to the defence of your State, and I am assured that it will be promptly responded to. I promise that I will share with you the glory of the triumph which surely awaits you.

Done in the city of Frankfort, this 31st day of August, 1862.

(Signed) JAMES F. ROBINSON.

By the Governor,

D. C. WICKLIFFE, Secretary of State.

On the 2d the Confederate advance guard entered Lexington. All the Government stores had been previously safely removed. The stock of horses and mules had also been sent off, and all the cars withdrawn from the railroad.

In explanation of the object of the invasion, Gen. Smith issued the following proclamation:

KENTUCKIANS: The army of the Confederate States has again entered your territory under my command.

Let no one make you believe we come as invaders, to coerce your will, or to exercise control over your soil. Far from it. The principle we maintain is, that government derives its just powers from the consent of the governed.

I shall enforce the strictest discipline, in order that the property of citizens and non-combatants may be protected. I shall be compelled to procure subsistence for my troops among you, and this shall be paid for.

Kentuckians: We come not as invaders, but liberators. We invoke the spirit of your resolutions of 1798. We come to arouse you from the lethargy which enshrouds your free thought, and forebodes the political death of your State.

We come to test the truth of what we believe to be a foul aspersion, that Kentuckians willingly join the attempt to subjugate us, and to deprive us of our property, our liberty, and our dearest rights.

We come to strike off the chains which are riveted upon you. We call upon you to unite your arms, and join with us in hurling back from our fair and sunny plains the Northern hordes who would deprive us of our liberty, that they may enjoy our substance.

Are we deceived? Can you treat us as enemies? Our hearts answer NO! E. KIRBY SMITH,
Major-General C. S. A.

On the 6th Frankfort, the capital of the State, was quietly occupied by about fifteen hundred Confederate cavalry. The government of the city was reorganized, and recruiting stations opened. The guerilla force, under Col. Morgan, also joined Gen. Smith.

Meanwhile, on the first approach of the Confederate force toward Lexington, excitement commenced in Cincinnati, and preparations for defence began to be made. Gen. Lewis Wallace took command of Cincinnati, Covington, and Newport on the 1st of September. Martial law was declared, and on the next day all places of business in Cincinnati were ordered to be closed at nine o'clock in the morning, and the citizens were required to assemble at ten o'clock and organize for defence. The street railroad cars were stopped, and no male citizen was allowed to leave. Preparations to throw up intrenchments and to fortify the city were immediately commenced. This excitement extended into the interior of the State and into the adjoining State of Indiana. The governor of Ohio issued the following proclamation:

CINCINNATI, *September* 2, 1862.

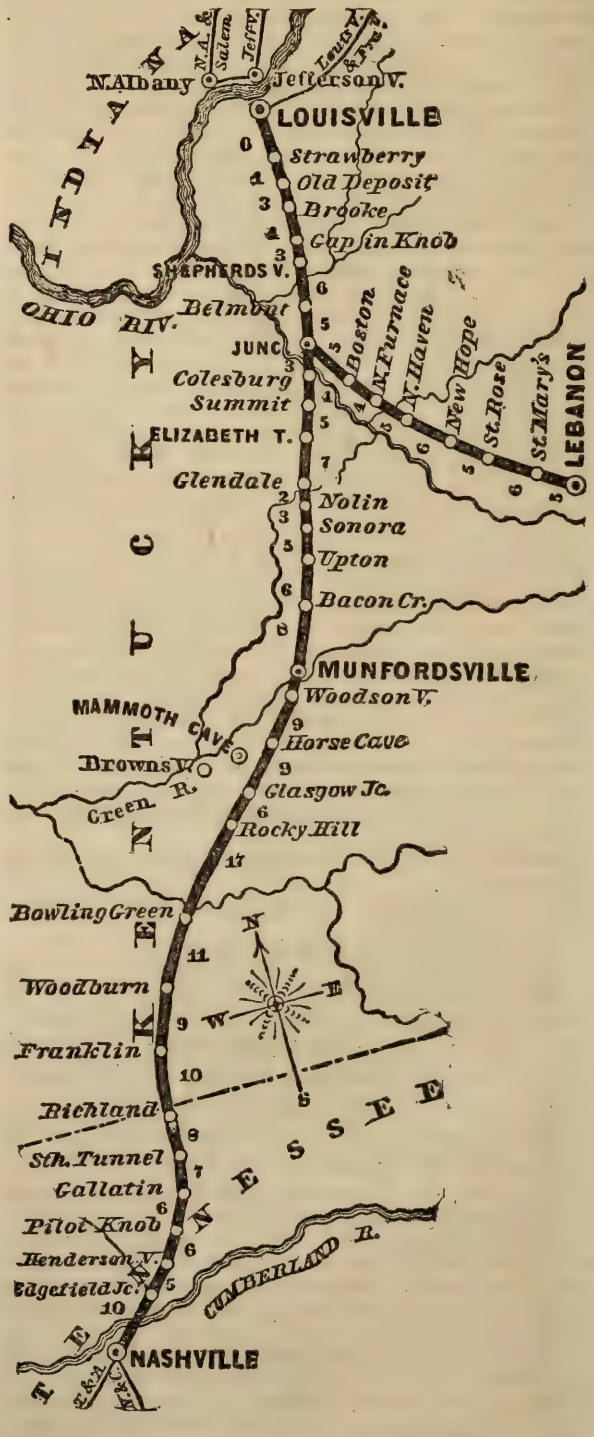
To the Loyal People of the River Counties:

Our southern border is threatened with invasion. I have, therefore, to recommend that all the loyal men of your counties at once form themselves into military companies and regiments to beat back the enemy at any and all points he may attempt to invade our State. Gather up all the arms in the country, and furnish yourselves with ammunition for the same. The service will be of but few days' duration. The soil of Ohio must not be invaded by the enemies of our glorious Government. DAVID TOD, Governor.

About the 10th of June Gen. Buell left Corinth with the main body of his army for Chattanooga. On reaching Huntsville he appointed Gen. Rousseau to command the division of his army previously under Gen. Mitchell, and completely reorganized the state of affairs in that part of his department. Depredations by soldiers were stopped, discipline restored, and order established. His army then took positions at Battle Creek, Huntsville, and McMinnville. At the same time the Confederate general Bragg massed his army at Chattanooga and Knoxville. This was done by suddenly moving his force from Tupello, in Mississippi, through the States of Alabama and Georgia, and thus reaching Chattanooga in advance of Gen. Buell. It was divided into three corps under Maj.-Gens. Wm. J. Hardee, Leonidas Polk, and E. Kirby Smith, each of which numbered about fifteen thousand men. The two former of these officers had been at Corinth, and their forces consisted of some of the troops which evacuated that place, increased by new levies under the conscription law. The division of Gen. Smith was stationed at Knoxville, where it safely remained while Chattanooga was occupied by the corps of

Gens. Hardee and Polk. Gen. Smith moving from Knoxville succeeded in flanking the Federal general G. W. Morgan, and with no battle of any consequence, except at Tazewell, effected the design of getting into his rear, and thence advanced into Kentucky as above stated. The next movement was made by the other two corps, for the purpose of forming a junction with Gen. Smith after he had reached Lexington. Accordingly, on the 21st of August, Gen. Bragg crossed the Tennessee river at Harrison, a few miles above Chattanooga, and turning the left of Gen. Buell he marched westward by the mountain road to Dunlap, which he reached on the 27th. His force then consisted of five regiments of cavalry, thirty-six of infantry, with forty pieces of field artillery. Thence he moved up the Sequatchie Valley, and reached Pikeville on the 30th. On the same day he threw a large force forward toward McMinnville, the capital of Warren county, Tennessee, and seventy-five miles southeast of Nashville. The Confederate cavalry advanced far toward McMinnville, and one or two smart skirmishes took place with the Federal cavalry thrown forward from that point. In the mean time the rest of the Confederate army moved northeast toward Crossville, and on the 1st of September reached the mountains at that place, having ascended the Grassy Cave road, while the force thrown toward McMinnville was suddenly withdrawn, and followed the main army. On the 5th of September this Confederate force entered Kentucky, and moved on toward Bowling Green. On the 13th of September an advance of this force appeared before Munfordsville, at the crossing of the Louisville and Nashville railroad, over Green river, and demanded its surrender. Col. Wilder then in command refused, and early on the next morning an attack was made by the Confederate force, under Gen. Duncan, who after a struggle of seven hours was repulsed. The force at Munfordsville, which had been stationed there for the protection of the bridge, consisted of three thousand one hundred infantry with four pieces of artillery. The Federal loss was eight killed and twenty wounded. The Confederate loss was larger. The attack was renewed again on the 16th with great spirit, and on the next day the place was surrendered by Col. C. L. Dunham, who had arrived with his regiment, and then had command. The troops surrendered consisted of the 17th, 60th, 67th, 68th, 69th Indiana, a company of Louisville cavalry, a part of the 4th Ohio, and a section of the 13th Indiana battery; amounting in all to about four thousand five hundred men, and ten guns. The bridge over the Green river was burned at this time.

During this period Gen. Buell had not been idle. While on the Tennessee river, near Chattanooga, his army was dependent on Louisville as its base for the supply of provisions and munitions. To render this available it was necessary to protect over three hundred miles of railroad, over which every pound of these supplies had to be transported. Every care which prudence could suggest was exercised to retain the command of this road. Stockades were built, and guards were stationed at the places most liable to attack, but they were not able



to resist the dashes of the Confederate cavalry, who in many cases were aided by the sympathies of the local residents. In the meanwhile the Confederate conscription act had been rigidly enforced, and a large army under Gen. Bragg was massed near Chattanooga, as above stated, the definite object of which was long unknown. For several weeks the utmost vigilance was exercised over the enemy at Dechard, McMinn-

ville, and the valley of the Sequatchie before it was assuredly ascertained where he intended to strike his blow. It was expected that Nashville was the point he desired to reach, but subsequent movements soon made it evident that was not the projected point of attack. Finally despatches to Gen. Bragg were intercepted, which proved conclusively that Louisville in Kentucky was the point toward which the Confederate strategy was directed. This was to be effected by forced marches of the Confederate force without supplies, subsisting on the country, and reaching the city when in a condition unprepared for defence. It was then intended to destroy the canal around the falls of the Ohio, to seize all the public stores, and to hold the city, under the impression that the Federal army would make no effort to recover it, for fear of injuring it by a bombardment.

While Gen. Bragg made his way slowly toward the Cumberland river, which he struck at Carthage, Gen. Buell was on his left flank, at Lebanon, guarding against his approach to the city of Nashville. The march of Gen. Bragg was commenced on the 21st of August, as above stated, and all the way he was felt by Gen. Buell, whose object was to guard the railroad as much as possible, and allow his enemy to get no distant start of him. All this time Gen. Buell was drawing his supplies from the depots, collecting at Nashville and Bowling Green; but Gen. Bragg was warmly received in many places, and bountifully supplied by friends. Gen. Buell harassed his rear as long as possible, shelled him out of Woodsonville, and forded the Green river and drove him out of Munfordsville, and followed him along the turnpike road from Nashville to Louisville, until the road through Hodgenville to the east was reached, into which Gen. Bragg's forces defiled. It was evident from the movement of Gen. Bragg that he was hurrying in a direction in which he expected to find Gen. E. K. Smith, Gen. Humphrey Marshall, and Col. Morgan with their forces, with whom he could unite and make a combined attack on Louisville. Gen. Buell, however, was forced by the need of supplies to move directly to the city, around which his army encamped.

The chief object of this Confederate movement upon the State of Kentucky was to obtain supplies of meat. There were more hogs and cattle in the State available for general consumption, two or three to one, than were left in all the South besides. The grain growing and provision raising country which stretched from the Potomac at Harper's Ferry to Memphis, on the Mississippi, was now exhausted of its provisions. Much of the productive portions of North Carolina, and of the Gulf States, were also exhausted, and a general scarcity existed. Wheat was two dollars and a half per bushel in the heart of a fine wheat country, and cattle sold for seven cents gross per pound in the chief cattle-raising region of the whole South. Pork could not be had at an advance of four hundred per cent. At the same time it was thought that a powerful force might secure the State to the Southern Confederacy.

On the 18th of September Gen. Bragg issued the following address to the people of the State:

GLASGOW, KY., *September* 18, 1862.

Kentuckians! I have entered your State with the Confederate army of the West, and offer you an opportunity to free yourselves from the tyranny of a despotic ruler. We come, not as conquerors or despoilers, but to restore to you the liberties of which you have been deprived by a cruel and relentless foe. We come to guarantee to all the sanctity of their homes and altars; to punish with a rod of iron the despoilers of your peace, and to avenge the cowardly insults to your women. With all non-combatants the past shall be forgotten. Needful supplies must be had for my army, but they shall be paid for at fair and remunerating prices.

Believing that the heart of Kentucky is with us in our great struggle for Constitutional Freedom, we have transferred from our own soil to yours, not a band of marauders, but a powerful and well-disciplined army. Your gallant Buckner leads the van. Marshall is on the right, while Breckinridge, dear to us as to you, is advancing with Kentucky's valiant sons, to receive the honor and applause due to their heroism. The strong hands which in part have sent Shiloh down to history, and the nerved arms which have kept at bay from our own homes the boastful army of the enemy, are here to assist, to sustain, to liberate you. Will you remain indifferent to our call, or will you not rather vindicate the fair fame of your once free and envied State? We believe that you will, and that the memory of your gallant dead who fell at Shiloh, their faces turned homeward, will rouse you to a manly effort for yourselves and posterity.

Kentuckians! We have come with joyous hopes. Let us not depart in sorrow, as we shall if we find you wedded in your choice to your present lot. If you prefer Federal rule, show it by your frowns, and we shall return whence we came. If you choose rather to come within the folds of our brotherhood, then cheer us with the smiles of your women, and lend your willing hands to secure you in your heritage of liberty.

Women of Kentucky! Your persecutions and heroic bearing have reached our ear. Banish henceforth, forever, from your minds the fear of loathsome prisons or insulting visitations. Let your enthusiasm have free rein. Buckle on the armor of your kindred, your husbands, sons, and brothers, and scoff with shame him who would prove recreant in his duty to you, his country, and his God.

BRAXTON BRAGG,
General Commanding.

From Munfordsville the Confederate force moved toward Bardstown, Glasgow, and the central part of the State. Thence guerillas in large and small bands scoured almost every other portion, penetrating in various places to the Ohio river, and even making dashes to within four or five miles of Louisville. Every day, during which they continued these operations, was estimated to afford them a gain of a hundred thousand dollars, and to bring a loss to the loyal people of at least two hundred thousand. Everything which could be of use to the army or to the Southern people was seized. Hundreds of drovers almost daily took away horses, cattle, and hogs, and almost interminable trains were hauling away bacon, pork, and all kinds of breadstuffs. Regarding Kentucky as belonging to the Confederacy,

the conscription act was enforced, and men were forced into the ranks of the Confederate army by the point of the bayonet. The stores of the towns were ordered to be opened, and the goods taken and paid for in Confederate scrip.

On the 1st of October Gen. Buell, who had been previously removed from command and reinstated again, moved from Louisville, where he had lost thousands by desertion, to meet the Confederate force, and on the 4th his army arrived at Bardstown. On the previous day a force of Gen. Bragg had evacuated that place. This force consisted of about sixty-five regiments, averaging about three hundred men each, and amounting in total to twenty thousand. It moved from Bardstown in the direction of Springfield. The force of Gen. Buell was stated by the general-in-chief to number about one hundred thousand men. From the first approach of the Confederate forces, every effort had been made to collect new troops at Cincinnati and Louisville, and to fortify these places against a *coup de main*. To give confidence to the new levies, a portion of Gen. Grant's army was withdrawn from Mississippi and sent to Kentucky and Cincinnati.

The army of the Ohio, as Gen. Buell's force was designated, was now divided into three corps, commanded by Gens. Gilbert, Crittenden, and McCook. The new regiments sent to Louisville were placed in brigades with the old ones, which had seen nearly a year's service. On the march from Louisville the corps of Gen. McCook, forming the left wing, took the road to Taylorsville, Gen. Gilbert the road to Shepherdsville, and Gen. Crittenden, forming the right wing, the road to Bardstown. With the latter corps Gen. Buell moved.

On the 4th, Richard Hawes was inaugurated at Frankfort as Confederate Provisional Governor, and on the same day the city was evacuated, and he retired with the troops.

On the 6th the army of Gen. Buell arrived at Springfield, sixty-two miles from Louisville. Its slow progress had been owing to its numbers, the difficulty of the route and the conflicts with the Confederate rear guard. The main body of the Confederate army was twenty-four hours in advance when Gen. Buell left Louisville, and thus far had been constantly gaining. The order of Gen. Bragg to his rear guard was to prevent the arrival of Gen. Buell at Bardstown before the 4th, if possible, in order to give time to the Confederate wagon train to gain an advance of some twenty miles. Gen. Crittenden's corps only entered the place, and those of Gens. McCook and Gilbert kept on toward Springfield, retaining their position on the left and centre. Gen. Crittenden followed on the 5th. On the 7th it was reported to Gen. Buell that a considerable Confederate force was at Perryville, forty-two miles south of Frankfort. The three army corps were then marching on that place by different roads. Gen. Buell determined to surround the enemy, if possible, and ordered all the divisions to march without delay, leaving behind their transportation. Gens. McCook and Gilbert continued their march, but Gen. Crittenden lost half a day on a circuitous route to obtain water. Gen. Bragg, learning of the united approach of the Union forces, immediately began to retreat. It was the design of Gen. Buell that the three corps should participate in the battle, but Gen. Bragg hearing of the delay of Gen. Crittenden, immediately determined to fight the corps of Gens. McCook and Gilbert, and defeat them if possible, and then to fall upon Gen. Crittenden or to retreat before his arrival. The Confederate general Hardee's corps, which had retreated six miles, was accordingly ordered back in haste to Perryville. Suddenly, on the 8th, Gen. McCook found himself in front of the Confederate line of battle, with his men marching in columns, and without skirmishers in advance, nothing in front but a small advance guard which attempted to attack the enemy's outpost. The Confederate infantry rushed forward and a division of raw troops had to be formed in line of battle under a heavy fire. The raw troops fled in confusion, but the old troops stood their ground. Gen. McCook had approached Perryville by the Knoxville road. Gen. Gilbert had marched direct from Springfield, and had arrived within two miles of Perryville on the preceding evening, the 7th. To Gen. McCook's request for reënforcements, they were ordered from Gen. Gilbert's corps. At the same time Gen. Crittenden was ordered to push forward on the Lebanon road to attack the Confederate left. The advance of Gen. Gilbert's reënforcements arrived at half-past three o'clock in the afternoon to support Gen. McCook on the left. His forces were found badly cut up and hotly pressed by the Confederate force, having retreated nearly a mile. The contest continued violent until dark, the Federal force retiring from the field. During the evening Gen. Crittenden's corps came up, but no movement was made till noon of the next day, when it was ascertained that the Confederate force had retired. The Federal loss was about four hundred and sixty-six killed, among whom were Brig.-Gens. Jackson and Tyrrell, fourteen hundred and sixty-three wounded, and one hundred and sixty missing. The Confederate loss was nearly the same. The forces of Gen. Bragg, which he had been able to draw from all quarters, were now about sixty thousand. The arrival of Gen. Crittenden's corps undoubtedly induced Gen. Bragg to continue his retreat. On that evening the Federal troops returned to Perryville.

It was now expected that Gen. Bragg would make a stand at Camp Dick Robinson. The position of this place is such that it can easily be defended against an approach in front by a few batteries on the cliffs which line Dick river. It, however, can be easily flanked. It was the plan of Gen. Buell, therefore, to make a feint in front and a strong attack on the flank of the Confederate position. Accordingly, Gen. Crit-

tenden was ordered to march to Dick river, giving the semblance of a contemplated attack in front. Gens. McCook and Gilbert were to approach by different roads, so as to cut off the escape of Gen. Bragg and leave to him no alternative but to fight or surrender. By the night of the 12th the entire army of the Ohio was within a mile of Danville, which is forty-two miles south of Frankfort, in one of the most fertile and highly improved parts of the State. But Gen. Bragg penetrated the designs of his antagonist in consequence of a retrograde movement by the advance of Gen. Crittenden's corps, under Gen. Wood, and determined to frustrate them. His spoils loaded heavily nearly four thousand wagons, a majority of which were branded with the letters U. S., having been captured during the year; in addition there were several thousand head of cattle, a thousand mules, and as many sheep.

The following statement from a highly creditable source at Lexington, Ky., has been made of property taken by Gen. Bragg's forces:

We were here in Lexington and saw something of the removal of Government stores, and witnessed the plunderings of the Confederate armies of our dry-goods stores, groceries, &c. Upon the resumption of the publication of our paper ("Observer") we stated that an immense amount of Government stores, amounting perhaps to $1,000,000, besides arms sufficient to arm eighteen or twenty thousand men, were taken off, and we stated precisely the truth, and there are hundreds here who will bear us out in the statement. We are not inclined to think the "Richmond Examiner" far wrong when it published that the "wagon train of supplies brought out of Kentucky by Gen. Kirby Smith was forty miles long, and brought a million yards of jeans, with a large amount of clothing, boots, and shoes, and 200 wagon loads of bacon, 6,000 barrels pork, 1,500 mules and horses, 8,000 beeves, and a large lot of swine."

From the city of Frankfort it is stated that 74,900 yards of jeans were taken from the establishment of Mr. Watson. From one concern in this city (Lexington) they took $106,000 worth of jeans and linseys, from another $10,000 worth, another $9,000, another $10,000, another $5,000. These different amounts in woollen goods we know to have been removed from this city, as we have the names before us from whom they were taken. Aside from this, in boots, shoes, &c., we know of $30,000 worth that they carried off, and also have the names to show from whom the goods were taken. From one house seven boxes of new Springfield rifles and nine boxes of muskets, with all the tents belonging to Metcalf's cavalry, forty kegs of horse shoes, and one hundred and twenty boxes belonging to four regiments, containing clothing and subsistence. The articles taken from this house were valued by the Confederates themselves at more than $10,000, and they so declared at the time. The Adams Express office was robbed of everything it contained. All the goods that had been sent and deposited in the establishment from all parts of the country were seized and appropriated. For four weeks, during the stay of the enemy here, a train of cars were running daily to Nicholasville, bearing away mess pork and other articles necessary to the subsistence of armies, while trains of wagons—huge in number—were moving out on the Richmond, Versailles, and Nicholasville roads, day and night, loaded with valuable commodities. We were here and saw and know what occurred, and can prove what we assert. Lexington afforded the Confederates, when they entered it, the richest harvest they have reaped during the war, and nothing is to be made by disguising the fact.

On the night of the 11th the evacuation of Camp Dick Robinson commenced. The destination of Gen. Bragg was Cumberland Gap. Two routes for retreat were open to him, both leading to that point; one by the way of Richmond and Big Hill, through Madison county, and the other, called the Crab Orchard road, by the way of Mt. Vernon and Barboursville. These two roads converge at Pitman's Junction, twenty-two miles from Mt. Vernon, and fifty-eight miles from Cumberland Gap.

At midnight, on the night of the 12th, orders were received from the headquarters of Gen. Buell at Perryville, by the army encamped near Danville, for an immediate advance. Transportation of all kinds was ordered to remain behind. Only ambulances were to accompany the troops. Gen. Buell had been informed of the retreat of the Confederate army. At one o'clock the army was in motion toward Stanford, nine miles from Danville, a town through which it was supposed the Confederate force was then retreating. The march was rapid, and the advance arrived in time to see the rear of the Confederate rear guard pass unmolested. Two or three regiments of cavalry, one of which was the Texan Rangers, and two howitzers, was the force of this rear guard. Familiar with the topography of the country, and taking advantage of it whenever favorable to themselves, these troops were able to conceal their small numbers and to check the Union advance until late in the afternoon. Having thus accomplished their object, which was to gain time for the main body, they then retired toward Crab Orchard. From a few prisoners, taken by the Union troops, they learned that the main body of Gen. Bragg's army and half his wagon train had passed through Stanford on the previous day, and the other half of the wagon train had gone safely through Lancaster, and were retreating on the Richmond and Big Hill road. That night the Union army encamped at Stanford. Early the next morning, the 14th, it was on the march, and soon reached Crab Orchard, a distance of ten miles. As it approached the town, the Confederate rear guard made its appearance drawn up in battle array. It had taken possession of two hills, and was in a good position to make a formidable resistance for a short time. This caused the Federal column to halt. The artillery was then brought up into position, a line of battle was formed, a reconnoissance made, an advance of skirmishers thrown out, and other details performed which caused a delay of several hours. During all this time the army of Gen. Bragg was unmolested and in full retreat. When all the Federal preparations were complete, the Confederate rear guard hastily retired. The Union advance, on the next day, reached Mt. Vernon. On the next day, the 16th, the division of Gens. Van Cleave and Smith were ordered forward; the rest of the advance halted. At this time Gen. McCook's corps and a part of Gen. Gilbert's were at Crab Orchard, and all the cavalry had

been ordered to the rear in consequence of the difficulty of obtaining forage in the mountainous region. On the hills and in the defiles between Mt. Vernon and the State line, ten thousand men would be as effective as forty thousand in resisting an army. The pursuit of the Confederate forces now lost all of its importance.

The result of the invasion of Kentucky was undoubtedly regarded by the Confederate leaders as successful in obtaining supplies, but they were greatly chagrined at the tardiness of the Kentuckians to rally around the Confederate standard. The desertions from their force exceeded the number of recruits obtained. The Confederate forces now retired into east Tennessee, and Gen. Buell fell back to the line between Louisville and Nashville, where he was superseded in the command by Major-Gen. Rosecrans, under the orders of President Lincoln. Col. Morgan, with a small guerilla force, still remained in the State. The invasion of eastern Kentucky, by the Confederate forces, cut off the line of communication between the Federal forces at Cumberland Gap in east Tennessee and the north. It was followed by the evacuation of that strong position by the Union General, G. W. Morgan.

Cumberland Gap is south and a little east of Lexington, Ky., and about one hundred and fifty miles distant. It is a natural gap in a mountain nearly eighty miles in length. There are other places in this long mountain which are called gaps, but this name is given more from the fact that the summit at those places is of more easy access than because of any natural depression of the mountain. At the place called Roger's Gap, next to Cumberland, and eighteen miles west, there is actually no gap; but the road, taking advantage of a succession of ridges on the northern side and running diagonally on the southern side, is rendered passable by man and beast, and may, by great exertions, be passed over by wagons and cannon. The distance from the beginning of the ascent on the one side to the ending of the descent on the other is a little more than five miles. Sixteen miles further west is Big Creek Gap, the crossing at which is a little more difficult.

The mountain on each side of Cumberland Gap is about twelve hundred feet high. In the gap it is only four hundred feet. The road through the notch is a good one. On the southern side the mountain is abrupt in some places and almost perpendicular, and the summit is inaccessible without the greatest danger, except by entering the gap and ascending on either the right or left. The northern side is more irregular, breaking off in a succession of smaller mountains and hills, to the valley lying between the gap and Cumberland Ford. But the main mountain towers far above its neighbors. Two roads from Lexington, Ky., lead to the gap. One passes through Nicholasville, Crab Orchard, and Mt. Vernon, by the way of Wild Cat. The other passes through Richmond, by way of Big Hill. From London, Ky., there is but one road. It is flanked on each side by a succession of hills and mountains, and passes through Barboursville, and crosses the Cumberland Ford. Wagons or cannon could scarcely pass by any other route.

This position was important to the Confederate Government, as by its occupation in force they could hold possession of east Tennessee, and prevent any approach from the north to cut their northern railroad line of connection between Richmond and northern Alabama, Mississippi, Nashville, Memphis, and other towns on the Mississippi. Its occupation was also necessary to sustain their advance into eastern Kentucky. A small Confederate force, therefore, took possession of the gap soon after the commencement of hostilities. On the other hand, its possession was important to the Federal Government, as thereby it prevented the invasion of Kentucky from the southeast. It was also the stronghold of east Tennessee, a section in which there existed among the people a stronger and more invincible attachment to the Union than in any other portion of the seceded States. After the defeat of the Confederate forces in southeastern Kentucky, under Gen. Zollicoffer, a body of Federal troops advanced in the direction of Cumberland Gap. On the 15th of February, they were encamped near Cumberland Ford, about ten miles from the gap, which was then occupied by about two thousand Confederate soldiers. Scouting parties were sent out from the camp near the ford, one of which penetrated the gap and captured a few prisoners. On the 13th of March, another expedition consisting of about 12 companies of infantry and 86 cavalry, started from camp near Barboursville, Ky., and crossing the mountain near Big Creek Gap, after four days reached Powell's Valley, five miles from Jacksborough, where a body of about four hundred Confederate cavalry was surprised and routed, and their camp taken possession of. Another body at Jacksborough, about two hundred in number, was next driven out. After remaining four days, the Federal force retired. On the 21st, a strong expedition moved upon the gap and made an attack, and cannonading ensued without any important result except developing the Confederate strength. The Confederate occupation of the gap continued without any serious interference until Chattanooga was occupied by the forces of Gen. Mitchell, as has been stated. This led to its evacuation about the 10th of June. Previous to that date, Gen. Geo. W. Morgan, with a division of Union troops, advanced from Cumberland Ford, and crossing at Roger's Gap, prepared to cut off the supplies for the small force then at Cumberland Gap. Their stock at the time was small; the Confederate forces under Gen. E. K. Smith had moved south from east Tennessee, and the Union forces at hand being large, and threatening in front and rear, no alternative remained to the

garrison but to surrender or evacuate the position. On the 14th of July, an expedition was sent against a body of Confederate cavalry at Wallace Cross Roads, and after a brief skirmish the latter retired. Again, on the 9th of August, Col. De Courcy was on a foraging expedition with the 16th and 42d Ohio, 14th and 22d Kentucky, when the 14th Kentucky, being advanced a short distance beyond Tazewell, was attacked by the 11th and 42d Tennessee, 30th Alabama, and 21st Georgia, under Col. Rains. A severe conflict ensued, in which the Confederate forces were compelled to retire before the artillery that was brought to the aid of the Federal forces.

On the 17th of August, a small Confederate force approached in front of the position, and attacked a body of Union cavalry some two miles out in the valley, who were compelled to retire with a loss of two or three killed and wounded. Their camp, however, was protected from the approach of the Confederate force by the guns on the mountain. On the same day information was received by Gen. Morgan that a large Confederate force had appeared at Barboursville and London, Ky., and captured his supply trains nearly as far back as Crab Orchard. Its object was to hold the Blue Grass region of Kentucky, and ultimately to force the entire division of Gen. Morgan to surrender or hastily evacuate the position. The comparative success of Gen. Bragg in his movements in Kentucky, cut off all the communications of Gen. Morgan, and by Sept. 11, his corn was all gone and nothing remained for his troops but a scanty supply of beans and rice. The force, however, had not remained inactive during this period; about three hundred prisoners and two hundred horses had been captured. The destitute condition of the force for clothes and food, caused the evacuation of the gap by Gen. Morgan on the 17th of September. On that day the 23d Indiana and the 9th Ohio battery left with all the ammunition. During the succeeding night all the troops left except a squad that remained to finish the work of destruction. The magazine was blown up, and the commissary building burned. Nothing but ammunition and a few of the most useful cooking utensils were brought away. Tents, wagons, gun carriages, arms, and accoutrements were changed to a mass of fragments and ashes. The line of retreat was two hundred and fifty miles with a large Confederate force intervening. But the position was one of the strongest in the country, and Gen. Morgan had represented that his supplies were abundant. By the 4th of October the division reached the Ohio river. It had foraged on the country, but suffered at times for water. During the entire march, a Confederate cavalry force harassed the retreat. During nineteen nights the troops bivouacked without a tent. New roads were made, trees cut out, provisions gathered, a hovering enemy kept at check, and a large force brought safely through to the borders of Ohio.

This body of troops under Gen. Morgan numbered more than ten thousand men. It brought twenty-eight pieces of artillery, six of which were 20-pounder siege guns, and four hundred wagons. Four heavy siege guns were destroyed before evacuating the gap, and a large number of sick men were left behind.

The march was through a mountainous and unproductive country. A court of inquiry was subsequently ordered to investigate the causes of this evacuation. The position has been subsequently occupied by a small Confederate force.

It has been stated, that on the advance of the Confederate army from Richmond to attack the forces of Gen. Pope, troops were summoned by the general-in-chief from points adjacent to come to his support. Among others a portion of the troops of Gen. Cox in western Virginia were brought on to unite with the army of Virginia. The effect of thus reducing the force in western Virginia was an invasion by a Confederate force under Gen. Loring. He advanced up the Kanawha Valley as far as Charleston, which he occupied for some time. His troops were finally required to reënforce Gen. Lee's army, when he retired. The chief advantage derived from this invasion by the Confederate people was the seizure of the salt works in the Kanawha Valley. Perhaps there was no article of which they were so destitute in comparison to its importance as salt. It was exchanged by the Confederate colonel Echols, who had charge, for forage for his troops. Affairs remained in this situation until the return of Gen. Cox's forces early in November, when the Confederate forces retired.

It has also been stated that, on the invasion of Kentucky by Gen. Bragg, a portion of Gen. Grant's troops were withdrawn from Mississippi and sent to Kentucky and Cincinnati to give confidence to the new levies, and to reenforce Gen. Buell. The consequence of the withdrawal of these troops was to induce the Confederate officers to renew their operations in north Mississippi and western Tennessee. On the departure of Gen. Halleck to take the position of general-in-chief, Gen. Grant was put in command of the department of west Tennessee, including the districts of Cairo and Mississippi, that part of the State of Mississippi occupied by Federal troops, and that part of Alabama which might be occupied by the troops of his particular command, including the forces heretofore known as the army of the Mississippi.

In the department of Gen. Grant it became apparent in August that the Confederate forces south of his position had assumed a threatening attitude upon his line between Corinth in Mississippi, and Tuscumbia in Alabama. On the 10th of September the 2d brigade of Gen. Stanley's division, commanded by Col. Murphy, evacuated Tuscumbia, and fell back thirty

miles upon Iuka. On the next day the Ohio brigade, which had been occupying Iuka, fell back to Corinth, leaving the force with Col. Murphy in its place. Scarcely, however, had it reached Corinth before information was received that a body of Confederate cavalry had dashed into Iuka, and after a slight skirmish put the force of Col. Murphy to flight. A considerable amount of medical and commissary stores was captured, among which were six hundred and eighty barrels of flour that Col. Murphy had neglected to destroy. Col. Murphy was immediately placed under arrest by Gen. Rosecrans, who now commanded the forces previously under Gen. Pope, and the brigade was ordered back to Iuka under Col. Mower, It, however, finally reached the neighborhood of Jacinto, and was there instructed to await further orders. The preparations of the army for an active campaign were now commenced. Transportation and baggage were reduced, and the supply of tents cut down. At this time information was received that the Confederate general Price had not only occupied Iuka in force, but was endeavoring to cross the Tennessee river for the purpose of getting in the rear of Gen. Buell, then falling back toward Nashville. It was also a part of the plan of Gen. Price, by his movement upon Iuka, to draw the Federal forces away from Corinth, and thus render its capture easy by Gen. Van Dorn, who was to attack it during the absence of Gen. Grant's forces. The design was then formed by Gens. Grant and Rosecrans to cut off the retreat of Gen. Price, and force him to surrender. For this purpose eighteen thousand men under Gens. Grant and Ord were to move by way of Burnsville, and attack Gen. Price, while Gen. Rosecrans should move with part of his force by the way of Jacinto, and attack him on the flank; at the same time the remainder of Gen. Rosecrans' force was to move on the Fulton road and cut off Gen. Price's retreat if he should attempt it. With this understanding the army was put in motion on the morning of the 18th of September. The divisions of Gens. Stanley and Hamilton under Gen. Rosecrans, after a fatiguing march in a drenching rain, bivouacked at Jacinto. Early the next morning they were again on the march, and at ten o'clock the advance encountered the Confederate pickets at Barnett's Corners. A sharp skirmish ensued, which resulted in driving them six miles toward Iuka, with a small loss. At this time the entire column had arrived at Barnett's Corners, and awaited, according to the previous understanding, for Gen. Grant to commence the attack, which would be known by the sound of his artillery. After two hours had elapsed a despatch arrived from Gen. Grant, seven miles distant, to the effect that he was waiting for Gen. Rosecrans to open the battle. The column was immediately moved forward within two miles of Iuka, when the Confederate force was discovered posted on a broad ridge commanding the country for some distance. The Confederates opened fire upon the skirmishers as they advanced in sight, under which Gen. Hamilton's division formed in line. They were also received by a hot fire of artillery and musketry, which was replied to by the 11th Ohio battery, that had now got into position. The engagement soon became general, and continued for two hours, when darkness prevented any further advantage to either side. The contest was exceedingly fierce, and the troops behaved with great bravery. The 11th Missouri and the 5th Iowa stood the severest portion of the contest, and the former lost seventy-six, and the latter one hundred and sixteen in killed and wounded. The 11th Ohio battery was exposed to a severe fire of musketry, and in less than half an hour seventy-two of its men were killed or wounded. The Confederate officers, perceiving that it was poorly supported, ordered a charge to be made on it, by which the six guns were captured, and two of them spiked. It was afterward retaken twice by the 5th Iowa at the point of the bayonet, but finally fell into the possession of the Confederates. The night was spent in taking care of the wounded and burying the dead, while the troops lay on their arms awaiting the dawn of the next day to renew the battle.

Early in the morning, as no movement was perceived on the part of the Confederate force like renewing the contest, Gen. Rosecrans ordered his line of pickets to advance. Not meeting with any opposition the whole force was thrown forward, and within a half mile of the town a flag of truce was seen approaching. It reported that Gen. Price had evacuated the town during the night. Pursuit was immediately made and kept up by three companies of cavalry during the day, skirmishing with the Confederate rear guard, and capturing many prisoners. The loss of Gen. Rosecrans's force was 148 killed, 570 wounded, and 94 missing. The Confederate loss was supposed to be larger in killed and wounded, and about one thousand prisoners were taken by Gen. Rosecrans. At Iuka the six pieces of the 11th Ohio battery were found, having been abandoned, and also a large number of wounded, and commissary stores and camp equipage. Among the killed were the Confederate generals Lytle and Berry. Gen. Whitfield also was mortally wounded. The road by which Gen. Price retreated being unobstructed, he marched that day twenty-seven miles to Bay Spring.

The force of Gen. Grant left Corinth at the same time when Gen. Rosecrans marched, and reached Burnsville, Miss., in the afternoon. There it remained one night and the next day, and then pushed forward until it met the Confederate pickets. Then it retired and awaited the next morning, when a flag of truce was sent to the Confederate camp, which did not return until late in the afternoon. Thus while Gen. Rosecrans engaged the Confederates on the south, Gen. Grant was prevented from engaging them on the west and north.

The effect of this battle was to relieve Gen. Buell from all danger of an attack by Gen. Price on his rear, while moving against Gen. Bragg. On the 22d Gen. Grant's forces returned to Corinth, and Gen. Rosecrans to Jacinto. Gen. Van Dorn through delays had not reached Corinth as soon as had been planned, and Gen. Grant by now abandoning Iuka reached the former place in advance of Gen. Van Dorn. On the 26th Gen. Rosecrans proceeded to Corinth, and took command of that position, Gen. Grant having been ordered to Jackson, and Gen. Ord to Bolivar. Jackson is forty-seven miles, and Bolivar nineteen miles by railroad north of Grand Junction, which is forty-one miles by railroad west of Corinth. By the ordinary routes Jackson is fifty-one miles north, and Bolivar forty miles northwest of Corinth. Meantime, Gen. Price retreating southwesterly from Iuka by Bay Spring, reached Baldwin, Miss., thirty miles. Thence he moved northwest to Dumas, fifteen miles, where he joined Gen. Van Dorn; thence to Pocahontas, thirty miles, where he was joined by Gen. Lovell; thence down the Chewalla, and from thence to Corinth by the old State Line road. Gen Van Dorn took the chief command at Dumas.

Meanwhile Gen. Rosecrans, anticipating that an attack would be made on his position at Corinth, prepared to meet it. The fortifications constructed by Gen. Beauregard in the beginning of the year were on the north and east, and two miles from the centre of Corinth, and required an immense force to occupy them. After Gen. Halleck took possession of the town he constructed a line of intrenchments inside those of Gen. Beauregard. Afterward, upon consultation between Gens. Grant and Rosecrans, it was determined to construct a line inside that of Gen. Halleck. This was done under the direction of Capt. Prim of the U. S. engineers. It consisted of a chain of redoubts, arranged for the concentric fire of heavy batteries. Learning the approach of the Confederate forces, Gen. Rosecrans ordered Gen. Ogleby with his brigade to proceed up the Chewalla road and meet them, with instructions to resist strongly enough to draw them under the defences of Corinth. McArthur next went forward and sent back for assistance. Gen. Davis was then ordered to send a small force, but moved with his whole division. This occupied the 30th of September, and the 1st and 2d of October. On the 3d the Confederate force was greatly increased, and the fighting became severe; Gen. Oglesby was wounded, and Gen. Hackelman killed, and the loss in killed, wounded, and prisoners was considerable, and the Union troops were driven back to their defences.

On the north and east of Corinth, hill and swampy ground alternate, which is on the whole heavily timbered. On the left hand side of the railroad there is occasionally an open field. The Union army faced to the north. On the front of its right centre there was a heavily thicketed swamp almost impassable for masses of infantry. On the left centre the ground was quite hilly. Where the right wing was posted it was rolling, but fell off in front into heavily timbered ground, such as to be swampy in rainy weather. The Chewalla road enters the town on the left, and the Bolivar road on the right centre. Excepting at this last named point Corinth was approachable in an unbroken line of battle. The new line of fortifications consisted of four revetted redoubts, covering the whole front of the town, and protecting the flanks. The front of the extreme right was strengthened by the old works of Gen. Beauregard. On the left of the extreme right, which was held by Gen. Hamilton's division, a new five-gun battery was constructed on the night of Friday the 3d. This was in direct range of the point where the Bolivar road entered the town. The previously mentioned fort on the extreme right flanked that road. The hills over which the Chewalla road entered the town were commanded by Fort Williams, which mounted twenty-pounder Parrotts. On a high, narrow ridge was located Fort Robinson, which with Fort Williams enfiladed both the Chewalla and Bolivar roads. Another fort on the extreme left protected the left and strengthened the centre. Several forts in the rear were so located as to be of much service during the action. Their guns were reversed, and turned toward the centre.

On the extreme right was stationed the division of Gen. Hamilton. Its right rested near the fort first mentioned and the old works of Gen. Beauregard, and stretched from the south side of the road to Purdy. Its left rested behind Fort Richardson. On the left Gen. Davies' division joined it, and in consecutive order six companies of Illinois sharpshooters and Burke's Missouri sharpshooters; Gen. Stanley's division, consisting of two brigades, and Gen. McKeon's division, with Gen. Arthur's brigade, were on the extreme left. The cavalry, under the command of Col. Misener, was stationed on the wings and in the rear. Suitable forces were held as reserves and to protect the rear. The front line was covered by crests of undulations on the surface. On the night of the 3d, the Confederate line was formed within a thousand yards of the Union position. Before daybreak the Confederates were heard at work planting a battery on a hill in front of and about 200 yards from Fort Robinett, and soon after they opened a furious fire on Corinth. At daylight, the Parrott guns in Fort Williams opened upon this Confederate battery and in a few minutes silenced it. Two of the guns were removed, but the third was taken and drawn within the Federal line. Skirmishing also opened at various points in front, which was constantly increasing to the magnitude of a battle. The Confederate lines, however, were still invisible. About half past nine o'clock dark and threatening masses of Confederate troops were sud-

denly discerned on the east of the railroad moving up the Bolivar road. They assumed a wedge-like form and advanced impetuously. It was now manifest that the Confederate force had been enticed to attack at the very point where the Federal artillery could sweep it with direct, cross, and enfilading fire. These batteries rent hideous gaps in those massive lines, but they were closed at once and inflexibly pressed forward. Suddenly the Confederate force extended to the right and left, and approached covering the whole field. In front of them, however, was a broad turfed glacis sloping upward to a crest, fringed with determined soldiers and covered with frowning batteries. The few obstructions from fallen timber produced no disorder in the approaching lines but what was quickly restored. The entire Federal line next opened fire, but the Confederate forces, as if insensible to fear, steadily pressed forward undismayed. As they approached the crest of the hill in front and to the right of Fort Richardson, the division of Gen. Davis, although not in immediate danger, began to fall back in disorder. Gen. Rosecrans, seeing the disgraceful scene, dashed forward inflamed with indignation and began thrashing the fugitives with the blade of his sabre. His staff, and even his orderlies, followed his example, and the panic was checked and the line restored. Much space was thus lost, and the enemy reached the headquarters of Gen. Rosecrans and took possession. The loss of fort Richardson now appeared certain. The Confederates gained the crest of the hill, swarmed around the little redoubt, and were swept away. Again they came like infuriated tigers, and with a yell made a desperate dash before which the battery, unsupported, gave way. The guns were seized, but before they could be manned, the 56th Illinois, rising from cover in the ravine, fired a deadly volley and with a shout made a sweeping charge, before which the Confederates fled. When the division of Gen. Davis broke, it was necessary for all to fall back, but this charge of the 56th Illinois recovered the ground. The whole line advanced, and the Confederates were broken and fled to the woods, whither they were pursued. The attack on the Federal right was made by Gen. Price. On the left Gen. Van Dorn was expected to make a simultaneous approach and thus carry Corinth by assault. In the extension of the Confederate right, artificial obstructions interfered. Gen. Van Dorn was obliged to move with his left over a rugged ravine through dense thickets and over a heavy abatis up hill. His centre moved down hill under the fire of Fort Williams, the siege guns in the rear of the town, and under heavy musketry. His right was obliged to move round a ridge and advance over almost insurmountable abatis under the direct fire of both Fort Williams and Fort Robinett well supported by experienced troops. Gen. Van Dorn's advance had necessarily been slower than that of Gen. Price, and the latter was overwhelmed and defeated when the former was ready to commence the attack. His forces advanced steadily, with troops from Mississippi and Texas in front. Huge gaps were made through their ranks by the great guns of the batteries, but they closed and at once moved unflinchingly onward. The slaughter was great, but none wavered. As they reached the ditch a pause, as if for breath, was made. That pause was fatal to them. The two redoubts, Fort Robinett and Fort Williams, were on the same ridge, and the former, which was in front, was commanded by the latter. They were about 150 yards apart. The Ohio brigade, Col. Fuller commanding, was formed behind the ridge on the right of the redoubts. The left of the 63d Ohio rested on Fort Robinett, and its right joined the left of the 27th Ohio; the 39th Ohio was behind the 27th supporting it; the right of the 43d Ohio joined the left of the 63d, forming a right angle with it, and extending to Fort Williams behind the crest of the ridge. The 11th Missouri was formed behind the 63d Ohio, with its left in the angle and the regiment facing obliquely to the right of the 63d. The brigade were required to lie flat on their faces, and reserve their fire until the Confederates were close upon them. At the moment when the Confederate advance paused, as above stated, the 63d Ohio was ordered to fire. An officer has thus described the scene which ensued: "There were only 250 of the 63d in the conflict, but their volley was fearful. It is said 50 Confederates fell at once. Six volleys were fired and the enemy was gone. The 63d again lay down. Directly the supporting Confederate brigade advanced. The 63d was ordered to make a half left wheel to sweep the front of the redoubt, and the manœuvre was handsomely executed. The 11th Missouri moved on the left into line into the vacant space; the 43d moved by the right of companies to the left, and the 27th half-faced to the left. Suddenly the enemy appeared, and a furious storm of lead and grape was launched at them. The 63d fired five or six volleys and the enemy rushed upon them. A terrific hand to hand combat ensued. The rage of the combatants was furious and the uproar hideous. It lasted hardly a minute, but the carnage was dreadful. Bayonets were used, muskets clubbed, and men were felled with brawny fists. Our noble fellows were victors, but at a sickening cost. Of the 250 of the splendid 63d, 125 lay there on the field, wounded, dead, or dying. The last final struggle terminated with a howl of rage and dismay. The foe flung away their arms and fled like frightened stags to the abatis and forests. The batteries were still vomiting destruction. With the enemy plunging in upon him, brave Robinett, with his faithful gunners of the 1st U. S. artillery, double shotted his guns and belched death upon the infuriate host, and now he sent the iron hail after the fugitives with relentless fury. The abatis was full of them,

but they were subdued. Directly they began to wave their handkerchiefs upon sticks in token of submission, shouting to spare them "for God's sake." Over 200 of them were taken within an area of a hundred yards, and more than 200 of them fell in that frightful assault upon Fort Robinett. Fifty-six dead were heaped up together in front of that redoubt, most of whom were of the 2d Texas and 4th Mississippi."

The battle was now over. It had begun in earnest about 9 o'clock, and at half past 11 the Confederate force was falling back. The front was so thoroughly masked that it was late in the afternoon before it could be determined whether a second assault was intended. Pursuit in force could not be attempted before rations and ammunition were provided. It was 3 o'clock on the morning of the next day, Sunday the 5th, before the column moved in light order and swiftly. The vigor and determination with which Gen. Rosecrans would pursue a flying foe may be understood from his views expressed to his officers: "Follow close; force them to pass to the rear; compel them to form often in line of battle and so harass and discourage them; prevent them from communicating from front to rear; give them no time to distribute subsistence; don't let them sleep." Meantime, after the Confederate force had retired, Gen. McPherson arrived with 3 regiments from Jackson, and led the van of the pursuit.

The Confederate force retreated by the route on which they had advanced, which was the Chewalla road. It was necessary for them to cross the Tuscumbia river in the neighborhood of Pocahontas. They sent a body of troops to protect the Hatchie river bridge, which is two miles from the bridge across the Tuscumbia. On the 4th Gens. Ord and Hurlbut, from Gen. Grant's force, moved down and encountered this detachment and defeated it, capturing a large number of prisoners and two batteries of 6 guns. The Federal loss here was 50 killed, 493 wounded, and 17 prisoners. This action compelled the Confederate force to retrace their steps and by making a wide circuit they finally crossed the Hatchie at Crum's Mill, about 6 miles farther up. Gen. Rosecrans, however, continued the pursuit to Ripley, whence he was ordered by Gen. Grant to return. He captured nearly 1,000 prisoners, part of the Confederate ammunition and baggage trains, and 11 guns. The Federal loss at Corinth was stated at 315 killed, 1,312 wounded, and 232 prisoners, taken chiefly on Friday, and two Parrott guns. The additional effects of the battle are thus stated by Gen. Rosecrans in an address to his troops, dated October 25:

I have now received the reports of the various commanders. I have now to tell you that the magnitude of the stake, the battle and the results, become more than ever apparent. Upon the issue of this fight depended the possession of west Tennessee, and perhaps even the fate of operations in Kentucky. The entire available force of the rebels in Mississippi, save a few garrisons and a small reserve, attacked you. They were commanded by Van Dorn, Price, Villipigue, Rust, Armstrong, Maury, and others in person. They numbered, according to their own authorities, nearly 40,000 men—almost double your own numbers. You fought them into the position we desired on the 3d, punishing them terribly; and on the 4th, in 3 hours after the infantry went into action, they were completely beaten. You killed and buried 1,423 officers and men; some of their most distinguished officers falling—among whom was the gallant Colonel Rogers, of the 2d Texas, who bore their colors at the head of his storming column to the edge of the ditch of "Battery Robinett," where he fell. Their wounded, at the usual rate, must exceed 5,000. You took 2,268 prisoners, among whom are 137 field officers, captains, and subalterns, representing 53 regiments of infantry; 16 regiments cavalry; 13 batteries of artillery; 7 battalions; making 69 regiments, 13 batteries, 7 battalions, besides several companies. You captured 3,300 stands of small arms, 14 stands of colors, 2 pieces of artillery, and a large quantity of equipments. You pursued his retreating columns 40 miles in force with infantry, and 69 miles with cavalry, and were ready to follow him to Mobile, if necessary, had you received orders. I congratulate you on these decisive results; in the name of the Government and the people, I thank you. I beg you to unite with me in giving humble thanks to the Great Master of all for our victories.

After the battle at Corinth and the pursuit of the Confederate force, the troops of Gen. Grant returned to their respective positions. Gen. Rosecrans, on the 25th of October, was ordered from Corinth to Cincinnati to take command of the forces preparing for a new campaign. On the 4th of November the forces of Gen. Grant advanced from Jackson and Bolivar to Lagrange, 3 miles east of Grand Junction on the Cairo and New Orleans railroad. The scattered forces of Gens. Van Dorn and Price had rallied and were within 20 miles of the same place, at Cold Water and Holly Springs, Mississippi. Their numbers had not been increased by reënforcements, but they had been rendered more effective by concentration. The forces of Gen. Grant had been slightly increased by the new levies. His army was required to garrison Columbus, Humboldt, Trenton, Jackson, Bolivar, Corinth, and Grand Junction, and was now designated as the army of west Tennessee. The position of the army was unchanged until near the end of November. It required reënforcements and supplies. Active efforts were made to repair the Memphis railroad in order that supplies might be brought from that point instead of Columbus in Kentucky. The distance to the latter place is 138 miles, and to the former, from Lagrange, 49 miles. On the south a small body of troops was thrown forward a few miles to Davis's Mills, and on the west a heavy force had been stationed at Moscow. On the 28th, however, the advance of Gen. Hamilton's corps began to move in the direction of Holly Springs, which place was reached on the 29th. By the 1st of December, Gen. Grant's forces had arrived and were chiefly encamped at Lumpkin's Mills, south of Holly Springs, and 7 miles north of the Tallahatchie river. The Confederate force had retired to the river. At the same time that the movement was commenced from Davis's Mills, a division of Gen. Curtis's army left Helena,

Ark., for the purpose of making a flank movement on the Confederate force on the Tallahatchie and getting in their rear, and thus cutting off their retreat while the main army advanced upon them. On the river extensive fortifications had been thrown up as if for the purpose of making a determined stand against the prog-

ress of the Federal army. These, however, were abandoned on Dec. 1 by Gen. Van Dorn, and his forces retired farther south. It was supposed that information of the flank movement from Helena led to the evacuation of his strong position on the Tallahatchie. On the 2d his rear guard passed through Abbeville, and on the 3d through Oxford, with some sharp skirmishes with the Federal advance. On the 4th Gen. Grant's headquarters were at Oxford. The main body of the army was at Abbeville. As it advanced, the bridges and culverts of the railroad were repaired, the track restored, and the cars run. At the same time the Confederate force continued to fall back toward Grenada, presenting only a strong rear guard.

Meantime the expedition from Helena abovementioned, moved on the 27th of November with seven thousand men under Gen. Alvin P. Hovey. On the next day he crossed the Tallahatchie. The passage was disputed by Confederate pickets without loss. On the 30th a second skirmish occurred at the Yacknapatapha, after the crossing of which the Confederate forces retired toward Coffeeville. The next movement of Gen. Hovey was to cut the Mississippi Central railroad and the telegraph line. The railroad line was destroyed for a considerable distance. The Confederate communication on the Mississippi and Tennessee railroad for a short distance was next cut near Panola, by a cavalry force sent out by Gen. Hovey under Col. Washburn. In executing this order, on Dec. 1, Col. Washburn unexpectedly encountered a cavalry force near Oakland, on the Mississippi and Tennessee railroad, and a sharp skirmish ensued. The superiority of the Federal artillery soon put an end to it, and the Confederate forces retired in the direction of Coffeeville, with a loss of five killed, several wounded, and about fifty taken prisoners. The loss of Col. Washburn was fifteen men wounded and fifteen horses killed. The steamboats and small craft on the Tallahatchie river were destroyed, and two locomotives and some cars on the railroad, and the expedition then returned to Helena. The effect of this movement was to cause the Confederate force under Gen. Pemberton to fall back from the Tallahatchie, evacuate Grenada, and retire toward Canton, under the impression that the entire command of Gen. Grant was very strong. The effect of the return of this force to Helena was to restore the confidence of the Confederate general Van Dorn, and an attack upon Gen. Grant's rear, in order to cut off his supplies, was immediately organized, and on the 20th, while Gen. Grant's headquarters were at Oxford, an attack by surprise was made on the garrison at Holly Springs, thirty miles north, by a considerable force of cavalry, to whom the place was surrendered. The prisoners were paroled, the immense stores collected there for Gen. Grant's army were destroyed, also a large quantity of cotton which had been purchased of the people in the vicinity. On the same day a similar attack was made at Davis's Mills, a little farther north, which was bravely repulsed. Near Jackson, in Tennessee, previously the headquarters of Gen. Grant, an attack was made on the 19th by a body of cavalry with artillery, under Col. Forrest. It was first made upon a train loaded with wood. The telegraph wire was also cut,

and the road destroyed. On the next day Humboldt was captured, and an attack was made on Trenton, which was soon surrendered by Col. Fry in command. The railroad depot was burned with all the stores and cotton in it. Other stations on the road, as Dyer, Rutherford, and Keaton, were taken on the same day. The purpose was to destroy every bridge on the railroad from Columbus to Corinth and Grand Junction, and thus cut off the route for supplies to Gen. Grant's army. The consequence of destroying his depot of supplies, and disturbing his line of communication, was to make Gen. Grant fall back upon Holly Springs. Subsequently Col. Forrest's force was entirely routed by Col. Sweeney.

Meanwhile troops had been collected at Cairo and Memphis, for an expedition against Vicksburg. This had been done within the department of Gen. Grant, and the commander of the expedition, Gen. Sherman, was stationed at Memphis in the same department, and under the command of Gen. Grant. It was an object of Gen. Grant's movements into Mississippi, just related, to reach Jackson in the rear of Vicksburg, and thus coöperate with Gen. Sherman. In this design he was unsuccessful, and obliged to fall back in consequence of the attacks on his line of communication. After falling back upon Holly Springs, a division of his troops was sent to join Gen. Sherman. The future proceedings of Gen. Grant and of this Expedition properly belong to the record of 1863.

The second campaign in Kentucky and Tennessee during the year was virtually ended. The forces of Gen. Grant were reduced by a detachment of ten thousand men to aid Gen. Sherman in the capture of Vicksburg, which was a part of the new campaign.

Meanwhile the calls of the President for six hundred thousand additional troops were producing their effect. Vast forces were gathering, and new campaigns were about to commence. The great march of the Northwest sweeping everything before it to the Gulf of Mexico, was now to be made. The Government had found that the Western people would bear no longer with its futile efforts to open the Mississippi and to seize the Southern valley. "What we need," said President Lincoln, "is a military success;" money and men had been promptly furnished to the full extent of the request.

This new campaign contemplated the advance of a powerful army under Gen. Rosecrans through Tennessee into Alabama; the movement of a military and naval expedition from Cairo upon Vicksburg; the coöperation of an expedition under Gen. Banks from New Orleans, and thence into Texas; and an advance from Missouri upon Arkansas; and also from Kansas upon the Indian country and northern Texas. Thus the Federal Government would not only open the Mississippi river, but occupy all the Southwestern States, and reduce the Confederate forces to the limits of the Atlantic States.

On the 25th of October, Gen. Rosecrans was ordered to Cincinnati to take command of the army of the Ohio, as already stated. This command consisted of what remained of the splendid army of Gen. Buell, reënforced by new but raw levies, until it became the second army in size of the United States. The preparation for his campaign was no ordinary effort.

The new troops were to be drilled, disciplined, and made reliable; equipments, arms, horses, and stores of every kind were needed.

The country in which he proposed to march had just been swept of its forage by two armies—that of Gen. Buell, and that of Gen. Bragg. His supplies must come from the States of the Northwest. Only two routes existed for their conveyance: the Cumberland river, which was at too low a stage of water for successful navigation, and the Louisville and Nashville railroad, on which the bridges had been burned, and the tunnel at Gallatin destroyed. The work of preparation and organization was vigorously begun, and his army soon began to move southward. On the 1st of November Gen. Rosecrans moved to Bowling Green, and on the 5th three divisions of Gen. McCook's corps moved farther on their way to Tennessee.

The commanders of the corps of the whole army were Gens. Thomas, McCook, Rousseau, and Crittenden. On the 7th the corps of Gen. McCook passed through Nashville.

The Louisville and Nashville railroad was completed on the 8th to Mitchellsville on the northern line of Tennessee. On the 10th, Gen. Rosecrans arrived at Nashville, and from that time to the close of the year he was constantly engaged in concentrating, reorganizing, reëquipping, and disciplining his army, accumulating supplies by the railroad, of which there was only a single track, and preparing for a forward movement. As early as the 25th of November, the Confederate army manifested a purpose to contest the occupation of middle Tennessee. The railroad bridge at Bridgeport was repaired and troops hurried to Murfreesborough. Gen. Joseph Johnston had been placed in command of this Confederate department, although unable to engage in active field operations. The Confederate forces were stationed at Lavergne, Murfreesborough, McMinnville, &c. Their numbers, under Gen. Bragg, were estimated at forty-five thousand effective men. He had been led to believe by the spies of Gen. Rosecrans that the latter intended to go into winter quarters at Nashville, and had despatched one body of cavalry under Gen. Forrest to cut off Gen. Grant's communication, and another body under Col. Morgan to cut the communication of Gen. Rosecrans in Kentucky, and also a body of infantry to the Confederate army of Mississippi. This appeared to be the opportunity for Gen. Rosecrans to strike an effective blow. At this time, the Federal army

occupied a line of about ten miles on the southeasterly front of Nashville facing south, the right resting on the right of the Franklin turnpike, the centre extending out to Breakville on the Nolinsville turnpike, and the left covered by Mill Creek, some six or eight miles from Nashville, with outposts describing an irregular semicircle, covering a distance of nine miles from the city. To this front the Confederate army presented its force with outposts about two miles distant. Gen. E. Kirby Smith's corps, with part of Col. Morgan's cavalry, occupied the Confederate right; the corps of Gen. Polk, with Col. Wheeler's cavalry brigade, occupied the centre at Lavergne; Gen. Hardee's corps at Triune and Nolinsville, with Col. Wharton's cavalry in front, occupied the left. On the night of the 25th, Christmas, the determination for an advance the next day was made. The respective columns were so disposed as to move down Wilson's, the Nolinsville, Murfreesborough, and Jefferson turnpikes. The general plan was to move a brigade down Wilson's turnpike to protect the right, while Gen. Negley should endeavor to turn the Confederate left and get into its rear; Gen. McCook's corps was to press directly upon Gen. Hardee at Nolinsville and Triune, while Gen. Crittenden pushed down the Murfreesborough and Jefferson turnpikes. At dawn on the 26th, the troops broke up camp with wild shouts and poured along the highways. Gen. McCook's corps marched steadily down the road with skirmishers widely spread out. The Confederates resisted sharply, but were steadily driven, the Federal loss being small. Gen. Crittenden advanced to Lavergne without opposition. The Confederates retired rapidly before his skirmishers. On the next day, the 27th, the Confederate force continued to retire as the Federals advanced with sharp skirmishing. At four o'clock P. M., the Confederate right had been driven over the bridge across Stewart's Creek, on the Jefferson turnpike, which they were prevented from destroying. They were also driven over the bridge across the same creek on the Murfreesborough turnpike so rapidly as to be unable to destroy it. Both structures came into the possession of the Federal forces, all the columns of which had now closed up. It was now apparent from the course of the Confederate retreat that their purpose was to concentrate near Stone Creek or river. On Sunday the 28th, Gen. Thomas advanced his camp across Stewart's Creek, and joined the left. Next day, Gen. McCook moved within seven miles of Murfreesborough, and Gen. Crittenden moved within three miles, Gen. Negley advanced to the centre, and Gen. Rousseau's division was placed in reserve, on the right of Gen. Crittenden. On the 30th, Gen. McCook advanced through thickets, stubbornly resisted by the Confederates, and pressed Gen. Hardee's corps in his front in line of battle. The front of this Confederate corps crossed the Federal right obliquely, in a position which, if extended, would flank it. The centre, under Gen. Negley, was slightly advanced into a cedar wood, and was engaged in reconnoitring under sharp resistance, and in cutting roads through the dense forest to open communication with the right. The left was in a line corresponding with the course of Stone river. The right division of Gen. McCook now faced to the southeast, and two brigades were thrown out on the extreme right, somewhat in reserve. The Confederate force was concentrated within two miles of Murfreesborough, with its right resting on the Lebanon turnpike, thence extending west across Lytle's Creek and the Nashville turnpike, and under the command of Gen. Leonidas Polk. It consisted of three divisions under Gens. Cheatham, Breckinridge, and Buckner. The Confederate centre was composed of three divisions of Gen. E. Kirby Smith; the left was under the command of Gen. Hardee, and rested on the Franklin and Murfreesborough road. This position of the Confederate army gave to it the advantage of strong natural fortifications, with their centre effectually masked by almost impenetrable cedar forests. Constant skirmishing was going on between both forces, and it was manifest that another day would witness the impending battle. At this time assaults were made by cavalry on the Federal rear, and several trains were captured. During the night it was evident that the Confederate forces were massing on the right of Gen. Rosecrans, and his plan was formed to give ground a little, if necessary, on that wing, and to advance the left at the same time into Murfreesborough. The execution of this purpose was prevented by the great force of the Confederate attack on the right.

Early on the morning of the 31st, the attack was made along the entire line of the Federal right under Gen. McCook. The weather was foggy, and the appearance of the Confederate force was sudden. No preparations up to this time for an advance or an assault had been made. An attack very early in the morning had been anticipated; but as it did not come, a degree of carelessness and indifference had taken possession of both officers and men, and all precautions were in a degree abandoned. The opposing lines of the two hostile wings had formed on the opposite sides of a valley which narrowed toward the Federal left. Gen. McCook's corps consisted of three divisions which formed this line. On the left was the division of Gen. Sheridan, in the centre that of Gen. Davis, and on the right that of Gen. Johnson. The attack was made along the entire front at once by the Confederate force, rapidly advancing in double columns. Before the divisions of Gens. Johnson and Davis could form, the Confederate batteries opened upon them, and their infantry soon after became engaged at short range, rapidly advancing and preparing to charge bayonets. Two batteries of Gen. Johnson's division were taken before a gun was fired; and the irregular fire of

the others, many of which had no horses near at hand, and the desultory fire of the incomplete line did not cause the Confederate line to waver, much less repulse it. One brigade of Gen. Johnson's was broken and fled to the rear, leaving the artillery they should have supported, and the men were shot down at the guns. The rest of the division fell back, and with them a few of the guns. The line of Gen. Davis's division, which was attacked at the same time, was also imperfectly formed. In vain it attempted to hold its position. Like that of Gen. Johnson, it was crushed and broken, and three entire batteries lost. The division of Gen. Sheridan, when first assailed, withstood the shock, and forced back the Confederate line; but when the division of Gen. Davis was driven back it stoutly resisted, and endeavored to hold the position until the others could be rallied in the rear, and advanced to its support. The effort, however, was unsuccessful, and like the others, his division retreated. The divisions of Gens. Johnson and Davis had in the mean time formed in the rear, and endeavored to stay the Confederate progress. They were unsuccessful, but maintained their line and fell back in good order, and again formed at the first good position. In like manner Gen. Sheridan proceeded. No guns were captured after the first assault, and the mass of prisoners was taken during this retreat. The object of Gen. Bragg was to turn the right flank, but this failed. Gen. Rosecrans, on the other hand, prepared to stop the progress of the Confederates on his right, without exposing his centre and left to immediate danger. His left wing could not be advanced to Murfreesborough, because his right was gone. He, therefore, massed his artillery upon his centre, at the probable point of assault. These movements were concealed by forests, and were unperceived by the enemy. Gen. Negley now ordered forward the advance of the centre, consisting of two small brigades to protect the retreating forces of Gen. McCook. These were supported by the division of Gen. Rousseau, and served to check the Confederate force in its pursuit of the right wing. As the enemy approached these brigades, they retired slowly. The former, unsuspecting it to be a decoy, rushed forward, and were received with such a cross-fire of double shotted canister from two batteries and a volley from a brigade, as caused their line to waver for a moment. It dashed forward again. In the mean time Gen. Rousseau had come up on the right of Gen. Negley, and his regular troops on his left advanced at the moment when the right of the Confederate left wing dashed forward. The combined fire of Gen. Negley's force and of the regular troops drove the Confederate main force back with terrible loss, and a large number of Confederate prisoners were taken. The struggle was maintained a few moments, when the Federal force under orders fell back, and the Confederate line, flushed with success, and consisting of their centre and right of left wing, rushed in overwhelming mass upon the batteries which had been so placed as to rake them in almost every direction. A horrible slaughter ensued. The Confederate line wavered, fell back, and attempted to rally. On another discharge, they fled from the fire which they could not face. Meanwhile Gen. McCook had got into line on the right of Gen. Rousseau, and received reënforcements of artillery, and was ready for another attack. The Confederate force had now fallen back, and a suspension of fire took place along the entire line. It was midday. The Federal line had been driven back between two and three miles, thirty pieces of artillery had been lost, and the dead and wounded with many prisoners were in Confederate hands. The spirit of the troops was still resolute.

These movements had somewhat changed the position of the Federal line. The left and centre recovered their position at right angles to the Murfreesborough road and across it. They extended from the river to the distance of a mile west of it. The right wing had fallen back until it was nearly parallel to this road, and extending from Stewart's Creek to the right of Gen. Rousseau. The Confederate left was opposite the Federal right and a few hundred yards from it. In this position both of Gen. Rosecrans's flanks were protected by streams with good bridges and fords in his rear.

About three o'clock, the battle opened again by a Confederate attack upon the Federal centre and left. Although this was made by large masses, yet such was the favorable position occupied by the Federal line on a crest or ridge of ground, and such was the strength of its batteries that no advantage was gained by the Confederates. The slaughter on both sides was great and the contest very determined. It continued until five o'clock when the exhausted armies suspended operations for the night. This was so clear and beautiful that some batteries continued their fire. The result of the day was that the Federal right had been driven in almost upon the left, and a change of front had been made under fire, leaving in possession of the Confederate troops that part of the field. They also held the ground occupied in the morning by the Federal pickets on the left, which wing had receded to draw the Confederate troops on. During this time the communication to Nashville had often been cut off, and a strong force of Confederate cavalry had made a dash in the Federal rear within a mile of the front, and captured a considerable amount of hospital stores. The ammunition train of the right wing was twice captured and twice retaken. The Federal loss on that day was estimated at three thousand killed and wounded, twenty-five pieces of artillery, and a large number of prisoners. The Confederate loss in killed and wounded was not less.

On Thursday the 1st of January, 1863, the line of Gen. Rosecrans was restored to its

original position by the success of Gen. McCook's efforts to recover and hold it, on the third attempt. The division on the extreme left was also moved across Stone river. The position on the right wing was intrenched and the communications in the rear completed. On the morning of the 2d, sharp demonstrations were made along the whole Federal line by the Confederate army, but nothing serious was attempted until three o'clock in the afternoon. At that time the Confederate force burst in mass upon the division across Stone river, as if having discovered the intention of Gen. Rosecrans to advance it in their rear. This attacking force consisted of their entire right wing. The three brigades of the Federal division under Col. Beatty were prepared for the attack and stood their ground manfully, but the overwhelming force finally drove them back across the creek. Gen. Negley's division, which had been formed in reserve as if for this occasion, now advanced, supported by the division of Gen. Davis and the pioneer battalion of Morton. The most bitter conflict of the battle now ensued. Both sides massed their batteries and used them with desperate vindictiveness. The Confederate line wavered and fell back. Gen. Davis was ordered to cross the stream, and Col. Sirwell of the 78th Pennsylvania, placing his hat on the point of his sword, led the way with a shout. Col. Beatty's division followed. An overwhelming and irresistible charge was made on the Confederate line, and it broke and fled. A battery was captured, and a stand of colors. The entire division of Gen. Negley followed up rapidly, and Gen. Rosecrans's whole line immediately advanced. The Confederate right wing was now broken, and the Federal force was gaining the Confederate flank, when resistance on its part became vain and the entire force receded with the loss of many prisoners. The next morning found the Federal line intrenched in its advanced position, but a storm was raging. Quiet prevailed through the day, excepting one or two sharp conflicts resulting in the capture of a Confederate breastwork. On the next morning the Confederate army had retired from Murfreesborough, which was subsequently occupied by Gen. Rosecrans. Two divisions were soon sent forward in pursuit of the forces of Gen. Bragg, who fell back to Tullahoma. The Federal loss was 8,485 killed and wounded, and 3,600 missing. The Confederate loss is not known.

The original plan of Gen. Rosecrans to turn the right of the Confederate army and cut off its retreat, was entirely defeated by the failure of the right wing to maintain itself. The subsequent movements of the army of the Cumberland, properly belong to the history of the year 1863.

The conclusion of the campaign in Virginia remains to be described. Immediately after the battle of Antietam, the Confederate army retired across the Potomac and occupied strong positions on its right bank. All hopes that the State of Maryland would unite her destinies with the Southern Confederacy were now banished. The invasion had been made by crossing the Potomac within a limit of twelve miles, which is about a mile above the Point of Rocks and five miles below the Monocacy aqueduct on the Chesapeake and Ohio canal. The army then marched through fields, woods, and roads for Frederick. The line of the Chesapeake and Ohio canal for twelve miles presented a scene of desolation. It was tapped at five places. Several floodgates were cut to pieces, and from heights above large boulders of rock were dislodged and thrown into the canal. An unsuccessful attempt was made to blow up the aqueduct at Monocacy. The telegraph lines and the track of the Baltimore and Ohio railroad were much injured. The bridge at Monocacy and portions of the abutments were destroyed. Private property did not escape. Fences were torn down and fields laid desolate.

The influence produced by the activity of the militia of Pennsylvania in responding to the call of the governor to aid in the defence of that State, is acknowledged by Gen. McClellan in the following letter:

HEADQUARTERS ARMY OF THE POTOMAC,
SHARPSBURG, *September* 27, 1862.

GOVERNOR: I beg to avail myself of almost the first moment of leisure I have had since the recent battles to tender to you my thanks for your wise and energetic action in calling out the militia of Pennsylvania for its defence, when threatened by a numerous and victorious army of the enemy. Fortunately circumstances rendered it impossible for the enemy to set foot upon the soil of Pennsylvania, but the moral support rendered to my army by your action was none the less mighty.

In the name of my army and for myself I again tender to you our acknowledgments for your patriotic course. The manner in which the people of Pennsylvania responded to your call and hastened to the defence of their frontier no doubt exercised a great influence upon the enemy.

I am, very respectfully and sincerely, yours,
GEO. B. McCLELLAN,
Maj.-Gen. U. S. Army.

His excellency A. G. CURTIN,
Governor of Pennsylvania.

The army of Gen. McClellan remained on the north bank of the Potomac in the vicinity of Sharpsburg and Harper's Ferry. On the 1st of October it was visited by President Lincoln, who was cordially received and tarried until the 4th. On the 7th Gen. McClellan issued the following order relative to the Proclamation threatening emancipation of the Southern slaves:

HEADQUARTERS ARMY OF THE POTOMAC, *October* 7, 1862.

General Order, 163.—The attention of the officers and soldiers of the Army of the Potomac is called to General Orders, No. 139, War Department, September 24, 1862, publishing to the army the President's proclamation of September 22.

A proclamation of such grave moment to the nation, officially communicated to the army, affords to the General commanding an opportunity of defining specifically to the officers and soldiers under his command the relation borne by all persons in the military service

of the United States toward the civil authorities of the Government.

The Constitution confides to the civil authorities—legislative, judicial, and executive—the power and duty of making, expounding, and executing the Federal laws. Armed forces are raised and supported simply to sustain the civil authorities, and are to be held in strict subordination thereto in all respects. The fundamental law of our political system is essential to the security of our republican institutions, and should be thoroughly understood and observed by every soldier.

The principle upon which and the objects for which armies shall be employed in suppressing rebellion must be determined and declared by the authorities, and the Chief Executive, who is charged with the administration of the national affairs, is the proper and only source through which the views and orders of the Government can be made known to the armies of the nation.

Discussion by officers and soldiers concerning public measures determined upon and declared by the Government, when carried beyond the ordinary, temperate, and respectful expression of opinion, tend greatly to impair and destroy the discipline and efficiency of the troops, by substituting the spirit of political faction for the firm, steady, and earnest support of the authority of the Government, which is the highest duty of the American soldier. The remedy for political errors, if any are committed, is to be found only in the action of the people at the polls.

In thus calling the attention of this army to the true relation between the soldiers and the Government, the General commanding merely adverts to an evil against which it has been thought advisable during our whole history to guard the armies of the Republic, and in so doing he will not be considered, by any right-minded person, as casting any reflection upon that loyalty and good conduct which have been so fully illustrated upon so many battle-fields.

In carrying out all measures of public policy this army will, of course, be guided by the same rules of mercy and Christianity that have ever controlled its conduct toward the defenceless.

By command of Maj.-Gen. McCLELLAN.

JAS. A. HARDIE, Lieut.-Col.,
Aide-de-Camp and Act'g Ass't Adj.-General.

On Monday night, Oct. 10, a body of Confederate cavalry of about twenty-five hundred, under Gen. Stuart, suddenly appeared at Chambersburg, Penn., and occupied the place. The Government storehouses and machine shops were burned by them; also the Cumberland Valley railroad depot. On the next day Gen. Stuart marched to Emmettsburg, thence to Woodsborough, New Market, and Monrovia, which place he reached early on Sunday morning. Thus far his force had gathered about one thousand horses. He next pushed for the Potomac, at Noland's Ford, at the mouth of the Monocacy; but finding a Federal force there, he divided his troops and crossed at different places, chiefly at Conrad's Ferry, and six miles below the Monocacy. The entire distance of his march north of the Potomac, was a little over one hundred miles. A large number of Federal troops were put in motion to effect his capture, but without success. Reconnoissances made on the 16th and 17th discovered the Confederate army occupying a position extending from Bunker Hill to the Shenandoah river.

It had been expected that Gen. McClellan would take the forces of Gen. Pope's shattered army and march into Maryland and conquer the victorious Confederate force and pursue them even to Richmond. The inactivity of his army after the battle of Antietam became a subject of complaint. It was overlooked that the low water in the Potomac required time to line its north shore with troops to prevent another invasion of Maryland. It was overlooked that most of his troops had been in active service in the field during the previous six months, and might require most important supplies. On the 6th of October the following despatch was sent by the general-in-chief, Gen. Halleck, to Gen. McClellan:

WASHINGTON, D. C., *Oct.* 6, 1862.

Maj.-Gen. McClellan:

I am instructed to telegraph to you as follows: The President directs that you cross the Potomac and give battle to the enemy or drive him south. Your army must move now while the roads are good. If you cross the river between the enemy and Washington, and cover the latter by your line of operation, you can be reënforced with 30,000 men. If you move up the valley of the Shenandoah, not more than 12,000 or 15,000 can be sent to you. The President advises the interior line between Washington and the enemy, but does not order it. He is very desirous that your army move as soon as possible. You will immediately report what line you adopt and when you intend to cross the river. Also, to what point the reënforcements are to be sent. It is necessary that the plan of your operations be positively determined on before orders are given for building bridges and repairing railroads. I am directed to add that the Secretary of War and the General-in-Chief fully concur with the President in these instructions.

H. W. HALLECK, Gen.-in-Chief.

According to the report of Gen. Halleck, Gen. McClellan disapproved of the plan of crossing the Potomac south of the Blue Ridge, and said that he would cross at Harper's Ferry and advance on Winchester. The advance, however, did not take place until the 26th of October. It became the subject of speculation on the part of the public as to the real nature of the causes of delay. Subsequently, upon the removal of Gen. McClellan from the command of the army, on the 7th of November, the following letter was published:

HEADQUARTERS OF THE ARMY,
WASHINGTON, *Oct.* 28, 1862.

Hon. E. M. Stanton, Secretary of War:

SIR: In reply to the general interrogatories contained in your letter of yesterday, I have to report:

1st. That requisitions for supplies to the army under Gen. McClellan are made by his staff officers on the chiefs of bureaus here; that is, for quartermasters' supplies, by his chief quartermaster on the Quartermaster-General; for commissary supplies, by his chief commissary on the Commissary-General, &c. No such requisitions have been, to my knowledge, made upon the Secretary of War, and none upon the General-in-Chief.

2d. On several occasions Gen. McClellan has telegraphed to me that his army was deficient in certain supplies. All these telegrams were immediately referred to the heads of bureaus, with orders to report. It was ascertained that, in every instance, the requisitions had been immediately filled, except one, where the Quartermaster-General had been obliged to send from Philadelphia certain articles of clothing, tents, &c., not having a full supply here. There has not been, so far as I could ascertain, any neglect or delay, in any department or bureau, in issuing all supplies asked for by Gen. McClellan, or by the officers of his staff. Delays have occasionally occurred in forwarding supplies

by rail, on account of the crowded condition of the depots, or of a want of cars; but whenever notified of this, agents have been sent out to remove the difficulty. Under the excellent superintendence of Gen. Haup, I think these delays have been less frequent and of shorter duration than is usual with freight trains. An army of the size of that under Gen. McClellan will frequently be for some days without the supplies asked for, on account of neglect in making timely requisitions and unavoidable delays in forwarding them and in distributing them to the different brigades and regiments. From all the information I can obtain, I am of opinion that the requisitions from that army have been filled more promptly, and that the men, as a general rule, have been better supplied than our armies operating in the West. The latter have operated at much greater distances from the sources of supply, and have had far less facilities for transportation. In fine, I believe that no armies in the world, while in campaign, have been more promptly or better supplied than ours.

3d. Soon after the battle of Antietam Gen. McClellan was urged to give me information of his intended movements, in order that, if he moved between the enemy and Washington, reënforcements could be sent from this place. On the first of October, finding that he proposed to operate from Harper's Ferry, I urged him to cross the river at once and give battle to the enemy, pointing out to him the disadvantages of delaying till the autumn rains had swollen the Potomac and impaired the roads. On the 6th of October he was peremptorily ordered to "cross the Potomac and give battle to the enemy or drive him south. Your army must move now, while the roads are good." It will be observed that three weeks have elapsed since this order was given.

4th. In my opinion there has been no such want of supplies in the army under Gen. McClellan as to prevent his compliance with the orders to advance against the enemy. Had he moved to the south side of the Potomac he could have received his supplies almost as readily as by remaining inactive on the north side.

5th. On the 7th of October, in a telegram in regard to his intended movements, Gen. McClellan stated that it would require at least three days to supply the first, fifth, and sixth corps; that they needed shoes and other indispensable articles of clothing, as well as shelter tents. No complaint was made that any requisitions had not been filled, and it was inferred from his language that he was only waiting for the distribution of his supplies.

On the 11th he telegraphed that a portion of his supplies sent by rail had been delayed. As already stated, agents were immediately sent from here to investigate this complaint, and they reported that everything had gone forward. On the same date (the 11th) he spoke of many of his horses being broken down by fatigue. On the 12th he complained that the rate of supply was only "one hundred and fifty horses per week for the entire army there and in front of Washington."

I immediately directed the Quartermaster-General to inquire into this matter and report why a larger supply was not furnished. Gen. Meigs reported on the 14th that the average issue of horses to Gen. McClellan's army in the field and in front of Washington for the previous six weeks had been 1,459 per week, or 8,754 in all. In addition, that large numbers of mules had been supplied, and that the number of animals with Gen. McClellan's army on the upper Potomac was over thirty-one thousand. He also reported that he was then sending to that army all the horses he could procure.

On the 18th Gen. McClellan stated, in regard to Gen. Meigs's report that he had filled every requisition for shoes and clothing: "Gen. Meigs may have ordered these articles to be forwarded, but they have not reached our depot, and, unless greater effort to insure prompt transmission is made by the department of which Gen. Meigs is the head, they might as well remain in New York or Philadelphia, so far as this army is concerned." I immediately called Gen. Meigs's attention to this apparent neglect of his department. On the 25th he reported, as the result of his investigation, that 48,000 pairs of boots and shoes had been received by the quartermaster of Gen. McClellan's army at Harper's Ferry, Frederick, and Hagerstown; that 20,000 pairs were at Harper's Ferry depot on the 21st; that 10,000 more were on their way, and 15,000 more ordered. Col. Ingals, aide-de-camp and chief quartermaster to Gen. McClellan, telegraphed, on the 25th: "The suffering for want of clothing is exaggerated, I think, and certainly might have been avoided by timely requisitions of regimental and brigade commanders." On the 24th he telegraphed to the Quartermaster-General that the clothing was not detained in cars at the depots: "Such complaints are groundless. The fact is, the clothing arrives and is issued, but more is still wanted. I have ordered more than would seem necessary from any data furnished me, and I beg to remind you that you have always very promptly met all my requisitions, so far as clothing is concerned. Our department is not at fault. It provides as soon as due notice is given. I foresee no time when an army of over 100,000 men will not call for clothing and other articles."

In regard to Gen. McClellan's means of promptly communicating the wants of his army to me or to the proper bureaus of the War Department, I report that, in addition to the ordinary mails, he has been in hourly communication with Washington by telegraph.

It is due to Gen. Meigs that I should submit herewith a copy of a telegram received by him from Gen. McClellan.

Very respectfully, your obedient servant,

H. W. HALLECK, Gen.-in-Chief.

UNITED STATES MILITARY TELEGRAPH.

Received, *Oct.* 22, 1862—9 40 P. M.

From McClellan's Headquarters.

TO BRIG.-GEN. MEIGS: Your despatch of this date is received. I have never intended, in any letter or despatch, to make any accusation against yourself or your department for not furnishing or forwarding clothing as rapidly as it was possible for you to do. I believe that everything has been done that could be done in this respect. The idea that I have tried to convey was, that certain portions of the command were without clothing, and the army could not move until it was supplied.

G. B. McCLELLAN, Maj.-Gen.

Nothing has been made public on the part of Gen. McClellan alluding to or explaining the causes of the delay of the movements of the army. Strict justice requires that, in estimating the importance of the preceding letters, the testimony of Gen. Burnside on a subsequent page should be considered. It was generally understood that Gen. McClellan's movement was delayed by the want of clothing and other supplies, and especially on account of his deficiency in cavalry and artillery horses. The purchase and forwarding of these was going on even up to the day of his crossing the Potomac. One army corps did not receive its clothing until it had commenced its march in Virginia. It was stated by several commanders that they made every effort to get the clothing for their troops, repeatedly sent teams to the railroad depots for it, and until a short time previous to the marching of the army they were invariably told that the clothing had not arrived.

Early on the 26th of October a cavalry force, under Col. Pleasanton, crossed the Potomac on the new pontoon bridge at Berlin, and moved on in the direction of Purcellville. Soon after the corps of Gen. Burnside began to cross in light marching order, followed by an immense train of wagons, and took a position near Lovettsville. On the next day a heavy reënforcement joined him. About the same

time the Confederate force prepared to abandon the line of the Potomac and to fall back. The crossing of the Federal troops was now constant, until the entire army was south of the river. On the 30th of October Gen. Sedgwick advanced from Boliver Heights, and crossed the Shenandoah in the direction of Shannondale, and Gen. Hancock pushed forward, pressing on the Confederate lines in front of Charlestown. Gen. Burnside moved along the eastern base of the Blue Ridge, followed by the corps of Gen. Porter.

The situation of the respective forces at this time was as follows: The Federal army reënforced by the divisions of Gens. Sigel and Sickles, who had advanced from Washington, occupied all the region east of the Blue Ridge, with the right resting on Harper's Ferry, and the left extending nearly to Paris, on the road from Aldie to Winchester. The centre was at Snickersville; with Snicker's Gap in its possession. The Confederate line was on the south side of the Blue Ridge, with the Shenandoah river immediately in its front, extending from Front Royal down to Charlestown, with the great body of their troops massed between Berryville and Winchester. On the 4th Ashby's Gap was occupied without opposition by the Federal troops. The cavalry corps, under Col. Pleasanton, pushed on from Piedmont, and occupied Marguette, holding the approaches to Manassas and Chester Gap, on the left side of the Blue Ridge. The condition and spirit of the army at this time were unequalled by that of any force before organized. On the 6th Gen. McClellan's headquarters were at Rectortown near Front Royal. The army was steadily advancing and the Confederate force falling back, with some skirmishing. Warrenton was occupied by the Federal troops on the same day. On the 7th a severe snow storm commenced, and continued throughout the day. On the 8th the bridge at Rappahannock Station was taken and held by Gen. Bayard. On the night of the 7th, near midnight, Gen. Buckingham arrived, from Washington, at Gen. McClellan's tent, and delivered to him an order from President Lincoln, to surrender the command of the army to Gen. Burnside, and to report himself immediately at Trenton, the capital of the State of New Jersey. This order was entirely unexpected by Gen. McClellan, and probably by every officer of the army. The only reasons for it which have officially appeared, will be found in the above letter of Gen. Halleck, dated October 28, which was given to the public a few days after this removal.

Gen. McClellan immediately wrote the following address to his troops preparatory to his departure:

HEADQUARTERS OF THE ARMY OF THE POTOMAC,
CAMP NEAR RECTORTOWN, VA., *November 7.*

Officers and Soldiers of the Army of the Potomac:

An order of the President devolves upon Maj.-Gen. Burnside the command of this army. In parting from you I cannot express the love and gratitude I bear to you. As an army you have grown up in my care. In you I have never found doubt or coldness. The battles you have fought under my command will probably live in our Nation's history. The glory you have achieved over mutual perils and fatigues; the graves of our comrades fallen in battle and by disease; the broken forms of those whom wounds and sickness have disabled; the strongest associations which can exist among men unite us by an indissoluble tie. We shall ever be comrades in supporting the Constitution of our country and the Nationality of its people.

(Signed) GEO. B. McCLELLAN.
Major-General U. S. A.

The next day was devoted by Gen. McClellan to the transfer of his command to Gen. Burnside. The most cordial feelings existed between the two officers, the latter of whom accepted a promotion which he had before twice declined, only upon the peremptory order of the War Department. On Sunday evening his officers assembled at his tent, for a final parting of commander and officers. It was such a scene of deep feeling as could occur only where officers reposed the highest confidence in their commander, who had led them successfully through some of the most fearful battles of modern wars. Monday was occupied in passing among the various camps, reviewing the troops, and taking a final leave of both officers and men. A spectator of these scenes has summed them up in these words:

"As Gen. McClellan, mounted upon a fine horse, attended by a retinue of fine-looking military men, riding rapidly through the ranks, gracefully recognized and bid a farewell to the army, the cries and demonstrations of the men were beyond bounds—wild, impassioned, and unrestrained. Disregarding all military forms they rushed from their ranks and thronged around him with the bitterest complaints against those who had removed from command their beloved leader."

On the next day, the 10th, he withdrew, taking the railroad cars at Warrenton. On reaching Warrenton Junction a salute was fired. The troops, which had been drawn up in line, afterward broke ranks, when the soldiers crowded around him and many eagerly called for a few parting words. He said in response, while on the platform of the railroad depot, "I wish you to stand by Gen. Burnside as you have stood by me, and all will be well. Good-bye." To this there was a spontaneous and enthusiastic response.

The troops were also drawn up in line at Bristow's Station and Manassas Junction, where salutes were fired and he was complimented with enthusiastic cheers. On reaching Washington he proceeded immediately to the depot, and passed on to Philadelphia and Trenton, where he arrived early on the 12th.

What was now the military aspect? The movement of Gen. McClellan's army, after crossing the Potomac, was toward Gordonsville. This made a movement on the part of the Confederate general Lee necessary in order to prevent the Federal army from getting between him and Richmond. For this purpose he attempted to move from Winchester through the

gaps of the Blue Ridge to Culpepper. The larger part of his force had passed through, when the gaps were taken and held by Gen. McClellan. At the same time Gen. Sigel had advanced from Washington, and lay near the Blue Ridge, covering at once Washington, observing the gaps to the Rappahannock, and protecting the railroad communication to that river. The bridge at Rappahannock Station had already been seized by the cavalry, under Gen. Bayard. The available force of Gen. McClellan was about one hundred and twenty thousand men; that of Gen. Lee consisted of about sixty thousand able men at Culpepper and Gordonsville, and thirty thousand in the Shenandoah Valley, near Strasburg. The distance from Warrenton to Gordonsville is about fifty miles, and from Warrenton to the Rapidan, thirty-five miles; from Strasburg to Gordonsville, by Staunton and Charlottesville, one hundred and thirty-five miles; and by the only other practicable route, one northwest of Gordonsville, and perpendicular to Gen. McClellan's line of advance, about one hundred miles. In his position it was necessary for Gen. Lee to defend the line of the Rapidan, or endeavor to effect a junction with the force in the Shenandoah Valley, under Gen. Jackson, or fall back upon Richmond, in a country without a line of defence, with Gen. McClellan close upon him, leaving Gen. Jackson to shift for himself. The defence of the Rapidan was impracticable from the course of the river from the Alexandria railroad to the Blue Ridge. The efforts to join Gen. Jackson would have uncovered Richmond, and the attempt to fall back on Richmond would have at least hazarded the demoralization of his army, and enabled Gen. McClellan to turn the defensible parts of the Rappahannock, and the line of the North Anna. The appointment of Gen. Burnside was followed by the organization of a portion of the army into divisions, and a movement to concentrate it at Fredericksburg. On the 12th Gen. Burnside issued the following address to the army:

HEADQUARTERS ARMY OF THE POTOMAC, *Nov.* 10, 1862.

In accordance with General Orders, No. 182, issued by the President of the United States, I hereby assume command of the Army of the Potomac. Patriotism, and the exercise of my every energy in the direction of this army, aided by the full and hearty coöperation of its officers and men, will, I hope, under the blessing of God, insure its success.

Having been a sharer of the privations, and a witness of the bravery of the old Army of the Potomac in the Maryland campaign, and fully identified with them in their feelings of respect and esteem for Gen. McClellan, entertained through a long and most friendly association with him, I feel that it is not as a stranger I assume command.

To the 9th army corps, so long and intimately associated with me, I need say nothing. Our histories are identical. With diffidence for myself, but with a proud confidence in the unswerving loyalty and determination of the gallant army now intrusted to my care, I accept its control, with the steadfast assurance that the just cause must prevail.

[Signed] A. E. BURNSIDE,
Major-General Commanding.

On the 12th the general-in-chief (Halleck) and Gen. Meigs proceeded from Washington to the headquarters to confer with Gen. Burnside. On the same day the advance of the army was across the Rappahannock and fifteen miles south of Warrenton. On the 14th Gen. Burnside issued the following order reorganizing a portion of his army:

HEADQUARTERS, ARMY OF THE POTOMAC, }
WARRENTON (VA.), *Nov.* 14, 1862. }

General Order, No. 184.

First. The organization of a portion of this army in three grand divisions is hereby announced. These grand divisions will be formed and commanded as follows:

The Second and Ninth Corps will form the right grand division, and will be commanded by Maj.-Gen. E. V. Sumner.

The First and Sixth Corps will form the left grand division, and will be commanded by Maj.-Gen. W. B. Franklin.

The Third and Fifth Corps will form the centre grand division, and will be commanded by Maj.-Gen. Joseph Hooker.

The Eleventh Corps, with such others as may hereafter be assigned to it, will constitute a reserve force, under the command of Maj.-Gen. F. Sigel.

Assignments of cavalry and further details will be announced in future orders.

By command of Maj.-Gen. BURNSIDE.

S. WILLIAMS, A. A.-G.

A movement was made at this time by Gen. Jackson for the purpose of detaching a portion of the army of the Potomac. He occupied all the roads west and north of Winchester as far as Big Cacapon Bridge on the northwestern turnpike, and from Pughtown to Bath and Hancock. He was thus looking westward, at the same time he was in a position to cross the Potomac. His movement failed to effect his design.

Meanwhile the mass of Gen. Lee's forces retired to Gordonsville. On the 16th the forces of Gen. Burnside began to move for Fredericksburg, as had been previously determined in consultation on the 12th between Gens. Halleck and Burnside. On the 15th the evacuation of Warrenton and the adjacent places was commenced, and by the morning of the 18th it was entirely completed. The advance was led by Gen. Sumner. At the same time supplies were sent to Aquia Creek, and the repairs of the railroad track to Fredericksburg commenced, and the army concentrated at Falmouth opposite Fredericksburg.

The march to Richmond, it appeared, was to be made by the route from Fredericksburg. This city is on the south bank of the Rappahannock, and sixty-five miles distant from Richmond. It is connected with the latter place by a railroad, of which there is a double line nearly to Hanover Junction, twenty-three miles from Richmond. The railroad crosses the Mattapony river at Milford, thirty-seven miles from Fredericksburg, and the Pamunkey, twenty-five miles from Richmond, besides a number of smaller streams. Between Falmouth, where the Federal army concentrated, and Richmond there are two main and two minor lines of de-

fence. The first that of the Rappahannock river. Above Falmouth its abrupt banks, which are lined with high hills, difficult of access, and its narrow fords and rocky bottom render a rapid crossing for a large force almost impossible. Below, the valley of the river expands, spreading often into spacious plains, while the winding course of the stream forms numerous necks of land, easily commanded from the north side, and giving secure crossing places, and ample ground for the formation of troops. At Fredericksburg the north commands the south bank and much of the distance, which is a mile and a half, to the frowning hills or table land beyond. But these heights equally command this intermediate plain, and are unassailable in front except by infantry. Next in the rear and twelve miles distant, is the line of the Po river and Stannard's Marsh, which is hardly available except to hold a pursuing foe in check. The North Anna is about forty miles from the Rappahannock, and affords another principal line of defence. It is a deep and rapid stream, with a narrow valley. The table land on its north bank is about one hundred feet above the bed of the river, and about one hundred and fifty on the south bank. The extension of its line after it turns to join the South Anna, and becomes the Pamunkey, presents scarcely less obstacles than the river itself, so well is the ground guarded by swamps and flanked by streams. The last and a minor line of defence is the South Anna river, with the southern commanded by the northern bank, and too near the North Anna for a second formation by a force that has been badly defeated. Numerous small streams parallel to the line of advance present suitable points for resistance, and protect foes attacking the line of communication, while the bridges over them are weak points necessary to be securely guarded.

By the 20th a considerable force had reached Falmouth. Gen. Sumner on the next day sent to Fredericksburg the following summons to surrender:

HEADQUARTERS ARMY OF THE POTOMAC, *Nov.* 21, 1862.

To the Mayor and Common Council of Fredericksburg:

GENTLEMEN: Under cover of the houses of your city shots have been fired upon the troops of my command.

Your mills and manufactories are furnishing provisions and materials for clothing for armed bodies in rebellion against the Government of the United States; your railroads and other means of transportation are removing supplies to the depots of such troops.

This condition of things must terminate, and by direction of Gen. Burnside, I accordingly demand the surrender of the city into my hands, as the representative of the Government of the United States, at or before five o'clock this afternoon.

Failing an affirmative reply to this demand by the hour indicated, sixteen hours will be permitted to elapse for the removal from the city of women and children, the sick and wounded, and aged, &c.; which period having expired, I shall proceed to shell the town.

Upon obtaining possession of the city, every necessary means will be taken to preserve order and secure the protective operation of the laws and policy of the United States Government.

I am, very respectively, your obedient servant,

E. V. SUMNER,
Brevet Maj.-Gen. U. S. army,
Commanding Eighth Grand Division.

In reply the mayor of the city, M. Slaughter, stated that the firing complained of occurred in the suburbs, and was the act of the Confederate officer in command, for which neither the citizens nor authorities were responsible. The other matters complained of, he said, should no longer exist, and proceeded thus: "The civil authorities of Fredericksburg have no control; but I am assured by the military authorities of the Confederate army near here that nothing will be done to infringe the conditions herein named, as to matters within the town; but the latter authorities inform us that, while their troops will not occupy the town, they will not permit yours to do so."

The late hour at which the summons was received rendered it impossible to remove the women and children in the time allowed.

The reply of Gen. Sumner to the mayor was as follows:

HEADQUARTERS RIGHT GRAND DIVISION, CAMP NEAR FALMOUTH, *Nov.* 21, 1862.

To the Mayor and Common Council of Fredericksburg:

Your letter of this afternoon is at hand, and in consideration of your pledge that the acts complained of shall cease, and that your town shall not be occupied by any of the enemy's forces, and your assertion that a lack of transportation renders it impossible to move the women, children, sick, wounded, and aged, I am authorized to say to you that our batteries will not open upon the town at the hour designated. Gen. Patrick will meet a committee of representatives from your town to-morrow morning at nine o'clock at the Lacy House.

Very respectfully your obedient servant,

E. V. SUMNER,
Brevet Maj.-Gen. Commanding Division.

An interview was subsequently held as above mentioned, which resulted in the following note from Gen. Sumner:

HEADQUARTERS RIGHT GRAND DIVISION, *Nov.* 22, 1862.

To the Mayor and Common Council, Fredericksburg:

I am authorized to say that so long as no hostile demonstration is made from the town it will not be shelled. I have also to say that there will be no firing upon the cars before 11 o'clock P. M. to-morrow.

I am, gentlemen, your obedient servant,

E. V. SUMNER,
Brevet Maj.-Gen. U. S. A., Commanding.

The firing upon the cars of the railroad above mentioned was in consequence of the belief that they were used to remove military stores from Fredericksburg.

As Gen. Burnside's army concentrated on the north bank, Gen. Lee's forces concentrated on the heights in the rear of Fredericksburg. Had the pontoon bridges required been at hand when the advance reached Falmouth, the line of the Rappahannock would have been taken without opposition. Then, with proper supplies and bridges, thirty of the sixty miles to Richmond would have been placed within the reach of Gen. Burnside, and perhaps a lodg-

ment have been effected on the banks of the North Anna. Nearly thirty days elapsed before the pontoons arrived and the bridges were completed. The ensuing military operations were investigated by a committee of Congress, before whom Gen. Burnside testified as follows:

Gen. Halleck came down to see me on the 11th of November. On the 9th I made out a plan of operations, in accordance with the order of Gen. Halleck, which directed me not only to take the command, but also to state what I proposed to do with it. That plan I wrote on the morning of the 9th of November, and sent it by special messenger to Washington. I can furnish the committee a copy of that plan if they desire it. I do not have it here now.

Question.—State the substance of it, if you please. That may do as well.

Answer.—I stated, in substance, that I thought it advisable to concentrate the army in the neighborhood of Warrenton, to make a small movement across the Rappahannock as a feint, with a view to divert the attention of the enemy, and lead them to believe we were going to march in the direction of Gordonsville, and then to make a rapid movement of the whole army to Fredericksburg, on this side of the Rappahannock.

As my reasons for that, I stated that the farther we got into the interior of Virginia, the longer would be our lines of communication and the greater would be the difficulty we would have in keeping them open, as the enemy had upon our right flank a corps that almost at any time could, by a rapid movement, seriously embarrass us. If we were caught by the elements so far from our base of supplies, and at the same time in the enemy's country, where they had means of getting information that we had not, it might, I thought, prove disastrous to the army, as we had but one line of railway by which to supply it.

In moving upon Fredericksburg we would all the time be as near Washington as would the enemy, and after arriving at Fredericksburg, we would be at a point nearer to Richmond than we would be even if we should take Gordonsville. On the Gordonsville line, the enemy, in our opinion, would not give us a decisive battle at any place this side of Richmond. They would defend Gordonsville until such time as they felt they had given us a check, and then with so many lines of railroad open to them, they would move upon Richmond or upon Lynchburg, and in either case the difficulty of following them would be very great.

In connection with this movement I requested that barges filled with provisions and forage should be floated to Aquia Creek, where they could easily be landed; that materials be collected for the reconstruction of the wharves there, and that all the wagons in Washington that could possibly be spared should be filled with hard bread and small commissary stores, and, with a large number of beef cattle, started down to Fredericksburg on the road by way of Dumfries; and that this wagon train and load of cattle should be preceded by a pontoon train large enough to span the Rappahannock twice. I stated that this wagon train could move in perfect safety, because it would be all the time between our army and the Potomac; or in other words our army would be all the time between the enemy and that train. But at the same time I said that if a cavalry escort could not be furnished from Washington, I would send some of my cavalry to guard the train.

On the morning of the 14th of November, feeling uneasy with reference to the pontoons, as I had not heard of their starting, I directed my chief engineer to telegraph again in reference to them.

He telegraphed to Gen. Woodbury or to Major Spaulding. It subsequently appeared that that was the first they ever had heard of any wish to have the pontoon train started down to Fredericksburg, although the authorities in Washington had had my plans sent to them on the 9th of November; and it had also been discovered by Gen. Halleck and Gen. Meigs, at my headquarters, on the night of the 11th and 12th of November; and after discovering it fully there, they sat down and sent telegrams to Washington, which, as I supposed, fully covered the case, and would secure the starting of the pontoon trains at once. I supposed, of course, that those portions of the plan which required to be attended to in Washington would be carried out there at once. I could have sent officers of my own there to attend to those matters, and perhaps I made a mistake in not doing so, as Gen. Halleck afterward told me that I ought not to have trusted to them in Washington for the details.

In reply to the telegram I had ordered to be sent, Gen. Woodbury telegraphed back that the pontoon train would start on Sunday morning probably, and certainly on Monday morning, which would have been on the 16th and 17th of November, and would have been in time. They did not, however, start until the 20th, and on that day it commenced raining, which delayed them so much and the roads became so bad that when they got to Dumfries they floated the pontoons off the wagons. We then sent to Washington for a steamer, and carried them down to Aquia Creek by water, sending the wagons around by land. The pontoons did not get here until the 22d or 23d of November.

On the 15th of November I started the column down the road to Fredericksburg, not knowing anything about the delay in the starting of the pontoons, because the telegram announcing the delay did not reach Warrenton Junction until I had left to come down here with the troops, and that telegram did not reach me until I arrived here on the morning of the 19th, when it was handed to me by an orderly who had brought it down to Warrenton Junction.

After reaching here I saw at once that there was no chance for crossing the Rappahannock with the army at that time. It commenced raining and the river began to rise—not to any great extent, but I did not know how much it might rise. There were no means of crossing except by going up to the fords, and it would be impossible to do that because of the inability to supply the troops after they should cross.

Gen. Sumner, with his command, arrived here in advance. He sent to me, asking if he should cross the river. He was very much tempted to take his own men across to Fredericksburg by a ford near Falmouth, as there was no enemy there except a very small force. I did not think it advisable that he should cross at that time.

The plan I had in contemplation was, if the stores and these bridges had come here as I expected, to throw Sumner's whole corps across the Rappahannock, fill the wagons with as many small stores as we could, and having beef cattle along for meat, then to make a rapid movement down in the direction of Richmond and try to meet the enemy and fight a battle before Jackson could make a junction there. We knew that Jackson was in the valley, and felt confident that there was force enough on the upper Rappahannock to take care of him. We felt certain that as soon as the enemy knew of our crossing down here, the force of Jackson would be recalled, and we wanted to meet this force and beat it before Jackson could come down on our flank and perhaps cripple us.

I had recommended that some supplies should be sent to the mouth of the Rappahannock with a view of establishing a department at Port Royal. After we had advanced to Fredericksburg, and after the first delay in starting the pontoons, I think they were sent as quickly as they could have been, and the supplies and quartermasters' stores have been always in as great abundance as we could have expected, for after the 19th of November the roads were particularly bad. Horses and mules were sent down to us, so that our cavalry and teams were in very good condition.

After it was ascertained that there must be a delay, and that the enemy had concentrated such a force

as to make it very difficult to cross, except by a number of bridges, we commenced bringing up from Aquia Creek all the pontoons we could. After enough of them had been brought up to build the bridges, I called several councils of war to decide about crossing the Rappahannock. It was at first decided to cross at Shinker's Neck, about twelve miles below here, but our demonstration was simply for the purpose of drawing down there as large a force of the enemy as possible.

I then decided to cross here because, in the first place, I felt satisfied that they did not expect us to cross here but down below. In the next place I felt satisfied that this was the place to fight the most decisive battle, because if we could divide their forces by penetrating their lines at one or two points, separating their left from their right, then a vigorous attack with the whole army would succeed in breaking their army in pieces.

The enemy had cut a road along on the rear of the line of the heights where we made our attack, by means of which they connected the two wings of their army, and avoided a long detour round through a bad country. I obtained from a colored man from the other side of the town information in regard to this new road, which proved to be correct. I wanted to obtain possession of the new road, and that was my reason for making an attack on the extreme left. I did not intend to make the attack on the right until that position had been taken, which I supposed would stagger the enemy, cutting their lines in two. And then I proposed to make a direct attack on their front, and drive them out of the works.

By Mr. Gooch: Do I understand you to say that it was your understanding that Gen. Halleck and Gen. Meigs, while at your headquarters in Warrenton, and before you commenced the movement of your army, sent orders to Washington for the pontoons to be immediately forwarded to Falmouth?

Answer: That was my understanding, certainly.

Question: In your judgment, could the pontoons have been forwarded to you in time for you to have crossed the Rappahannock when you expected, if all possible efforts had been made by those charged with that duty?

Answer: Yes, sir, if they had received their orders in time.

Question: Did the non-arrival of these pontoons at the time you expected prevent your crossing when you expected to cross and interfere with the success of your plans?

Answer: Yes, sir.

Thus it was the design of Gen.Burnside that the pontoons should leave Alexandria on Nov. 11, and arrive at Falmouth at the same time with the advance of his army. The right grand division reached Falmouth on Nov. 17. The pontoons left Alexandria on Nov. 19, and arrived at Fredericksburg after the movements of Gen. Burnside had not only become known, but after Gen. Lee had advanced his forces from Gordonsville to the heights in the rear of Fredericksburg, and had fortified them. They were not used until the night of Dec. 10.

A plan for the movements of Gen. Burnside had now been arranged between President Lincoln, Gen. Halleck, and himself, by which it was determined that the army should move across the Rappahannock at a certain place and at a certain time. This was departed from by Gen. Burnside, who was induced to move the army across at a different place and at an earlier day. His reasons for this change he thus states in his report:

During my preparations for crossing at the place I had first selected, I discovered that the enemy had thrown a large portion of his force down the river and elsewhere, thus weakening his force in front, and also thought I discovered that he did not anticipate the crossing of our whole force at Fredericksburg, and I hoped by rapidly throwing the whole command over at that place to separate by a vigorous attack the forces of the enemy on the river below from the force behind and on the crest in the rear of the town, in which case we could fight him with the greatest advantage in our favor. To do this we had to gain a height on the extreme right of the crest, which height commanded a new road lately made by the enemy for the purpose of more rapid communication along his lines; which point gained, his position along the crest would have been scarcely tenable, and he could have been driven from them easily by an attack on his front in connection with a movement in rear of the crest.

During the night of the 10th of December, therefore, the pontoons were conveyed to the river, and the artillery to the number of one hundred and forty-three pieces was placed in position opposite the city. Between four and five o'clock on the morning of the 11th, the work of building four bridges was commenced. One was to be made at the point where the railroad bridge formerly crossed, and two others opposite the city but nearer Falmouth, and the fourth nearly two miles below for the crossing of the left wing under Gen. Franklin. A dull haze so obscured the movement, that it was not discovered for some time by the Confederate pickets. The bridges were thus partly constructed, when a brisk and deadly fire of musketry from along the banks of the river and windows of the houses was opened, which compelled the workmen to stop. They fled to the cover of the surrounding hills where they formed again, and about six o'clock the work was recommenced. The Confederates had now become aroused to a sense of what was going forward, and with reënforcements of sharpshooters swarmed the opposite bank and houses. The pontonniers, nothing daunted by the hot fire poured upon them, went bravely to work. A storm of bullets covered them. The planks and boats were riddled by every volley. Once more they were compelled to withdraw, and again fell back to the cover of the ridge of hills running parallel with the river. Orders were now given to the artillery to open fire on the city. The Federal batteries commenced an almost simultaneous bombardment, directing their fire chiefly at the houses in which the sharpshooters had concealed themselves. At the first fire they became untenable, and the riflemen retreated to the rear of the town, and took shelter behind the buildings unharmed. The fire of the artillery, which commenced at seven o'clock, was continued incessantly until one o'clock. The fog somewhat obscured its results, but bodies of the Confederates with great stubbornness still kept within the city. The Confederate batteries on the heights in the rear continued silent. Not a gun was fired, About ten o'clock, the workmen were again formed for a third attempt to build the bridges. Vol-

unteers joined them from the 8th Connecticut. Some planks were seized and carried out to the end of a string of boats and placed in position, when a galling fire from sharpshooters in rifle pits near the edge of the water again interrupted them, and they were recalled. Meantime the bombardment was continued, and several houses in the city had taken fire. In the afternoon, several pontoon boats, loaded with volunteers from the 7th Michigan and 19th Massachusetts, were sent over. They chased the Confederate sharpshooters from their hiding places, and the bridges were finished without further interruption. On the other side a scene of destruction presented itself. The walls of houses were breached, roofs had fallen in, and the interiors were destroyed.

No sooner were the bridges completed than the troops began to cross, and before dusk Gen. Sumner's grand division had gone over, and a section of Gen. Hooker's. All had rations for three days, and blankets for a bivouac. The grand division of Gen. Franklin, consisting of the corps of Gens. Reynolds and Smith, crossed over at the lower bridge, which was built earlier in the day without interruption, as there was a plain before it which the artillery could easily have swept. The troops commenced crossing again early on the morning of the 12th without molestation. Some sharp resistance had been made by the Confederate soldiers to those who crossed on the previous day, but these were driven out of the city or killed. During the afternoon fire was opened upon the city by the Confederate batteries on the nearest heights, which was replied to by the Federal batteries, and soon ceased. The occupation of Fredericksburg had now been successfully made. No greater opposition had been presented by the forces of Gen. Lee than was sufficient to tempt the Federal troops to press forward with greater ardor.

The next movement was to drive the Confederate forces from their positions on the heights. These positions consisted of two lines of batteries, one a mile in rear of the other, and both overlooking the city. They extended, in the form of a semicircle, from Port Royal to a point about six miles above Fredericksburg. Their right wing, under Gen. Jackson, extended from Port Royal to Guinney's Station on the Richmond and Fredericksburg railroad; the centre, under Gen. Longstreet, extended to the telegraph road; the left, under Gen. Stuart, was west of Massaponax Creek. A reserve corps was commanded by Gen. A. P. Hill. This was the force which had fought at Richmond and in Maryland.

Friday night and Saturday morning, the 13th, were spent by Gen. Burnside in making a proper disposition of his forces. The left was occupied by Gen. Franklin with his grand division, the centre by Gen. Hooker, and the right by Gen. Sumner.

The right of Gen. Franklin rested on the outskirts of the city, his centre was advanced about a mile from the river, and his left was on the Rappahannock, about three miles below. The action commenced on the extreme left by an annoying fire from a Confederate battery, which the 9th New York was ordered to charge and capture. In this attempt they were repulsed. A brigade was brought to their aid by Gen. Tyler, and another attempt made, but the fire was so deadly that it failed of success. The battle now became more general, and another attempt was made to capture the battery. No advantage was gained at this time, but a severe loss was suffered. The conflict now extended along the whole line of the left, and a desperate effort was made to drive the Confederates across the Massaponax Creek by turning their position. The ground was contested most obstinately, but the Confederates gradually fell back, occasionally making a most desperate stand, until night, when Gen. Franklin had succeeded in gaining nearly a mile, and his troops occupied the field. The right of Gen. Franklin's division, under Gen. Reynolds, encountered the fire of the Confederate artillery on the heights, and although the conflict was most deadly, no advantage was gained.

On the right, under command of Gen. Sumner, the action commenced about ten o'clock and was furious during the rest of the day. The Confederate forces occupied the woods and hills in the rear of the city, from which it soon became evident they could not be driven except at the point of the bayonet. The charge was ordered to be made by the division of Gen. French supported by that of Gen. Howard. Steadily the troops moved across the plain, until they were within a dozen yards of the ridge, when they were suddenly met by a galling fire from the Confederate infantry posted behind a stone wall. For a few minutes the head of the column exhibited some confusion; but quickly forming into line it retired back to a ravine within musket shot of the Confederates. Here they were reënforced by fresh troops who fearlessly advanced to their aid under a most destructive fire of artillery. The line of assault was now formed again, and with bayonets fixed and a double-quick step, they rushed forward to seize the Confederate artillery. From the first step they encountered a terrific fire of infantry and artillery. No veterans could face that shock. They were thrown into confusion and brought to a sudden halt. At this juncture the centre quivered, faltered, and fled in disorder, but was afterward rallied and brought back. Three times was the attack thus made to dislodge those batteries. But each time it was in vain. The ranks of the storming party, shrunk to small limits, retired. The entire force of his artillery was now brought by Gen. Sumner to bear upon the enemy, and thus the contest was kept up until dark. At night the Confederate force occupied their original position, and the wounded and the dead remained where they

had fallen. Every attempt to remove them by the Federal troops was defeated by the Confederate infantry.

In the centre, under the command of Gen. Hooker, skirmishing commenced early in the morning; and during the forenoon, while the fog prevailed, a terrific contest, chiefly with artillery, was kept up on both sides. The Confederate position appeared to be invulnerable to artillery, and about noon preparations were made for storming it. The troops marched steadily up within musket shot of the batteries, and were there met by such a destructive fire of artillery and rifles as drove them back with a heavy loss. Reënforcements were obtained, and the attempt to take the batteries was repeated in the afternoon, but without success. The contest continued with great fierceness until night. About half past five the firing of musketry ceased, but that of the artillery continued until long after dark.

On the next day, Sunday the 14th, both armies remained comparatively quiet. Some skirmishing and artillery fire took place for a short time. Gen. Burnside sent the following despatch to President Lincoln early in the morning:

HEADQUARTERS ARMY POTOMAC,
FOUR O'CLOCK, A. M., *December* 14.

THE PRESIDENT: I have just returned from the field. Our troops are all over the river and hold the first ridge outside the town and 3 miles below. We hope to carry the crest to-day. Our loss is heavy—say 5,000.

A. E. BURNSIDE,
Major-General Commanding.

On Monday, both armies continued in the same position. The Confederates had strengthened some of their works. During the ensuing night, the army evacuated Fredericksburg and retired across the river to its former position. The artillery crossed first, followed by the infantry, the last of whom left about daylight. The pontoon bridges were then removed and all communication cut off. The movement was not perceived by the Confederates until it was too late to do any injury to the retreating force. The following is the despatch of Gen. Burnside announcing this movement:

HEADQUARTERS ARMY POTOMAC,
SIX O'CLOCK P. M., *December* 16, 1862.

Maj.-Gen. HALLECK: The army was withdrawn to this side of the river because I felt the position in front could not be carried, and it was a military necessity either to attack or retire. A repulse would have been disastrous to us. The army was withdrawn at night, without the knowledge of the enemy, and without loss either of property or men. A. E. BURNSIDE,
Major-General Commanding.

The Federal loss was as follows: Gen. Sumner's division on the right, killed, 473; wounded, 4,090; missing, 748, Total, 5,311,

Gen. Hooker's division on the centre, killed, 326; wounded, 2,468; missing, 754. Total, 3,548.

Gen. Franklin's division on the left, killed, 339; wounded, 2,547; missing, 576. Total, 3,462. Grand total, killed, 1,138; wounded, 9,105; missing, 2,078. Total, 12,321.

The Confederate loss was comparatively small, having been sheltered by their works.

Gen. Burnside, in his report to the general-in-chief, thus explains his defeat:

How near we came to the accomplishment of our object future reports will show. But for the fog, and the unexpected and unavoidable delay in building the bridges, which gave the enemy 24 hours to concentrate his forces in his strong position, we would almost certainly have succeeded, in which case the battle would have been, in my opinion, far more decisive than if we had crossed at the places first selected. As it was, we came very near success. Failing in accomplishing the main object, we remained in order of battle two days, long enough to decide that the enemy would not come out of his strongholds to fight me with his infantry, after which we recrossed to this side of the river unmolested, without the loss of men or property.

As the day broke our long lines of troops were seen marching to their different positions as if going on parade—not the least demoralization or disorganization existed.

To the brave officers and soldiers who accomplished the feat of thus recrossing in the face of the enemy, I owe everything. For the failure in the attack, I am responsible, as the extreme gallantry, courage, and endurance shown by them were never exceeded, and would have carried the points had it been possible.

To the families and friends of the dead I can only offer my heartfelt sympathies, but for the wounded I can offer my earnest prayer for their comfort and final recovery.

The fact that I decided to move from Warrenton on to this line rather against the opinion of the President, Secretary of War, and yourself, and that you have left the whole movement in my hands, without giving me orders, makes me the more responsible.

Thus closed the third campaign against Richmond. No further hostile demonstrations were made by either army during the year. On the 31st of December, the Confederate general Lee issued the following address to his troops:

HEADQUARTERS ARMY OF NORTHERN VIRGINIA,
Dec. 21, 1832.

General Order, No. 38.

1. The General commanding takes this occasion to express to the officers and soldiers of the army his high appreciation of the fortitude, valor, and devotion displayed by them, which, under the blessing of Almighty God, have added the victory of Fredericksburg to the long lists of their triumphs.

An arduous march, performed with celerity under many disadvantages, exhibited the discipline and spirit of the troops and their eagerness to confront the foe.

The immense army of the enemy completed its preparations for the attack without interruption, and gave battle in its own time, and on ground of its own selection.

It was encountered by less than twenty thousand of this brave army, and its columns, crushed and broken, hurled back at every point with such fearful slaughter that escape from entire destruction became the boast of those who had advanced in full confidence of victory.

The war is not yet ended. The enemy is still numerous and strong, and the country demands of the army a renewal of its heroic efforts in her behalf. Nobly has it responded to her call in the past, and she will never appeal in vain to its courage and patriotism.

The signal manifestations of Divine mercy that have distinguished the eventful and glorious campaign of the year just closing, give assurance of hope that, under the guidance of the same Almighty hand, the com-

ing year will be no less fruitful of events that will insure the safety, peace, and happiness of our beloved country, and add new lustre to the already imperishable name of the Army of Northern Virginia.

R. E. LEE, General.

As a part of the campaign against Richmond undertaken when Gen. Burnside took command of the army in Virginia, the efforts which were made to cut the Confederate line of communication between Richmond and the southwestern States, should be stated. There are three lines of railroad running south and southwest. The one running southwest passes through southwestern Virginia, eastern Tennessee, northern Alabama, and connects with roads to western Tennessee and to New Orleans. One line running south connects Richmond with Wilmington, Charleston, Savannah, and parts of Alabama. A southern line from Richmond, recently completed, passes through central North Carolina and South Carolina. By cutting the former of these roads at Cumberland Gap, reënforcements and supplies could not be brought from the southwest to the Confederate army under Gen. Lee. Neither could reënforcements be taken from Gen. Lee's army to Gen. Bragg at Murfreesborough. By cutting the second line the most direct communication between Richmond and the principal cities of the Confederate States was destroyed.

At the time when Gen. Rosecrans was prepared to move from Nashville to attack the Confederate army near Murfreesborough, an expedition was sent into east Tennessee to destroy the railroad, in order to prevent any reënforcements to Gen. Bragg from Richmond. Gen. Carter, with a force of cavalry numbering one thousand men, left London, in Kentucky, on Dec. 21. They entered Virginia between Cumberland Gap and Pound Gap, and advanced within six miles of Bristol, burned the bridges across the Halston and Watauga rivers, and tore up portions of the track, destroying the rails for a distance of nearly one hundred miles, almost to Jonesborough. They captured nearly five hundred prisoners, seven hundred stand of arms, and a large amount of stores. They reached Manchester, Ky., on the 6th of January, having lost only ten men. The enterprise was a most hazardous one.

The expedition against the second line of railroads was undertaken in North Carolina. It forms the only subsequent military movement of importance, in addition to those heretofore described, which was made in that department during the year. It was a march upon Goldsborough, and the destruction of the railroad at that place. This is the line connecting Charleston and Savannah with Richmond. Gen. J. G. Foster, who commanded the department after the departure of Gen. Burnside, took charge of the expedition. The force consisted of four brigades under Cols. Wessels, Amory, Stevenson, and Lee; the 3d New York and 1st Rhode Island batteries; also sections of the 23d and 24th New York Independent batteries, and the 3d New York cavalry. It left Newbern on the morning of Dec. 11, and moved on the Kinston road fourteen miles. Some parts of the road were obstructed by felled trees. On the next morning it advanced to the Vine Swamp road, having some sharp skirmishing with a small Confederate force. At this point three companies of cavalry were sent up the Kinston road as a demonstration, and the main force took the Vine Swamp road, thereby avoiding the obstructions and the Confederate forces. It was delayed to build the bridge over Beaver Creek, where the 51st Massachusetts and a section of artillery were left to hold it, and support the cavalry on the main road, and halted at a distance of four miles. The next morning the main column advanced, turning to the left and leaving the road it was upon to the right. At the intersection the 46th Massachusetts and a section of a battery were left as a feint and to hold the position. On reaching Southwest Creek a Confederate force was found posted on the opposite bank, about four hundred strong, and with three pieces of artillery. The creek was not fordable, and ran at the foot of a deep ravine. Under the protection of a battery the 9th New Jersey effected a passage and formed on the opposite bank, where it was afterward supported by the 85th Pennsylvania. This caused the Confederate force to retire with some skirmishing. On the next day an advance upon Kinston was made, and the Confederate force found posted in a strong position about one mile from the place. An attack was at once made with the 9th New Jersey in advance, and the position taken. The Confederate force retired across the Neuse river, with a loss of four hundred prisoners. On crossing, the bridge was set on fire, but soon extinguished by the advance of Gen. Foster. The bridge was immediately repaired, and the column crossed, and occupied the town of Kinston. With constant skirmishing the force of Gen. Foster continued to advance until the 17th, when it reached Goldsborough. Here it burned two trestle-work culverts, destroyed a train of four railroad cars, water station, depot, &c., and some small arms, which it was unable to carry off. After destroying other bridges, and capturing some small positions that had been occupied by a Confederate force, the expedition successfully returned to Newbern. This enterprise was very skilfully executed. In connection with movements upon Richmond it would have possessed considerable importance, but in the absence of such movements it only served to interfere for a few days with one line of the Confederate internal communication.

These expeditions, although successful in themselves, secured no important advantages as the great movement upon Richmond had, in the mean time, been suspended. They were useful reconnoissances, and the former may have

delayed the arrival of reënforcements from Gen. Lee to Gen. Bragg before the battle of Murfreesborough. They developed the importance of these roads to the Confederate Government, and proved that their permanent loss would have caused seriöus embarrassment to it.

Some military movements took place during the year, which have not been stated in the preceding pages, as they were rather isolated operations than a part of the campaign at the time progressing.

On the 6th of September a body of Confederate troops surprised the garrison at Washington in the department of North Carolina. A vigorous resistance was made, and the attacking party was repulsed with a loss of thirty-three killed, and nearly one hundred wounded. The Federal loss was eight killed, and thirty-three wounded.

On the 22d of October an expedition was sent out from Port Royal in the department of the South, which was then under the command of Gen. Mitchell, to destroy the trestle-work bridges of the Charleston and Savannah railroad across the Pocotalico, Tullifinny, and Coosawhatchie, tributaries of the Broad river, and to make a reconnoissance of these streams. The expedition was under the command of Gens. Brannan and Terry. The main body of the troops was landed at Mackey's Point, about fifteen miles from the railroad, and marched seven miles inland, where the Confederates were met in force. After a sharp fight of an hour they retired to a point two miles distant and made a second stand. From this point they again fell back to the village of Pocotalico, and having burned the long bridge across the stream, they were inaccessible. Meanwhile Col. Barton, with three hundred and fifty men, penetrated to the railroad at Coosawhatchie, and destroyed some of the rails, cut the telegraph wire, and fired upon a train containing troops. The engagement by the main force was severe, and the Federal loss was thirty-two killed, and one hundred and eighty wounded. The Federal force retired on the next day, having failed in the object of the expedition, except the reconnoissance. The Confederate loss has not been stated.

On the 5th of August an attack was made on Baton Rouge, in the Department of the Gulf, which was under the command of Gen. Butler. The Federal force at this city was under command of Brig.-Gen. Williams. The Confederate force making the attack was under the command of Gen. John C. Breckinridge. The contest was sharp and bloody, and the attack was successfully repulsed. The Federal loss was ninety killed, and two hundred and fifty wounded. Among the killed was Gen. Williams. Three hundred of the Confederates were reported to have been killed and buried by the force of Gen. Williams. The city was subsequently evacuated by the Federal force on May 16.

On the 24th of October Brig.-Gen. Weitzel commanded an expedition from New Orleans to the west bank of the Mississippi in the La Fourche district. An engagement took place with a considerable Confederate force on the next day, about nine miles from Donaldsonville, in which they were defeated with the loss of their commander, and a large number killed and wounded, and two hundred and sixty-eight prisoners. The Federal loss was eighteen killed, and sixty-eight wounded. The entire district was subsequently occupied by the force of Gen. Weitzel. (*See* LOUISIANA). For further mllitary operations, *see* NEW MEXICO and MINNESOTA.

Some serious conflicts with guerilla troops took place in Kentucky, Tennessee, and Missouri. For the particulars, *see* KENTUCKY, TENNESSEE, and MISSOURI.

The following list of the most important military events, with the date when they occurred, presents a more summary view of the great magnitude of the simultaneous operations:

Burnside sails	Jan.	12
Mill Springs (Ky.), battle	Jan.	19
Cedar Keys (Fla.), captured	Jan.	16
Fort Henry (Ky.), captured	Feb.	6
Roanoke Island (N. C.), captured	Feb.	7
Elizabeth (N. C.), captured	Feb.	8
Edenton (N. C.), captured	Feb.	12
Springfield (Mo.), captured	Feb.	14
Donelson (Ky.), captured	Feb.	16
Bowling Green (Ky.), evacuated	Feb.	17
Fayetteville (Ark.), occupied	Feb.	18
Clarkville (Tenn.), occupied	Feb.	19
Winton (N. C.), occupied	Feb.	20
Nashville (Tenn.), occupied	Feb.	24
Columbus (Ky.), evacuated	March	1
Fernandina (Fla.), captured	March	3
St. Mary (Fla.), captured	March	3
Pea Ridge (Ark.), battle	March	6, 7
Brunswick (Ga.), captured	March	8
Jacksonville (Fla.), captured	March	12
St. Augustine (Fla.), captured	March	14
Newbern (N. C.), captured	March	14
New Madrid (Mo.), captured	March	14
Washington (N. C.), captured	March	25
Shiloh (Tenn.), battle	April	6, 7
Island No. 10, evacuated	April	7
Huntsville (Ala.), captured	April	8
Decatur and Stevenson (Ala.), captured	April	9
Fort Pulaski (Ga.), captured	April	11
Fort Macon (N. C.), captured	April	25
New Orleans, captured	April	26
Yorktown (Va.), evacuated	May	3
Williamsburg (Va.), evacuated	May	6
Pensacola (Fla.), evacuated	May	9
Norfolk, captured	May	10
Baton Rouge, occupied	May	27
Corinth (Miss.), evacuated	May	29
Fair Oaks (Va.), battle	May	31
Fort Pillow, evacuated	June	5
Memphis (Tenn.), surrenders	June	6
Cross Keys, battle	June	8
Cumberland Gap, occupied	June	18
Seven days before Richmond	June	25, &c.
Malvern Hill, battle	July	1
Baton Rouge, attack	Aug.	5
Cedar Mountain, battle	Aug.	9
Rappahannock Bridge	Aug.	23
Centreville (Va.), battle	Aug.	28
Manassas (Va.), battle	Aug.	30
Chantilly (Va.), battle	Sept.	1
Munfordsville (Ky.), battle	Sept.	14
South Mountain, battle	Sept.	14

Antietam, battle	Sept.	17
Iuka (Miss.), battle	Sept.	19
Corinth (Miss.), battle	Oct.	4
Perryville (Ky.), battle	Oct.	8
Holly Springs (Miss.)	Nov.	13
Cane Hill (Ark.), battle	Nov.	28
Crawford's Prairie (Ark.), battle	Dec.	7
Fredericksburg (Va.), battle	Dec.	13
Murfreesboro (Tenn.), battle	Dec.	31

What has been accomplished by the military operations of the year:—The State of Missouri has been relieved from invasion by the Confederate force. Half of Arkansas has been permanently occupied. The Confederate force has been driven from the Mississippi river except at Vicksburg and Port Hudson. Western and Middle Tennessee have been occupied, and the former and part of the latter held. Western Virginia has been retained by the Federal Government. Maryland exhibited her preference for the Union. Norfolk and Yorktown have been taken and held. The cities and towns on the coast of North Carolina, with few exceptions, are occupied by a Federal force. Fort Pulaski, commanding the entrance to Savannah, was captured, and the important points on the coast of Florida occupied. Pensacola and New Orleans were also taken, and nearly all of Louisiana brought under Federal control. The forces of the North have slowly but firmly advanced upon every side of the Confederacy, and permanently hold every important position which they have gained. The battle of Antietam secured the border States, and decided the physical supremacy of the Union in favor of the North.

ASTRONOMICAL PHENOMENA AND PROGRESS. The astronomical questions which during the year 1862 have taken precedence of all others, are those relating to the physical constitution of the sun, and the possible determination of some of the chemical elements composing that body. Next to these in order of interest, may yet perhaps be ranked the question of variableness and disappearance of nebulæ. Nearly the average fertility in new asteroids (or planetoids) has rewarded the faithful devotees of the telescope; and though the comets of the year have not been brilliant, they have exhibited some features of interest. For many points directly or indirectly connected with the subject of this article, the reader is referred to the titles, Earth, and Auroras.

Asteroids.—Jan. 27, 1862, asteroid (53), Calypso, discovered in 1859, by Dr. Luther, at Bilk, near Düsseldorf, and at the periods of its opposition to the sun in the two succeeding years not detected, was by the same observer, after careful preparation of an ephemeris and a search of three weeks, rediscovered. Aug. 13, 1861, Dr. Luther found a new asteroid, appearing as a star of the 11th magnitude, and which he named Niobe,—its number being supposed to be (71). Of the observations made by Dr. Peters, of Hamilton College Observatory, and all of them, as he supposed, on the recently discovered Maja (66), Mr. T. H. Safford, of Cambridge Observatory, found on a careful computation that 8 consecutive ones did not agree with the others; and he was led to infer that they indicated another planet contiguous at the time. For this the name Feronia was afterward selected by Mr. Safford and Dr. Peters; it now stands as (71), Niobe, subsequently discovered, ranking as (72). April 7, 1862, an asteroid appearing of the 13th magnitude, was discovered near β Virginis, by Mr. H. P. Tuttle, at Cambridge Observatory; to this (73) the name Clytia was afterward given. This is the third discovery of the kind within 12 months, at the same observatory. Asteroid (74) was discovered by M. Tempel, Aug. 29, and named Galatea; and it is now probable that this was the asteroid observed, Sept. 25, by Mr. H. M. Parkhurst, of N. Y. An asteroid, supposed until recently to number (75), was discovered by Dr. Peters, Sept. 22; this, however, is now believed to be the true Daphne. (*See* below.)

M. D'Arrest, of the observatory of Copenhagen, Oct. 21, detected asteroid (76); and he commemorates this first discovery of the sort in a latitude so far north, by proposing for the planet a name from the Scandinavian mythology,—that of Freya, the hyperborean Venus. Including Feronia, this gives four asteroids for the year.

Some changes of name, as well as of order, among the asteroids have been made. To (69), announced in the first volume of the Cyclopædia, the name of Hesperia is assigned; that of Panopæa being given to (70). When M. Chacornac had found asteroid (59), he deferred the naming of it by courtesy to M. Le Verrier, principal of the observatory. The latter desired to have introduced what he considered a more useful system of naming than the present, and delayed accordingly; meanwhile, Von Littrow, who had chiefly calculated the orbit of the planet, suggested the name Elpis. Le Verrier having finally waived for the time his scruples, Chacornac requested Mr. Hind to furnish a name, and he selected that of Olympia. The name at first given to (61), Titania, having been previously appropriated to a satellite of Uranus, has been changed to Echo. One of the most interesting episodes of asteroid-finding is presented in the history of the supposed Daphne. May 22, 1856, M. Goldschmidt, of Paris, found a new asteroid (41), which during a few days longer was observed by himself and others. It soon grew faint and disappeared. Its return to opposition in Sept. 1857, was computed; and at the latter date a concerted search was made for it by astronomers of different countries. Goldschmidt announced what he supposed to be the rediscovered planet; but afterward finding a discrepancy in the elements of the bodies for the two years, he inferred that the planet of 1857 was not Daphne, and named it Pseudo-Daphne (56). At two succeeding oppositions, this planet was not seen; but it was

found again Aug. 27, 1861. M. Schubert has selected for it the name of Melete, daughter of Uranus. The true Daphne meantime escaped observation, until Aug. 31, 1862. Dr. Luther, at Bilk, detected an asteroid of the 11th magnitude, the resemblance of the plane of whose path to that of the missing planet led him to suspect that he had rediscovered it. His observations, extended to Sept. 11, render the identity almost certain; though to establish this positively will require a rigorous computation of all the observations of the two years, 1856 and 1862. This planet thus appears to stand at present both as (41) and (75); so that it must relinquish one or the other of these numbers. The name of asteroid (65) having also been changed, the following list of asteroids since the 50th presents, along with the years of discovery, the names and order according to the latest corrections.

1858. (51) Nemausa.	1861. (64) Angelina.
" (52) Europa.	" (65) Cybele.
" (53) Calypso.	" (66) Maja.
" (54) Alexandra.	" (67) Asia.
" (55) Pandora.	" (68) Leto.
[1857.] (56) Melete.	" (69) Hesperia.
1859. (57) Mnemosyne.	" (70) Panopæa.
1860. (58) Concordia.	" (71) Feronia.
" (59) Olympia.	" (72) Niobe.
" (60) Danaë.	1862. (73) Clytia.
" (61) Echo.	" (74) Galatea.

Comets.—Comet III, 1861, telescopic, was discovered, Dec. 29, by Mr. Tuttle, at the observatory of Yale College. Encke's comet, on its return, was observed at the same place, Dec. 25, 1861, having at the time the appearance of a minute nebula; its perihelion was reached Feb. 6, 1862. Prof. Bond remarks of the comet that it was "for some time visible to the naked eye, and showed a respectable tail 1° in length." The appearances exhibited were similar to those of previous visits, the chief singularity being, as heretofore, that the coma first showed itself as a faint luminous projection toward the sun, the reverse of the direction in which its elongation usually occurs. Comet I, 1862, was discovered near β Cassiopeiæ, July 2, by M. Schmidt, of Athens, and on the same evening by M. Tempel, of Marseilles; its brightness that of a star of 4–5th magnitude; July 3, it was seen by Prof. Bond, of Cambridge. Its rapid apparent motion showed its nearness to the earth, from which, July 4, it was distant only 9,000,000 miles. This is probably the first astronomical discovery of any importance made within the last 2,000 years in that city in which the foundations of the science were laid. Comet II, 1862, was discovered July 18, by Mr. Thos. Simons, at the Dudley Observatory, and on the same evening by Mr. Tuttle, at Cambridge. It was nearest the earth—33,000,000 miles—Aug. 31; it remained five weeks within the circle of perpetual apparition, its nucleus 100,000 miles in diameter, tail nearly 18,000,000 miles in length, or longer than that of the great comet of 1861; and but for the light of the moon, then in its first quarter, it would have been visible to the unaided eye. Comet III, 1862, is the second of two comets discovered by Dr. Bruhns, of Leipsic Observatory, on the nights of Nov. 30, and Dec. 1, respectively. This comet soon after ceased to be visible in the northern hemisphere, becoming visible in the southern, from which it was expected to return to the northern heavens in Jan. and Feb., 1863. The character of its orbit appears to differ from that of the orbits of all other known comets. The first of Dr. Bruhns' comets is to be styled I of 1863, since it passes its perihelion in February of this year. It was in December travelling toward the constellation Boötes, rising about 1 in the morning.

The brilliant and long-continued appearance of Donati's comet, in 1858, has led to a considerable extension of comet-literature. Among the latest and most valuable of the additions to this, is the "Account of the great comet of 1858, being vol. 3d of the Annals of the Astronomical Observatory of Harvard College;" by Prof. G. P. Bond, Director of the Observatory. The volume presents a more thorough discussion of the physical peculiarities of the comet referred to than has ever been published respecting any other, and is illustrated with 57 engravings in the best style, representing every aspect assumed by the comet during the period of its visibility, 275 days.

A new theory of comets is offered by Mr. Benjamin V. Marsh in the "American Journal of Science," for Jan. 1862, in a paper entitled, "The Distinguishing Features of Comets considered as Phases of an Electrical Discharge, resulting from Eccentricity of Orbit." In the same journal, May, 1861, the author had argued that an auroral streamer is due to a current of electricity originating in the upper part of the earth's atmosphere, and from it shooting off into space, the current carrying with it at nearly its own velocity material particles from the atmosphere, by rendering which luminous its own course becomes visible, and being thus seen (as he infers) throughout heights actually of 500 to 600 miles, through which extent the passage of the electricity itself is almost instantaneous. He now considers the question whether the coma or tail of comets may not be of like character. Either comets must be, in the material composing them, unlike the other bodies of our system; or else their peculiar features must result from some conditions to which they alone are exposed. But the number of the comets, and their coming from every direction and from all parts of space, would appear to show that the former supposition cannot be true,—that they must contain every variety of material constituting the bodies of our system. Now, excepting the difference of their appearance, the only other respect in which they differ from all others of those bodies, and in which they all agree among themselves, appears accordingly to be that in the form of their orbits. In

the different parts of its flight, every comet goes through changes of condition that contrast extremely: not so, however, with the planets. Halley's comet, at perihelion, is 56 millions of miles from the sun; at aphelion, 3,370 millions of miles. Hence, its greatest being more than 60 times its least distance, the solar light and heat received by it during a given time at perihelion is more than 3,600 times that received during a like period at aphelion. Again, while the comet is 6½ years in passing over one heliocentric degree of its orbit in aphelion, at perihelion it accomplishes the same distance in 15.7 hours. The comet, beginning to cool faster than it is warmed by heat received, from the time at which its distance from the sun first begins to increase, must, in view of the feeble heat received in all distant parts of its orbit, continue cooling until in its return it has already approached so near the sun that its velocity begins to be greatly accelerated. Now, along with this rapid approach toward the sun, there is an augmentation (in duplicate ratio) of the light and heat the nucleus or comet-mass receives; so that during the latter part of its return course, and within a relatively small part of the entire orbit, there occurs a violent transition from the lowest temperature at any time reached by the mass, to the highest. This change, the author infers, is likely to develop a powerful discharge and current of electricity, which will carry off from the substance of the nucleus myriads of extremely fine particles, as in certain circumstances such currents are known to do. That absolute smallness of the comet's perihelion distance does not explain the development of the luminous coma, is proved by such facts as that some bright comets approach the sun no nearer than about the distance of Mars or Jupiter. But from the view given, it follows that great splendor must result when, along with extreme eccentricity of path, there is combined a comparatively small perihelion distance; since in such cases the change of conditions during the approach will be correspondingly intensified. And that such combination of circumstances is attended with the development of extraordinary brightness, is shown by the facts, being remarkably exemplified in the instances of the comets of 1843 and 1861. The ratio of aphelion to perihelion distance for Polyhymnia, the most eccentric of known planetary bodies, is only 2; that of some telescopic comets given is from as low as 3.5 up to about 12; that of De Vico's comet, just visible, is 52; that of Donati's comet (1858) was 624; that of the great comet of 1843 was 18,673; and that of the comet of 1861, not less than 137,173. Of the two last named, the perihelion distance was also extremely small. Other consequences following from the theory are, that brilliant comets should have long periods, and that they should begin to appear bright at a great distance; and both these requirements are in accordance with observed facts. If the theory be true, and the forms of the orbits of asteroids and comets could be exchanged, then, within a single set of revolutions, each of these kinds of bodies would have assumed the characters now peculiar to the other. According to the view presented, the substance of the cometary mass must slowly waste; and it is stated that Professors Pierce and Mitchell had already been led to suspect that to a progressive diminution of its mass might be due the known retardation of Encke's comet. It will be seen, however, that the theory of Mr. Marsh surrenders the idea of the planetary spaces as really vacuous, or free from a diffused ponderable matter. If the comets waste, as he supposes, then all space or many parts of space are filled with an actual atmosphere of extremely rarefied comet-matter; and the planets are very sure to meet with obstruction accordingly. Moreover, the view of the aurora involves a progressive exhaustion of our own atmosphere, against which some of the generations of a very remote future might desire the opportunity of entering a remonstrance.

Nebulæ.—Toward the close of the year 1861, Prof. D'Arrest, of Copenhagen, who has been for some time engaged in a revision and cataloguing of the nebulæ, announced that a nebula in the constellation Taurus, discovered by Mr. Hind in 1852, had totally vanished from its place in the heavens. By observations made about Jan. 26, 1862, Le Verrier confirmed this declaration; although by other authorities it has since been stated that the nebula, invisible to other telescopes, was still detected with the great refractor at Pultowa. This much is certain, that a nebula sufficiently bright to be readily seen, between 1852 and '58, through many telescopes in different countries, can now no longer be seen through most of those instruments, if through any of them. The place of this nebula was about 1½ degrees from ϵ Tauri, in the group known as the Hyades. Its diameter was about 1′; and its light being more distinct toward the central portion, it had an appearance which indicated that, if ever resolved, it would prove to be a very remote globular cluster of stars. It was seen by Chacornac in 1854, while he was engaged in forming a chart of the stars in this region; and having also been missed by him during a subsequent search in 1858, it is now supposed that its disappearance probably occurred about 1856. From 1852 until the last named date, a star showing the 10th magnitude, and first noticed on the same night with the discovery of the nebula, almost touched the latter at its edge. From the circumstances of its discovery, Mr. Hind had suspected that this star was variable; and in fact, since the nebula has ceased to be visible, the star has dwindled to the 12th magnitude.

A second case of a variable or disappearing nebula, is that of one in the Pleiades, and 4° distant from the preceding, discovered by M. Tempel at Venice, Oct. 19, 1859, and which

was stated by him at the time to be quite large and in brightness equal to that of a beautiful telescopic comet. For this nebula M. D'Arrest looked repeatedly on clear nights in August, 1862, with his fine refractor, but saw no trace of it. M. Schmidt, of Athens, learning of the circumstance, announced (Sept. 20, 1862) that the nebula could not have become visible more than a very short time before the date of its discovery by Tempel, or that at least it must have been very faint for some time previous; as he had since 1841 made many and most careful observations of the stars in the Pleiades, estimating several hundred times their apparent magnitude; and he had not seen the nebula in question until Feb. 5, 1861, when it appeared large, pale, and of no definite form. After that date, he observed it several times, the last on March 26, 1862, when it was easily visible. M. Auwers suggests a doubt in regard to the variability of this nebula, thinking that its apparent disappearance may perhaps be accounted for by the greater ease with which faint, ill-defined objects are detected with small than with large telescopes.

A third instance of variability is that of a nebula not far from the two already named, observed at Bonn, and afterward at Cambridge, and which is now almost invisible. These being the only three nebulæ whose variableness appears established, it is a curious fact that they are all situated in the same celestial region, in the vicinity of the Pleiades.

A few years since, the resolution, by aid of Lord Rosse's powerful telescope, of one or more of those singular, fixed, and hazily luminous patches in remote space into congeries of actually separated and individual stars, a resolution confirmed subsequently by other instruments and on other nebulæ, proved sufficient to shake the "nebular hypothesis" of Laplace to its foundation; until certain physical explorers bethought themselves that Laplace's diffused or nebulous condition of primitive matter could still be a fact, as so many of the phenomena of our planetary system and of the geological constitution of the earth seemed to require, even though all the existing nebulæ of the heavens should successively prove to be in reality clusters of stars. Now, however, assuming that the three nebulæ referred to have actually disappeared or faded, new and strange questions are raised; and the facts seem likely to prove as irreconcilable with the doctrine that all nebulæ are clusters, as the resolution of some of them was with the hypothesis of Laplace. Is such disappearance due to the interposition of some vast, dense, and invisible body, but which, not being wholly opaque, does not suffice to hide observed stars? Or, in the first of the cases above given, did the star illuminate the nebula, which in that case could not have been itself a cluster? and did the visibility of the nebula diminish with the decreased light of the star? Several variable stars have, in fact, been detected in the region of the great nebula of Orion; and in 1860, a star suddenly shone out in the middle of the well-known nebula, Messier 80, in Scorpio, and vanished again in a few days. Up to the present time, however, the subject remains one of considerable mystery.

Stars.—Some facts relative to variable stars have necessarily appeared in the preceding section. The star which has become known as the "companion of Sirius," was discovered Jan. 31, 1862, by Mr. A. Clark, of Cambridge, Mass., with his new achromatic object-glass of 18½ inches aperture. Sirius being in our latitude low, and the new star being in contrast with its extreme brightness but faint, it is at first difficult to catch sight of the latter. It remains for the present a question, whether this forms with Sirius a binary star; and whether, accordingly, it is the hitherto invisible body which has disturbed the motions of Sirius, and the existence of which had been surmised by Bessel and Peters; as also whether it is merely an opaque body illuminated by the brighter star, or itself, though large, only feebly self-luminous. Mr. L. M. Rutherford, of New York, on the same evening on which he first learned of the discovery of the companion to Sirius (March 8), readily detected it with his equatorial telescope of 11¼ inches aperture and 14 feet focal distance, the workmanship of Mr. Fitz, of the same place. Though admitting that the new star may be a variable one, he judges that the difficulty of seeing it most likely arises solely from its nearness to an object so bright as Sirius. He also finds in the facts of its discovery now given, a probable illustration of such a principle as that it requires a far higher telescopic power to make a new discovery than it does to redetect the same object when its existence has become known to the observer.

Just as, in 1851, Dr. Peters found that the irregularities in position of Sirius could be explained by motion of the bright star about an invisible one (since found), so recently M. Auwers finds that Procyon moves about a dark star, and in an orbit whose plane is that of the visible heavens, the distance of the companion being about 1¼″. He concludes that the mass of the dark body equals ½ that of the sun, or at least 100 times that of Jupiter. Thus Bessel's idea of the existence of dark stars in the heavens, controlling the motions of some of those visible to the eye, an idea ridiculed by Humboldt, appears now to be established in one instance, if not in two.

Refraction.—Prof. Challis read before the meeting of the British Association, 1862, a paper on the "Augmentation of the Apparent Diameter of a Body, by its Atmospheric Refraction." For reasons which he gave in a previous discussion on the earth's atmosphere, he assumed that, generally, the atmospheres of the bodies possessing them have definite boundaries, at which their densities have very small but finite values. Two cases of refraction

present themselves: that of the earth's atmosphere, first, is one in which the curvature of the course of a ray passing through it is less than the curvature of the globe such atmosphere surrounds. The moon having, if any, an atmosphere rarer than that of the earth, the like result must, *a fortiori*, hold of any atmosphere it may have. As a practical consequence, the apparent diameter of the moon, as ascertained by measurement, will be greater than that inferred from observation of an occultation of a star; since, through bending of the light by the moon's atmosphere, the star will disappear and reappear when the line of vision is a little within the moon's apparent boundary. A like result would be obtained from a solar eclipse. The author stated that by actual comparison of the two kinds of determination, such an excess to the amount of 6″ to 8″ was found. This difference, accordingly, he considers as indicating a lunar atmosphere of very small extent and density. The reasoning leads us to anticipate that, in a solar eclipse, a slender band of the sun's disk, immediately contiguous to the moon's border, will appear somewhat brighter than parts more distant: attention to this feature at the next solar eclipse was advised. The other case, that in which the curvature of path of the ray is greater than that of the globe having the atmosphere, was assumed true in the instance of the sun. On this supposition, it was shown that all objects seen by rays coming from the sun's periphery, would by the great refraction be brought out apparently to the level of the boundary of the solar atmosphere; and this would be so, whether the rays proceeded from objects on the surface of the interior globe, or from cloud-like masses suspended in its atmosphere. The contour of the sun, accordingly, should appear quite continuous, and the angle of its apparent semidiameter will equal the angle subtended at the earth by the whole height of the solar atmosphere. For like reasons, the apparent diameter of the planets will be augmented to a certain amount by the effect of refraction; and on account of the great distances of these bodies from the earth, the eclipse of a satellite will take place as soon as the visual ray begins to be bent by interposition of the atmosphere of the planet.

AURORAS. The questions relative to the precise manner of production of the auroral display, and its elevation and place with respect to the earth, have been during the year 1862 somewhat pointedly discussed. The *aurora borealis* was, of course, known to the civilized world earlier than its counterpart of the southern polar regions; and the theories at first proposed to account for it, among them that which referred the light to the bending of the sun's rays by the atmosphere about the northern convexity of the earth, and that which supposed it to be the effect of rays reflected from icebergs, were either imperfect on physical, or impossible on mathematical grounds, or defective in both these particulars. Since the phenomena of electricity became better known, the view proposed by Cavendish, to the effect that the aurora is due to the passage of electricity through portions of the atmosphere in which the air is considerably rarefied, or at all events serves as a conductor, and yet not a perfect one, has become (so far as it extends) quite generally adopted. The causes and conditions leading to disturbance of the electric equilibrium and to the actual discharge, remained to be investigated. Many years since, it began to be observed that not only are the instruments at the earth's surface employed to indicate electric disturbance (electrometers) subject to excitation during the auroral displays, but also that at such times marked deviations or irregularities of the magnetic needle almost invariably occur. At times when the aurora has appeared simultaneously over a great extent, as in 1831, 1839, and 1859, the magnetic disturbance has been unusually great. It is now known also that generally the display occurs at the same times at both poles, or as *aurora borealis* and *australis;* though it is believed that, for some reason, the phenomenon is somewhat the more frequent in and near the arctic zone. Of controversial papers on the subject during the year, the most important have been that of Prof. A. De la Rive, read before *la Société de Physique et d'Histoire Naturelle*, of Geneva, Feb. 6, 1862, an abstract of which appears in the "Philosophical Magazine," vol. xxiii, p. 546; and that of Dr. David Walker, in the "Intellectual Observer," Nov. 1862. The chief addition to our physical knowledge of the subject is probably to be found in the "Ninth Article" upon electrical currents near the earth's surface, and their connection with the aurora, by Prof. E. Loomis, of Yale College,—"Amer. Journal of Science," July, 1862.

Of course, no theory of the aurora can be correct, unless according with the fact of the actual position in space of the luminous arc or streamers: this being a point not easily determined, and probably not yet known, each theory must assume for the display some position to which its requirements will correspond. Cavendish supposed the height of the aurora about 71 miles,—the air, if there existing at all, having but $\frac{1}{150,000}$th part of its density at the earth; Halley, Dalton, and others assumed heights of 52 miles or upward. The actual height of the base of the visible arc should be ascertained by trigonometrical measurement from different positions at the same time; yet observers at different places must often see at the same moment each a different aurora; and in an instance of measurement by two observers and supposedly of the same aurora, Jan., 1831, one of these made the height 18 miles, the other not less than 96. Prof. Loomis, in his "Eighth Article" upon auroras, especially the great aurora of Aug. 28, to Sept. 4, 1859 ("Amer. Jour. of Science," Nov. 1861), by comparing the angles of elevation of the same arches as seen from different positions, in a few in-

stances given, makes the lower limit of these at a height varying from 46 to 50 miles above the earth, the upper limit at heights of 495 to 534 miles. Many modern observers have, on the other hand, concluded that the luminous space is seldom higher than the clouds; and some, as Capt. Parry (1825), Sir Wm. Hooker, Gen. Sabine, and Dr. Walker (1859), relate the observing of auroras, parts of which they decided were very near the earth, in some of these instances the lower portion appearing to be visible (as in case of rainbows) between the observer and an elevated shore or ground at some distance. Dr. Walker observed the aurora in the arctic regions occurring repeatedly in the direction of open waters, from which evaporation was going on, and at times when the air showed minute spiculæ of snow, or was gradually filling with mist, or where cirrous clouds appeared in the sky. Biot proposed that the light occurred during the imperfect conduction of electricity between upper and lower atmospheric strata, by a sort of clouds of extremely subtile metallic particles, but of which it is very difficult to admit the existence; and Prof. Potter, of England, in the "Philos. Mag.," 1862, objecting to De la Rive's theory (yet to be named), and holding to the view of a great altitude, offers a hypothesis somewhat similar to the last, to the effect that the light is due to the electromagnetic influence of the earth on masses of very rare vapors, of a nature like that of meteorites or vaporous comets, moving under control of gravitation in the planetary spaces, and affected in the manner supposed only when nearly approximating to the earth. For a brief mention of Mr. Marsh's theory, which like the last two is cosmical rather than terrestrial in character, and of an objection to that theory, see *Comets*, under ASTRONOMICAL PHENOMENA, &c.

The experimental observations of Plücker, Gassiot, and others, had already shown considerable traits of resemblance between the behavior of the electric discharge in a partial vacuum, and under the influence of magnetism, and the appearance of the auroral light; and suggestions were offered by Faraday and Humboldt pointing in the same direction. Hansteen had generalized the fact that the luminous arc of the aurora is concentric with the earth's nearest magnetic pole—that point, for the strongest N. magnetic pole, now about lat. 60° N., long. 81° W., toward which the magnetic meridians converge,—in other words, that the arc stands at right angles to these meridians. It is doubtful whether the theory of the aurora proposed by Dr. Walker does full justice to some of the facts and principles now presented; although the author claims for it a close agreement with his own and other arctic observations of the phenomenon. He supposes that the cause of the electrical disturbance is the condensation and freezing of vapor, at any elevations at which these changes may take place, the result being an evolution of positive electricity [query: that carried up by the vapor from the evaporating surface?]; that the body of air so affected being surrounded by air which does not perfectly conduct, an inductive action takes place between it and more external bodies of air, as between the two coatings of a Leyden jar; but that the excess of positive electricity, where liberated, being in some degree transmitted from particle to particle of the air, renders the mass for the time luminous, the lower edge of the arch showing where the change in the vapor and in the electric equilibrium begins to take place. The luminous tracts or streamers, then, are portions of the air through which the opposite electricities are making their way, in the tendency to a restoring of the equilibrium. If true, the theory would appear to show why the aurora usually, if not invariably, appears in close connection with clouds, usually cirrous, or where at least the sky wears a hazy aspect. Hence, too, the aurora can be at any height at which the supposed conditions exist; and hence, it may be, the explanation of the more frequent appearance of auroras of late years, the winters having been in many instances unusually severe. The theory of M. De la Rive appears to be not only more clearly in harmony with the great general facts now known in relation to the aurora, but also to have been followed out to greater particularity of detail than those offered by other explorers; while the experimental illustration which he has been able—through use of an apparatus constructed under his direction by M. Eugène Schwerd, a German artist in the establishment of Prof. Thury—to produce, is remarkable for the complete and exact manner in which it imitates the actual phenomenon in nature. Although the germ of De la Rive's theory is conveyed in a letter of his to Arago in 1849, and a more complete development of it is given in his "Treatise on Electricity" (London, 1858), yet his communication of the year 1862 is important as giving the latest and fullest exposition, as well as the more perfect arrangement for experimental illustration, of the subject. The apparatus itself is of too complicated a nature to allow of description in detail in this place: a general, and it is hoped, intelligible account of both the theory and its illustration can be briefly given.

M. De la Rive sets out with two principles which he regards as definitively established; 1, that generally northern and southern auroras coexist—a fact which the series of observations made at Hobart Town in the southern, and Christiana in the northern latitudes particularly confirm; 2, that the aurora is always an atmospheric phenomenon. In confirmation of the latter view he cites particularly the opinions of Arago and Secchi. In reference to the source of the electrical charge: the waters of the ocean being at the surface continually in a positively electrified condition, the vapors arising from them conduct this electricity to the upper strata of the atmosphere; and being then in a considerable degree carried by the upper trade

winds (or anti-trades) toward the polar regions, they form in those regions a sort of positive envelope to the earth, the surface of which is itself usually or always negative. Now the earth being an almost perfect conductor, and the highly rarefied air of the upper regions being also such, while the lower atmosphere is less conductive or highly non-conducting, the result is an arrangement that precisely and on a very grand scale represents the two coatings and intervening insulating layer of the electrical jar or the condenser. The antagonistic electricities most strongly intensify each other where their positions approach the nearest, and this, though not always, will be in a general way near to the two poles; in such positions, when their intensities have passed a limit depending on the insulating power of the lower air, more or less frequent discharges will occur: these discharges, taking place in the lower latitudes and in summer more frequently in form of lightning, will, through difference of meteorological conditions, in the higher latitudes and in winter more frequently appear as displays of auroral light. While, through high conducting power of the earth, the auroral discharge must usually take place almost or quite simultaneously at the two poles, there can evidently exist such differences in the charge at the two poles, in the condition of the intervening air, and otherwise, as shall produce not only differences in the display from moment to moment in either hemisphere, but also inequalities of time and brilliancy in the two, or the appearance of the light at only one of the poles. Owing, moreover, to the low conducting power of the medium, the neutralizing of the opposite electricities cannot be instantaneous, but must be by successive and more or less continuous discharges.

The magnetic phenomena in our hemisphere attending the aurora consist in an augmentation of the westerly deflection, with often more or less oscillation, followed and occasionally preceded by a feebler easterly deflection. Among the observed electrical phenomena are currents, frequently very intense, in lines of telegraphic wire. The observations of Dr. Walker in England, and of Prof. Loomis in America, have shown that during the appearance of an aurora these currents vary every moment, and that in direction as well as intensity, flowing more generally from N. to S., but being at irregular intervals reversed. These variations are in part to be ascribed to the location and relative intensity of the discharges; these taking place at both poles or chiefly at the north pole, the current along the earth will, in the northern hemisphere, flow southward; and the well-known electro-magnetic effect in all such cases will be to produce westerly deflection of the needle. But when the only or stronger discharge is at the south pole, the current in the earth will move northward; and those familiar with the character and production of induced currents will see that the plates at the end of the telegraph wires becoming, when charged in either direction, rapidly polarized by the current which they transmit, speedily give rise to an induced current, moving in the opposite direction, which will suffice either to diminish or momentarily replace the original one: through such electrical variations, the oscillations and occasional easterly deflection of the needle are to be explained.

Essentially M. De la Rive's apparatus for reproducing in miniature the auroral display, and showing the fact and influence of the attendant circumstances now considered, consists of a wooden sphere of about 12 inches diameter, to represent the earth, supported at the ends of its horizontal axis by upright soft-iron rods, the magnetic poles being represented by two cylindrical soft-iron rods, at the ends of the axis, projecting each about 2 inches beyond the supports, insulated at all parts save the free ends, and which can be rendered magnetic by action of coils or of the poles of an electro-magnet, when desired, while the principal portion of the length of each outside the body of the sphere is situated within and in the middle line of a glass tube of larger diameter (about 4 inches), and greater length; these tubes being hermetically closed at the two ends with metallic disks, as well as furnished with stop-cocks through which the air within them can be exhausted to any rarity desired. It is within these partially vacuous tubes that the miniature auroras are to be produced. Through the inner metal disk of each, of course, the soft iron (magnetic) pole projects, terminating about mid-length of the tube; immediately about and concentric with each of these poles, is a soft-iron ring, of such size that it lies just within the glass tube, and leaves an annular space between itself and the pole: the ring plays the part of the upper electrified air; the intervening space, that of the stratum in which the discharge becomes visible. To obtain the effect of the earth's conduction between the poles, a band of blotting paper is extended from one of the soft-iron poles to the other; while a similar band is extended equatorially about the sphere; and during experiments both these are kept moist by capillary action from a little capsule containing salt water. On the opposite sides of the equator of the sphere, small copper plates are fixed to the wood upon the meridian conducting band of paper, and wires proceed from these to the coil of a galvanometer needle about 36 feet distant, so as to be beyond the influence of the magnetic action upon the poles of the sphere. The electrical current used is that of a Ruhmkorff's coil, one pole of which, through the conducting paper bands, is made to communicate with the soft-iron poles of the sphere, while the other divides into two branches, and by wires passing through the outer disks of the glass tubes, terminates in the two rings. Having the tubes properly exhausted, let the positive pole of the electrical apparatus communicate with and terminate in the poles of the sphere, while the negative termi-

nates in the rings: then, sometimes at one pole of the sphere, usually at both, a luminous jet from the pole to the surrounding ring appears. Let the poles of the sphere be now at the same time magnetized: the jet at once spreads around the ends of the soft-iron poles, very soon forming two distinct colored rings, concentric with it and between it and the iron ring—the inner of a rose-red, the outer violet—with a dark annular space between; and both these rings rotate around the pole. But the course of the current is thus far the reverse of that in the natural phenomenon. Now let the positive pole of the electrical apparatus be the rings, and the negative be the two soft-iron poles of the sphere —the air in this experiment requiring to be somewhat more dense than before:—the conditions then represent those in nature. Having obtained the jet of light showing passage of the current, again magnetize the poles of the sphere, and at once the jet again begins to spread out and rotate; but it now invariably extends itself laterally by throwing off a multitude of minute brilliant jets (the auroral streamers), which extend like the spokes of a wheel from the poles toward the rings, and turn with greater or less rapidity. Here, then, is an extremely faithful reproduction of the aurora; and it is particularly worthy of notice that this appearance is only to be obtained when the positive current flows from the rings toward the poles of the sphere; and that, however apparently identical the arrangement and conditions of the two poles of the sphere, the discharge will still through slight and inexplicable changes of condition, but in exact imitation of the natural phenomenon, begin at one pole first on one occasion, and again at the other, or during its progress will suddenly cease at one pole, or fly from one to the other. The phenomena of the current in the meridian conducting band, at least so far as the principal deflection of the needle is concerned, are illustrated by passing the same current as that in the apparatus through a surface of mercury over which a delicate needle is suspended, or by the galvanometer; though in these experiments the secondary induced currents and their effects do not come in.

In the communication of Prof. Loomis, above first referred to, he calls attention to the fact of his having shown, in his eighth article in the same journal, the existence of a stream of electricity drifting across Central Europe in a direction from about N. 28° E. to S. 28° W. After collecting during several months materials drawn from observations on the magnetic needle made at Toronto, Cambridge, and Philadelphia, from May, 1840, to Dec. 1842, and during a portion of this time at Washington also, he is led by a comparison of the times of the daily maximum and minimum deviations of the needle at the places named, to conclude that the maximum deviation of the needle advances like a wave over the earth's surface—the direction of its motion being from N. 68° E. to S. 68° W. The observations, secondly, of the minimum deviation of the needle indicate a wave from N. 69° E. to S. 69° W. In view of their close approximation, he assumes the former as the true direction. The average of the velocities of the two waves, as deduced from comparison of the Cambridge and Toronto observations, is 134 miles per minute; by the Philadelphia and Toronto observations, 89 miles per minute. Comparing the observations, further, with the notices (often nearly or quite simultaneous) of occurrence of auroral displays, the conclusion is that for the eastern part of the United States the irregular deflections of the needle, whether attended or not with auroras, are as the rule propagated in the direction already stated, and with an average velocity of 112 miles per minute. A summary and comparison of notices—from 1820 to 1850—indicating the fact and direction of lateral displacement of the auroral beams, shows 36 cases of movement of the arches or beams from N. to S., only three in which it was from S. to N., and a few instances of change from one course to the other; also, 31 cases of movement from E. to W., and 15 from W. to E. Taking into account the effect of apparent motion, in parts lateral to the observer, the general conclusions are, that the actual motion of the streamers is from about N. N. E. to S. S. W.; and hence, that there is a general correspondence between the direction of the electric currents which traverse the earth's surface during displays of aurora and that of the movement of the auroral beams—the former, in the United States, being from about N. 68° E. to S. 68° W., the latter, from about N. 30° E. to S. 30° W.

A remarkable aurora visible in the region of the city of New York, at very near the hour of 12 on the night of August 4, 1862, was observed for a short time by the writer of this article. No notice of the phenomenon, save that of a daily newspaper, having been met with, the commencement and duration of the display cannot be given. In this aurora, the light was—at least in most parts of the heavens covered by it—not that of a somewhat fixed arch; on the contrary, it appeared and disappeared over considerable portions of the entire northwestern and northern sky in a rapid succession of almost instantaneous pulses or flashes, comparable in this respect to the appearance of very quickly moving puffs of steam, but of a pale reddish color. The general direction of the waves of light appeared to be from N. N. W., and they reached quite to the zenith. It soon became evident, on carefully observing the light, that the successive flashes continued to become visible and to disappear over nearly or precisely the same patches of sky. Such, it can readily be imagined, would be the case with electric discharges passing through successive bodies of air of differing conductive power; at all events, it appears difficult to reconcile the actual and peculiar character of such an aurora with any theory of its existing

above the limits of the earth's atmosphere. It would seem that auroras of this sort are but rarely observed: the notices at Christiana, Norway, 1842–'7, include those of four auroras "with flames," or "flaming:" one of these, Sept. 22, 1846, is described as showing "vehement flames over three fourths of the heavens; (color) reddish."

AUSTRIA. Emperor Francis Joseph I, born August 18, 1820, ascended the throne, Dec. 2, 1848, married April 24, 1854, to Elizabeth Mary Eugenia, daughter of Maximilian, duke of Bavaria, heir to the throne: Archduke Rodolphus Francis Charles Joseph, born August 21, 1858.

The most interesting portion of the history of Austria during the year 1862 consists in the proceedings of the *Reichsrath* (parliament). The Government made the utmost efforts to induce all the crownlands to send deputies, and thus to complete the organization and centralization of the empire. The number of deputies apportioned to every crownland was as follows: Hungary 85, Bohemia 54, Venetia 20, Dalmatia 5, Croatia and Slavonia 9, Galicia 38, Lower Austria 18, Upper Austria 10, Salzburg 3, Styria 13, Carinthia 5, Carniola 6, Bukowina 5, Transylvania 26, Moravia 22, Silesia 6, the Tyrol and Vorarlberg 12, Istria, Goerz, Gradisca, and Triest, together 6. But the efforts of the Government were in vain. Hungary and its dependencies, as well as Venetia, persisted in refusing to take part in the proceedings of the Reichsrath, and of the 343 members of which it was to consist, no more than 200 were at any time present.

The Reichsrath contained two great political parties; one in support of the constitution of Feb. 26, 1861, and in favor of consolidating all the crownlands, in accordance with the constitution into one constitutional monarchy; the other, opposing the centralization of the empire, and the completion of the design of the constitution, as endangering the rights of those who were not of the German races. The majority being centralists consisted of the deputies of the German provinces, as Upper and Lower Austria, Salsburg, the Tyrol, Styria, and of several other provinces, where the population contains a strong element which is not German, but where the Government has succeeded in securing the election of partisans. Among the deputies who were not German it was in particular the Ruthenes of Galicia, under the leadership of Bishop Litvinovitch, who supported this party, out of opposition to the Poles, who inhabit the same country, and whose political influence they wished to break. The majority, in general, was favorable to liberal reforms. Its chiefs were Dr. Hein, of Silesia, recently appointed Minister of Justice, Gizkra, of Moravia, who was, in 1848, a prominent member of the parliament of Frankfort, Kuranda, editor of one of the leading dailies of Vienna (the *Oest Deutsche Post*), and Brinz, professor of Prague. The opposition to the centralization of the empire (the Federalists), is headed by the Czechi, of Bohemia, who repel with indignation any idea of submission or conversion to the German element of the empire, and of the Poles, who still hope for the restoration of an independent kingdom of Poland. A small contingent of this party, which altogether counted about 50 members, was furnished by the Slavic population of Moravia, Carinthia, and Carniola. The leaders of the party were Rieger, Klaudi, and Brauner, of Bohemia, and Smolka, of Galicia. A small aristocratic body, headed by the Count Clam-Martinitz, generally voted with this party. The Chamber of Peers was, on the whole, less liberal than the Chamber of Deputies. A conflict between the two broke out, particularly on the question of the budget and of the privileges to be exercised in matters of taxation by the Chamber of Deputies. The upper house, however, on December 15, adopted the budget as voted by the Chamber of Deputies. On December 18, the session of the Council of the Empire was closed by a speech of the emperor, who expressed satisfaction that the confidence he had placed in the nation, by granting the constitutions of October 20 and February 26, had been justified. The emperor said: "Our resolute progress in the path of peace has powerfully increased confidence in Austria's strength, and has gained her the sympathy of other nations. The Reichsrath has proceeded firmly upon the solution of its task, and has already passed important measures. Basing the regulation of the budget upon the principle that the resources of the country itself must supply its necessities, I am convinced that such a result will be brought about by an equal division of burdens. Commerce has already shown increased animation in consequence of the abolition of the transit dues. The bill regulating the control of the Reichsrath over the national debt secures also the coöperation of the Legislature in supervising the expenditure. The new Bank Act has established the relative position of that institution to the State. The retrenchment of the expenditure has exercised a favorable influence upon the state of public affairs."

It has been generally acknowledged in Europe, and particularly by the English press of all parties, that Austria, during the year 1862, has made great progress in the path of constitutional freedom. On May 1 a law was promulgated, establishing the responsibility of the ministry. In December, two other important laws were published relative to individual liberty, and the inviolability of the domicile. These laws, although still imperfect, are substantially based upon what is known in England and America as the *Habeas Corpus* Act.

The efforts of the Government to overcome the discontent of Hungary and Venetia were unceasing, although not attended by any marked success. Count Forgach was sent by the Government to Hungary, in order to make himself acquainted with the real state of things.

What the Hungarian party chiefly insisted upon was the reëstablishment of the comitats or municipal councils of Hungary, as the natural precursors of a diet, which they said might be constituted without the slightest danger to the monarchy. Count Forgach admitted the desirability of reëstablishing the comitats, but doubted whether the time was yet come for such an experiment. He recommended his Hungarian countrymen to persevere in their conciliatory views, and that he should be happy to make himself their mediator with the emperor. Toward the close of the year 1862 it was thought that the basis of a compromise was agreed upon, and the leaders of the liberal-conservative party in Hungary, anxious both for the independence of their country and for its "indissoluble and indivisible" union with the other hereditary provinces of Austria, were said to be engaged in a negotiation with influential men in Vienna for that object. In November the emperor granted an amnesty to political offenders condemned by courts martial, as well as such refugees as had already returned to Hungary. The emperor also ordered the total cessation of judicial proceedings pending for offences of a political character. For Venetia a new plan of organization has been drafted, according to which there is to be a diet composed of fifty members, chosen by direct election, who appoint their own president, subject to the ratification of the emperor. The executive power is to be composed of thirteen members, nine of whom are to be chosen by the diet, and four by the Government. The diet is to have the right to revise the plan.

The diets of the following provinces: Bohemia, Dalmatia, Galicia, Upper and Lower Austria, Salzburg, Silesia, Styria, Carinthia, Carniola, Bukowina, Moravia, Tyrol, Vorarlberg, and Istria, were convoked by an imperial decree for December 10. The Government wished to circumscribe their deliberations within narrow limits, but it was soon found impossible to evade the discussion of political questions.

The following table gives a complete exhibit of the different nationalities in Austria, according to the census of 1857:

Crownlands.	Germans.	Northern Slavi.	Southern Slavi.	West Roumanians.	East Roumanians.	Magyars.	Other races.
Austria below the Enns	1,341,770	12,270	6,870	....	....	....	8,789
Austria above the Enns	688,290	....	....	....	....	....	4
Salzburg	140,197	....	....	....	....	....	....
Styria	640,806	....	369,246	....	....	....	24
Carinthia	231,558	....	92,767	....	....	....	....
Carniola	29,783	....	437,058	....	600	....	....
Goerz, Gradiska, Istria, Trieste	8,150	....	331,042	162,326	2,300	....	4,113
Tyrol and Vorarlberg	525,092	....	....	339,913	....	....	548
Bohemia	1,766,372	2,925,982	....	....	....	....	86,339
Moravia	483,518	1,351,982	1,000	....	....	....	41,529
Silesia	234,843	223,928	....	....	....	....	3,280
Galicia	114,293	4,067,107	....	....	....	....	451,466
Bukowina	37,855	194,608	....	....	175,679	7,400	31,553
Dalmatia	....	....	369,310	45,000	....	....	1,318
Lombardy and Venetia	12,250	....	26,892	2,408,010	....	....	6,583
Hungary	1,221,714	2,037,817	593,625	....	1,171,676	4,333,987	456,948
Croatia and Slavonia	24,470	6,500	811,757	487	50	12,770	6,732
Transylvania	200,364	1,768	830	....	1,104,322	517,577	102,312
	38,400	9,820	865,377	400	140,826	4,900	2,349
	150,200	213,000	77,000	33,000	47,500	70,500	13,645
Total	7,889,925	11,044,872	3,982,774	2,989,136	2,642,953	4,947,134	1,217,532

Among the Northern Slavi are included 6,132,742 Chechi, Moravians, and Slovacks, 2,159,648 Poles, and 2,752,482 Ruthenes. Among the Southern Slavi are included 1,183,533 Slovenians, 1,337,010 Croats, 1,438,201 Servians, and 24,030 Bulgarians. Among the West Romanians are included 2,557,913 Italians, 416,725 Friulians, and 14,498 Ladinians. Among the other races are 3,175 Albanians, 2,255 Greeks and Zinzari, 16,131 Armenians, 146,100 Gipsies, and 1,049,871 Jews.

The population of the principal cities is as follows: Vienna, in 1857, 476,224, in 1861 about 512,000; Prague (in 1851) 142,588, Pesth 131,705, Venice 118,172, Trieste 104,707, Lemberg 70,384, Gratz 63,176, Szegedin 62,700, Verona 59,169, Brunn 58,809, Buda 55,240.

The total imports of 1861 consisted of 240,732,238 guilders; total exports of 315,177,981 guilders. The merchant marine in the same year numbered 9,803 vessels, with 341,972 tons.

The financial condition of the empire will appear from the following extracts from the Finance Law and the Budget for 1863, which have been published in the official collection of laws, where they fill together 29 columns. The Finance Law is in substance as follows: The total expenditure for the year 1863 is estimated at 367,087,748 florins. The total revenue 304,585,094 fl. The deficit of 62,502,654 fl. is to be covered by means of an augmentation of the taxes, by the sale of bonds belonging to the English loans of 1859, and of shares in the lottery loan of 1860. Should the deficit not be entirely covered, the Minister of Finances is empowered to raise a loan of 12,000,000 fl. If an arrangement with the National and Credit Bank should not be brought about, the minister shall be at liberty to raise another loan of 30,000,000 fl.

The following are the prominent features of the budget for 1863: the civil list is 7,458,700 fl. (it was 6,127,200 fl. in 1862). The outlay for the Reichsrath, 726,537 fl.; Cabinet of the Emperor, 76,000 fl. (it was 72,900 fl. in

1862); Council of State, 151,837 fl. (it was 142,680 fl. in 1862); Ministry of Foreign Affairs, 2,486,150 fl. (it was 2,644,382 fl. in 1862); Ministry of State, 25,727,580 fl.; Ministry for Ecclesiastical Affairs and Public Education, 4,724,500 fl.; the Hungarian, Transylvanian, and Croatian Chancelleries, 18,572,185 fl.; the Ministry of Finance, 21,584,766 fl. (in 1862 it was 22,150,008 fl.); the Ministry of Justice, 9,150,567 fl.; the Ministry of Police, 2,645,676 fl.; the Ministry of Commerce, 4,613,142 fl. (in 1862 its expenses were no more than 383,400 fl.); other branches of the Administration, 1,386,200 fl.; Ministry of War, 107,023,000 fl.; to this sum must be added 5,777,000 fl., which is the "special revenue" (*eigenes Einkommen*) of the Military Administration; Naval Department, 10,481,619 fl. (in 1862 it was 13,165,000 fl.); subventions and guarantees of interest to private companies, 4,843,050 fl.; interest on the national debt, 113,698,750 fl.; State debts to be paid (*Schuldentilgung*) 18,870,500 fl. (these debts are specified); sums to be expended for State railways and telegraphs, and for subsidies to the fund for the emancipation of the soil, 5,061,961 fl.; loss on bills and coin, 7,118,420 fl.

The receipts for the same year were estimated as follows: Direct Taxes.—Land-tax, 62,481,200 fl.; tax on buildings, 19,261,300 fl.; trade tax, 5,814,900 fl.; *personal steuer* (poll tax), 5,271,000 fl.; legacy tax, 29,500 fl.; income tax on all kinds of property, with the exception of land and buildings, 15,157,700 fl.; direct taxes levied in the military frontiers, 1,799,100 fl. (this tax is paid by men who are obliged to render military service as long as they are able to shoulder a musket). Indirect Taxes.—Excise of consumption, 57,678,700 fl.; customs, 15,247,515 fl.; salt, 33,059,600 fl.; tobacco, 30,901,470 fl.; stamp duty, 13,116,519 fl.; taxes and dues on legal affairs and on legal acquisitions, 21,271,639 fl.; lotteries, 6,034,400 fl. post office, 3,714,200 fl.; tolls, 2,928,609 fl.; stamping metals, measures, &c., 66,500 fl.; dues levied in the Lombardo-Venetian kingdom, 106,010 fl.; indirect taxes levied in the military frontiers, 155,564 fl.; revenue from State domains, mines, &c., 7,615,157 fl.; other receipts, 2,874,520 fl.

Austria has a very large public debt, which on Oct. 31, 1862, was made up of the following items:

Old consolidated debt.....	66,287,696	florins.*
New consolidated debt.....	1,982,312,170	"
Floating debt.....	419,777,163	"
Lombardo-Venetian debt....	70,713,807	"
Grand total.....	2,539,090,836	florins.

The standing army consists of 162,218 infantry, 40,344 cavalry, and 46,018 other troops,—total, 248,680; in time of war, of 442,000 infantry, of 52,760 cavalry, and of 92,935 other troops—total, 587,695. The highest military officers are, 3 fieldmarshals, 15 generals of the cavalry and field zeugmeister, 77 lieutenant fieldmarshals, and 120 major-generals in active service, and 31 generals of the cavalry and field zeugmeisters, 131 lieutenant-fieldmarshals, and 175 major-generals not in active service.

The navy, in May, 1862, consisted of 64 steamers, with 11,981 horse power and 647 guns, and 51 sailing vessels, with 840 guns.

The religious statistics, according to an official census, taken in 1857, were as follows:

Provinces.	Catholics.			Non-United		Evangelical.		Unitarians.	Israelites.	Other Religionists.
	Latin.	Greek.	Armenian.	Greeks.	Armenians.	Confession of Augsburg (Lutherans).	Helvetic Confession (Reformed).			
Austria (Upper)	1,350,684	78	85	1,170	466	8,645	1,495	20	6,999	57
Austria (Lower)	673,404	1	..	2	..	14,826	56	1	4	..

* A florin is 50 cents in American money.

B

BALLOONING. The recent practical applications of this art are important. The success of Montgolfier in sending up in 1782 a balloon of large size, and having a surplus lifting power of 500 lbs., confirmed as it was the next year (and now just 80 years since), by the first aërial voyage—that of M. Pilatre des Roziers and the Marquis D'Arlandes—promised to mankind the mastery of a new field and element, and gave them in a manner a new sense of freedom. Important practical uses of the novel art were almost immediately suggested. Thus far, however, the attempts to realize these have not been in any case so persevered in as to result in an entirely successful working system. In fact, the conditions and contingencies the aëronaut may have to encounter are not yet fully known, and no means have been devised for determining the course as well as the elevation of the balloon; so that some amount of uncertainty and risk still attends the practice.

Three highly important uses of ballooning have been attempted, and in the order of time here given; namely: reconnoissance in war, scientific exploration, and communication in the way of travel or conveying intelligence between distant points. Of these purposes, the first has been exemplified in the history of the past two years; and the second of them particularly within the year 1862. The French republic early instituted a secret school of aërostation, with a view to the use of balloons in war. It is stated that at the battle of Fleurus, June 26, 1794, observations of the Austrian camp were in this way made, and that by the signals conveyed to him Gen. Jourdan was materially assisted in winning the victory of that day; as also, that Napoleon had a balloon sent with his army in the campaign in Egypt. The remarkable ascents for scientific purposes in the early part of the century, beginning with that of MM. Gay-Lussac and Biot in 1804, are well known. To test the question, then already agitated, and growing out of the theory of the trade winds, as to whether there is at heights of about 2 to 4 miles in the atmosphere a quite constant wind moving (in the northern hemisphere) to N. E., or generally speaking, from westward to eastward, the aëronaut Green, in Nov. 1836, rose from London and actually sailed to Weilburg in Germany; distance 500 miles, time 18 hours. In Sept. 1849, M. Auban sailed from Marseilles to Turin, crossing the Alps, 400 miles in 8 hours. Napoleon III, in his campaign in Italy, summoned to his aid the aëronaut M. Goddard; and by his reconnoissances prior to the battle of Solferino important information respecting the disposition of the Austrian army was furnished. For such reconnoissance the balloon is, so to say, tethered by a strong rope, being allowed to ascend to heights of a few hundred or a thousand feet, as may be necessary, and at will drawn down again. From its elevation a greatly enlarged field of view is secured, upon which rivers, forests, towns, fortifications, armies, &c., appear in a sort of perspective, in reduced but relatively true proportions, as if plotted or laid down on a chart. M. Nadar was at a later date directed to experiment in taking photographs of the field of view from a balloon over Paris, in order to call in photography also to the aid of military reconnoissance. In the United States, about the year 1860, very clear and satisfactory photographs of the earth's surface, as presented to the point of view of a balloon elevated many hundred feet in the air, were taken by Mr. J. W. Black, of Boston. Mr. John Wise, of Lancaster, Penn., having from 1835 to July, 1859, made 230 ascensions, was led by his experience of upper eastwardly currents to revive the project of travelling by means of these. Two of the journeys undertaken in consequence form memorable and well known events in the history of the last-named year; the first, that of Wise, with Mr. John La Mountain and two others, July 1, 1859, from St. Louis. Mo., to the town of Henderson, Jefferson county, N. Y., 1,150 miles in 19 h. 50 m., or at an average of nearly a mile per minute; the second, that of La Mountain and Mr. John A. Haddock, Sept. 22, 1859, from Watertown, N. Y., and the greater distance after nightfall, to a point in the great Canadian wilderness 150 miles N. of Ottawa city, and almost due N. from the place of setting out, a voyage of 300 miles in about 4 hours.

In the existing war between the Government of the United States and the Southern Confederacy, balloon reconnoissances under charge of Messrs. La Mountain and T. S. C. Lowe, and perhaps others, have been to some extent availed of. In an ascent over Washington, June 18, 1861, Mr. Lowe achieved for the first time the feat of telegraphing from an aërial station, in this case at an elevation of about 600 ft. This was accomplished by looping with a telegraph wire contiguous to the place fine and flexible helix wires several hundred feet in length, and paying these out from a reel at the same rate with the rope releasing the balloon, the helix wires connecting within the latter with an operating instrument, so that the balloonist, making use of the current of the land wire—now turned out of its course to his movable station—transmitted intelligence as from any other station to the next on the line, and which was in this case the office in the city of Washington. The following is a copy of this first despatch, transmitted through the War Department:

BALLOON ENTERPRISE, *June* 18, 1861.

To the President of the United States:

From this point of observation, the city, with its girdle of encampments, presents a superb scene. I have pleasure in sending you the first despatch ever telegraphed from an aërial station, and in acknowledging indebtedness to your encouragement for the opportunity of demonstrating the availability of the science of aëronautics in the military service of the country. T. S. C. LOWE.

Mr. Lowe not long afterward made reconnoissances in the vicinity of Fairfax Court House. Aug. 10 of the same year year, Mr. La Mountain successfully observed the position of the enemy's forces beyond Newport News and on Sewall's Point, by ascending from the deck of the tugboat Adriatic, anchored in Hampton Roads, and to the unusual height of 3,000 ft. Oct. 4, having ascended from the camp of the Union army on the Potomac, and reconnoitred, he then severed the cord holding the balloon, and rising to the height of 1½ miles was carried directly over the enemy's lines, making a still more satisfactory observation of their position; then discharging ballast, he rose to 3 miles, and at this elevation passed over Washington, descending finally within the State of Maryland. In the peninsular campaign under Gen. McClellan, balloons were employed as a regular part of the system of reconnoissance. A letter from Mr. Parker Spring, superintendent of the telegraph construction in the army, contains an account of the use of the telegraph in connection with a balloon during the battle of Seven Pines. He states that when the battle was at its height Mr. Lowe and himself, having established communication with the wire to Fortress Monroe, 100 miles distant, ascended to a height of 2,000 ft. Mr. Lowe took observations through a good telescope, reporting to Spring, who at once telegraphed the information of the enemy's position and movements thus acquired to the commanding officers, through aid of an operator and recording instrument at the point beneath. The aëronauts kept up their observations until dark of Saturday, pointing out the position of the batteries, &c. On Sunday morning they ascended again at daybreak, and about noon were able to announce the commencement of the enemy's retreat toward Richmond. The streets of Richmond, as seen in the early part of the day, appeared nearly deserted; after the retreat had set in multitudes of ambulances, carts, &c., were seen conveying the dead and wounded along the road to Richmond; and about twilight the innumerable camp fires lighted, and the smoke from the hospitals and barracks, showed that the main body of the army had fallen back to the city.

At the meeting in 1861 of the British Association for the Advancement of Science, a committee was appointed to superintend a series of balloon ascents for scientific purposes, the sum of £200 being applied for expenses. Mr. Coxwell, an experienced aëronaut, being enlisted in the matter, constructed a balloon of larger dimensions than any before seen in England—height 69 ft., diameter 54 ft.; composed of 46 gores, each 44 inches at greatest width; with a total capacity equal to 95,000 cubic feet. A previous trial with an old balloon and the first trial with the new one also having failed, eight successful ascents were afterward made during the months of July, August, and September; and these have possessed considerable interest in scientific and other points of view. The committee at the last meeting at Cambridge, 1862, report a total expenditure for these ascents of 329,000 feet of gas, 115,000 feet being wasted; whole outlay £270; and they recommend a continuance of the experiment, at other seasons of the year, and a further appropriation to that end.

In these ascents, Mr. James Glaisher performed the office of philosophical observer, Mr. Coxwell being engaged as the practical balloonist. Mr. Glaisher read before the Association at its last meeting a paper giving a summary of observations made and of facts connected with the experiments. He first called attention to the circumstance that all experimental investigations carried on at and near the surface of the earth are in many ways subject to disturbance, from the influence of the latter as a physical body; among the disturbing agencies, being heat, as radiated by the earth, or conducted by or reflected from it; reflection of light; currents of air; effect of evaporation from neighboring bodies of water, or of condensation on other bodies, &c. From such influences we do not escape even by going to the tops of mountains; but to the greatest extent practicable, only in a balloon at considerable height. Is it then possible to make delicate and accurate observations in a balloon at great height? Can the observer there be at his ease so as to observe as well as on the earth? Can he make the observations with tolerable safety to himself? If these questions are practically answered in the affirmative, very important gains should accrue to the sciences of meteorology and astronomy, especially in the latter science in connection with our knowledge of the refraction of light by our atmosphere, and its effect on the apparent places of the stars—a point so essential to navigation; while it was probable that valuable results would also be attained in respect to magnetism, chemistry, &c. A greater familiarity moreover with the changing conditions of the upper atmosphere, would doubtless extend our knowledge of the laws of aërial phenomena, and turn it to practical account with reference to the preserving of our own health and comfort. Primarily, Mr. Glaisher proposed to determine the temperature of the air, and its hygrometrical state at different elevations up to five miles; secondarily, other of the inquiries already intimated; to compare the readings of the mercurial and aneroid barometer, and the indications of the dew point given by Daniell's, Regnault's, and the dry and wet bulb

hygrometers at different heights, especially as high up as man may reside on mountains, or troops (as in India) may have to be stationed, so as to ascertain the degree of reliance to be placed on these instruments severally; to note the elevations and characters of the different kinds of clouds; to make observations on magnetism, on aërial currents, on sounds, &c.

On account of its central position, allowing the longest run over land, Wolverhampton was at first selected as the place of ascent. Three ascents were made thence, July 17, Aug. 18, and Sept. 5; four others took place from the Crystal Palace, July 30, Aug. 20, Sept. 1 and 8; and one from Mill Hill, near Hendon, Aug. 21, where the balloon had descended the previous evening. July 17, as shown by the barometer, a height of 26,177 ft. was reached; and in descending a mass of vapor 8,000 ft. thick, and so dense that in it the balloon was not visible from the car, was passed through. Aug. 21, the balloon was released from its anchorage before sunrise, the morning being warm, dull, and cloudy; at 5,000 ft. clouds were reached; the balloon soon emerged above the dense mass of cloud it had entered, into a sort of basin or valley, surrounded by immense black mountains of cloud, which extended far above its place. Shortly afterward the appearance below became that of deep ravines of great extent, with beautifully curved outlines; while the blue sky overhead was nearly covered with *cirri* (the "mare's tail," or hair-like cloud). Presently, as the sun rose, the tops of the mountain-like clouds became silvery and golden; at 8,000 ft. the level of their summits was reached, and the light of the sun on them, and, flooding the atmosphere on either side of the balloon with orange and silver, produced a gorgeous effect. As the sun's rays warmed the contents of the balloon, it shot more rapidly upward, and other vast masses of cloud of varying shapes came into view, but still bounded in the horizon by immense piles resembling Alpine ranges. The height reached was nearly 3 miles. Sept. 1, at ¾ mile above London, the whole length of the Thames could be traced from its mouth; and along its entire course, following all its windings, extended a cloud or fog bank bounded by the shores on either side. For half an hour, previous to descent near Woking, in Surrey, the balloon was under one stratum of cloud and above another. Of the latter, the upper surface appeared bluish white, the middle portion a pure white, the lower surface a blackish gray, and from this rain was falling to the earth. At 1,300 ft. the balloon was yet above these clouds. As afterward learned, rain had fallen from them all the afternoon. Sept. 5, the greatest altitude ever yet made by the balloonist was reached. The temperature at 3 miles high was 18°; at 4 miles (1 : 39 P. M.) it was 8°; in 10 minutes more the 5th mile was reached, temperature now —2°, while no dew condensed on Regnault's hygrometer, though cooled down to —30°. Up to this time Mr. Glaisher had taken the observations with comfort; and he experienced no difficulty in breathing, although Mr. Coxwell, who exerted himself more, did so. At 1 : 51 P. M. the barometer corrected read 10.8 inches, showing a height of about 5¼ miles. Here Mr. Glaisher's sight began to fail; he strove to reach to the distance of a foot for some brandy, but could not move his hand so far; he finally saw and noted the barometer at 10 inches, true reading 9.75, showing 5¾ miles height, when he lost all power, his head falling to one side, then, on raising it, to the other, and finally backward; and in a few minutes more he was totally unconscious. Mr. Coxwell, who had been up in the ring, returned to the car; feeling now that he was himself becoming insensible, and being unable to use his hands, he seized the valve rope between his teeth, and thus discharged so much gas that the balloon took a downward turn. In the descent Mr. Glaisher recovered at about the same elevation at which he had become senseless; and on reaching only 24° the temperature seemed to the aëronauts very warm. Of six carrier pigeons taken up, two, thrown out at 3 and at about 4½ miles in rising, dropped straight down; two others released, the one in rising, the other in coming down, at 4 miles, flew about the balloon in circles, the latter returning and perching upon it; of the remaining two, brought to the ground, one was dead, and the other for some time indisposed to exert itself. Since the instruments were placed facing Mr. Glaisher, the exact height reached in this ascent was not ascertained; but a casual observation of Mr. Coxwell on the aneroid barometer appears to show that it could not have been less than 35–36,000 ft., or at least 6½ miles; and it may have been greater.

The reader is referred to the title METEOROLOGY, for some valuable results arrived at during these ascensions, in reference to atmospherical conditions; certain others belong more properly in this place. The time of vibration of a magnetic needle was only slightly greater at considerable elevations than on the earth, thus showing that up to such heights the earth's magnetic force had not materially diminished. It was observed that some sounds are transmitted much farther through the air than others that appear to be equally loud; thus, the barking of a dog was heard plainly at 2 miles; the shouting of a multitude had ceased to be audible before reaching one mile. In the voyages of Messrs. Wise and La Mountain in 1859, above referred to, the frequency and distinctness with which the aëronauts heard the barking of dogs are also noticeable.

Mr. Glaisher is led to conclude that, in order to reach great altitudes, the balloon must have a capacity of at least 90,000 cubic feet; and that even with such a balloon, except through the employment of a gas of density as low as that secured for these experiments (namely, carburetted hydrogen, of specific gravity of

370 to 340, air being 1,000), a height of six miles is unattainable. At 3–3½ miles the body of gas admitted at the earth will double its volume; hence, in order to reach 6 or 7 miles, a volume of gas that at the earth fills not more than ⅓ of the capacity of the balloon must suffice to raise its entire weight, including ballast enough to regulate the descent, and prevent the necessity of landing until an exactly suitable spot is found. With a balloon of such size, and with a view to an entirely safe descent, Mr. Glaisher found it desirable to reserve for such purpose 5–600 lbs. of ballast: as this ballast must be carried to the greatest altitude reached, it becomes another condition limiting the elevation attainable in practice. To say nothing, therefore, of the question as to how great may be the actual increase of cold at heights greater than those yet reached, nor as to whether the buoyant power of the air would not have sunk too low for the density of any gas that could be used to fill the balloon, the banter offered by another aëronaut, since the publication of the above results, to accompany Mr. Glaisher to a height of 11 miles, must be regarded as idle in view of the inevitable conditions under which it appears that balloons must be constructed and worked. Again, it was found in the voyages above described, that very great altitude and an extended flight in distance are results that cannot both be secured at the same time. In no instance did the balloon keep to very great altitudes more than an extremely brief period; that this was not owing to leakage, would seem proved by its satisfactorily holding its charge over night, between the ascents of Aug. 20 and 21. Mr. Glaisher thinks the roaring sound, as of a hurricane, spoken of by some aëronauts, and ascribed by them to opposing upper currents of air, could in no way result from the cause supposed, and may have been due to the flapping about of the lower part of the partially collapsed balloon during rapid descent. Beyond this the most that he observed was a slight whining noise in the netting, at times when the balloon was mounting upward with great rapidity. He remarks that the theory of a settled wind at considerable heights to eastward or southeastward [query—to N. E.?], and as he thinks too readily accepted, was not confirmed in these trips. Nor was the upper surface of the fields of cloud, above which at times the balloon stood, such as required by a somewhat current supposition to the effect that the upper cloud-surface is a counterpart of the earth's surface below, rising and falling in the same parts as does the latter, in hills and valleys.

It was inferred that the diminished pressure of the air at great heights exercises a very different influence on different individuals, probably through diversity of temperament and organization, and in fact also, on the same person at different times. The trials made appeared to establish it as a fact that, up to 3 miles high, observations, even of a delicate nature, can be made as comfortably and accurately in a balloon as on the earth; while at heights exceeding 4 miles they cannot be made quite so well, because of the personal distress of the observer; and at 5 miles it requires the exercise of a strong will to make them at all. Up to 3 miles any person of ordinary self-possession may safely ascend in the car; but no person with pulmonary complaints or heart-disease should attempt the height of 4 miles; and it may be added that [at least outside the tropics] 5 miles above the sea-level is very nearly the limit of human existence. But all the conclusions relative to the making of valuable scientific observations, proceed upon the supposition that the balloon is intelligently and skilfully managed. In fact, it was Mr. Glaisher's perception of the skill of his assistant, of his great familiarity with his business (attained during more than 400 ascents previously made), and of his presence of mind, that served to inspire in himself that feeling of entire confidence and security requisite to the proper discharge of his duties in the way of observation.

The wellnigh fatal termination, however, of the trip of Sept. 5, served to call out from Mr. Isaac Ashe, at a recent meeting of the British Association, the proposition of a simple contrivance, by means of which the opening of the escape valve, through action of a weight attached to its rope, should when desirable on the part of the aëronaut be made to depend on a relaxation of his voluntary effort; so that in the event of insensibility supervening at great altitudes, the spontaneous opening of the valve should at once secure a descent into lower strata of air, the higher temperature of which would be expected to restore the luckless navigator to consciousness.

An attempt is being made in France to reintroduce the employment of the Montgolfier balloon, or that elevated by heated air. Some balloonists have even declared these safer and more easily managed than those inflated with—what is now the most usual material—coal gas. M. Goddard, an aëronaut attached to the French army, recently ascended from the Pré Catalan in a Montgolfier balloon, of a capacity of 4,000 cubic metres. This was inflated in less than half an hour, the fuel being compressed cakes of rye straw. A successful descent was made, after a journey of 26 minutes, near Maisons.

BAPTISTS. The Baptist family of Christian denominations embraces all those which hold that immersion is the only true form of baptism, and that adults are the only fit subjects. There are in the United States 8 different denominations with these distinctive views, viz.: the Regular Baptists, with 1,109,343 communicants in North America; the Anti-Mission Baptists, with 60,000 communicants; the Free-Will Baptists, with 58,055 communicants; the Six-Principle Baptists, with 3,000 communicants; the Seventh-Day Baptists, with 6,686 members; the Church of God (Winebrennarians), with 14,000 communicants; the Disci-

ples (Campbellites), with 350,000 members; the Tunkers, with 8,200 members. The Regular Baptists are the second largest religious denomination of the United States, being exceeded only by the Methodists, and, like the Methodists, they are numerous in every State of the Union. Their progress during the last three years has not been great, the increase in membership since 1859 amounting to only 41,000.

The Baptists of the North have at present no general convention of all the churches but their large religious societies, viz.: the American Baptist Missionary Union, the American Baptist Publication Society, the American Baptist Home Mission Society, the American and Foreign Bible Society, may be regarded as a kind of substitute in respect to the churches of the Free and part of the Border States. The Southern Baptist Churches have a Southern Baptist Convention, which meets biennially, and a Southern Baptist Publication Society.

The anniversaries of most of the great religious societies of the Northern Baptists took place last year at Providence, Rhode Island. Notwithstanding the disastrous influences of the war upon churches in general, the results of the year were, on the whole, regarded as highly satisfactory. The Missionary Union showed even a small increase in its annual income, which this year amounted to $95,193. Its missions number now 375 churches, with about 31,000 members—an increase over the last year of about 3,000. The Publication Society had issued during the year forty-one new works, and received $56,306. The Home Mission Society had employed 90 missionaries, 12 of whom preached in foreign languages, and its receipts amounted to $37,894. The American and Foreign Bible Society held its annual meeting in the city of New York, May 26, and reported its receipts for the last year to be $16,688. Prior to the meeting, February 21, the Society had found itself obliged to sell its Bible House, in New York. Characteristic of the sentiments animating the Baptist community in the Northern States on the state of civil affairs are the resolutions which were unanimously passed at the annual meeting of the Missionary Union. They are to the effect that the officers and members of the Missionary Union regard the "war to put down the unprovoked and wicked rebellion as a most righteous and holy one," and that they believe "the institution of slavery to have been the principal cause and origin of this attempt to destroy the Government, and that a safe, lasting and solid peace cannot be expected short of its complete overthrow." Similar resolutions were passed by the great majority of the Baptist Associations. It was observed, in particular, that the New York and Philadelphia Associations, both of which bodies had hitherto contained a considerable number of influential men of conservative views, endorsed, this year, unanimously, the emancipation proclamation of President Lincoln.

Very little has been heard of the condition of the Baptist churches in the Seceded States. At the beginning of 1862 the "Southwestern Baptist," published at Tuskegee, Alabama, stated that besides itself there were only three other Baptist papers published in the South. A mission has been established by Northern Baptist missionaries among the negroes in that part of South Carolina which, during the year 1862, was occupied by the forces of the Federal Government.

The Baptists in England are divided into three great classes: the General Baptists, who, in the course of time, have become Unitarians in sentiment; the New Connection of General Baptists, who hold Arminian sentiments; and the Particular Baptists, who are Calvinists. The latter are by far the most numerous. The statistics are not ascertained in England with as great care as in the United States. In 1862 the number of (Particular) Baptist ministers in England and Wales was reported as 1,806, in Scotland 89, in Ireland 17; churches, 1,245; members, 133,931; new churches organized during the year, 7—increase of membership during the past year, 9,458. The Missionary Society of the Particular Baptists, which, ten years since, sustained 45 missionaries, and 114 native preachers, has now 66 missionaries and 148 native preachers and pastors. Eight new missionaries were sent out during the last year. The educational institutions of the Baptists have of late received a valuable increase by Mr. Spurgeon's college, connected with the Metropolitan Tabernacle, the new church of Mr. Spurgeon's congregations. The institute owes its origin entirely to the zeal of Mr. Spurgeon in behalf of young men who are anxious for mental improvement and religious usefulness. The institute is called the Pastor's College, and depends for its support upon Mr. Spurgeon, who devotes a considerable portion of his income to its maintenance. It contained at the close of last year twenty-three young men, who were in training for the ministry, and whose theological education is under the special superintendence of the pastor. Besides these there were upward of a hundred general students, who, with the others, receive instruction from paid professional tutors. The majority of the students are engaged in business, but, with a view to intellectual advancement, spend their evenings in study and attendance upon classes. An important movement toward a union with Congregationalists and Presbyterians in one new denomination was commenced last year, and several prominent Baptist ministers, as Mr. Spurgeon, declared themselves in favor of it. Many associations, on the other hand, have declared a determined opposition to it.

Twenty-six of the thirty-eight associations belong to the Baptist Union, which body held its fiftieth annual session in London, April 25th, 1862, and unanimously passed a resolution expressing "unfeigned grief for the calamity of civil war in the United States, and for the sin

of slavery, with its consequences, on account of which that war must be braved."

Upon the continent of Europe the organization of Regular Baptist churches is of recent origin, but they have met with extraordinary success. In Germany, where Rev. Mr. Oncken, who is still living, established the first mission, in 1834, they had in December, 1861, 538,067 members, 53 churches, and 819 stations and outstations. In connection with the German Mission are, in Denmark, 16 churches, with 1,670 members; in Switzerland, 1 church, with 201 members; in France, 1 church, with 100 members; in Poland, 1 church, with 332 members. The last accounts from Germany represent their progress as being still very rapid, notwithstanding they were subject to a fierce persecution in several States, especially in Mecklenburg. Still more remarkable is the progress of the Baptists in Sweden, where, in spite of a law threatening with exile every seceder from the State Church, their number has increased so rapidly that, on January 1, 1862, they counted 7 associations, 150 churches, and 4,865 members. With four exceptions, all these churches originated through the labors of colporteurs employed by the American Baptist Publication Society. In Russia and Poland they have only recently commenced to labor, but there also, notwithstanding the persecution which they are suffering, at the instigation of the Lutheran clergy, great success seems to await them. In Courland, nearly two hundred have been baptized; in the Crimea, the first secession from the State Church has taken place; in Poland, two churches have been formed, and twenty-four preaching stations.

In France, Baptist missions were established about twenty years ago by the American Baptist Missionary Union, and a few of them have become self-supporting. In October, 1861, the Executive Committee of the Missionary Union found it necessary, in consequence of its financial condition, to suspend pecuniary aid to the missions. This announcement was received by the Baptist missionaries with profound sorrow, but also with an unwavering determination to persevere in their work. The report made of the French churches at the anniversary of the Missionary Union, in 1862, showed that the aggregate membership had increased from 304 to 319, and the pecuniary contributions were larger than during the preceding year. The missions are, however, still in their infancy, numbering, as yet, only four preachers and two colporteurs. The "Annuaire Protestant" for 1863 gives the names of nine churches. The Baptists do not yet enjoy full religious toleration, and one of their chapels has been for several years, and still is, under the interdict of the civil authorities. Yet it is possible that freedom of worship will ere long be fully enjoyed. Besides these missionary congregations established in France by the American Baptist Union there are some remnants of the Baptist churches of the sixteenth century, especially in the departments of Doubs, Haut-Rhin, and Vosges. Little is known about their statistics. The names of four congregations, one of which has a membership of 300, are given by the "Annuaire Protestant."

Among the missionary churches which have been established by the Baptists of America and England, those of Farther India have been especially successful. Some tribes of the Karen have been almost wholly Christianized, and are beginning to form the nucleus of a Christian nation. During the past year the converts have increased by scores and even hundreds. The desire and efforts of the Karen churches to establish schools, not only for the training of native preachers and teachers, but in all their villages, for the general instruction and elevation of their people, and especially of the females, indicates a marked growth, and in a direction that promises to yield permanent and abundant fruit. The progress among the Burmans during the past year, as heretofore, has been comparatively slow. A new mission has been commenced to the Shans, who are probably the most numerous of the many subordinate tribes that make up the population of Burmah, though no accurate statistics of their numbers have thus far been ascertained. Like the Burmans and Karens, they are Buddhists, but they are a race distinct from either, and speak a different language. They have long been settled in the territory of Upper Burmah, but a few years ago about ten thousand emigrated to the British provinces, and settled in the vicinity of Toungoo. There the first Baptist mission was commenced among them in 1861, and the first church organized in 1862. The mission in Siam continues to enjoy the full toleration of the enlightened king. Altogether the membership in the Baptist churches in Farther India amounted, in 1862, to 17,739.

Other missionary churches have been established by the American Baptist Missionary Union and the Southern Baptist Missionary Society, in China; by the American Free-Will Baptists, the English Baptist Missionary Society, and the English General Baptist Missionary Society, in India; by the Southern Baptist Missionary Society and the English Baptist Missionary Society, in Africa. In 1860, the missions in India and China had a membership of about 2,600; those in Africa of about 1,400.

The number of Baptists in Australia was estimated, in 1862, at about 10,000.

BAROMETER. In the common or mercurial barometer, as is well known, the pressure of the atmosphere takes effect directly on the surface of mercury in a cup, or upon a mass of mercury through the walls of a reservoir which are made flexible in some part. The height at which the pressure thus exerted suffices to sustain the column of mercury in the barometer tube, serves, conversely, as a convenient measure of the pressure itself. But as the density of the air diminishes at increased heights in a ratio which, in the average, is fixed and known,

and as, in ascending, portions of the air are continually left beneath, there results from these two causes an average fall of the mercurial column strictly corresponding with the elevations attained; and on this principle the barometer becomes a convenient and nearly—though thus far not absolutely—correct means of determining heights. Thus, the average height of the column at the sea level being about 30 inches, a fall of one half this length occurs when the elevation of 3.43 miles (Cooke: "Chem. Physics") is reached; at double this elevation the length of column is ¼ that at the sea level, and in the like ratio for all elevations whatever; so that by calculation the elevation can always be deduced with tolerable correctness from the barometric indications. Of course, in effecting this, corrections are required for temperature, and for any other agency which may cause the atmospheric pressure at the place to vary independently of the mere fact of elevation.

In the so-called aneroid and metallic barometers, several forms of which are now constructed, the atmospheric tension is allowed to take effect directly on the thin flexible sides of a small metallic case, or upon a compressible tube or chamber only inside the case, and which is acted on with greater force as the pressure is increased, and the reverse; a connection by delicate mechanism from the movable wall or chamber, as the case may be, to an index moving over one face of the case, serving to show the pressure; and the indications of these instruments are readily compared with those of the mercurial, the corresponding values being marked on a scale over which the point of the index is caused to travel.

Messrs. Horne and Thornthwaite, of London, have during the year produced a carefully constructed aneroid barometer, a new feature of which is that it is intended to show or measure heights by simple inspection. The instrument is of about 2½ inches diameter; hence, highly portable. The face is graduated in two circles, the outer being the usual scale, and showing the pressure in inches and tenths of an inch. The inner circle is graduated in spaces—of course decreasing in length from the greater pressures up—which correspond with hundreds and thousands of feet. Supposing the density and tension of the atmosphere not to vary with temperature nor other meteorological conditions, but to remain at all heights precisely that due to height only, the mere observation of the place of the index shows the elevation above the sea level at the time, and a comparison of two such indications shows the difference of heights between two stations. The calculation saved is that showing relation of pressure to elevation. A correction for temperature is, however, required; and a convenient table giving the corrections for degrees of Fahrenheit, and based on a formula of Laplace, is furnished with the instrument. Known fluctuations of pressure occurring independently of heat and elevation should also be allowed for; so that it is doubtful whether the instrument can serve more conveniently than any other for the most accurate measurements; though it must still prove very useful for cases in which ordinarily correct measurements only are required.

Mr. J. Ball presented before the British Association (1862) a quite abstruse paper on corrections required in determining heights by means of the barometer, the general bearings of which, rather than those details suited only to the use of the scientific explorer, will here be given. Serious errors are still involved in the ordinary process of reducing barometrical observations taken for hypsometrical purposes. The process has involved two assumptions—neither of them wholly true: 1, that the volume of a column of air unequally heated in its different parts is nearly the same as that of an equal weight of air having throughout a temperature equal to the mean of the former; 2, that the mean temperature of the column or stratum of air between two unequally elevated stations is equal to the mean of the readings of the thermometer in the shade at the two stations. The practical error arising from the second of these assumptions only is important. The subject has lately been under investigation by M. Plantamour, the distinguished astronomer of Geneva. He first ascertained by careful levelling the height of the Great St. Bernard above Geneva: his comparison of the barometrical observations of 18 years then shows that the mean height deduced from them is less by 14 English feet than the true height. This result he thinks due to an abnormal depression of the mean temperatures of Geneva, owing to contiguity of the lake. The readings of the barometer and thermometer at the observatories of Geneva and the St. Bernard are taken at 9 hours or epochs of each day. Calculating the height of the mountain by the elements corresponding to the 9 epochs severally, and for the months of June to September inclusive, for successive years, he obtains a series of differing measures of the height—those given by the hottest hours of the day being in excess of the true height, and those of the cooler hours falling short. He thereupon formed a table showing the correction necessary for each of the 9 epochs at Geneva, for the months named; and introduced a further and more difficult correction for the variation which the temperatures may be undergoing (at the moment of a given observation) from the mean of the corresponding day and hour. The paper will doubtless appear in the publications of the Association.

Prof. Hennessy read before the Association a paper on the vertical movements of the atmosphere, as detected by a new form of anemoscope (*ανεμος, wind, σκοπεω, I observe*). The instrument is so constructed as by an index or pencil to show, and also to record, the vertical oscillations of otherwise quiet, or moving bodies of air. Such non-horizontal movements are found to be more prevalent about midday than at

any other time. They often commence abruptly, and are usually the precursors of considerable horizontal disturbance; while a gradual and regular diminution in their amount appears to precede and so to indicate a regaining of the atmospheric equilibrium—hence, to prelude fine weather. Horizontal movements of the atmosphere are seldom such alone; they are usually blended with more or less of vertical movement, so that winds, like the disturbances they cause in the equilibrium of bodies of water, have their undulations or waves. The author of the paper is led to suppose that the study of this atmospheric pulse or undulation, in connection with that of the actual advance of the wind, may yet prove of value as a test of changes of weather.

Prof. Regnault ("Philos. Magaz.," Sept., 1862) proposes an arrangement by which both temperatures and pressures at different heights in balloon ascents can be known without the necessity of accurately observing and recording at the time. Some 20 tubes are previously prepared for each of the purposes, each series standing against a suitable frame or back; and the aëronaut has, at the moment of an observation, only to turn a stop-cock for one (air) thermometer and one barometer tube, marking the time of doing so; and so on through the two series, at such intervals as he may desire. Upon returning to the earth, the several tubes in which change in length of column was arrested in the manner named, show what was the temperature and the atmospheric pressure—hence, again, the elevation—at the times marked against them severally. For some points in connection with the use of the barometer for predicting changes of weather, *see* METEOROLOGY.

BATESVILLE, the capital of Independence county in Arkansas, is situated on White river 400 miles from its mouth and 90 miles north northeast of Little Rock, the capital of the State, and 115 miles from Memphis in Tennessee. Small steamers can ascend the river to Batesville at nearly all seasons of the year. It is the most important town in that part of the State, and was thriving under the influx of emigration. Its population was nearly 3,000. It was occupied by Gen. Curtis for some time during the spring of the year while he was waiting for supplies. These failing to reach him by the river, were finally sent by land from St. Louis.

BATON ROUGE, the capital of the State of Louisiana, is situated on the east bank of the Mississippi river, 129 miles above New Orleans. Its location is high, being about twenty-five or thirty feet above the highest overflowings of the river, and extremely healthy. The esplanade in front of the town presents a fine view of the majestic Mississippi and the rich cultivated tracts on its banks. Below the city the broad river sweeps through a plain which is covered with plantations of sugar cane and adorned by splendid villas and gardens, and groves of tropical fruit trees. The seat of government of the State of Louisiana was established at this city in the year 1847. The State House was a building of fine appearance, situated immediately on the bank of the river. It was burned during 1862, while the city was occupied by Federal troops. It was supposed to have been set on fire, and such was the deficiency of means with which to extinguish it, that all the efforts of the troops were unsuccessful. It was first occupied by Federal troops immediately after the capture of New Orleans. The attack upon the city by the Confederate forces under Gen. Breckinridge was made on the 5th of August. (*See* ARMY OPERATIONS.) It was subsequently evacuated in order to concentrate the force at New Orleans under Gen. Butler, and again occupied after Gen. Banks took command of New Orleans.

BEAUFORT, the capital of Carteret county, North Carolina, is situated at the mouth of the Newport river, a few miles from the sea. It is eleven miles from Cape Lookout and one hundred and forty-three miles by railroad from Raleigh, the capital of the State. The harbor is the best in the State, and the commerce was considerable in turpentine, resin, and other products of the pine. The population in 1853 was about 2,000. The entrance to the harbor was guarded by Fort Macon, which was seized by order of the governor after the surrender of Fort Sumter, and surrendered to the United States forces under Gen. Burnside. (*See* ARMY OPERATIONS.)

BECKWITH, Major-General JOHN CHARLES, C.B., an English officer and philanthropist, died at La Tour, Piedmont, Italy, July 19, 1862, aged 72 years. Gen. Beckwith entered the British army in his fifteenth year and served in Hanover in 1805, and subsequently in Sweden, Portugal, and Spain, being in almost every considerable action until the battle of Waterloo, where he lost his left leg. He was at this time and had been for two or three years, on the Duke of Wellington's staff, and after his retirement on half pay was a favorite with the duke, who often invited him to Apsley House. It was on one of these visits that an incident occurred which influenced his entire subsequent career. The duke being particularly engaged at the time of his call, he was shown into the library to wait till he should be at leisure. To while away the time he took from the shelves Gilly's "Waldenses." He had read but a few pages when summoned to the duke's room, but the book had made such an impression on him that he purchased a copy of it, and collected whatever else he could find relating to these poor mountaineers, and in 1827 visited Piedmont to become acquainted with them. His first visit lasted but three or four days; the next year he spent three months in their valleys, and afterward six months, till finally he made his home at Torre, in the valley of Piedmont. Here he exerted himself for the improvement of the people, and finding education much neglected, in-

cited them to rebuild their schoolhouses and improve their schools, contributing largely of his own means to aid them in these objects. In this way he opened and restored 120 district schools, and aided by Dr. Gilly, then dean of Durham, and other friends in England, set himself to improve the parochial schools and to enlarge the college and divinity school at Torre. In 1846, encouraged by the liberal policy of Charles Albert, he determined to attempt the nationalization of the Waldensian Church. The Waldensians had since 1620 spoken French, and used it in their schools and religious services. He determined to encourage the use of Italian in both school and pulpit, and for this purpose sent six young pastors to Florence to acquire the pure Tuscan dialect. This accomplished, they taught the teachers of the schools in the valleys, and in about two years the people became sufficiently conversant with the language to attend religious services in it. In 1848 permission was given to erect a Waldensian church or chapel at Turin, and Gen. Beckwith raised a sum sufficient to build a tasteful edifice on the Viale de Re, and thenceforward made Turin his winter residence, though his summers were spent in the valleys visiting his schools and acting as the father of the people. Late in life he married an intelligent and amiable Waldensian damsel. For a few years past he had spent some months at Calais for his health, but finding his end approaching he hastened back to Torre to lay his bones among his beloved Waldensians.

BERESFORD, Right Hon. and Most Rev. Lord John George, Archbishop of Armagh, Primate of all Ireland and Metropolitan, and Chancellor of the University of Dublin, born November 22, 1773, died at Auburn, County Down, Ireland, July 18, 1862. He was the second son of George, first Marquis of Waterford, and was educated at Eton and afterward at Christ Church, Oxford. He was appointed dean of Clogher in 1801, and in 1805 consecrated bishop of Cork. In 1807 he was translated to the see of Raphoe, in 1819 to that of Clogher, in 1820 to the archbishopric of Dublin, and in 1822 to the archiepiscopal see of Armagh and the primacy of Ireland. In 1821 he succeeded Lord Manners as vice-chancellor of the University of Dublin, and in 1851, on the death of the King of Hanover, was elected chancellor. He was a man of noble, commanding, and dignified person, of excellent judgment and discretion, of genial affectionate disposition, of remarkable equanimity of temper, and of a most generous and liberal nature. He endowed the observatory of Armagh; founded a professorship in the University of Dublin, and built the campanile for it at a cost of £3,000; gave nearly £6,000 to the college of St. Columba near Dublin, restored the cathedral church of Armagh at a cost of £30,000, sustained its church service in the highest condition, and made large contributions to the public library, the royal school, and for forty years contributed £400 a year for the church education schools of Armagh. His private charities, never ostentatious in their character, and often unknown except to their recipients, amounted, it has been ascertained since his death, to over £2,000 per annum. At his death, men of all denominations, even including the Roman Catholic Primate, united in doing the last honors to his remains.

BETHUNE, George W., D. D., an American clergyman of the Reformed Protestant Dutch Church, born in the city of New York in 1805, died in Florence, Italy, April 27, 1862. He was the son of Divie Bethune, a New York merchant, distinguished alike for his eminent business abilities and his unaffected piety and philanthropy. His mother was the daughter of the saintly Isabella Graham, whose memory is embalmed in so many of the charitable institutions of New York. His youth was passed in his native city, but at an early age he entered Dickinson College, Carlisle, Penn., of which his father's former pastor, the eloquent John M. Mason, D. D., had then recently become president. Young Bethune's college career was marked by no special incidents, and he attained no great distinction as a scholar. But near the close of his college course he became the subject of a religious change, and soon after graduating determined upon studying theology. He accordingly entered Princeton theological seminary in 1822, and after completing his course was ordained as a Presbyterian minister in 1825, having just completed his 20th year. He accepted an appointment about the same time as chaplain to seamen in the port of Savannah. In 1826 he returned to the North, and transferred his ecclesiastical relations to the Reformed Dutch Church, settling soon after at Rhinebeck, N. Y., where he remained four years, when he was called to the pastorate of the First Reformed Dutch church in Utica. In 1834 his reputation as an eloquent preacher and an efficient pastor led to his receiving a call from a Reformed Dutch church in Philadelphia, which, after deliberation, he accepted. He remained in that city till 1848, and was greatly esteemed as a preacher and a thorough and critical belles-lettres scholar. In 1848 the "Reformed Dutch Church on the Heights" in Brooklyn, N. Y., was organized, and Dr. Bethune was earnestly solicited to become its pastor. He consented, and its beautiful church edifice was erected under his own eye. For eleven years he continued in the pastorate of this church, but in 1859 his impaired health led him to resign and visit Italy. While residing at Rome he had charge of the American chapel, at that time the only Protestant place of worship in the "Eternal City." He returned in 1860 with his health materially improved, and was for some months associate pastor of a Reformed Dutch church in New York city; but his health again becoming impaired he returned to Italy in the summer of 1861, and

after some months' residence at Florence, died from an attack of apoplexy. Dr. Bethune was profoundly versed in the earlier and later English literature, and had achieved distinction as a writer by his careful editing of the "British Female Poets with Biographical and Critical Notices," and his admirable edition of Izaak Walton's "Complete Angler," for which his own fondness for piscatorial sports also qualified him. His original works also possessed great merits. Among these were "Lays of Love and Faith," a volume of poems remarkable for their beauty of sentiment and their mellifluous rhythm; "Fruits of the Spirit," a volume of sermons; and two smaller works, "Early Lost Early Saved" and "The History of a Penitent." One of his latest public efforts before leaving his native city for his last voyage to Europe, was a speech delivered at the great mass meeting at Union Park, April 20, 1861, in which with more than his ordinary fire and eloquence he gave utterance to his patriotic emotions.

BLOCKADE. The Federal blockade of the Confederate ports continued unchanged during 1862. Some questions of interest arose in England during the year as to its efficiency. But being the great commercial nation of Europe, the views adopted by her were readily acquiesced in by other governments, whose commerce was less obstructed.

The first question relative to the effectiveness of the blockade was raised by the commissioner from the Confederate States to London, John M. Mason, of Virginia. It was presented in the following letter to Earl Russell, the British Minister for Foreign Affairs:

109 Piccadilly, *Feb.* 17, 1862.

I have the honor to transmit to your lordship herewith (by permission) returns of vessels entered and cleared at the blockaded ports of the Confederate States of America at the respective dates to which they refer. Your lordship will observe that the returns from the ports of Charleston and Savannah are only up to the 31st of October last; from New Orleans, Mobile, Pensacola, and Lavada, to the dates given in August; and from Wilmington till 10th September. Your lordship will further observe, that in the list from New Orleans a large number were inland by the river Mississippi, and therefore involved no question of a breach of blockade. Wishing to be perfectly frank, it may be proper to remark also, that others from some of the ports may have been *quasi* inland; that is to say, through the estuaries and sounds along the coast. I state as an example, from New Orleans to Mobile, where the route for small vessels may or may not have been through the inland sounds. But in regard to the latter, I do not see why the obligations of a blockade do not extend as fully to them as by access to the port from the open sea. These estuaries or sounds are accessible by inlets from the sea, and, if not guarded, the port to which they lead may be reached as successfully by sea going vessels of light draft through those channels as by a direct sea route. That the Government of the United States so considered, is proved by the fact that the inland sea communication between New Orleans and Mobile, Charleston and Savannah, and perhaps other places, is claimed to be blockaded by naval forces of that Government. The transcripts herewith were furnished me by my Government, to be communicated to your lordship. Although purporting to be copies of the original returns, they were copies made at the proper department at Richmond from those returns, and are therefore authentic. I ask permission also to include herewith a printed list of vessels entered and cleared at ports in Cuba from and to the blockaded ports of the Confederate States. These, for the most part, are enumerated in September; and all for the months of November and December are, of course, not included in the transcripts from my Government. This paper, sent to me from Havana, was taken from official documents there by a gentleman of intelligence and integrity, well known to me, and worthy of entire reliance. The marginal notes are, of course, unofficial. The fact (assumed) of the arrival of the vessels cleared (at their ports of destination) was matter of notoriety, from the almost daily intercourse between Havana and these ports. I have no official returns from my Government for the months of November, December, and January, to be accounted for in the fact that until very recently it could not be known when I might reach London. But, as your lordship is doubtless aware, breaches of the blockade at most if not all of these ports by vessels of large as well as of small tonnage, both inward and outward bound, have been, during the last three months, and yet are, constantly reported. J. M. MASON.

Previous to this communication various reports had been sent in by the British naval officers and consuls respecting the blockade.

Consul Bunch, in a series of letters from Charleston, extending from the 15th of May to the 4th of September, 1861, frequently alluded to the inefficiency of the blockade of that port, as shown by the facility with which vessels continued to enter and leave the port.

Commander Hickley, of H. M. ship Gladiator, represented, under date of July 23, that the blockade of the Southern coast was merely nominal.

Commander Lyons, of the Racer, writing in July, represented that Savannah and Charleston were effectually blockaded, but many other harbors and inlets along the coast were perfectly free from blockade. The same officer, on the 19th of December, reported some instances of breaking the blockade at Charleston and Wilmington, and inferred therefrom that the blockade, either intentionally or through want of ordinary vigilance, was not effective.

Captain Ross, of the Desperate, reports the result of a visit to Galveston in December. The blockading ships were visible, and he was of opinion that vessels might easily escape from Galveston or St. Louis Pass. At the other ports which he visited the blockade was generally actively maintained.

The views entertained by the Government from these and other representations, were expressed in a letter from Earl Russell to Lord Lyons, dated Feb. 15, 1862, two days earlier than the date of Mr. Mason's note above. They were as follows:

Foreign Office, *Feb.* 15, 1862.

My Lord: Her Majesty's Government have had under their consideration the state of the blockade of the ports of Charleston and Wilmington. It appears from the reports received from her Majesty's naval officers that, although a sufficient blockading force is stationed off those ports, various ships have successfully eluded the blockade. A question might, therefore, be raised as to whether such a blockade should be considered as effective. Her Majesty's Government,

however, are of opinion that, assuming that the blockade is duly notified, and also that a number of ships are stationed and remain at the entrance of a port, sufficient really to prevent access to it, or to create an evident danger of entering or leaving it, and that these ships do not voluntarily permit ingress or egress—the fact, that various ships may have successfully escaped through it, as in the particular instances here referred to, will not, of itself, prevent the blockade from being an effective one by international law.

The adequacy of a force to maintain a blockade being always and necessarily a matter of fact and evidence, and one as to which different opinions may be entertained, a neutral state ought to exercise the greatest caution with reference to the disregard of a *de facto* and notified blockade, and ought not to disregard it, except when it entertains a conviction, which is shared by neutrals generally having an interest in the matter, that the power of blockade is abused by a state either unable to institute or maintain it, or unwilling, from some motive or other, to do so. RUSSELL.

The subject was brought before the House of Commons on the 7th of March by Mr. Gregory, who moved for copies of any correspondence subsequent to papers then before the House. In support of his motion, he contended that the efficiency of the blockade of the Southern ports was a question of great importance to England and to Europe, and he asserted that her recognition of it, in its present state, had exposed her to severe criticism on the part of foreign jurists. Amongst others, M. de Hauteville, one of the most eminent of modern French writers, had charged England with conniving at an illegal blockade, and that she did so not from any friendly feeling toward the United States, but in order that she might make it the basis for enforcing her own arrogant pretensions, when, having become a belligerent ourselves, it might be to her interest to set aside the principles of international law. Her justice and impartiality, in fact, were involved in this matter. If the blockade is ineffectual, she was conniving at the use of a weapon of warfare by one belligerent which it is not in the power of the other to employ, and thus acting unjustly to fair traders, by making commerce a matter of smuggling, gambling, and speculation. The opinions of the neutral powers were almost unanimously against the legality of the blockade. Hitherto it had not fulfilled any of the conditions which could constitute it legal and efficient. On the contrary, steamers of light draught have continually run it, and were daily plying between the various ports of the Southern States. In conclusion, he urged that if England continued to connive at an illegal and inefficient blockade in order to conciliate the United States, the Declaration of Paris would be, so far as it regarded the Confederate States, a mockery, as regarded international law, a delusion, and, with respect to the trade and commerce of the world, a snare.

Mr. W. E. Foster denied that the blockade was ineffective, and stated that the lists of upward of three hundred vessels, which had been handed in by Mr. Mason as a list of the vessels which had broken the blockade, had, on examination, dwindled down to nineteen, and most of these had escaped on dark and stormy nights, thus proving the stringency, rather than inefficiency of the blockade. He also reminded the House that during the war between Great Britain and her revolted colonies in America, no less than five hundred privateers succeeded in getting out of American ports.

The Solicitor-General quoted numerous precedents to show that the present blockade was as efficient as other blockades had been in former years, and that it would be a violation both of international law and of the principles of neutrality to break it. In 1798 public notification was issued by the British Government that there would be a rigorous blockade of Havre. A force was sent out to establish the blockade, but the commander was so remiss in the execution of his duty that he habitually allowed ships to run in, so that practically it might be said there was no blockade at all. Yet, it was nevertheless held that so long as a force remained and the notification was not ignored, the blockade was considered to be in existence, and any neutral vessel breaking it was liable to capture. That was, he contended, a case strictly analagous to that of the blockade of the Southern ports, with this exception, that the duties of the blockade in force in the latter instance had been more vigorously executed. He complimented the speech of Mr. Foster, asserting that the facts the member had laid before the House were wholly unanswerable. The returns received by the Government fully established the accuracy of his statistics.

This motion was negatived without a division.

Subsequently, on the 10th of March, Lord Stratheden renewed the motion. At the same time he stated that his object was not to declare that the blockade ought to be raised, or any means to be adopted with that view, but to show that toward one of the belligerents in America—the Southern, or insurrectionary power—England had assumed an attitude which suspended, if it did not violate neutrality, and that to restore that neutrality some further action was necessary. Her attitude toward that power arose out of a despatch addressed by Earl Russell at the head of the Foreign Office to Lord Lyons on the 15th of February. About July or August last England appealed to the Government at Richmond to induce them to accede to the principles of public law which were laid down by the great powers at Paris in the year 1856. The negotiation was conducted by a gentleman of South Carolina, who had the confidence of the British consul at Charleston and of Lord Lyons; and although the Richmond Government might have declined to receive the proposition on the ground that they could not hear a negotiator from a power which refused to recognize the place they claimed in the society of nations, they did not act on that feeling, but on the 13th of August the Congress of the Southern

States resolved to embrace the principles laid down in the Treaty of Paris, with the exception of that relating to privateering, which they had not been asked to adopt. When the President communicated this decision to the negotiator, he pointed out that it had been adopted in the sanguine expectation that England should adhere strictly to the article of the treaty which laid down, that blockades to be binding should be effective. The despatch of the 15th of February, which was not called for by any question or any emergency, sanctioned, on the part of her Majesty's Government, the blockade as it had been carried on at Wilmington and Charleston, where it was notorious that it had been less strict than on any other portion of the seaboard from the north of Virginia to the extremity of Texas. Thus the attitude which England had adopted toward one of the belligerents had been to induce them to make a generous concession on an understanding from which she seemed to have departed. The effect of that despatch clearly was to release the Government of Washington from the necessity of maintaining at any port of their coast a more stringent blockade than that which existed at Wilmington and Charleston.

Earl Russell in reply to these views said: I quite admit the right of the noble lord to call into question the conduct of the Government with respect to the blockade; nor, indeed, should I complain if any noble lord were to call into question the whole of their conduct with respect to the unfortunate differences which have taken place in America; for I am convinced not only that that policy is founded on reason and can be justified by argument, but also that it is generally approved by the country. With respect to this particular question of the blockade—and I shall not detain your lordships by entering into any other—it was, of course, a matter of serious consideration with her Majesty's Government from time to time in what manner they should act. There are various questions connected with a blockade which they had to consider. The first was, whether there was sufficient authority for instituting it. Lord Stowell says that a blockade must be the act of a sovereign authority. This was the act of the President of the United States, who, on the 19th of April, issued a proclamation declaring that the blockade was about to begin, and that act was followed by armed ships of the United States blockading the several ports and warning vessels off the coast. Therefore there can be no question as to the authority by which the blockade exists. Then, with regard to the means which the President, as the organ of the Government of the United States, has employed, of course at first they were very deficient, but I think that these papers and everything we have heard show that the Government of the United States have been most desirous so to augment their squadron and so to employ their ships that there might be a sufficient force to establish an effective blockade. It was a matter of great importance to them—a vital point of their policy, and therefore one cannot doubt that they would use every means in their power. As early as the 15th of July, when complaints were made in some New York newspapers that the blockading squadron was not sufficient, I find that they had then thirty-four men-of-war, of 56,000 tons, with 726 guns and 10,113 men. That shows that they had made great efforts to establish an effective blockade. It might be said, again, at the commencement that the blockade was too extensive, and that it was impossible that so extensive a blockade should really be efficient; but we must recollect that we ourselves in our American war instituted a blockade of 2,000 miles of coast, and the difference between 2,000 miles and 3,000 miles is not so great as to authorize us to make any objection to the blockade on that account. But in a blockade of 3,000 miles of coast, although it is such a blockade as we ourselves should have established, and such as the law of nations recognizes, with several large ports and many small ones to watch, there were sure to be many irregularities in the conduct of it. Yet we find, generally speaking, that there has been an intention to station ships off the different ports, and that ships have been stationed there. Thus the blockade of Charleston was effective on the 11th of May by the ship Niagara; Pensacola was blockaded on the 13th of May; the blockade of the Mississippi was effective on the 26th or 27th of May, and Savannah was blockaded on the 28th of May, each port with a sufficient number of ships for the purpose. The noble lord says that the blockade of Charleston was interrupted on some day in May; but he himself read a letter in which it is stated that the blockade was renewed by another ship on the 5th of June. There was also an account of another ship being added on some day in July or August, and there is no reason to suppose that there had been no ships of war before that port, and the whole question that arises is as to the interruption of the blockade between the 15th or 23d of May and the 4th of June. If any ship had been taken at that time into a prize court it might well have been argued by the owners that there was an interruption, and that no blockade existed; but that does not affect the general question of the blockade of the southern coast of America. And let it be remembered above all, that if there were an ineffectual blockade the first place in which we should hear of it would be in the American prize courts. When a merchant vessel had been taken into one of those courts it would be quite competent for the owners to plead that there was no effective blockade, and that, therefore, the vessel not having broke it, could not be legally condemned. No one will say that there are not judges in America quite competent to decide questions of international law—judges who have inherit-

ed the precepts and doctrines of such men as Chancellor Kent and Justice Story—quite competent to pronounce judgment according to law, and who, I believe, would not have departed from the law in their decisions in such cases. But I do not find that there has been any real discussion in the prize courts of America, except, perhaps, in one or two instances, with respect to the efficiency of the blockade. I must confess to the noble lord that the many instances which are given by Consul Bunch and others of the vessels which have run the blockade, induce me to consider the whole of this question with a view to deciding what the course of the Government should be. But, in saying that many vessels have run the blockade, I think there is great exaggeration, and there is great misapprehension when lists of vessels are given which are, in fact, vessels belonging to the Southern ports, which run out of creeks and creep through shallow waters in order to reach another port on the same coast. These are mostly small vessels from fifty to three hundred and fifty tons, and it is stated in one of these letters that they cannot be regarded as vessels of such size and importance as to argue that the blockade was inefficient which allowed them to escape. Your lordships know very well that in 1806 the Government of this country announced a blockade extending from Brest to Dunkirk, but during that and other blockades which we instituted on the French coast there were many coasting vessels which went from one port of France to another, entirely escaping the blockade. But would that have justified either America or any other neutral power in saying, "This blockade is ineffective, and we will not acknowledge it, and we require you to give up the vessels which you have seized for breach of blockade." It certainly would not have justified such a course. But there is another consideration. Has the Southern coast had a free and uninterrupted communication with Europe? Have your lordships heard that cotton has arrived in its usual quantities here, and that the manufactures of Great Britain and France have arrived freely at the ports of the States which are now in a state of civil war? On the contrary, the intelligence which we have received shows that there has been no such uninterrupted intercourse, but that great inconvenience has been suffered by the inhabitants of these Southern States, owing to the existence of that blockade which is said to be ineffective. On the question of the efficiency of the blockade it was desirable to consult the law officers of the Crown; and after having done so I wrote the despatch to Lord Lyons, stating that:

Her Majesty's Government, however, are of opinion that, assuming that the blockade is duly notified, and also that a number of ships is stationed and remains at the entrance of a port sufficient really to prevent access to it or to create an evident danger of entering or leaving it, and that these ships do not voluntarily permit ingress or egress, the fact that various ships may have successfully escaped through it will not of itself prevent the blockade from being an effective one by international law.

This was the deliberate opinion of her Majesty's Government on the subject. I cannot give the papers to which the noble lord refers, on the very ground on which he asks for them. He says, perhaps there may be papers that may show the blockade he thinks ineffective may really have been effective. There are no such papers; there are no papers that can make the case stronger for the Government than those which have been given: the Government is willing to leave your lordships to judge the case from the whole effect of the papers that have been already printed. As to any representations from the Government of France that it considered the blockade ineffective, I must state that no such communication has ever been made to her Majesty's Government. The noble Lord has asked whether the Government of the Southern States acknowledges the second and fourth articles of the Declaration of Paris. It has declared that it does acknowledge them. We have entered into no engagement with that Government. It is our duty to see that the Declaration of Paris is agreed to independently of any such engagement; that is our duty with regard to all neutral nations, and with regard to the peace of the world.

The subject came up before the French Legislature about March 13, when M. Calvert Rognait said: "I wish to examine whether the blockade of the Southern ports is maintained by a force respectable enough to constitute this danger. I assert," said the speaker, "that it is not, and think that no more conclusive proof of my assertion can be given than the very long catalogue of ships of all sorts which have entered or quitted these ports since the notification of the blockade. Authentic documents, letters from honorable merchants and shipowners, show that any ship leaving for South America can be insured by a premium of 7½ to 15 per cent." The honorable member went on to say that Earl Russell had written a despatch to Lord Lyons to the effect that, although many ships had forced a passage, still the blockade of the port of Charleston had been regularly announced; and that, as ships of the American navy had been charged with its maintenance, there was ground to regard it as effective. In that despatch Lord Russell departed widely from the declarations of the Paris Treaty, and from the language of the circular of the French Minister of Commerce.

In reply, M. Billault, on the part of the Government, said: "One of the honorable members has expressed doubts as to whether the blockade established by the Northern States is effective, and appears to see an opposition between English and French tendencies on the subject. Such is not the case. The principles laid down by the two governments as to the conditions necessary to render the blockade effective have been mutually accepted. Earl Russell has laid down the principle that the

blockade is effective. The reason was that considerable prudence is necessary in this American question, and that it is important that the powers interested should act in concert. Those powers do not think that the effective character of the blockade can be denied, and they respect it."

In the month of June a memorial from certain British merchants and shipowners in Liverpool was addressed to Earl Russell, as principal Secretary of State for Foreign Affairs, in which they stated that they viewed with considerable anxiety and apprehension the hostile attitude assumed by Federal cruisers in the Bahama waters, and prayed that steps might be taken to protect British shipping in those waters, and to put a check on the seizures so repeatedly made by those cruisers. The reply of Earl Russell, on July 5, was as follows:

I am to state to you, in reply, that it is alleged, on the other hand, by Mr. Seward and Mr. Adams, that ships have been sent from this country to America with a fixed purpose to run the blockade; that high premiums of insurance have been paid with this view; and that arms and ammunition have been thus conveyed to the Southern States to enable them to carry on the war. Lord Russell was unable either to deny the truth of those allegations or to prosecute to conviction the parties engaged in those transactions. But he cannot be surprised that the cruisers of the United States should watch with vigilance a port which is said to be the great *entrepot* of this commerce. Her Majesty's Government have no reason to doubt the equity and adherence to legal requirement of the United States prize courts. But he is aware that many vessels are subject to harsh treatment, and that, if captured, the loss to the merchant is far from being compensated even by a favorable decision of the prize court. The true remedy would be that the merchants and shipowners of Liverpool should refrain from this species of trade. It exposes innocent commerce to vexatious detention and search by American cruisers; it produces irritation and ill-will on the part of the population of the Northern States of America; it is contrary to the spirit of her Majesty's proclamation; and it exposes the British name to suspicions of bad faith, to which neither her Majesty's Government nor the great body of the nation are justly obnoxious. It is true indeed that supplies of arms and ammunition have been sent to the Federals, equally in contravention of that neutrality which her Majesty has proclaimed. It is true also that the Federals obtain more freely and more easily that of which they stand in need. But if the Confederates had command of the sea they would no doubt watch as vigilantly, and capture as readily, British vessels going to New York as the Federals now watch Charleston and capture vessels seeking to break the blockade. There can be no doubt that the watchfulness exercised by Federal cruisers to prevent supplies reaching the Confederates by sea will occasionally lead to vexatious visits of merchant ships not engaged in any pursuit to which the Federals can properly object. This, however, is an evil to which war on the ocean is liable to expose neutral commerce, and her Majesty's Government have done all they can fairly do; that is to say, they have urged the Federal Government to enjoin upon their naval officers greater caution in the exercise of their belligerent rights. Her Majesty's Government, having represented to the United States Government every case in which they were justified in interfering, have only further to observe that it is the duty of her Majesty's subjects to conform to her Majesty's proclamation, and abstain from furnishing to either of the belligerent parties any of the means of war which are forbidden to be furnished by that proclamation.

No further questions arose respecting the effectiveness of the blockade. Some correspondence took place between the governments of the United States and England relative to certain prizes which were captured, and to fitting out vessels in the latter country for the purpose of running the blockade, for which *see* DIPLOMATIC CORRESPONDENCE and UNITED STATES.

BRAZIL, a vast empire of South America, is bounded on the E. and S. E. by the Atlantic Ocean, on the N. by Guiana and Venezuela, and on the W. and S. W. by Ecuador, Peru, Bolivia, Paraguay, the Argentine Republic, and the Republic of Uruguay. It has a coast line of upward of 3,700 miles. Its greatest diameter is, east to west, from Cape Augustin, S. lat. 8° 21′, W. long. 34° 56′, to the river Yavari, which separates it from Peru, 2,630 miles, and north to south, from Cape Orange, N. lat. 4° 23′, W. long. 37° 27′, to the river Tahim, 2,540 miles. Its total area is roughly estimated at 3,956,800 sq. m.

Politically, it is now divided into 20 provinces, the population of which, in 1856, together with the name of the capital and the number of senators and deputies elected by each, are exhibited in the following table:

PROVINCES.	Population.	Senators.	Deputies.	Capitals.
Para	207,400	1	3	Para.
Maranhao	360,000	3	6	Maranhao.
Piauhy	150,400	1	3	Oeiras.
Ceara	385,300	4	8	Aracate.
Rio Grande do Norte	190,000	1	2	Natal.
Parahiba	209,300	2	5	Parahiba.
Pernambuco	950,000	6	14	Pernambuco.
Alagoas	204,200	2	5	Porto Calvo.
Sergipe	183,600	2	4	Sergipe.
Bahia	1,100,000	7	14	San Salvador.
Espirito-Santo	500,000	1	2	Vittoria.
Rio de Janeiro	1,200,000	6	12	Janeiro.
St. Paulo	500,000	4	6	Santo Paulo.
Sta. Catharina	105,000	1	2	Sta. Catharina.
Rio Grande do Sul	201,300	3	6	S. Pedro do Sul.
Minas Geraes	1,300,000	10	20	Ouro Preto.
Matto Grosso	85,000	1	2	Cuyaba.
Goyaz	180,000	1	2	Goyaz.
Amazonas	42,600	1	1	
Parana	72,400	1	2	
Total	7,677,800	58	122	

Toward the close of the year 1862 a serious difficulty arose between the Governments of Brazil and Great Britain from the refusal of the Brazilian Government to admit certain claims which Mr. Christie, the British minister at Rio de Janeiro, had made. The facts, as far as can be ascertained, were as follows:

In June, 1861, the British consul at Rio Grande do Sul heard, that a Brazilian magistrate of Albardao, a wild and half peopled portion of the Brazilian coast in the province of Rio Grande do Sul, had mentioned in conversation that the dead bodies of Englishmen had been washed on shore near his house, but he denied that there had been any wreck. This led to an inquiry, the consul having reason to suspect that a British vessel had been wrecked on the coast, and that that wreck had taken place some days previously to the conversation in which the Brazilian magistrate had taken

part, but that no inquest had been held on the bodies, nor had any information been given to the authorities as to the wreck. The consul accordingly proceeded to the spot in company with a judicial officer and a small body of coast guards. On arriving there he went to the house of the magistrate, who was absent. His visit was not very well received, and in the house was found some portion of the cargo of the wrecked vessel, which evidently had not been in the sea, but had been removed from the vessel, and had not been damaged by sea water. On the following day the consul went to the coast and found the remains of an English vessel, the Prince of Wales. The sands were covered with the cargo, some portion of which was damaged by the sea, but a very large portion was not damaged at all. The trunks had been broken open and their contents plundered. He had heard that ten bodies of Englishmen had been found upon the coast, and he desired to see the bodies, but the inspector of the district resisted the attempt, and being at the head of a body of armed men, the consul was obliged to desist, and he returned to Rio de Janeiro. After some trouble he obtained from the authorities their aid in having the bodies brought to Rio de Janeiro, but at his own expense. Instead, however, of ten bodies being brought, there were only four, upon which an inquest was held. On further remonstrance an inquest was directed to be held on the remaining bodies, but no person from the consulate was present, and the persons appointed to carry on the inquest were a sub-delegate and the brother-in-law of the magistrate, who was suspected to have been a party to wrecking the vessel.

Application was made for redress, but it was not till September 18, 1861, that any steps were taken by the Brazilian Government. The compensation then offered not being deemed sufficient by the British Government, they demanded that further inquiry should be made. This request was not complied with till the month of August, 1862. Mr. Christie then demanded that a British officer should be present at the inquiry, but that was refused. Late in August the Brazilian Government announced that two of the minor officials had been dismissed for culpable neglect, but no steps were taken to punish the principal culprit.

This alleged outrage was the first cause of complaint. The second act complained of took place on June 7, 1862, just a year after the wreck at Albardao. It consisted in the arrest and detention for a night and a day of two of the officers and the chaplain of the British ship Forte. Mr. Christie's representation was, that the three had been dining ashore in the suburbs of Rio de Janeiro, and were quietly returning to their ships when stopped by the sentry on duty at a guard house near the beach; that on resisting their unprovoked detention, one of them was wounded by the soldier's musket, and they were locked up without having in the least misconducted themselves. The Brazilian authorities replied to this representation, after examining witnesses—among them the English master of the hotel at which the gentlemen had dined—that the officers and chaplain had been drinking as well as dining; that they insulted the sentry and annoyed the passers-by; that they were not in uniform, and refused to give their names and rank; that they were locked up, in fact, for being drunk and disorderly, and were released after a detention that was not unreasonably long or offensive. Notwithstanding this explanation of the affair, Mr. Christie, acting upon authority from Lord Russell, demanded the dismissal of two officers, the further reprimand of two others, and the punishment of the sentinel.

In consequence of the refusal of the Brazilian Government to comply with the British demands, Mr. Christie, on Dec. 5, 1862, despatched three notes to the Brazilian Minister of Foreign Affairs, to which he demanded a definite reply by the 20th of the same month.

As these notes did not bring forward any new argument in support of the British demands, the Brazilian Government, in a note of December 29, after giving a detailed account of what had occurred, of the investigations that had been made, and of the explanations which had been offered to the British legation, adhered to its former refusal. While it referred the final settlement of the question to the British Government and the Brazilian legation at London, it protested energetically against having any responsibility in the case of the Prince of Wales, and peremptorily declined payment, declaring that if it should be forced to yield in the question of indemnification it would only pay the sum demanded by the British legation or the British Government under protest.

In reply to this note, Mr. Christie ordered a declaration to be posted at the doors of the British consulate, to the effect that, the Brazilian Government having refused to give satisfaction to Great Britain, Admiral Warren would be immediately instructed to retaliate by seizing Brazilian property. This order was promptly executed. At night, on December 30, the English war steamers Stromboli and Curlew quitted the bay of Rio. The preceding evening the telegraph had signalled the capture of a Brazilian vessel outside the bar by an English steamer. Popular indignation at this intelligence ran very high, and large numbers of excited but inoffensive groups collected in the streets. On Jan. 6, 1863, it transpired that the Stromboli had reëntered the bay during the past night, bringing news of the capture of five vessels, one of which was a steamer, their entire cargoes being valued at £30,000 sterling. The irritation of the people now became extreme. The entire population, with boundless enthusiasm, applauded the refusal of the ministry to comply with the demands of the British minister. The indignation manifested against England was intense, and caused the apprehen-

sion of a popular outbreak against the British residents. Foreigners as well as natives with perfect unanimity declared themselves strongly opposed to the proceedings of the English minister. Excited meetings were organized in the open street, and the speakers implored the people to make no reprisals upon English property, and to refrain from molesting English residents, but at the same time to encourage the Government to resist. The emperor and several of the cabinet ministers found it necessary to address the people, to urge them to remain quiet, and to trust to the Government the vindication of the national honor. Lists of volunteers were opened, and immediately filled; deputations were formed to congratulate the ministry upon its attitude, and liberally responded to by the citizens, some giving as much as £1,000. The shareholders of the bank demanded that a resolution should be passed not to discount the paper of English houses, and proclamations were issued, inviting the people to abstain henceforth from using any description of English goods. On January 6th the Brazilian Government, by the advice of the councils of state, determined to accept the new proposition of Mr. Christie, according to which the following arrangement was concluded: The prizes are to be restored. The Brazilian minister in London, if so required by the British Government, will pay, under protest, whatever sum may be demanded to the owners of the Prince of Wales. With respect to the treatment sustained by the officers of the Forte, it shall be submitted to the arbitration of the King of the Belgians to decide whether or not such treatment should be regarded as an outrage upon the honor of the British navy. Upon the receipt of this news in England, the extreme and summary measures adopted by the British Government were severely censured by the liberal press. Meetings of merchants, engaged in the Brazilian trade, expressed their disapprobation. The matter was brought up in the House of Commons, when Mr. Layard, in the name of the Government, admitted that Mr. Christie acted under instructions from the Government, and expressed the hope that the matter would be soon amicably settled.

Another collision toward the close of the year took place in the river Amazon between the Brazilian authorities and two vessels of war lately built in Great Britain for the Peruvian Government. Some time previous the Peruvian Government had entered into a contract with the Brazilian company, "Companhia de Navigacao e Commercio do Amazonas," for the conveyance of mails, &c., on the upper waters of the Amazon. For a year previous to the expiration of the contract payment was withheld by the Peruvian Government on one pretext or another, and, finally, it refused to pay at all, on the plea that verbal notice had been given to the Amazon company that the (written) contract was no longer in force. The Amazon company consequently instructed their agent at Para, at the mouth of the Amazon, not to take any more cargo belonging to the Peruvian Government, and to give notice that after the end of the year no cargo destined for Peru would be taken on board the company's steamers. The Peruvian Government was thus put in great embarrassment, for by a convention existing between the Governments of Peru and Brazil it was distinctly stipulated that no goods shall be taken up the Amazon in Peruvian vessels until the limits of the two countries were mutually agreed upon. About the middle of October, 1862, the Peruvian war steamers Morona and Pastaza arrived at Para, and professed that they were going up the Amazon for the purpose of assisting in marking the boundaries between Peru and Brazil. To the surprise of the Brazilians, a few days subsequently, the Morona took in a general cargo, mounted her guns, and, in disregard of a formal intimation from the president of Para that she could not, without direct violation of the convention existing between the two countries, proceed on her voyage, the anchor was weighed, and the Morona steamed up the river, followed speedily by the Pastaza. The president of the province immediately sent after them a fast steamer, the Belem, belonging to the Amazon company, on board of which he placed two hundred artillerymen and some nine-pounder guns. The Belem overtook the Morona at a place called Gurupa, and her commander at once ordered the Morona to return to Para. This order being set at defiance the Belem proceeded to the fortress of Obidos, which she reached six hours before the Morona, so that when the latter arrived at Obidos the fortress fired two blank cartridges for her to bring to. In reply the Morona fired a shot, upon which the fortress fired eight shots at the Morona, and the latter replied with round shot and canister. No injury appears to have been done by this exchange of fire, and the Morona proceeded on her voyage. The Pastaza soon after leaving Para got ashore, but floated with the rising of the tide, and returned to Para. These events had created great excitement in Para, and the Brazilian Government had ordered several of their vessels of war to rendezvous at the mouth of the Amazon.

Brazil has been making of late great progress in civilization and material prosperity. Garibaldi, who was for some time clerk in an English house in Rio de Janeiro, built about the first ten miles of railroad ever constructed in Brazil. Since then other roads have been made; the demand for steamboats on the Amazon begins likewise to be supplied; docks were constructed and used at Rio de Janeiro in 1861; in 1862 the first ferry boat was taken to Rio de Janeiro from the United States. Particular attention is paid to the encouragement of European emigration, although the efforts of the Government have been thus far only partially successful. The most numerous emigrants come from Portugal and the Azore Islands, and they

devote themselves almost exclusively to commercial industry. Some forty thousand immigrants have also arrived from Germany and Switzerland, and established a number of colonies, of which the most important are those of Sao Leopoldo, in the Province of Rio Grande, and Donna Francisca, at Saint Catherine. The Swiss Confederation sent in 1861 a distinguished scholar, M. Tschudi, to examine thoroughly the condition of the colonists, and his report was in the main favorable. Some difficulty arose from the fact that a considerable number of German and Swiss emigrants were Protestants, and the laws of Brazil recognized only the Roman Catholic Church; but the Government has now guaranteed to all the Protestant immigrants freedom of religion, and even provides for the support of their ministers and teachers, churches, and schools, as soon as the number of colonists in any place has reached four hundred.

Of immense importance, especially for commerce, will be the opening of the Amazon, the largest river of the world, to which the Government is devoting great attention. A body of scientific men, provided with the finest instruments, have been employed by the Government for its exploration, and the result of this interesting investigation it is expected will ere long be published. The city of Para is already rapidly progressing. For ten miles up the river from Para the land on the banks appears to be a vast brick kiln, preparing bricks for the enlargement of the city. This city has undoubtedly a great future. It is the centre of the whole commerce of the valley, and the climate is of a healthy character. Close to the city spread the virgin forests. Sugar cane planted in the valley becomes perennial, and throughout its whole extent all the best medicinal plants in the world grow in profusion.

The Emperor of Brazil is very popular, and it is hoped that the progress of this vast empire, which seems to be destined to become one of the greatest of the world, may be uninterrupted and rapid.

BRODIE, Sir Benjamin Collins, baronet, D.C.L., F.R.S., sergeant-surgeon to the queen, an eminent English surgeon, born at Winterslaw, in Wiltshire, in June, 1783, died at Broome-park, Betchworth, Surrey, Oct. 21, 1862. He was the son of Rev. Peter Bellinger Brodie, a learned and able clergyman of the English Church, and received his early education under his father's care. At the age of 16 he was already a good classical scholar, and having a predilection for the study of medicine, he was sent in 1799 to London to commence his professional studies at the Hunterian School of Medicine in Windmill street. After a four years' course in that school he became a pupil of Mr., afterward Sir Everard Home, then one of the most distinguished surgeons in the metropolis, in 1803. In 1804, at the age of 21, he gave lectures on anatomy in St. George's Hospital, and in 1808 became assistant surgeon of that hospital. In 1810 he received the Copley medal for two able papers in the "Philosophical Transactions," and the same year was appointed Croonian lecturer. In 1819 he was elected professor of anatomy and surgery to the Royal College of Surgeons, and in 1822 one of the principal surgeons of St. George's Hospital. In 1823, at the age of 40, he occupied the first rank in his profession. In 1830 he was called to attend George IV. in his last illness, and on the accession of William IV. was appointed sergeant-surgeon to the king. He was created a baronet in 1834. On the accession of Queen Victoria he was appointed sergeant-surgeon, and on her marriage surgeon to the Prince Consort. The Government also recognized his ability by placing him on important commissions relative to medical education, the public health, sanitary matters, &c. He was also professor of the Medico-chirurgical Society; president of the Royal College of Surgeons, member of the Council of the Royal Society, and later, its president, and corresponding member of the Institute of France. Oxford University conferred upon him the degree of D.C.L. in 1850. His practice was, as a whole, larger than that of any other British surgeon, though perhaps not equal in any one year to that of Sir Astley Cooper during two or three of his best years. For nearly 40 years it is said to have exceeded £12,000 per annum. Yet amid all his professional labors and cares, increased as they were in the later years of his life by impaired vision, he found time to prepare several works of great value on topics connected with his profession. The principal of these were "Lectures on Diseases of the Urinary Organs;" "Observations, Pathological and Surgical, on Diseases of the Joints" (both these have passed through numerous editions); "Physiological Researches," reprinted from the "Philosophical Transactions in 1851," and "Physiological Inquiries," first published in 1854. He was a skilful physician, and an admirable operator, profoundly versed in anatomy, and in the science as well as the practice of his profession, and withal a genial, generous, and accomplished gentleman.

BUCKLE, Henry Thomas, an English philosopher and historian, born at Lee, in Kent, Nov. 24, 1822, died in Damascus, Syria, May 28, 1862. His father was a wealthy London merchant, and he received an excellent early education under Dr. Holloway at Gordon House, Kentish Town. At the age of sixteen, when asked by his father to name his own reward for the diligent scholarship which had made him the first scholar of his class, he preferred the earnest request to be allowed henceforth to pursue his studies alone. His desire was granted, and thenceforth, with a rare determination and fixedness of purpose, his time was given wholly to earnest study, with the single recreation of games of chess, in which he won the reputation of being one of the best players in England. The death of his father occurring in

1840, he soon came into the possession of a large fortune, which enabled him to gratify his passion for books. Of these he made a very large and choice collection, and to an extent seldom equalled at his age, had made himself master of their contents. His extensive reading and devotion to study attracted the notice of such men as Hallam and Bunsen, who regarded him as a young man of great promise. The tendency of his mind and the drift of his studies had been from an early period toward the philosophy of history, and the result of his many years of labor finally took form in a proposed "History of Civilization." The first volume of this, consisting only of an elaborate introduction to the "History of Civilization in England," appeared in 1857, and was republished the next year in this country; a second volume, also introductory in its nature, and devoted to the developments of civilization in Spain and Scotland, was published in 1861, and a third, in which he was to review the civilization of Germany and the United States, was in progress. These were all preliminary to his treatment of the subject of the "History of Civilization in England," of which the greater part was said to be ready for publication. He had also published in "Fraser's Magazine" two essays, republished since his death in this country, on "Liberty," and on the "Influence of Women." The theory on which his historical works were based called forth strong and severe animadversion, and was hardly accepted even by his most intimate friends and admirers; but while many of the objectionable positions in his works were attributed to his isolation as a student, and his one-sided views of humanity, he was unquestionably but partially understood, and greatly misrepresented by his critics. A more free and extended commingling with his fellow men, it was thought, would have greatly modified his theories, and brought his really reverent spirit to a better understanding of the "ways of God with man." The literary merits of his works are very great: they give evidence of vast research without pedantic display, and the style in its lucidity and fascination compares favorably with that of the great English historian Macaulay.

Mr. Buckle had seriously overworked himself in the preparation of his second volume for the press, and after its publication suffered from illness for some months. In October, 1861, he left England, accompanied by two boys, sons of a friend, to spend the winter on the Nile. In March, his health being improved, he left Cairo, with Mr. J. S. Stuart Glennie, for a tour through Sinai, Petra, and Palestine. The fatigues of a horseback journey through the latter region, led to his serious illness for about ten days at Nazareth; recovering partially he pushed on to Sidon, and thence by the easiest route to Damascus, where he was attacked with typhus fever, and died after about ten days' illness.

BUILDING MATERIALS. The very marked decay already taking place upon the surface of the stone used in building, not many years since, the new palace at Westminster, London —the edifice containing the new houses of parliament—having led to the appointment of a committee to consider the subject of the causes of decay in building stones and the possibility of preventing it, the report of that committee has not only furnished some important information upon the topics in question, but has served to elicit further discussion in England and to some extent in this country. The stone used in construction of the palace—a magnesian limestone—was mainly procured from the quarries of Anston; a portion, however, in view of its reputation for durability, was taken from the ancient quarries at Mansfield Woodhouse. The committee of investigation just referred to, appointed by an order of the House of Commons, consisted of Sir R. I. Murchison; Geo. Godwin, and M. Digby Wyatt, Vice-Presidents of the Royal Institute of British Architects; D. T. Ansted and James Tennant, Professors of Geology; A. W. Hofmann, Edward Frankland, and F. A. Abel, Professors of Chemistry, and others: their report is dated August 1, 1861, and is based upon results elicited by an examination of 77 communications submitted, and of 31 witnesses—13 meetings, irrespective of those of sub-committees, having been held for the purpose. The more important statements in reference to the four points of inquiry specified in the act of appointment, as condensed from the reply of the committee, are as follows:

"I. The extent and position of the decay." This began to appear in portions of the palace first built, and about 7 years after their execution; yet in some of the most recent parts it is now as obvious as in any others. In the parts toward the Thames, and in those fronting on the approaches to Westminster Bridge, the decay is much greatest in the lower portions of the wall; in some exposed positions where it was looked for, it is extremely slight; but in the inner courts, which are much sheltered, it is considerable, and perhaps the worst specimen is one of the parts most sheltered of all—an archway leading to the reporters' gallery, near the entrance to Westminster Hall. Thus, the material appears most liable to decay in damp and confined situations. The actual disintegration and discoloration of the stone in the affected portions are already considerable, suggesting deeper inroads into the material than are at first apparent; but though the disfigurement, marking the plane surfaces more than the carved work, is already serious, it is inferred that the stability of the structure is not at present endangered.

"II. The causes to which the decay is attributable, taking into consideration the composition of the stone, and the influence exerted upon it by moisture, and by the acids diffused in the London atmosphere." It was previously known to some contractors that some layers of the Anston stone were liable to decomposition; and though no inspector of the material

was appointed, some of the stone was rejected by the builders themselves. The sub-committee, consisting of the three chemists already named, make a division of building stones into 2 classes: 1, those of materials not easily acted on by acids; as granites, porphyries, and serpentines; 2, those of materials partially or entirely subject to ready action of acids, among which limestones, dolomites, and certain sandstones containing carbonate of lime as cementing material, must be classed. Among analyses of several varieties of dolomite, quoted in illustration of the composition of the stone in question, that of the North Anston quarry gave: carbonate of lime, 54.89 per cent.; carbonate of magnesia, 42.07; protoxide of iron, 0.49; peroxide of iron, 0.24; protoxide of manganese, *a trace;* silica, 0.56; water, 0.51. Not merely chemical composition, however, but physical condition also, goes to determine actual durability; thus, marble, a crystalline carbonate of lime, is much less subject to influence of acids than chalk, an amorphous one. Now, in the dolomitic limestone of the new houses of Parliament, while the same block of small dimensions is often greatly disintegrated in one part, and wholly untouched in another, analysis fails to show a difference in the chemical nature of the two parts; so that the cause must really exist in the state of aggregation of the material. Among the agents in the atmosphere that may attack building stones, are: 1. *Oxygén*, but only in case of those rare sorts containing sulphurets of iron, or the protoxides of iron and manganese, all of which are liable to oxidation. 2. *Carbonic acid* and *water:* carbonic acid in presence of water proves a powerful solvent, decomposing in time the most indestructible rocks. The acid transforms the insoluble earthy carbonates of lime and magnesia in the stones containing these into soluble bicarbonates; the water first serving as vehicle to introduce the acid, and then as solvent to wash away the products of its action. The removal in like manner of the alkaline bases from silicious rocks, leaves the silica in more or less friable condition. Besides, the committee think that water exerts a gradual disintegrating action near to the surface of stones, by the expansion occurring in its volume, upon its freezing within the interstices of the material. 3. *Nitric acid:* this is now known to be an almost constant, probably a normal, constituent of the air; but though it must assist in destroying calcareous and magnesian stones, its minute quantity renders its action scarcely worthy of notice. 4. *Sulphur acids:* these in towns, especially where much coal is burned, become quite appreciable. Dr. Angus Smith found in the air of parts of Manchester one part sulphuric acid in 100,000, and in the centre of the town, 25 parts in 100,000 of air. The composition and structure as well as the situation of the stone of the new houses of Parliament render it subject to action of all the agents now named, save oxygen. The chief agents in the decay are doubtless carbonic and sulphuric acids, with water; the action of the last named acid being indicated even by a marked efflorescence of sulphate of magnesia on the face of many stones from which exfoliation is taking place, while its effects will be not only due to solution of the lime and magnesia of the stone, but also to the forming of crystals of sulphate of magnesia within the pores, and which like those of ice will act to disrupt and remove the superficial parts of the material.

"III. The best means of preserving the stone from further injury." The sub-committee, already mentioned, begin their report on this head by declaring that, among the many processes for preservation that have been brought to their notice, there is not one which they at present feel justified in definitely recommending as a preservative, either for general or local application. Having devoted 5 days exclusively to the study practically of one process, Ransome's—presently to be described—they declare themselves unable to elaborate even this sufficiently to warrant them in expressing a final opinion as to its merits. The processes they had examined could be divided generally into: 1, those for permanent, and 2, those for temporary protection. In both these classes they summarily dismiss some of the proposed methods, as applicable only to stones before being placed in a building, or as showing misapprehension of the real problem to be solved—among these being such as boiling in a mixture of pitch or resin and oil; covering with a semifluid mixture of silica and sulphur, the latter not only oxidizable but highly inflammable; and even the offer to protect the walls galvanically by coating with sulphate of lead, and putting this in connection with plates of zinc; and again, to check the decay by first producing fermentation over the surface, in a coating of some organic and fermentable substance. The more probably applicable of the permanent processes, they classify under 5 heads, namely: the application, 1, of silicates of the alkalies, in various degrees of concentration; 2, of silicates, in conjunction with various saline compounds, intended to produce double decomposition; 3, of hydrofluoric, or hydrofluo-silicic acid, or their saline compounds; 4, of phosphoric acid, and acid phosphates; 5, of solutions of the alkaline earths, or their bicarbonates, in water. As to these, however, they advise nothing further than to apply, to portions of the palace wall actually decaying, the best representatives of the three classes last named, as an experimental test of their value, deeming that experiments already in progress with some of those in the first two subdivisions will, in the course of a few years, determine the question of their applicability. Of processes for temporary protection they recommend for trial on some affected parts of the wall only the solutions in volatile solvents of some of the most unchangeable of organic bodies, as paraffine, beeswax,

or the more permanent gums and resins. Finally, they think that only the test of some years of experiment and actual use can decide the questions of the actual or comparative merits of these various processes. In these views the general committee coincide; and they accordingly recommend no general coating, painting, oiling, or washing of the building, but only precautions—though by what means they scarcely make clear—to arrest decay where it actually commences, or in the worst cases the cutting out of the decaying stone, until more definite knowledge shall supply a remedy on which full reliance can be placed.

"IV. The qualities of the stones to be recommended for future use in public buildings in London." This head may here be briefly disposed of; since, the London atmosphere being among the most destructive to which building materials can be exposed, and the air of most cities in this country being much more dry and less corroding, the interest in this part of the subject must be for American architects mainly that of comparison. The committee condemn the magnesian limestones as an unsafe material for public buildings in London. The Portland stone, not so hard as the Anston, and yet with a power of withstanding the London atmosphere shown in many buildings from the date of St. Paul's downward, they fully recommend; though even with this, a careful selection at the quarries is necessary. The carbonates of lime used for buildings in the comparatively pure atmosphere of Paris, and where wood is largely used as fuel, also suffer decay, which, thus far, the French architects and chemists appear to have been no more successful than others in preventing or arresting. The committee close by recommending a persevering trial of the various probably valuable preservative materials and agents, expressing a belief that a large portion of the stone of the new palace is very durable, and that a remedy sufficing to arrest or control the decay in the affected portion will soon be found.—The full report may be consulted in the "London Builder," No. 974; and "Journal of the Franklin Institute," Phila., Jan. 1862.

In a paper read before the Architectural Association (London "Mechanics' Magazine," February, 1862), Mr. A. H. Church laid down certain principles as likely to be practically effective in accomplishing the preservation of stone, among them the following: 1, Any process, to be practically useful, must be easy of application, and moderate in cost; 2, It must render absorbent stone less porous, and counteract also the influence of injurious bodies in the air; 3, It must consolidate stones, the particles of which are loosely aggregated, and harden such as are easily abraded by mechanical means; 4, It must not materially change the color, surface, or texture of the stone; 5, The protecting material must not remain as a film, but must penetrate the material; not, however, contracting the surface, or otherwise separating particles from the stone; 6, The material must be less soluble in water and less subject to atmospheric agents than the material of the stone; 7, Its application must leave no soluble, and especially no efflorescent or crystallizing salt, as one of its products, in the surface or substance of the stone. As a result of some of the so called preservative processes, a sulphate of soda or of magnesia is formed in the superficial parts of the stone, which effloresces upon the surface; and it is curious to note upon the summit of each hair-like crystal a minute fragment of stone, torn off and carried forward by the force of the crystallization. Again, when a strong aqueous solution of silica is applied to chalk or a soft limestone, the silica glutinizes on the surface; the film formed scales off, and the scales bring away with them adherent particles of the chalk or stone upon their inner surface. The principles and remarks here offered have doubtless a reference to Mr. Church's process of preservation, presently to be named.

At a stated meeting of the members of the Franklin Institute, Philadelphia, December 19, 1861, Mr. A. L. Fleury read a paper on the subject of preserving building stone by applying a pure aqueous solution of silica, adding other uses of the same solution. He first referred to the very elaborate and quite exhaustive paper by Mr. J. M. Ordway, on "Water Glass" ("American Journal of Science," Sept. and Nov. 1861, and Jan. 1862), or the various forms of soluble alkaline silicates, originally investigated by Fuchs, Kuhlmann, Liebig, and others. For these alkaline silicates he would substitute the aqueous solution just mentioned; a suggestion made also in the same year by Mr. W. Crookes, editor of the "Chemical News." Mr. Fleury proceeds to quote from the last named journal, No. 100, giving several modes of preparing the soluble silica. The difficulty which besets many of the processes of silicification is, that along with the needful silica, so much superfluous, and indeed injurious matter is often introduced, that the valuable qualities of the silica are in a great measure counteracted. Of the four modes given for preparing the pure solution, which at least has the merit of excluding these useless or hurtful intermixtures, we name the two which appear to prove most satisfactory: 1, By dissolving pure sulphide of silicium in water; sulphuretted hydrogen is given off, the silicium is oxidized, and the resulting silica remains completely dissolved, in such proportion, moreover, that the liquid gelatinizes upon attempting to evaporate it. 2, By Prof. Graham's new method of *Dialysis*. (*See* CHEMISTRY.) In this, a solution of silicate of soda, supersaturated with hydrochloric acid, is placed on one side of a parchment paper septum, pure water being on the other side; in a few days the hydrochloric acid and chloride of sodium will be found to have completely passed through the diaphragm, leaving the silica in aqueous solution, and so pure that acid

nitrate of silver fails to detect chlorine in the liquid. This solution remains fluid for some days, but it ultimately gelatinizes. Of these two methods, the former gives the silicious solution in the greater strength. When such solution, thus prepared, is applied with a clean brush once or oftener over the surface of chalk or dolomite, Mr. Crookes states that a process of hardening occurs, which goes on increasing for several days, while, owing to the depth of penetration, and to there being no soluble or efflorescent compounds to be removed, there appears a strong probability of permanent protection by means of this silicious impregnation to the stones so treated. (It must be added, from other sources, that upon actual test of the pure solution of silica for preserving stone, made in England, it was found that the solution too frequently gelatinized mainly on the surface of the material, drying and scaling off, and chipping the surface in so doing. It cannot, therefore, be recommended, as is done by Mr. Fleury, for preserving building stones, and more especially not for decaying monuments. Of the other uses suggested by the writer named, and which will be mentioned, some may prove of real practicability and value.)

The first of the proposed applications of the hydrated silica being set aside, among the others are, briefly, the following: 2, The formation, by admixture in due proportions with other cheap materials, as lime, clay, sand, &c., of artificial building and other stones; 3, The application of the solution to wood, so as to render it comparatively indestructible, and fire and water proof; 4, The mixing of the solution with certain colors used by painters, and forming silicated colors, such as have lately been employed by Kaulbach and by many other painters of frescoes, German, French, and English, and which (chemical analysis showing that the frescoes at Herculaneum and Pompeii were of such character) appear to have the quality of resisting the change usually caused by time; 5, The formation, by mixture with certain materials, of a durable artificial marble, susceptible of beautifully variegated coloration; 6, Combination with certain organic substances to form many articles for which a plastic material or composition is suitable, as certain parts of machinery, furniture, &c. ("Journal of the Franklin Institute," January, 1862.)

Messrs. Bartlett, Bros. & Co., of Camden Town, Eng., propose ("Chem. News", No. 101) as a preservative material a combination of silicate and aluminate of potash, the latter prepared from a fused compound of alumina and potash, and dissolving readily in water, with not more than two per cent. of free potash. When silicate of potash, sp. gr. 1.250, and this aluminate of potash, sp. gr. 1.200, are mixed, instantaneous decomposition takes place, the result a solid mass, consisting of silicate of alumina, and some free potash. The mass hardens with extraordinary rapidity. The solutions being of somewhat less specific gravity, so that, mixed, they shall be of sp. gr. 1.150, the result of the combination lasts as a solution about 10 hours; but formed at or evaporated to about sp. gr. 1.200, it solidifies immediately. The product of the combination of the materials named, is declared to resist dilute sulphuric and hydrochloric acids.

The defect referred to above in the process suggested by Mr. Crookes, with pure solution of silica, Mr. Church thinks he has obviated by his method, which consists in applying along with the silica solution, usually first, but sometimes second, a solution of baryta (oxide of barium). The result he states to be the deposition within the interstices of the stone so treated of the insoluble and unalterable silicate of baryta, no other materials accompanying these, so that no soluble or otherwise injurious salt can be formed. By this process he considers that porous stones are necessarily made harder, and less subject to atmospheric influence; that brick, terra cotta, &c., may be made nearly water-proof; and that articles moulded from plaster of Paris are greatly improved in appearance and durability. The application, as proposed by others, of a silicate of soda and chloride of barium, results in production of silicate of baryta and chloride of sodium, the latter of which, washing out by rain, Mr. Church concludes, must injure the stone in respect to durability and appearance.

The process of Mr. Frederick Ransome, however, involving a principle nearly similar to that just stated, has received high commendation, and, among other authorities, by Prof. Ansted before the recent meeting of the British Association. Ransome's process consists in a deposit or formation within the substance of stones sufficiently porous, and whether natural or artificial, of a silicate of lime. The absorbent block or mass is first saturated, so far as may be, with a solution of silicate of soda applied to the surface, when this is followed with an application of solution of chloride of calcium: as the latter penetrates so as to come in contact with the former substance, a double decomposition takes place, the results being an insoluble silicate of lime, and a soluble chloride of sodium, the latter of which can be mainly washed away at once, or left to be removed gradually. Mr. Ransome formed in moulds small blocks of sand wet together by applying the liquid silicate of soda, and then hardened these by dipping them in the solution of chloride of calcium. The result was the formation, almost instantaneously, of a perfectly compact, hard, and apparently durable solid. In this and other ways, the inventor had employed the process in preparing artificial stones. Some of these are already in use upon the Metropolitan Railway. They are cheap, can be made on the spot where needed, of almost any rubbish or material at hand, and of any desired form and size. A bar of one of these artificial stones, 4 square inches in section, and over 8 inches between supports, sustained 2,122 lbs.;

like bars of Portland stone broke at 750 lbs.; of Caen stone, at 780 lbs. The cohesion or tensile strength of a bar, sectional surface 5½ square inches, weights being suspended from it and increased, was found equal to 1,980 lbs.; while Caen stone broke at 768 lbs., and Portland at 1,104 lbs. A cube of 4 inches sustained 30 tons pressure before crushing. These stones, however, were all recently made, and time alone can determine the question of their durability. Dr. Frankland found that the finished stone (of course after washing) still contained chloride of sodium, but he judges that this remnant is extractable without injury to the tenacity of the mass; and although it must obviously leave the stone more porous in time than at the first, he considers that this effect will be more than offset by the well-known tendency of the binding material, silicate of lime, to become more crystalline and so harder by age; so that these artificial stones may yet be found to surpass in durability any natural ones, unless it be the material quarried from the primary rocks.

Prof. Jas. Thomson read before the British Association a paper on the "Disintegration of Stones exposed in Buildings and otherwise to Atmospheric Influences," in which, setting out with the declaration that he would not be understood as assigning any single cause for the decay of building stones, he endeavored to show the fact of an important mode of such decay, hitherto overlooked. 1. He urges that certain cases of disintegration frequently observed, are not to be referred to the softening or weakening of the stone by dissolving away or chemical alterations of portions of it, but are instances in which the crumbling is to be attributed to a disruptive force exerted by certain crystalline matters in the act of solidifying in the pores or cavities of the mass, and from liquids permeating it. 2. That in such cases, the crumbling away of the stones, when not such as is caused by freezing of water in the pores, usually occurs in the greatest degree at places to which, by joint agencies of moisture and evaporation, saline substances existing in the stones are brought and left to crystallize. 3. That the solidifying of crystalline matters in porous stones, whether it be of ice from freezing of water, or of crystals of salts from their solutions, usually produces disintegration, not as commonly supposed, by expansion of the total volume of the liquid and the crystals jointly, occasioning a fluid pressure in the pores, but on the contrary, as a consequence of the natural and well known tendency of crystals to increase in size when in contact with a liquid that can still deposit in the solid state the same substance as that composing them—this growth in size still going on, even though, to allow of it, the crystals must push out of their way the porous walls of the cavity they are in, and even though it must be from liquids permeating these walls that the crystals receive the materials for their increase.

A patent has been taken out by Mr. L. Standfast, of London, for a composition of burnt clay, iron dust, brick dust, gravel, lime, and sand, mixed with hemp and hair, so as to form a cement, to be laid up in a suitable frame to constitute the walls of houses; such walls when dry being solid, instead of being composed of many small blocks. This application of gravel cement for building is similar to the concrete of gravel and mortar already in use for constructing the walls of houses, in some parts of the United States.

Of a valuable series of papers on "Hydraulic Engineering," by Mr. Samuel McElroy. C. E., in the "Jour. of the Franklin Institute," 1862, those in the numbers for May, June, and July, treat of "Reservoir Construction," its history theory, and practice, including the subjects of concretes, masonry, &c.; those in Nos. for September and October, of "Distribution." In the same journal, March, 1862, will be found an extract from a paper on the "Concrete used in the late Extension of the London Docks," by George Robertson, C. E. The highly special character of the branch of construction here involved, would render an abstract at length inappropriate in this place.

The factitious sorts of wood, as those produced by mixing fine saw dust of different natural woods with glue or other cementitious matter, and which are therefore generally obtained in a plastic state, and at once compacted and shaped by compressing in moulds, have become somewhat familiarly known; and thus far they have been employed rather for the manufacture of small articles than for building. Among the best of these is, doubtless, that of M. Ladry, formed by mixing sawdust with bullock's blood, and compressing. Another product of the sort, very recently invented in France, appears to have attracted still more attention: it is made of sawdust alone, heated to a high temperature, and in such state subjected to enormous pressure—600 tons, it appears, to the square foot; and while thus acquiring a compactness and hardness exceeding those of wood, it has a very fine texture, is readily moulded in forming it, and is unchangeable by the atmosphere. It is known as durable wood (*bois duré*).

The greatly diminished period of time during which ships are now built being found to result in an injurious increase of the tendency of their timbers to different forms of decay, in consequence of their becoming less thoroughly seasoned on the stocks, M. de Lapparent has within little more than a year past proposed, as a means of preserving the timbers, to carbonize their surfaces to a very slight depth, usually perhaps not exceeding about $\frac{1}{100}$ of an inch, by directing upon the surface of the wood a jet of some inflammable gas in the state of ignition. A quite uniform carbonization of the surface can thus be secured; and the resulting coating, it is anticipated, will prove quite impervious to air and moisture. The process, the

expense of which needs not exceed about 10 cents to the square yard, has lately been tried at Cherbourg; and it is thus far regarded as proving completely successful.

The following application for prevention of the rotting of wood, especially suitable for fence posts, piles, and the materials of various wet constructions, is recommended, in a late number of Dingler's "Polytechnic Journal," as superior in view of its economy, and its impermeability to water, as well as of the great hardness it assumes: Take 50 parts of rosin, 40 of finely powdered chalk, 300 parts (or less) of fine white sharp sand, 4 parts of linseed oil, 1 of native red oxide of copper, and 1 of sulphuric acid. First heat the rosin, chalk, sand, and oil, in an iron boiler; then add the oxide, and with care, the acid: stir the composition carefully, and apply the coat while it is still hot. If it be not liquid enough, add a little more oil. This coating, when cold and dried, forms a varnish which is as hard as stone.

To the many processes in use for the treatment of wood with a view to render it more durable, and incidentally also less inflammable, that recently patented by T. Cobley, of Meerholz, Hesse, promises to add another. In this, a strong solution of potash, baryta, lime, strontia, or any of their salts, is by action of a pump forced into the pores of the timber, placed within a close iron vessel. After this operation, the liquid is run off from the timber, and hydrofluo-silicic acid is forced in; the latter, uniting with the salt in the timber, forms with it an insoluble compound; and the wood is said to be in consequence rendered quite uninflammable.

In conclusion, for the year, of this subject of building materials, it may be proper—since, although the American climate is less severe on the materials of edifices than is that of some European countries, the actual decay of building stones is even here considerable, and the subject therefore one of practical importance—to express a regret that persons who are in this country also conversant with facts respecting the comparative decay and durability of the materials employed in our public and private buildings, or those making investigations and inventions in connection with such materials, do not more frequently communicate their results to the scientific journals, in which they would be rendered accessible, and could become of general utility. The continually increasing employment among us of iron in the construction of buildings, it is true, substitutes for a part of our subject the consideration of the qualities and working of that metal. But the marbles, sandstones, granites, &c., will still continue, as well as bricks and various woods, to be largely used for building; and the question of real economy, as well as in certain instances those of beauty in time, and of the interest that is sure to connect itself with structures very long preserved, render a particular investigation of the comparative durability and unchangeableness of these various materials in the climates of our country a work greatly to be desired.

C

CALIFORNIA. One of the Pacific States of the Union, first settled in 1769, ceded to the United States, by Mexico, in 1848, and admitted into the Union as a State in 1850. Its capital is Sacramento. The area of the State is 188,982 square miles, and its population in 1860 was 379,994, of whom 23,348 were Chinese and Mexican half-breeds, and 14,555 Indians.

The Governor of the State to December, 1863, is Leland Stanford, whose official residence is at Sacramento. The Secretary of State, whose term of office expires at the same time, is William H. Weeks, of Sacramento. The governor was elected in September, 1861. He received 56,036 votes, the Union Democratic candidate, J. Conness, having 30,944, and the Breckinridge Democratic candidate, J. R. McConnell, 32,751. Stanford's plurality was, therefore, 23,285. In 1862 the only State officer elected was a Superintendent of Public Instruction, and John Sweet, the Republican candidate, was elected, receiving 51,238 votes, while Stevenson, the Union Democratic candidate, had 21,514, and Fitzgerald, the Regular Democratic candidate, had 15,817. The Senate stands, 32 Republicans, 4 Union Democrats, 4 Regular Democrats. The House, Republicans 63, Union Democrats 10, Regular Democrats 7.

The Legislature of 1861, believing certain amendments to the constitution of the State required, passed a bill proposing amendments to articles 4, 5, 6 and 9. According to the Constitution these proposed amendments were to be passed upon by the next Legislature, and if adopted by them submitted to the people for their sanction. The amendment to section 9, which extended the term of office from three to four years, was adopted, and, being submitted to the people, received their sanction, but the amendments to the other sections were modified by the Legislature of 1862, and, though sanctioned in their modified form by the people, the irregularity of their modification, in the opinion of the highest legal authorities, rendered them void.

The message of Governor Stanford, sent to the Legislature January 5, 1863, reviews the financial condition of the State. The total indebtedness of the State is $5,579,284.76. The financial year (or, rather the financial period, for there were but ten months and twenty days,

viz., from January 10 to December 1, 1862, embraced in the governor's statement) commenced with a floating debt against the General Fund of $535,603.93, and the previous administration had received $251,705.34 of the revenues of 1862, and applied the amount on the expenses of 1861. The total revenues of 1862 were $929,334.34, less this sum of $251,705.34 anticipated, leaving only $577,629 of actual funds to meet the current expenditure. The expenses of the State from January 10 to December 1, 1862, were $738,117.76, of which $455,057.70 are yet unpaid. The governor recommends the levying of a tax of twenty-three cents on the $100 to meet this floating indebtedness and place the State on a cash basis. Some measure, he thinks, should also be adopted to obviate constitutional objections against taxing the Chinese. He also recommends the organization, arming, and equipment of an efficient militia force in the State, and the adoption of a provision allowing volunteers in the army to vote. He suggests the propriety of gathering all the Indians in the State upon one large reservation, where they could be more easily guarded, and rendered far more comfortable, while the citizens would be protected from their hostile incursions. The State prison, he says, is insecure, and not in any respect reformatory. He recommends a system of solitary confinement. There are 585 convicts, and the average cost to the State of their support is eighty-four cents per week. On the 22d of July, 1862, 150 of the convicts escaped, and in the pursuit for their recapture three were killed and twenty-two wounded. At the close of the year sixteen of the number were still at large. The orphan asylums and the Deaf, Dumb and Blind Asylums at San Francisco were well managed, and deserving of aid from the Legislature. The State Reform School at Marysville is a very costly institution to the State, and the good it accomplishes is not commensurate with its cost. The care of an average number of about ten boys costs the State as much as the care of two hundred convicts at San Quentin. The governor suggests that an arrangement may be effected to place the boys in the Reform School at San Francisco (a city institution). The Insane Asylum is not in a satisfactory condition. It needs more room, more buildings and better management. The school fund lands and the receipts from the sale of portions of them should be carefully guarded and sacredly applied to the purposes of education. Seven millions of acres of the lands granted by the General Government are devoted to educational purposes. The Swamp Land Commissioners report that they have established the claim of the State to 485,252 acres of swamp lands, all of which are susceptible of permanent reclamation. The governor recommends the Legislature to enlarge the list of bounties for home products.

Congress, in 1861, in organizing the new territory of Nevada, bestowed upon it some land included within the lines of the State of California, providing, however, that such lands should not enure to the new territory until the assent of California had been given to their surrender. The east line of California, it now appears, had never been carefully and accurately surveyed, and it was not possible to ascertain, without a survey, what portion already belonged to the territory and what to California. Governor Stanford urged the importance of an immediate survey, and the difficulties which have since occurred (in February, 1863) in regard to the boundary show its necessity.

Floods.—Mention was made in the ANNUAL CYCLOPÆDIA for 1861 of extensive floods which desolated the Sacramento Valley in December, 1861; the continuous rainfall which followed caused still more extensive and disastrous floods in January, 1862, which attained their greatest height on the 24th of that month, and laid waste the greater part of the Sacramento and San Joaquin valleys. Seriously destructive as these floods were, and large as was the amount of property they destroyed, they were not without their partial compensations. The river beds, when again bare, were found to contain large amounts of gold, new placers were laid open, and the mining interests profited largely by the incursion of the waters.

Mines and Mining.—The year 1862 was one of great excitement among the mining population of California. The gold mines of the Cariboo region in British Columbia, and those of the Salmon river, the Nez Perces and the John Day and Powder rivers in Washington Territory and Oregon attracted the attention of the miners, and led to an extensive emigration in the early part of the year, and to these was added intelligence of a large and profitable yield in the mines on the Colorado river in Arizona. The new and constantly multiplying discoveries of silver in Nevada caused an additional excitement during the later summer and autumnal months, and from September to the close of the year new companies, many of them with large capital, were formed daily to prosecute silver mining. The gold mines in the vicinity of Grasshopper Creek, near the boundary of Dakota, discovered in July or August, 1862, attracted a considerable emigration thither in the autumn.

The magnitude of the copper deposits and the richness of the ore have led to the extensive and profitable development of the copper mines during the year. There are two very extensive beds of the ore at remote points: one at Copperopolis and its vicinity, in Calaveras county, near the centre of the State, and on the slopes of the Sierra Nevada; the other in Del Norte county, in the extreme northwest of the State, west of the coast range, and only eighteen miles from the port of Cresent City. The Calaveras county mines are said to yield over $60 worth of copper ore to the ton, and

the lodes in Del Norte county from 25 to 80 per cent of pure copper. The recently opened quicksilver mines are also yielding largely.

Agricultural Products.—The richness of the virgin soil of California is such that all trees, shrubs and grains which can withstand the long dry season by sending their roots downward below the hard crust which forms on the surface in the summer months, yield most profusely, and the fruits and root crops are of such dimensions as are entirely unknown elsewhere. A pear grown in the orchard of E. L. Beard, Esq., at San Jose Mission, in the summer and autumn of 1862, was exhibited in New York city in January and February, 1863. It was twenty inches in circumference one way, and sixteen inches the other, and weighed on its arrival three pounds seven ounces. Other fruits attain to similar gigantic dimensions, and yet retain their fine flavor. The potatoes, beets, turnips and other root crops are of extraordinary size and excellence. The wheat of California contains a very large amount of gluten, rendering it more nutritious than that of the wheat growing States east of the Rocky Mountains, and requiring a different treatment to make bread from it. The grape is largely cultivated, and the California wines are attaining a good reputation in the eastern markets. Cotton has been tested, but is not likely to prove a profitable crop, as it does not well endure the drought, and requires, especially at the time of the opening of the boll, an amount of moisture rarely present at that season in the California atmosphere.

The amount of treasure received at San Francisco in 1862 was $49,375,462, and the amount shipped from that port $42,561,761. The exports of California produce, other than treasure, from the same port during the year amounted to $6,211,788, which included wheat and flour, equivalent to over 400,000 barrels of flour and 22,615 bales of wool. The entire value of the produce of the vineyards of the State was given at $5,050,000. The amount of quicksilver produced exceeded two millions of dollars. During the year the tonnage of vessels which arrived at the port of San Francisco was 634,670 tons, and 497,345 tons were cleared from the port in the same time. The freight money paid on the cargoes of foreign and eastern ships was $3,496,978. During the year 27,861 persons arrived in San Francisco by sea, of whom 8,188 were Chinese, and 11,711 left the country, of whom 2,795 were Chinese. The net gain of the population by seaward immigration at that port was, consequently, 16,150.

The population of the city of San Francisco, stated in the census of 1860 as 56,802, has greatly increased since that time. A census taken in the autumn of 1862 gives the whole population of the city as 91,825. Of these 32,000 were males over twenty-one, and 17,500 females over eighteen. The number of Chinese was 3,250; of other foreigners 4,200, and of colored persons 1,875.

CANNING, Right Hon. Charles John, Earl, K. G., an English statesman and late viceroy of India, born Dec. 14, 1812, at Gloucester Lodge, Brompton, died in Grosvenor Square, London, June 17, 1862. Earl Canning was the youngest child and only surviving son of the distinguished statesman Right Hon. George Canning, and was educated at Christ Church, Oxford, where he obtained in 1833 the high honor of first class in classics and second class in mathematics. He was elected to the House of Commons for Warwick in August, 1836, and on the death of his mother in March, 1837, was transferred to the House of Lords as Viscount Canning. In 1841, he was appointed under Secretary of State for Foreign Affairs under the late Earl of Aberdeen in the Peel administration, and in January, 1842, was made Commissioner of Woods, &c. At the breaking up of that administration, in July, 1846, he retired from office, and was not a member of the cabinet again till 1853, when he accepted the office of postmaster general, in the Aberdeen administration. In July, 1855, he was selected as successor to the late Marquis Dalhousie as governor general of India. In little more than a year after his arrival in India, the mutiny broke out, and his energy and statesmanship were severely tested. Some of his measures were at the time severely censured, and one (the attempted confiscation of the lands of the talookdars of Oude) was vetoed by the home government. He, however, proceeded to carry out his plan for the pacification of India in a conciliatory spirit, and accomplished it with such success that in April, 1859, he received the thanks of both houses of parliament for his eminent civil services during the mutiny, and the queen, in token of her approbation, made him an extra civil grand cross of the order of the Bath, and in May, 1859, created him an earl, and in May, 1862, conferred upon him the order of the Garter. His countess, eldest daughter of the late Lord Stuart de Rothesay, died in Calcutta, Nov. 18, 1861, and leaving no issue the title became extinct.

CHEMISTRY. The recent progress of this science, and mainly for the past year, in certain leading features both of theory and practice, is presented under the following subdivisions:

I. Elements. *Cæsium.*—This new metal, and base of a new alkali, was discovered in 1860 by Professors Bunsen and Kirchhoff, of Germany, and through the accident of detecting in the spectrum of certain potassium compounds, on which they were experimenting, two bright blue lines or a double blue line not before observed, and situated near to that line of the strontium spectrum which has been marked δ. (See Spectrum Observations.) The oxide of this metal appears very constantly to accompany in minerals and mineral waters those of potassium and rubidium. The associated alkalies, in solution, can be precipitated by bichloride of platinum; then separating the parts of the precipitate soluble in boiling water, and converting

the remaining chlorides into carbonates, the carbonate of the new metal is with certain precautions dissolved out with absolute alcohol. The salt thus obtained being placed along with mercury at the poles of a galvanic circuit, an amalgam of cæsium is the result: the avidity of the new metal for oxygen is shown by the fact that, while the familiar alkaline metals, potassium and sodium, must when separated be preserved in liquids which, like naphtha, contain no oxygen, the separation in the metallic state of cæsium has not as yet even been effected; and in the condition of amalgam it oxidizes in the air and decomposes cold water. In entire accordance with such facts, cæsium is the most electro-positive element now known. Symbol, Cs; equivalent, 123.4. The hydrate of protoxide of cæsium, chemically the analogue of hydrate of potash, is extremely caustic. Its carbonate, bicarbonate, sulphate, nitrate, alum, &c., have been investigated, and have in general a close resemblance to the corresponding compounds of potassium and sodium. The quantity of cæsium in any source yet known is extremely small; but it is widely diffused in nature. The largest proportion yet found in any source is that given by Prof. C. D. Allen ("Amer. Jour. of Science," Dec. 1862), as the product from a lepidolite from Hebron, Me., of which it formed somewhat more than 0.3 of one per cent. It has been stated to be a constituent of the human blood and tissues. The chloride and perhaps other compounds of this and the next named metal may, it is believed, now be obtained in small quantities of dealers in the rarer chemicals in this country.

Rubidium.—This second new alkaline metal was discovered, in like manner with the former, through spectrum observations; its characteristic, two bands of dark red lying in the extreme and usually invisible portion of the spectrum at the red extremity, having been detected during prismatic analysis of the light colored by an impure compound of cæsium which contained it. The associated alkaline metals existing in certain lepidolites being precipitated as above, the precipitate is reduced with hydrogen, and the chloride of the new metal being extracted with water, is purified by repeated precipitation and boiling. The chloride being converted into a carbonate, cæsium is removed by repeated extraction with alcohol; and an amalgam of rubidium is then obtained in the manner above described. In this condition, rubidium also oxidizes in the air and decomposes cold water: it is electro-positive in reference to potassium, but stands in the scale below cæsium. Symbol, Rb; equivalent, 85.36. Its hydrate is strongly caustic; several of its salts have been investigated. Its chloride, like common salt, crystallizes (though not readily) in cubes, which are permanent in the air. Prof. Allen prefers the process of extraction of cæsium and rubidium in the form of bitartrates. The greatest quantity of rubidium yet found is that obtained in 1862 by Bunsen from a lepidolite from Rozena in Moravia, equal to .03. Grandeau has recently found that rubidium exists in the ashes of the beet, in tobacco, coffee, tea, and raw tartar, so that there is little doubt of its presence in the human system. Since it had previously been shown to exist in many minerals, and mineral waters, rubidium must be regarded as an element very widely distributed in nature. An interesting result of these discoveries, and of the determination also of the characters of oxide of lithium, is that henceforth, instead of the familiar *two*, we must admit at least *five* positive fixed alkalies; namely, cæsia, rubidia, potassa, soda, and lithia. The first three of these, also show a remarkable tendency to exist associated, whether in the solid or liquid state; and they manifest a similarity of behavior that renders their separation difficult.

Thallium.—This new metal, the existence of which was suspected in 1860 by Mr. Wm. Crookes, through detection by him of a before unobserved green band in the spectrum of light colored by certain residues probably containing also sulphur, selenium and tellurium, was afterward chemically separated by him, and by M. Lamy, of France—the complete accounts of the substance by both these explorers appearing in 1862. As obtained in quantity, thallium is a metal strongly resembling lead, though in some respects more similar to tin. Freshly obtained, it is nearly as white as silver, and on cutting shows a brilliant metallic lustre. It is extremely soft and malleable, easily cut and scratched with the nail; and like lead it readily marks paper, but with a yellowish streak. Its density is 11.9, a little higher than that of lead; symbol, probably Th; equivalent not given. It fuses at 290° C.=554° F., and at a red heat volatilizes. It tends strongly to crystallize, so that bars of it obtained by melting crackle when bent like those of tin. Its most remarkable physical property is, perhaps, the green light which it imparts to flames; a quantity of the metal so small as the $\frac{1}{50,000,000}$ part of a grain in a flame is indicated in the spectrum by its characteristic green band. The oxide of thallium appears to have alkaline properties in a degree. Several of the ordinary salts have been investigated. Thallium is not a rare body, being found in pyrites and associated with native sulphur, from various localities. It can be reduced from its salts by an electric current, or with charcoal at high temperatures, or by precipitation with zinc. For more full accounts of this metal and its compounds, see "American Journal of Science," Sept. and Nov., 1862.

Lithium.—The equivalent of this element appears to be not yet decided. Troost has recently found it 7.06; Diehl, 7.026; and Mallet has given it as 7. Regnault, in calculations of the specific and atomic heats of certain elements, has taken the equivalent of lithium as 6.43 (O being 8); but he repeats his suggestion, long since made, that the true equivalent is half this, the constitution and symbol of lithia being according to his view L_2O; as

he would also make potash and soda K_2O and Na_2O.

II. Compounds. *Hydruret of Iron.*—Wanklyn and Carius have studied the action of zincethyl (C_4H_5Zn) upon the chlorides and iodides of silver, copper, iron, and nickel. In case of the iodide of iron, and probably of the chloride of nickel, during the reactions hydrogen seems to combine directly and simply with the metal. With iron, the product is a black powder, which at ordinary temperatures and with exclusion of water is preserved unchanged. Distilled water being brought in contact with the compound, pure hydrogen is given off, and protoxide of iron remains. The composition of the hydruret of iron is inferred to be Fe_2H_2, though it is difficult to obtain it free from metallic iron.

Peroxides of Potassium and Sodium.—Harcourt has investigated the action of dry air and oxygen on metallic potassium and sodium. By carefully regulating the heat and the supply of dry air, potassium may be wholly converted into a white oxide, probably the binoxide. As the oxidation increases, the color inclines to yellow, and by employing finally pure oxygen, a chrome yellow powder is obtained—the peroxide—its composition being regarded as KO_4. Thrown into water, this powder sets free pure oxygen with effervescence, and the binoxide, KO_2, remains. The peroxide of sodium is prepared by a similar process, and when not heated is of a pure white color.

Silicuretted Hydrogen.—Silicium belongs to the same group of elements as carbon; but the analogue of C_2H_4 (light carburetted hydrogen) has only recently been found. Wöhler, in certain decompositions with the galvanic current, observed bubbles of a spontaneously inflammable gas to arise at the aluminium electro-negative pole. The aluminium employed was found impure with silicium; and it was inferred that the gas was silicide of hydrogen, Si_2H_4. Very recently, Dr. Martins succeeds in preparing this gas in abundance. He mixes, in a wide-mouthed bottle, 80 parts of chloride of magnesium, 20 of the chlorides of potassium and sodium (taken in equivalent proportions), 40 of sodium, and 70 of silico-fluoride of potassium, all dry, the sodium in small pieces added last to the mixture of the others, and the whole then well agitated together; and then suddenly projects the mass into a tall Hessian crucible heated to redness, covering this tightly. The mass fused, the crucible is broken, and the slag removed. This contains the required material for yielding the gas—a silicide of magnesium; and being broken up, is acted on under water with strong hydrochloric acid. The gas can be collected over water or mercury; but allowed to escape in bubbles into the air, it explodes into a white flame, giving ascending rotating rings of smoke, in the manner of phosphuretted hydrogen (HP_3). It gives, however, no offensive odor, and finally scatters in fine flakes of white dry hydrated oxide of silica ($Si_2H_2O_5$).

Hydrofluosilicic Acid.—H. Deville prepares this acid by causing water to fall, drop by drop, upon a mixture of fragments of stone ware and of fluor spar, heated to redness in a tubulated earthen retort; or less conveniently, by passing steam through such a mixture. Condensing the vapors that arise, the liquid acid of about 17° (Beaumé) is obtained; and this may be concentrated even to 29° (B.), its maximum density, without deposit of silica—a result with the acid prepared in the ordinary way, quite impracticable. At its maximum, the acid is very energetic, expelling, when heated with their compounds, almost all acids save the sulphuric. It has little action on stone-ware vessels; rapidly destroys glass; but since it does not attack organic matters, it can be kept in wooden kegs. It is probably to become of considerable industrial importance. (*Annales de Chim. et de Phys.*, lxi, 333).

Hyperchloric Acid.—Roscoe has investigated the hydrates and principal salts of this acid, which is obtained by decomposing chlorate of potash with fluosilicic acid, distilling the chloric acid, and purifying the distillate by means of the hyperchlorates of silver and barium. Pure concentrated solution of hyperchloric acid is a colorless heavy oily liquid, strongly resembling concentrated sulphuric acid. Distilled with 4 times its volume of concentrated sulphuric acid, above 110° C. dense white vapors pass over; at 200° C. oily drops succeed, condensing to a crystalline mass. The liquid is hyperchloric acid (ClO_8H); the crystals, the hydrate discovered by Serullas ($ClO_8H + 2HO$). The pure acid is a colorless liquid, density 1.782, at 15° C. Its vapor attracts water in the air, forming dense white fumes; dropped in water, the mixture is strongly heated; dropped on paper, wood, &c., it explodes; on charcoal, almost as violently as the chloride of nitrogen. On the skin it produces a painful ulcer, healing only after some months. Kept, even in the dark, it spontaneously decomposes, becoming darker, and finally explodes. In the same paper, the author describes the hyperchlorates of ammonium and some of the metals. (*Ann. der Chem. und Pharm.*, cxxi, 346.)

Combustion of Hydrocarbons in air at Ordinary Temperatures.—Karsten appears to have proved, by experiments related in *Poggendorff's Annalen*, vol. cix, p. 346, that organic substances containing carbon combine at ordinary temperatures with the oxygen of the air, forming carbonic acid and water; and he argues that, since pure carbon is thus oxidized at common temperatures, as at higher, only more slowly, the prevalent theory of the necessity of a prior decay in some nitrogenous body, to set up destructive change in the hydrocarbons, is a mistake; in other words, that the presence of the nitrogenous substance is not essential. Under water, if air have access to them, the organic hydrocarbons (as woody fibre, starch, &c.) are oxidized more rapidly than in the dry state; the access of air insufficient, they rot, yielding carbonic acid and other gases yet im-

perfectly understood; and when oxygen is completely excluded, they remain unchanged. It then remained a problem, important in connection with the vital processes of the animal organism, to determine what becomes of gaseous hydrocarbons escaping into the air during putrefactive decay, and of other particles set free in air, such as the odorous, &c.; the probability being that these would be acted on in like manner. This also Karsten believes he has now proved by experiment ("Philos. Mag.," 1862). Through a carefully cleaned apparatus of small tubes and bulbs, he passed about 30 gallons of moderately heated air, at the slow rate of about 9 pints in 12 hours. The air before entering was passed through caustic potash, with precautions to secure the removal from it of all contained carbonic acid. Just before its escape from the apparatus, it passed again through pure caustic potash or lime water. If now, before admission to the first solution of potash the air was heated to redness, so as at once to burn up all the organic matter in it, then in no case did the second potash solution or lime water give indications, by forming of carbonate of potash in the one case, or by turbidity in the other, of presence of carbonic acid; but if the admitted air were not thus burned, during the slow passage of the current the lime water soon became turbid, or the potash solution gained in weight, and yielded some carbonate of potash. The carbonic acid thus appearing must have been generated by slow combustion of gases or particles containing carbon, in the air while moving through the tubes. [Query: Did the condensing power of surfaces, as in case of platinum sponge or a clean platinum slip, have any influence in producing the result given?]

III. Allotropic States. *Oxygen.*—One of the most singular, and now somewhat familiar principles determined by modern chemistry, is that of allotropism, or the existence of the same element in several conditions, in which both its physical qualities and chemical behavior are almost or entirely different. One of the most familiar instances is afforded by the element carbon, in its two extremely unlike states of diamond and coke or charcoal. So, phosphorus exists as the ordinary yellow solid, and in transparent crystals, both highly poisonous and inflammable in air, and again, as red or amorphous phosphorus, in which state its inflammability and poisonous character are in comparison well nigh lost, and its properties in other respects are greatly changed. Among the most interesting instances of the sort, however, is that of allotropic oxygen or ozone, discovered some years since by Prof. C. F. Schönbein. More recently, this chemist has endeavored to show that beside the division of ordinary oxygen and ozone, a second must be made, the ozone itself obtained from different sources and under unlike conditions behaving differently toward other bodies, in such a way as to suggest that it has two opposite or polar conditions, which he proposes for distinction's sake, to mark as — and + ozone, or to name *ozone* and *antozone*. In a communication during the year 1862, he states that he succeeded in isolating ozone from an ozonide (an oxide containing the allotropic oxygen); and has found tests, not named, for completely distinguishing the two ozones. The following is his latest method of producing ozone by purely chemical means: Dissolve pure manganate of potash in pure sulphuric acid, and introduce into the green solution pure peroxide of barium; common oxygen and ozone will both be set free; the latter being detected by the nose, and by other tests. With such ozone, Schönbein has oxidized silver at —20°C.=—4° F.; and by inhaling it, secured a capital catarrh.

Sir B. C. Brodie, in a paper before the Royal Society, Nov. 21, 1862, claims to have anticipated in 1850 Schönbein's view that oxygen may exist in opposite polar conditions; while he presents experiments tending as he thinks to show that the differences in behavior of different classes of peroxides do not warrant the distinction of the contained oxygen into + and —, the differences appearing not to be fundamental and characteristic. He further lays down a somewhat new principle, to the effect that, in no case are the properties of chemical substances that may enter into composition constant for each substance, as their atomic weights are known to be; but that the properties are variable, depending in degree on the physical conditions in which the particles may be placed, and the nature of the other substances with which they become associated.

Prof. T. S. Hunt's communication ("Amer. Jour. of Science," March, 1861) helps to show the intricacy and unsettled state of this subject. The formation of a nitrite in moist air ozonized by the electric spark (Cavendish's old experiment), or by phosphorus, being shown by Rivier and de Fellenberg, they concluded that Schönbein's ozone was really nitrous acid (NO_3). Marignac and Andrews, however, subsequently established that ozone is modified oxygen; and Houzeau proved its identity with the so-called *nascent* oxygen, as evolved along with the common form when peroxide of barium is decomposed by sulphuric acid. Prof. Hunt had proved that nitrous acid is generated when a current of air is caused to pass through permanganate of potash undergoing solution in sulphuric acid. He had suggested in 1848 that gaseous nitrogen is the anhydride amide, or nitryl of nitrous acid, its proper formula being NN, and which, in contact with water, could generate at once both nitrous acid and ammonia (NO_3 and NH_3); and as the ammonia, while forming, is readily attacked by nascent oxygen when present, giving both nitrate and nitrite of ammonia, it follows that, ozone being brought in contact with moist air, both the nitrogen atoms of the nitryl may appear in the oxidized state (giving $NH_4O.NO_3$, or nitrite of ammonia). This view will be seen to connect

itself with the theory following, of *Nitrification;* while it would further appear also, that many of the reactions ascribed to ozone may be regarded as due to formation of nitrous acid during decomposition of atmospheric nitrogen (NN) in presence of water and nascent oxygen.

IV. Nitrification. The subject of the formation of the nitre-beds, or vast collections of nitrates in the soil of certain hot countries, or in caves, always one of great practical interest, appears very recently to have received a new elucidation through researches in theoretical chemistry. The most important natural source of nitre is the nitriferous soil of certain districts in Hindostan, yielding chiefly nitrates of potash and lime. Similar but less productive beds are found in parts of Persia, Egypt, Hungary, Spain, and South America. The floor of many caves is found largely impregnated with nitrates; in this respect the Mammoth Cave of Kentucky was the most noted, until in 1812 it was industriously worked for nitre. In the desert of Atacama, S. A., immense beds of nitrate of soda exist; and another at Iquique (Peru), quite inexhaustible in extent, is now largely worked. (For an account of the last named, see "Jour. of Franklin Inst.," June, 1862.)

The "Smithsonian Report," 1861, contains an able "Report on Nitrification," by Dr. B. F. Craig, in which the subject is considered under the following heads: 1. Our knowledge of the laws which govern the formation of nitre. 2. The manner and extent of its production in nature. 3. The methods that have been practised for its artificial formation. 4. The methods of artificial formation that have been suggested, or those which the present state of our knowledge would suggest. 5. Experimental investigations it would be desirable to make, for the advancement of the theory and practice of the manufacture of nitre.

A theory dating as early as the 17th century referred the formation of the nitre-beds to collection and decomposition of organic matters, vegetable and animal; but as this scarcely sufficed for the magnitude of the product, various attempts have been made to show how nitric acid could be generated from constituents of the air. This doctrine was first distinctly advanced, as well as supported by experiments, by Longchamp, in a paper before the French Academy, 1823. Before the same body, Nov. 1855, M. Cloëz detailed experiments made by passing air, carefully freed from organic matters and ammonia, through porous substances of different kinds (pounded bricks or earthenware, &c.), impregnated with potash and lime; the result being that nitrates of these bases were formed. In this case, the action is like that of spongy platinum on hydrogen and oxygen gases, the mechanical condensation of the gases within fine pores or on certain surfaces resulting like compression in evolution of heat and chemical union; and such an action could be supposed to go on also in a porous soil laved by the atmosphere. Thus finally the *fact* that nitrates, or rather the nitric acid in them, is produced from the atmosphere is settled: the question of the *mode* remained. Dr. Craig favors the theory proposed by Dr. G. C. Schœffer, based upon a general tendency of certain compounds—in this case, as he supposes, preformed nitrous oxide (NO),—to assume the elements of water, giving rise to nitrate of ammonia, and by substitution of potash, &c., to the fixed nitrates. Dr. H. B. Jones ("Philos. Transactions," 1851) had described the cases of direct union of the atmospheric nitrogen and oxygen, in instances of combustion taking place in the air. What Schönbein has now done is, to determine the fact and the conditions of a new source of nitrous, and probably therefore of nitric acid, and thus to offer a substantially new theory of the precise mode of nitrification.

Let a piece of clean linen, drenched with distilled water, dry in the open air (the water, of course, gradually evaporating from it); then moisten it again with pure water, wring out this liquid, and acidulate it with pure dilute sulphuric acid; it will strike a blue with starch paste containing iodide of potassium—the most delicate test for the nitrites. Moisten a bit of filtering paper with a dilute solution of chemically pure potash, and suspend it for 24 hours in the air: examination will then show it to contain a perceptible quantity of nitrite; and by longer exposure this is increased. Or, better still, heat in a clean porcelain basin pure water to about 133° F., and over the evaporating surface suspend bands of filtering paper soaked in a weak solution of potash or soda, or their carbonates; in a very short time enough of the nitrite of either alkali will have accumulated to produce the reaction of such salt. In various other ways, involving evaporation of water in air, the same results are obtained; where no base is supplied, the nitrite of ammonia being the product found. The conclusion reached is that, universally, where water is evaporating in contact with atmospheric air, a nitrite of ammonia, or of such other alkaline base as may be present, is formed. Of course, all linen and other fabrics dried in the air must contain discoverable quantities of nitrite of ammonia due to this source; and as a fact the purest water suffered to evaporate spontaneously into the air, took up enough of this salt forming at its surface to produce the nitrite reaction. Thus, the fact before known that the purest water slightly charged with sulphuric acid or potash, kept evaporating at near 133° F., in the open air, and replenished, comes to show first a perceptible quantity of ammonia, and afterward of nitrous acid, is now explained. The formation of nitrite of ammonia about slowly burning phosphorus, detected some months before, Schönbein now refers to the effect of evaporation of water going on about the heated phosphorus. If, in these cases, the composition of nitrite of ammonia be regarded as ($NH_4.NO_4$), it will be seen to be formed by direct union of 4 atoms of evaporating water with 2 atoms of

nitrogen—the water at the moment of evaporation appearing to be in a condition favoring such union. Schönbein thinks that in all cases of generation of nitrites during combustion of various bodies, the combustion is only the incident, evaporation being the true cause. In a more recent note on this subject, Prof. Hunt questions whether the results arrived at by Schönbein can be ascribed to evaporation, except in so far as the coöperation of water, and a slightly elevated temperature, are necessary conditions of the reaction.

But since evaporation of water is continually going on in the atmosphere, it will follow that the generation of nitrite of ammonia must be an equally constant phenomenon. When this salt is brought in contact with fixed bases, as potash, soda, lime, these respectively enter into union with the acid, the ammonia being set free; and the gradual oxidation of these fixed nitrites, converting them into the corresponding nitrates, is a result then readily admitted. In rainy countries, like our own, the nitrates that would accumulate in the soil are washed away as formed, disappearing through springs and rivers in the ocean. But in hot countries, which have a dry season of several months' duration, and where in many cases there pre-exist vast plains of alkaline earth, the resulting nitrates accumulate. The old theory of production from decaying organic matters is disproved by such marked instances as those of the nitre-beds of Bengal, and it may be added, of Atacama, where no sufficient supply of organic substances exists or can collect.

The new facts have, if possible, a yet more important bearing on vegetable physiology. Liebig long since made the bold assertion that no plant needs any artificial supply of ammonia or of matters capable of yielding it, enough of this nutriment being furnished, as he thought, by natural means. Whether this assertion was or was not too sweeping, Schönbein's discovery goes far in support of it. Plants cannot assimilate free nitrogen. But it is a well-known fact that all plants, during seasons of growth, are exhaling or evaporating water in abundance from their leaves; while it is through pores in the leaves at the same time that they mainly inhale or receive the carbonic acid and other compound gases, among them ammonia and nitrous acid, from which their supplies of organic matter are continually generated.

Accordingly, if the new facts and theory be, as now appears, established, a very important step is gained in showing that every growing plant supplies by evaporation the conditions for the generation of certain inorganic gaseous compounds indispensable to its own nutrition, and that at the very points where such materials are required for appropriation, namely, at the porous surfaces of the leaves.

V. Syntheses of Organic Substances. The opinion that substances naturally of organic origin, or directly derivable from such, as for example, sugar, albumen, urea, common alcohol, &c., could only result through prior agency of living bodies, and in no case by direct union of their elements (artificial synthesis), took firm hold of the minds of most chemists during the earlier development of the organic department of the science. The first fact in contradiction of this belief, was the production by Wöhler of urea from its elements, that is, from inorganic compounds obtained in the ordinary ways from such elements, in 1828. Thus, he found that physically as well as chemically urea is identical with cyanate of ammonia ($C_2 H_4 N_2 O_2 = NH_4 O + C_2 NO$). Since the date just given, the number of syntheses of organic substances has become quite considerable; and some of them are highly important. Through the researches of Perkin and Duppa, and of M. Kekulé, the chemist is now enabled to build up step by step from their elements three highly complex organic acids, the succinic, paratartaric, and malic. Mr. M. Simpson ("Philos. Mag." vol. xxiii, p. 327, 1862) gives an improvement of his previous process for producing succinic acid, by employment of bromide of ethylene ($C_4 H_4 Br_2$), and which yields the acid directly and in a state of purity. In the same journal and volume, is an account of the first synthesis of a substance possessing saccharine qualities, by Boutlerow, by action of lime water on a solution of dioxymethylene.

Alcohol, &c.—In the French department of the London Exhibition, of 1862, could be seen a bottle of alcohol, differing in no respect of taste, odor, or other qualities, or of composition, from ordinary alcohol, save in the mode of its origin—being a product of chemical synthesis, accomplished by M. Berthelot. He first ascertained that olefiant gas ($C_4 H_4$), agitated with many thousand concussions with sulphuric acid (SO_3, HO), combining with two equivalents of the latter, produced sulphethylic acid ($C_4 H_5 O$, $SO_3 + HO$, SO_3). When this acid is heated with water, common or vinic alcohol results, distilling over, and leaving sulphuric acid behind. But if any other substance homologous with ($C_4 H_4$) be substituted, the corresponding alcohol, as the amylic, &c., is produced. It is claimed that while Berthelot's first mention of this method to the French Academy dates Jan. 1855, the Sieur Castex had in the preceding December taken out a patent for producing alcohol by absorbing smoke from burning organic matter in concentrated sulphuric acid, mingling with water and distilling.

Berthelot's more recent method, however, breaks down yet more strikingly the distinction between inorganic and organic chemistry. Acetylene ($C_4 H_2$) is known as one of the simplest and most permanent of the hydrocarbons. It was formerly obtained from olefiant gas, by action of the electric spark, or otherwise. Berthelot has now succeeded, first, in producing acetylene by synthesis. Carbon is first highly purified, as by action of chlorine

aided by heat; but this being submitted to action of hydrogen at the highest possible temperature, or by the induced electric spark, no union occurs. If, however, the electric arc is caused to pass between electrodes composed of this carbon, and in an atmosphere of hydrogen, the conditions of union are secured; acetylene begins at once to be produced, and continues to be so as long as the conditions are maintained: the product being carried over and absorbed in an ammoniuretted solution of protochloride of copper, is liberated afterward by action of hydrochloric acid. With this acetylene Berthelot next succeeds in combining hydrogen so as to give olefiant gas ($C_4 H_4$); from this he proceeds to common or other alcohols, as above; from the alcohols, ethers are obtained by the well-known methods; and so on. Thus is started, directly from the elements, and capable of being extended indefinitely, a chain of compounds hitherto regarded as belonging exclusively to the class of products of organic or vital action.

Among other syntheses recently accomplished, are those consisting in the addition of the element hydrogen to certain compounds—the hydrogen being set free during oxidation of sodium-amalgam introduced into water. In this manner, Wurtz has transformed aldehyde into alcohol, by mixing the former in water and introducing the amalgam named. Friedel, by means of the nascent hydrogen set free by the sodium-amalgam, has converted other aldehydes, as the benzoic and valerianic, into their corresponding alcohols. Kekulé, through union of H_2, has transformed fumaric into succinic acid; and Linnemann has effected the transformation of sugar into mannite.

The practicability of producing artificially the albuminous or protein substances, having been suggested some years since by Prof. T. S. Hunt, in accordance with his theory regarding those substances as amids or nitryls, and being also rendered probable through the researches of Laurent, Gerhardt, and others, certain chemists have given much attention to experiments having this end in view. Up to the present time, however, nothing very decisive has been effected in this direction. As, however, by action of ammonia on chloracetic acid, glycocol ($C_4 H_5 NO_4$) is obtained, Volhard, by substituting in this reaction methylamine ($C_2 H_5 N$) for ammonia, has effected the formation of *sarcosine*, a compound which Liebig had obtained as a product of the decomposition of *kreatine*—the latter being found in the juice of flesh and in the urine.

VI. Dialysis. Professor Thomas Graham has been conducting through several years a series of researches in one line of connection between chemistry and physical science. The most important of the results attained by him have been given to the world in his papers on "Diffusion," "Osmose," and finally that on "Liquid Diffusion applied to Analysis." Of these it has been remarked that, while probably the author could not himself have foreseen the value of the conclusions he was to reach, there is nevertheless a logical sequence in the subjects and the developments they have afforded; and that, since Davy startled the scientific world with the announcement of the metallic bases of the alkalies, the science of chemistry has scarcely received any other contributions so pregnant with important results. The principles arrived at in the investigation last named, in fact, serve to show more distinctly than ever before the close connection of chemical phenomena, not only with the physical, on one side, but also with the physiological, on the other. As a mark of appreciation of the entire series, the Royal Society in 1862 awarded to Prof. Graham the Copley medal.

The mode of analysis by diffusion Graham denotes more briefly by the term Dialysis. Essentially, the method is one which serves to separate one from another certain substances, usually compounds, by taking advantage of the different rates at which such substances are capable of diffusing through moist gelatine-like films or other partitions, or upward through water or viscid masses. A simple method of effecting this consists in placing the mixture of bodies to be separated in a cylindrical glass vessel 5 or 6 inches deep, and so carefully introducing water above as not to disturb or intermix them. After a few days, the upper strata of water can be successively drawn off by means of a pipette into as many different vessels; and analysis of these shows what substances have become most diffused, and in what quantities. For practical purposes, the "hoop dialyser" is usually to be preferred; this consists of a vessel in shape of a sieve, 8 to 12 inches across and 3 inches deep, the rim of gutta percha, the bottom of parchment paper. Placing in this a mixed solution of gum and sugar, with pure water enough to cover the bottom to the depth of half an inch, let the vessel float upon a larger quantity of pure water: in 24 hours, all the sugar will have passed through the membrane, and so free from gum that the solution is scarcely rendered turbid by basic acetate of lead, while on evaporation it yields crystallized sugar. Like the sugar, all bodies capable of distinct crystallization in some degree, diffuse with comparative readiness, though at quite different rates, through liquids, gelatinous masses, and most porous septa: of these bodies, good examples are the chlorides, sulphates, and other salts of metallic bases. On the other hand, bodies having little or no tendency to crystallize, and which incline in presence of water to assume the form or appearance of a jelly, of which starch, vegetable gums, caramel, tannin, albumen, a number of hydrated metallic peroxides (as silica), etc., are examples, possess comparatively little or no power of diffusion under like circumstances. Professor Graham accordingly divides bodies generally, in view of their behavior in this respect, into the two classes of—1, the crystal-

line and diffusible, which he names crystalloids; 2, the amorphous and non-diffusing, which he names colloids (κολλα, glue). Any substance separated by diffusion is named a diffusate. For an application of the process in case of silica, *see* BUILDING MATERIALS. The most diffusive of known substances are hydrochloric acid and the allied hydracids; and next in the scale are the solid chlorides, but particularly those of potassium and sodium. The times required for an equal diffusion of the following substances, were—hydrochloric acid, 1; chloride of sodium, 2.33; sugar, and sulphate of magnesia, 7; albumen, 49; caramel, 98. The rates of diffusion are accelerated by heat; and they are less in alcohol and other liquids than in water.

Generally, the new process serves for separating a crystalloid from associated colloids, or the reverse, and to some extent for separating the more from the less diffusible bodies. Among particular applications, are those of purifying certain colloids—albumen dissolved in water with acetic acid being in this way after 3 or 4 days entirely freed from the alkaline and earthy salts, and with retention of the sulphur which enters into its constitution. In like manner, arsenious acid and certain other poisons are separable from organic substances, and in great purity, so that the method must prove valuable in cases of suspected poisoning.

Liebig has claimed that Graham's explanation of diffusion—to the effect, namely, that crystalloids are bodies which by their affinity for water can abstract it, molecule by molecule, from gelatinous masses or moist septa, and can so advance gradually through the latter, while colloid bodies by their want of affinity for water have no such power—is identical with that proposed by himself in relation to motion of liquids in the animal body, in 1848. He calls attention also to the importance of dialysis in the study of the chemical constitution of the animal and vegetable secretions.

The colloids are the inert bodies, but having great sensibility to external conditions, and being thus highly mutable or unstable. The crystalloids are chemically active or energetic, but unsusceptible to external agencies. But the mutability of the former fits them for the part which some of them have to play in the metamorphoses of living tissues, in connection with nutrition, decomposition, and the manifestation of vital force; while the more unalterable crystalloids have no such capacity. Thus, these elements stand physiologically in relations the reverse of those they show chemically; and Graham accordingly terms the crystalloid a *statical*, and the colloid a *dynamical* condition of matter.

At least two economical applications of dialysis have been very recently proposed. Dr. Marcet has dialyzed in small quantity the brine or refuse liquor from the curing of meat, and having by the process separated the salt, the liquor containing the juices from the meat becomes fit for use as an article of diet. He suggests that if this separation can be effected without too great cost on the large scale, the liquor could be converted into soup for prisons and penitentiaries, or, in the present crisis, for the half starved cotton-spinners of Lancashire. It has also been suggested that the much debated question of utilization of town sewage may perhaps be solved by the process of dialysis. The solid matters of the sewage are diffused through so enormous a quantity of water as to render the whole comparatively valueless. But these solid matters consist of crystalloids (salts of various character) and colloids (organic substances); and the former are the materials, the return of which to the soil is especially to be desired. The question now raised is, whether dialysis can be economically applied to the separation in compact form and saving of these mineral elements of fertility of soils.

VII. TRANSPIRATION (Liquid), in its relations to chemical composition. The phenomena of passage of liquids under pressure through capillary tubes, first developed by M. Poisseuille, Prof. Graham has recently studied, under the name of Liquid Transpiration. To this study he was led by remarking that alcohol diluted to different degrees, is most retarded in its passage through a capillary tube at that degree at which the greatest condensation of the mixed liquids takes place. This he understood to indicate that the definite hydrate of alcohol containing 6 equivalents of water was the one most retarded; and if so, the rate of transpiration appears to depend on chemical composition, and to indicate it. This new physical property might thus become available, like the boiling point and others, as an aid in fixing chemical composition. The trials made on other alcohols and hydrated acids appear to establish a relation between transpirability and composition. Of nitric acid (NO_5, HO) with water added in successive proportions up to 100 parts, the maximum time of transpiration, at 20°C., was at the dilution corresponding to 3 equivalents of water; the time being then 2.1034 (taking that of water as 1), and diminishing both ways. In case of acetic acid, the greatest time was at the dilution answering to 2 equivalents of water; in that of sulphuric acid, it was also at 2 equivalents. Relation of transpiration time to boiling point is shown in the alcohols, thus:

SUBSTANCES.	Transpiration time.	Boiling point.
Methylic alcohol	0.630	151° F.
Vinic (common) alcohol	1.195	173° "
Amylic alcohol	3.649	270° "

Thus, generally, slow transpiration and low volatility appear to go together, and to be connected with a heavy molecule; in this way, it would appear, the water added to hydrated alcohols and acids acts to impede their transpiration. A fixed temperature being desirable

in comparisons of the sort here considered, the author suggests 100°C.,=212° F.

The researches on several of the homologous series of organic bodies are still going forward, the number and relations of the substances formable in such series being as yet subject to indefinite extension. For these researches and the new compounds developed in them, as well as some others, the reader must be referred to the chemical journals.

VIII. Applications of Chemistry. It has been, of course, impossible to present the preceding more theoretical topics without reference under some of them to applications in the arts or otherwise; but the subjects following are such as possess more purely a practical bearing or value.

Webster's Oxygen Process.—In this is employed a furnace containing a strong cast-iron vessel 10 inches in diameter, in which is placed a smaller one 7 inches in diameter, open at the top, and provided with an orifice at the base, temporarily stopped with sheet-iron: when its contents are exhausted, they can be beaten out through this with an iron bar. The outer vessel is connected by a pipe with a 30-gallon stone-ware vessel, containing ½ gallon of water, and 8 stone-ware colanders, upon which is placed 48 lbs. of the residue of a previous experiment, to serve as a purifier. The inner pot is charged with 10 lbs. of warm dry nitrate of soda, and 20 lbs. of warm dry crude oxide of zinc, the latter obtained from the so-called galvanic baths. A cover is luted on, and heat applied sufficient to give to the mass a pasty character. Oxygen is speedily given off, with nitrous fumes; these the purifier absorbs. By the process, a large quantity of oxygen is obtained at small cost, but mixed with nitrogen to the extent of .41. For many uses, as in the various metallurgic processes, this intermixture is in no way detrimental; and it is even supposed capable of augmenting the illuminating power of coal gas which the oxygen may be employed to consume.

Potash from the Animal Kingdom.—Hitherto the supply of potash has been obtained mainly from vegetable sources. Recently M. Maumené, a French chemist, has obtained this alkali in considerable quantity from an animal product, the yolk, or oily soap, naturally secreted along with the growth of wool, and usually constituting from ⅓ to ½, or even more, of the entire weight of the unwashed fleece. The fleeces of sheep's wool sheared without washing or pulled, are submitted to action of cold water in a tank or reservoir, and the yolk, which is a combination of fatty and oily acids with potash, readily dissolves out of them. Separating the soap, and heating it to redness, a very pure carbonate of potash is obtained. The process is so productive, that it is already worked as a commercial speculation at Rheims, and samples of the potash salts were shown at the International Exhibition.

Copper Paint.—The Abbé Moigno describes, in the "Cosmos," a new pigment which has come into use in the workshops of M. Oudry, of Auteuil. Copper set free from some of its salts by the electrolytic process, is reduced to an impalpable powder, and mixed with benzine: this may be employed on any surface as a paint. It possesses an agreeable lustre, and takes bronze tints by the usual means. By reducing the quantity of copper, and adding bases of lead, zinc, or other suitable metal, M. Oudry has produced a series of paints said to possess great advantages over the ordinary preparations with turpentine and oils.

Aluminium Bronze for Philosophical Instruments.—Lieut.-Col. A. Strange, having to superintend the construction of some astronomical and geodesical instruments of large size, for the Trigonometrical Survey of India, and the instruments requiring to be transported over ground very unfavorable for such carriage, was about to have certain parts usually entire cast in separate portions, when his attention was called to some articles in the International Exhibition, made from aluminium bronze, and which were from the works of Bell Bros., of Newcastle, and M. Morin, of Paris. He proceeded to have careful series of experiments conducted by different parties with a view to testing the qualities of this bronze; his summing up of the results attained being communicated to the Astronomical Society, and appearing in its "Notices," Nov. 1862.

The alloy named was first made by Dr. Percy, about 6 years since. It is composed of the metals aluminium and copper in various proportions; the alloy of 10 parts aluminium to 90 of copper giving the best material for most mechanical purposes. The twelve qualities regarded by Mr. Strange as most essential in a metal for the making of astronomical and other philosophical instruments, will be named in order, and the results in the several particulars obtained in respect to the aluminium bronze will be briefly noted under each. 1. Absolute or tensile strength. The aluminium bronze in good bars broke with a weight of 73,185 lbs. to the sq. in. section; gun metal, at 35,040 lbs.; while an average quality of steel breaks at about 80,000 lbs., some qualities however ranging much higher. 2. Resistance to compression. The bronze showed no perceptible compression until the load upon it reached 20,384 lbs. per square inch; then it suddenly yielded .006 of an inch, regaining .001 when the load was removed. Its ultimate compression, or the load at which it yielded so as wholly to lose its form, preparatory to crushing, was 132,416 lbs.; while the ultimate compression of cast iron is about 115,542 lbs. The bronze is thus exceedingly hard and incompressible. 3. Malleability. This is excellent: the alloy is malleable almost up to melting, and it can be drawn under the hammer almost to a needle point. 4. Transverse strength, or rigidity. On this quality the perfection of astronomical instruments is more dependent than on any other singly.

For the alloy, this was ascertained comparatively; the same weight being applied to bars of the three metals and of like dimensions, while the index of the instrument measuring the deflection showed for the bar of brass 2.22 divisions of the scale, for that of gun metal it was .15, and for that of the bronze .05. Thus, the rigidity of the bronze is three times that of gun metal, and about 44 times that of brass. 5. Ratio of expansion by heat. This also was found comparatively; and the bronze proved to be slightly less expansible under increase of temperature than gun metal, much less so than brass. 6. Founding qualities. The bronze produces admirable castings, of any required dimensions. 7. Behavior under abrading and cutting tools. The bronze does not clog the file; and in the lathe or planing machine, it cuts with clean, free, elastic shavings. It appears to be worked in these ways with less difficulty than steel. 8. Resistance to atmospheric influences. The new alloy tarnishes less readily in air than any of the metals usually employed for the instruments under consideration; viz., than gun metal, brass, silver, cast iron, or steel. 9. Fitness to receive graduation. The bronze readily takes a very fine division, and thus saves the need of inlaying another metal to receive any required scale. 10. Elasticity. The experiments on this point were comparative only; but the metal was found highly elastic. 11. Fitness for being made into tubes. The alloy admits of all the operations requisite for the making of tubes. It can be rolled into plates or hammered and drawn, and is soldered either with silver or brass solder. 12. Specific gravity. Of the bronze here described, containing 10 per cent. of aluminium, the sp. gr. is 7.689; being nearly that of wrought iron, and less than that of either brass or gun metal.

Generally, then, the new alloy (made with .10 Al.) is in all respects superior to any metal heretofore used for constructing philosophical apparatus. It should be employed in the relative dimensions suitable for cast steel. Besides its use for larger work, its hardness and great inoxidability fit it for the making of pivots, axes, and bearings. Along with its other good qualities, use of the alloy keeps the weight of the instruments within reasonable limits. Aluminium is at present extracted in England, under a license from the originator of the process, M. Deville, by one firm only—that of Bell Bros., of Newcastle. A pure copper is requisite; the best, however, that deposited by electrolytic action, is too expensive; the next best is the copper from the Lake Superior mines. The alloy must be remelted 2 or 3 times; and its tenacity and strength are in fact improved by repeated remeltings (though the percentage of aluminium may finally be reduced), so long as the forging qualities of the alloy show improvement. The present price of the aluminium bronze is very high, being equal to about $1.50 Federal money, per lb.; but it will doubtless fall with increasing production and familiarity with its use.

Aluminium Wire.—Metallurgists had already succeeded in forging aluminium, in filing, rolling, punching, and in engraving it with any sort of design. But the drawing of this metal into fine wire has only recently been effected by M. Garapon, of Paris. Commencing with rods of about 40 inches length and $\frac{1}{2}$ inch diameter, he succeeds in extending these until they are, if desired, reduced to the diameter of a hair. This wire, which, unless acted on by sulphur fumes or a very few other gases seldom present, retains the perfect brightness of the metal, and which has also its extreme lightness, is now employed in the making of such articles as lacework, epaulets, embroideries, head dresses, &c. It is furnished at 60 or more per cent. cheaper than silver wire of like measurement.

Artificial Plumbago.—Dr. Grace Calvert has experimented on gray (cold-blast) cast iron, by placing small cubes of this metal, about $\frac{3}{5}$ inch diameter, in weak solutions of several acids, sulphuric, phosphoric, acetic, &c., of about 80 times the volume of the metal, within corked bottles, renewing each acid about once a month for two years. At the end of this time the action of the acetic acid was evidently still going on upon the block contained in it; but this cube, which originally weighed 15.324 grammes, now weighed only 3.489 grammes, its specific gravity being reduced from 7.858 to 2.751. From Dr. Calvert's analyses of cubes of iron thus treated, and then reduced to fine powder in a mortar, it is shown that the iron had become transformed into graphite or plumbago; that most of the nitrogen originally in the iron remains in the graphitoid substance, a portion of it having gone to form ammonia in the solution; that the carbon of the cast iron was in like manner diminished in the graphite, a portion going to form carburetted hydrogen; and that it is silicium, not silica, which enters into the graphite compound. Thus, finally, he regards plumbago as a compound of about 91 per cent. of a subcarbide of iron, with about $8\frac{1}{2}$ per cent. of a nitride of silicium, and traces of phosphorus and sulphur. ("London Mining Journal," No. 1377.)

Determination of Carbon in Iron.—Wich determines in a simple manner the quantity of carbon in cast iron or steel, without the necessity of pulverizing the metal. He makes the iron to be analyzed the positive electrode in dilute hydrochloric acid: the metal dissolves, leaving the carbon, and without evolution of gas. It is necessary to regulate the strength of the current by so adjusting the distance of the electrodes that only the protochloride of iron shall form (production of the sesquichloride being indicated by a yellow color of the solution): in the former case the iron does not become passive, and the action goes on properly. A single Bunsen's element suffices—the iron to be acted on being so held in a forceps of plati-

num points, that the platinum shall not be moistened by the liquid. The separated carbon is collected on an asbestos filter, dried in a current of air, and burned with oxide of copper and oxygen, in the usual manner. In this way its weight is to be determined; while the quantity of the iron dissolved is nearly enough found by weighing the portion remaining after complete solution of that which dips in the acid, and subtracting from the entire previous weight the sum of weights of this residue and of the carbon. A piece of cast iron weighing about 124 grains dissolves in this way in 24 hours.

Nitrogen in Iron.—Recent experiments have determined not only that nitrogen is a constituent of cast and wrought iron and of steel, but further, that in these bodies it is present in two conditions. That existing in one of the two states is liberated in form of ammonia when the iron is dissolved in hydrochloric acid, the nitrogen uniting with nascent hydrogen. The nitrogen present in the second state is left in the carbonaceous mass which remains after the iron is so dissolved, or which is obtained by heating with sulphide of mercury. These two states have been determined by the researches of Ullgren, who concludes that the quantities of nitrogen in both of them must be ascertained by liberating the element in the gaseous form. A consequence of the fact that one portion of the nitrogen may remain masked as it were in the residue of solution, while another readily manifests itself, must be that the amount of the element in the sorts of iron has been in some cases underestimated. The entire paper is found in Liebig's "Annalen," Oct. '62, and a note embracing the processes to be employed, in the "Philos. Mag.," Dec. '62, Supplement.

New Fusible Alloy.—Dr. B. Wood describes ("Amer. Jour. of Science," March, 1862) a new alloy produced by him, of cadmium 1 part, lead 6, bismuth 7, which melts at 180° F., or about midway between the melting points of the old fusible metal (of tin, lead, and bismuth), and of another fusible alloy described by him in the same journal, 1860, (of cadmium, tin, lead, and bismuth). The new alloy has a brilliant lustre and does not readily tarnish; color, bluish gray; it is very flexible, and has about the hardness of bismuth or of the common "coarse solder."

Cupreous Acetylene.—M. Crova finds that this substance, which is explosive, is produced in copper pipes that have been long in use for conveying coal gas. It is known that such pipes, on being cleaned out, frequently give rise to dangerous explosions; and also that cupreous acetylene detonates at high temperatures, or on being struck. Crova placed a quantity of reduced metallic copper in a flask containing equal volumes of air and acetylene, and with the addition in one instance of a little ammonia. The copper became black, and the flask being after some time opened under water, it was found that ⅓ the gases present had been absorbed—slightly more when ammonia was present. The copper being washed and dried, and treated with hydrochloric acid, a considerable quantity of acetylene was disengaged. A portion of the compound unacted on being thrown on a heated metallic plate, explosion resulted, and more violent than with the ordinary cupreous acetylene. As coal gases always contain acetylene, and traces of air and ammonia, the formation of this dangerous compound in copper or bronze tubes conveying such gases, must almost of necessity follow. (*Comptes Rendus*, September 8, 1862.)—In January, 1863, a lady in Rochester, N. Y., was knocked down by an explosion following instantly upon the ignition of the gas in a room, and which she was lighting in the usual manner with a match. A boy near her was also prostrated, and the lathing and plastering of two or three rooms were torn off. The lady has since suffered from a partial paralysis. The explosive material was probably that just considered, or some other incidentally forming in the pipes or fixtures delivering the gas.

Improved Matches.—Messrs. Letchford and Company, London, improve the ordinary matches by substituting for the sulphur coating one of melted paraffine, which impregnates the wood and renders it more inflammable; the ordinary phosphorus coating, for ready ignition, is applied over this in the usual manner. These matches remain uninjured by damp, being the only sort found capable of igniting after six hours' exposure to a moist atmosphere; so that they are particularly suitable for export. Other advantages are their being free from the sulphurous acid fumes, on ignition, which are disagreeable and sometimes hurtful to the lungs; and that, for the like reason, they do not when lighted tarnish silver and other bright metallic surfaces near to them.

India Rubber Varnish.—Dr. Bolley obtains this varnish free from the usual imperfections; that is, in a perfectly dissolved, fluid, and colorless condition, by digesting India rubber cut into small pieces for many days in benzine, frequently shaking the containing bottle, then filtering, allowing the liquid to rest, and again straining through a woollen cloth. The residue separated by this last process affords a good water-proof composition. The varnish itself incorporates easily with fixed or volatile oils, dries fast, and if unmixed with any resin, does not shine. It is extremely flexible, can be spread very thin, and is unaltered by air or light. Its great advantages as a varnish for maps, prints, &c., are that it does not affect the whiteness of the paper, nor crack and come off in scales, nor produce a glare of reflected light in the manner of resinous varnishes, and so does not prevent the figure or print from being seen equally well in all directions. Unsized paper varnished with it can be written on with ink.

Basis of Artificial Teeth.—A composition to form the basis of artificial teeth has been proposed by M. and A. Gabriel, London. It con-

sists of India rubber 7 parts, sulphur 2, phosphate of lime 2¼, and phosphate of soda 2 parts. The object of the invention is to form a compound which will represent the natural bone, and also resist the action of the acids of the mouth and stomach. This compound is in the plastic state moulded, and then hardened, in the usual way, and afterward polished. It is then placed in an electro-galvanic bath, and a thick coating of pure gold is deposited upon it.

Guano Polishing Powder.—A patent has been solicited by Mr. W. Clark, of London, for a new polishing material for steel and other metals, as well as glass, composed of the extract of guano 100 parts, fine tripoli 25 parts, common sea salt 10 parts, and wheat flour 12 parts. These substances being mixed and dried, the powder formed is ready for use, save that at the time of applying it is to be wet up with dilute alcohol.

Cement for Rooms.—M. Sorel has discovered that a compound which he terms oxy-chloride of zinc possesses advantages, as a coating for the walls of rooms, over paint or plaster of Paris. A coat of oxide of zinc mixed with size, and made up like a wash, is first laid on the wall, ceiling, or wainscot; and over that a coating of chloride of zinc, prepared in the same manner as the first wash, is applied. The oxide and chloride effect immediately a sort of combination, forming a cement, smooth and polished as glass, and possessing the advantages of oil paint, without its disagreeable odor.

New System of Bottling Liquids.—For bottling beer, wine, cider, and other fermentable and perishable liquids, one general method has been in use from time immemorial; the bottling of milk, and the canning of eggs so as to secure their preservation, are still desiderata. Even in the processes of bottling, or of canning fruits, meats, etc., and hermetically sealing, a little air must usually be left within, so that this by its variations of volume under different pressures on it, may allow of the changes in the way of contraction or expansion of the soft or liquid contents, without risk of breakage of the vessels either from without or within. But this small quantity of air can suffice to set up fermentation or decay. Mr. Henry Dircks has proposed as a remedy against this evil a preparatory filling of the bottles with nitrogen, carbonic acid, or other innocuous gas, having in itself no power to induce change in the materials to be preserved, and which first serving like a filling with airless water to expel the detrimental oxygen of the atmosphere, may still remain in the small and needful quantity within the bottles or cans, to protect them during changes of volume of their contents. The gases named are quite harmless to the articles and to the health; while the addition in case of delicate old wines might be of great service. The filling of the vessels with such gases is easily effected on a large scale; methods for the purpose will readily occur to those conversant with like subjects—one such is described in the "Athenæum," Jan. 1863. The writer supposes that by a method such as there indicated even fresh eggs, broken into cans containing nitrogen gas, and sealed in such an atmosphere, may be kept without change. Any shrinkage with the materials of any sort to be preserved, either from escape of juices, or cooling, could be replaced by the proper gas before sealing.

New Process of Making Vinegar.—Pasteur has been investigating the property of mycoderms, especially of those of wine and vinegar —the latter the *mycoderma aceti*, or microscopic plant of mother of vinegar (*fleur du vinaigre*)—in virtue of which they act as conveyers of oxygen from the air into various mixtures of organic substances, and lead to oxidation of the latter, often with a surprising rapidity. He turns the new property to account in a method for the manufacture of vinegar. The method of vinegar making commonly adopted in Europe with wines, and known as the Orleans process, has the disadvantage of producing multitudes of vinegar eels (*anguillulæ aceti*); while the German method, of trickling the liquid to be acetified over beech shavings is not applicable to wine nor to beer in its natural state, and produces an inferior article, lacking the aroma of the original liquid. Pasteur sows the dried and crumbled mass of mycoderms on the surface of a liquid consisting of ordinary water having in it .02 of its volume of alcohol, and .01 of acetic acid from a previous operation: to this he adds about $\frac{1}{1000}$ part of alkaline and earthy phosphates. The plant rapidly develops, filling the whole liquid, and meanwhile the alcohol is acidified. When about half the original alcohol is transformed, more alcohol, or wine, or strong beer is added day by day, in small quantities, until the liquid has about the commercial strength. When the action of the plant begins to be exhausted, it is left to complete the acetification of the alcohol already introduced: it is finally separated from the liquid, and washed, yielding an acid and azotized liquid capable of further use; and the process is then repeated with a fresh body of alcoholized liquid. If at any time the plant wants a due supply of alcohol, it will transform the vinegar to water and carbonic acid; and the like result will follow if its growth is too rapid. Vessels about 40 inches square, and holding 10 to 20 gallons, yield at the rate of a gallon or more of vinegar a day. These may preferably be shallow wooden vessels, like the coolers used in brewing; and gutta percha tubes made to run along the bottoms of these, and perforated with small holes along their course, may admit the alcohol without disturbing the fungous film over the surface. The phosphates are required as mineral food for the mycoderms; the most suitable are those of potash, magnesia, and ammonia. The new process is not only suited to all the liquids named, but besides, the presence in it of the film of plants over the surface of the liquid, by consuming (as it is introduced) the

oxygen, prevents the development of the vinegar eels; and the natural aroma of the original liquid is also more fully retained. (*Comptes Rendus*, July 7, 1862.)

New Hydrometer.—The "Scientific American," May 24, 1862, contains a description of a hydrometer, the invention of Mr. Peter Hogg, of Brooklyn, N. Y., and which is designed to indicate densities of liquids equally well at any ordinary temperatures. The comparisons of the densities of different liquids, made with the usual forms of hydrometer, can only be strictly correct when the liquids themselves have the same temperature; and when, as is frequently the case in the process of refining sugar, and in other manufacturing processes, a portion of the liquid or solution must be cooled to the exact point taken for the standard of density, the operation is one of difficulty and requiring time, the result being that absolutely accurate tests are in this way rarely obtained. The new hydrometer, intended to obviate these difficulties, consists essentially of a tube closed at its lower end by a flexible diaphragm, and which, while placed in a vessel of water, is filled with the same liquid up to a certain point. When this tube so filled is afterward plunged, up to the same point, in any liquid to be tested, the contained water being soon brought to the same temperature as the surrounding liquid, it will follow that, according as the specific gravity of such liquid in contact with the outside of the flexible diaphragm is greater or less than that of the water resting on the inside of the same diaphragm, the column of water in the tube will be thereby caused to rise or fall; and the tube being properly graduated, the specific gravity of the liquid will be indicated by the height at which the column of water comes to stand within it. As a further part of the invention, the hydrometer described is so placed within an inverted syphon, through which the liquid to be tested may flow constantly, that the specific gravity of the liquid can be at any time ascertained, by simply observing at what point of its scale the hydrometer tube stands immersed in it.

Myrtle Wax.—The fruit of the bayberry (*Myrica cerifera*) yields a wax which, under the names of myrtle wax, candleberry wax, and bayberry tallow, has for some years formed to some extent an article of commerce in this country. It occurs abundantly as a white incrustation on the small globular berries of the plant. These berries being inclosed in bags of coarse cloth and kept immersed in boiling water, the fused wax collects on the surface, and is then poured off into pans to solidify: as thus obtained, it is nearly pure, and in this state passes directly into commerce. It is employed as a lubricant for rubbing surfaces of wood, as a polish for furniture, as a substitute for beeswax in the manufacture of candles, and in medicine. The commercial wax is of various shades of color, from a grayish-yellow to deep green; more hard and brittle than beeswax; sp. gr. 1.004—1.006; point of fusion very constant at 117°—120° F. Mr. G. E. Moore, of the Sheffield Scientific School, Yale College, has carefully examined the chemical constitution of the myrtle wax; and he is led to conclude that Chevreul's analysis, giving as its components glycerine, stearic, margaric, and oleic acids, must have been performed on an adulterated sample of the article. His own conclusion is that the pure wax consists of palmitin, about $\frac{1}{5}$ part, the remaining $\frac{4}{5}$ being free palmitic, with a small quantity of lauric, acid—the latter either free or in the state of laurin. He accordingly suggests this body as, to chemists, a convenient source of palmitin and palmitic acid; while, in the arts, its high illuminating power, cheapness, and probable facility of bleaching, recommend it especially as a hardening ingredient in the manufacture of various sorts of candles, including those of paraffine. The abundance and hardy habits of the plant, its thriving upon poor soils unfit for other crops, as near the sea, the slight attention requisite to insure an abundant yield, and the ease of extraction of the wax itself, combine to indicate the preparation of the myrtle wax as a branch of industry which has not yet received the attention it deserves. ("Amer. Jour. of Science," May, 1862.)

Aniline Colors.—A very full article on the celebrated colors derived from aniline, or which in other words are products of coal tar, by Mr. Perkin, the original producer of the aniline purple (*mauve*), will be found in the "Amer. Jour. of Science," Sept. and Nov. 1861. By a recent series of researches upon the aniline colors, which no one had previously obtained in a state of purity, Prof. Hoffmann has been able to reduce these to two types (*rosaniline* $C_{20}\,H_{19}\,N_3$) and *leucaniline* ($C_{20}\,H_{21}\,N_3$), which thus bear to each other the same relation as do the blue and the white indigo. The subject of the aniline colors is one of too great extent and complexity to bear condensation within a limited space. For the latest information respecting the composition of these coloring matters, their relation to other products obtained from coal (including the various hydrocarbons), their production, and use in dyeing, the reader is referred to the article above cited; to Prof. Hoffmann's recent paper on the subject, in the "Philos. Magaz.," Dec. 1862, Supplement; and to a report of a lecture by him before the Royal Institution, copied in the "Scientific American," Sept. 20, to Oct. 4, 1862.

Parkesine.—The basis of this new composition, articles manufactured from which attracted some attention in the Exhibition of 1862, is a mixture in certain proportions of castor oil, collodion, and chloride of sulphur. With these may be combined certain resins, gums, or earthy matters, according as a flexible, plastic, or hard and rigid material is desired, and also matters imparting the required colors to the mass. The mixture of the principal ingredients results in a sort of combination, and almost

immediate solidification takes place. The product can be applied to nearly all the purposes for which the vulcanized India rubber and gutta-percha are already employed, and has besides some advantages of its own. It appears to be more indestructible than those substances, and in some of its preparations excessively hard, quite as much so as iron; and while in thin plates it is perfectly transparent, and can be made to take transparent colors, by the use of certain others it is made wholly opaque. It resists moisture, and has high insulating properties. It is already made into buttons, combs, knife handles, medallions, and other like articles; and the specimens look well, while they appear to be quite indestructible, except by fire. It can be applied as a varnish, transparent or colored, and which becomes perfectly hard and impervious to moisture. The name is from that of the inventor, Mr. Parkes.

Australian Oils and Resins.—Mr. J. W. Osborne exhibited before the British Association, 1862, thirty-five specimens of oils, from indigenous trees and plants of Australia, and all of which he regarded as possessing valuable properties, for uses in medicine, or as solvents of resinous materials in varnishes, and for purposes of illumination. Of those serving the last named purposes, many are well adapted to high latitudes—burning in lamps for paraffine oil, with a very white and clear light, and being safe, since they ignite with some difficulty. The trees yielding these products cover an area of not less than 12,000,000 acres. Among them the *Eucalyptus amygdalina*, a very large forest tree, bears leaves which, with the twigs they are on, yield in the green state 3 pints of oil to 100 lbs. of the material. Mr. Osborne also described resins from the *Eucalyptus*, *Callitris*, *Xanthorrhœa*, and various species of *Acacia*.

Organic Alkaloids—new method of detection and preparation.—The organic alkaloids are easily soluble in hot amylic alcohol, while their hydrochlorates are so insoluble in this that they may be separated from the amylic solution by shaking this with water containing hydrochloric acid in solution. Erdmann and Von Uslar accordingly prepare the alkaloids by extracting with hydrochloric acid, treating the extract with ammonia to set free the bases, and evaporating. The alkaloid may then be dissolved in hot amylic alcohol, and the solution being shaken with water containing hydrochloric acid, the result is a watery solution of the pure hydrochlorate, while fatty and coloring matters remain dissolved in the amylic alcohol, which may be mechanically removed from the watery layer. (*Ann. der Chem. und Pharm.*, cxv, p. 12.)

Refining Sugar.—It has been usual with sugar refiners to correct the acidity likely to appear in the clarified syrup or mother liquor at a certain stage of the refining process, as after the separation of the first crop of crystals, and which is due to formation of saccharic acid ($C_6 H_4 O_7$, HO), by addition of lime water or milk of lime. The lime base being permanent, however, remains as an impurity in the solution, and as such requiring subsequent removal. Mr. Edward Beanes, of Havana, Cuba, has patented a process in which he substitutes for the lime compound the use of liquid ammonia. The quantity, varying in different cases, should be sufficient in each to keep the syrup neutral, and so prevent the formation of uncrystallizable sugar; the chief advantage consisting in the fact that the ammonia is a volatile base and, hence, eventually removable by heat. The liquid ammonia also serves, being introduced in such quantities as may be requisite, to correct the acidity of crude syrup or molasses, in the manufacture of sugar from these.

Detection of Picrotoxine.—The seeds of the *Menispermum Cocculus*, known in commerce by the name of Cocculus Indicus, or popularly as "fish berries," contain several active organic bodies. One of these, picrotoxine, is eminently poisonous, and in small doses, it is asserted, possesses an intoxicating quality. Hence, its use is believed to be common in the adulteration of ale and beer—a small addition of the berries to the fermenting mash enabling the brewer to dispense with a large amount of the malt he must otherwise consume. Mr. J. W. Langley believes that he has found a simple and sure test for the presence of picrotoxine; namely, in the bright reddish-yellow color produced in a solution or mixture containing this substance, when, after adding to the mixture 3 or 4 times the quantity of nitrate of potash that there is of substance to be examined, and then barely sulphuric acid enough to moisten the mass, enough of a strong solution of caustic potash or soda is finally introduced to render the whole quite alkaline after neutralization of the acid. The color is strongest at first, and is not permanent. Sugar or strychnia in the mixture, causes the color to be a brownish-yellow; so that these substances, when present, need to be first removed. By the test, the $\frac{1}{5000}$ of a gramme of the poison has been detected; and in malt liquors into which it was purposely introduced, its presence was readily determined, as also in the membranes of the stomach of a cat poisoned with it, and apart from the contents of that organ, the animal having been killed while the process of absorption was going on. A liquid to be examined for picrotoxine should first be rendered acid, then shaken with ether, and the residue after evaporation examined with the microscope for small prismatic crystals. If such be present, test as above stated. ("Amer. Jour. of Science," July, 1862.)

Oxygenated Beverages.—M. Maumené, Professor of Chemistry at Rheims, the centre of manufacture of champagne wines, has been conducting a series of experiments in the way of forcing into wines oxygen gas under a pressure of 7 or 8 atmospheres. When the wine is so old as no longer to give a deposit, the oxy-

gen produced no chemical change in it, though retained for nearly a year; the acidity of the wine was not increased, nor its taste changed. Such wine is more sparkling, and opened disengages oxygen in such quantity as to rekindle an extinguished taper. The wine, however, a little while after being drunk, produces a very sensible heat, and a general and peculiar agreeable sensation. Even ozonized oxygen did not acidify wine. Maumené has also charged wine with protoxide of nitrogen (laughing gas), and the beverage possessed in high degree the exhilarating property of that gas when inhaled. He has even caused water, under 8 atmospheres, to take up oxygen sufficient to render it strongly effervescent; and he was led to conclude that the drinking of such water improved the functions of respiration and digestion.

Preservation of Meats.—In the Cosmos is found an account of the process of M. Peligot for preserving meats, by introducing into an opening made with a trocar into some suitable part of each piece, a small metallic tube which terminates a longer flexible tube reaching down from a reservoir some 25 to 35 feet above, and which contains the prepared solution of preservative salts: the liquid pressure due to such a height forces the solution into and uniformly through the meat—the pieces meanwhile lying in another solution or pickle bath, which by external pressure prevents the escape of the liquid infiltrated. After a few days, the pieces are removed from the bath, dried in a moderately warm current of air, and then smoked: the whole loss of weight is about 18 to 20 per cent. A ham is in this process perforated to the bone, near the small end; and pork is more improved by the preparation than beef. The process preserves much better the juices and aroma of the meat, than does the ordinary method of pickling, while it can be so regulated as to prevent the entrance of too much salt, and it does not harden the fibres and reduce their nutritive value to near the extent that occurs in ordinary salted meats.

Rendering Fabrics Non-inflammable.—The many painful instances of death by burning, which have occurred since the incoming in ladies' dress of the present style of expanded skirts, have resulted in calling the public attention strongly to a consideration of the means of rendering the fabrics of ladies' and of course children's dresses non-inflammable. By this is implied the saturation of the material with some chemical which shall retard its burning, and at least prevent its being rapidly consumed in a blaze or flame; since to render such fabrics "incombustible," or totally incapable of burning, is as yet a thing wholly impracticable. Among the means which have been proposed for the former purpose, are the steeping of the fabric just before its final drying preparatory to ironing, in a solution of chloride of zinc, or of sulphate of ammonia, or of tungstate of soda, or of common salt. By one writer it is stated that the common salt, while not so liable to injure certain colors as are the other articles, is equally efficacious for the purpose intended.

In manufacturing starch from rice, Mr. T. Redwood, of London, adds to the starch liquor an acid solution of chloride of zinc; the starch compound being then dried and reduced to powder, is ready for use. The clothes starched with this compound are said to be rendered in a high degree non-inflammable, while their surface also takes in ironing a superior polish. For further applications of chemistry, *see* ILLUMINATION.

Awards at the Exhibition of 1862 *for American Chemical and Allied Products.*—The following are the awards made by the juries having in charge, according to the division made in the articles exhibited, the subjects of the first three classes or departments:

CLASS No. 1: *Mining, Metallurgy, and Minerals.*—J. Mosheimer received the Council medal for his collection illustrating the newly explored mineral wealth of the Territory of Nevada. T. Meads, honorable mention for fine collection of native copper and silver, from Lake Superior; New Jersey Zinc Company, honorable mention for fine spiegel iron, produced from franklinite.

CLASS No. 2: *Chemical Products.*—Medals to Glen Cove Starch Company, samples of starch; for the excellent quality of products; H. G. Hotchkiss, wintergreen oil; Kingsford, silver-gloss starch; F. S. Pease, for petroleum, benzole from petroleum, coal-tar oil for illumination and lubrication. In a subdivision of the same class, the Philadelphia College of Pharmacy received a Council medal for a fine collection of North American vegetable drugs, and preparations made from them.

CLASS No. 3: *Substances Used for Food.*—Glen Cove Starch Company, medal for maizena or corn starch used for food; exceedingly excellent for food. Hecker Brothers, medal for flour; excellence of quality. Stebbins and Co. receive honorable mention for good flour, and J. Waddell, honorable mention for good quality of Indian corn.

CHILI, a republic of South America, situated between lat. 25° 22′ and 43° 30′ south, and between long. 70° and 74° west. It is bounded on the north by Bolivia, on the east by Patagonia and the territory of the Argentine Republic, on the south and west by the Pacific Ocean. It has a length from north to south of about 1,150 miles, while its breadth varies from about 80 to 130 miles. The last official census, which was taken in 1854, gave the following results as to area and population:

PROVINCES.	Inhabitants.	PROVINCES.	Inhabitants.
Atacama	50,690	Concepcion	110,291
Coquimbo	110,589	Arauco	43,466
Aconcagua	111,504	Valdivia	29,293
Valparaiso	116,043	Chiloe	61,586
Santiago	272,499	Lanquihue	88,260
Colchaqua	192,704	Colony	....
Talca	79,439	Magallane	153
Maule	156,242		
Nuble	100,792	Total, 1854	1,439,120

The next census will not be taken until 1864, but according to a reliable estimate, made in 1857, the population in that year amounted to about 1,600,000. The northern frontier is still an object of controversy between Chili and Bolivia; the latter demanding the extension of its southern frontier to lat. 25° S.; while Chili claims possession of all the territory as far as lat. 21° 48′ S.

On the south, Chili lays claim to all the eastern coast as far as the Straits of Magalhaens, but its possession is only nominal. Its claims have been especially resisted by the Indians of the province of Araucania, a country which in its manners, its customs, its organization, and its local government has remained as thoroughly Indian as it was at the time when the Spaniard Ervilla made it the subject of his epic. It has always been in a degree independent, and the successive governments of Chili have in vain attempted to complete its subjection. At the beginning of the presidency of Mr. Perez, who was inaugurated in September, 1861, another attempt was made to enter into negotiations with the Araucanians. The governor of Nacimiento was charged with sending commissioners to the Indians, in order to convoke their chiefs to a conference, but the Indians refused to come, and the chief cacique, Guentecol, wrote to President Perez a very haughty letter, which indicated anything but a disposition to submit. Suddenly the controversy between Chili and the Araucanians took a singular turn. A Frenchman, M. de Tounens, who lived among the Araucanians, succeeded in making them believe that he would be able to defend them against Chili, and was consequently elected by them king under the name of Aurelie Antoine I. The new king formed a constitution, and although his movements at first created a great deal of merriment in Chili, the government now found it necessary to devise means to get rid of him. Early in 1862 disguised Chilians were therefore sent into Araucania, who reached the place where the king held his court; a policeman seized him, put him on his horse, and in full gallop escaped with him from the pursuing Indians. He has since been confined in a prison of Chili.

Chili is celebrated for the tranquillity which it has enjoyed since the establishment of the republican form of government. Subsequent to the adoption of the constitution in 1833 there have been only three presidents, each one serving two terms (of five years each). The last presidential election took place in 1861. On June 25th, the people chose electors; these met on July 25th for the election of the President; on August 30 the assembled Chambers opened the returns and officially announced the result, and in September the President elect, José Joaquin Perez, was solemnly inducted into his office by his predecessor. Mr. Perez had been elected unanimously; of 216 electoral votes, 214 were cast for him, and the two electors who were absent, declared that they would likewise have voted for him. The new President belongs to one of the first families of the country, and is about 60 years old. He commenced his political career, in 1829, as secretary of legation in France. A few years later, when Chili was involved in war with the new Peru—Bolivian Confederacy—Perez was sent to Buenos Ayres to effect an alliance with the Dictator Rosas. He has since been successively, councillor of state, minister of finances, of the interior, of foreign affairs, president of the Chamber of Deputies and of the Senate.

The aim of the new President was to effect a fusion of the conservative and the liberal parties. He therefore proposed to the Chambers a law of amnesty, which was adopted by them unanimously on Oct. 7th and 8th, 1861. His cabinet consisted partly of conservatives and partly of liberals. This conciliatory policy was, however, attacked by partisans of both parties, and led, on June 20th, 1862, to a change of the cabinet; yet the new one was again composed of conservatives and liberals.

CHINA. *See* TAE-PING REBELLION.

COCHIN-CHINA, or the EMPIRE OF ANAM, is a state occupying the eastern portion of the peninsula of Farther India, in S. E. Asia. It is separated from China on the north by a prolongation of the Himalaya Mountains, and its northern boundary nearly follows the line of the Tropic of Cancer; on the east the Gulf of Tonquin, or Tong-king, as the natives call it, and the Chinese Sea wash its shores, the latter forming also its southern boundary; on the west the Laos Mountains separate it from the Kingdom of Siam, and at the N. W. from the Burmese Empire. Its population is about 13,000,000. Its area is probably not far from 320,000 square miles. Aside from the mountain ranges which form its northern and western boundaries, a chain of considerable height, the mountains of Moi or Anam range, traverse the whole length of the country from Tonquin to the river Saigon, following the trend of the coast, and at a distance of fifty to sixty miles from it, and spurs from the Laos Mountains extend eastward to the valley of the Me-kong river, in the interior. The country is everywhere well watered; from the eastern slope of the mountains of Moi, numerous short streams, rarely navigable, find their way to the Gulf of Tonquin and the Chinese Sea; while the interior is abundantly irrigated by the great Me-kong, or Cambodia river, one of the great rivers of S. E. Asia, and its affluents. This river, which is also the outlet of the great lake of Tali-sab in Siam, enters the Chinese Sea and the Gulf of Siam by ten or twelve principal, and many small channels, and has formed an immense delta of rich though marshy soil, forming nearly one half of the state of Lower Cochin-China. This delta yields in great profusion rice, sugar, and other semi-tropical and tropical products, while the mountainous districts furnish vast quantities of the finest ship timber,

which is in demand for the construction of ships and junks, the Anamese being the shipwrights of southeastern Asia. The empire is divided into four principal states: Tonquin, or Tong-king, on the north; Cochin-China Proper, on the east; Lower Cochin-China, on the south, and extending above this in the centre and southwest, Cambodia. The interior, among the mountains and along the shores of the Cambodia or Me-kong river, is peopled by the Laos, Moi, Kuy, and other tribes, the aborigines of the country, who have been driven back and reduced to a state of partial subjugation by the successive invaders who have possessed themselves of the shores of the country. The Anamese, the ruling people of the coast, are a mixed race, composed of Malays, Chinese, Siamese, and Peguans, the Malays, perhaps, predominating. The religion of the country is nominally Buddhism, but it has not a very strong hold on the people; the mountaineers are mostly pagans, and adhere to some of the earlier forms of idolatry. In the 17th century the Jesuit missionaries introduced the Roman Catholic faith here, and at the close of the last century it had attained a great prëeminence, the Emperor Gya-Long having become a convert, and more than 500,000 of his people having professed Christianity. A Roman Catholic hierarchy was established in the country, and consisted of seven bishops, seven assistant bishops, sixty European missionaries, and 250 native priests. The successors of Gya-Long, from some cause, have not sympathized with Roman Catholic Christianity, and the last three emperors have persecuted it with great virulence. The present emperor, Tu-Duc, who is represented as a tyrannical and cruel ruler, though possessing considerable astuteness, has distinguished himself by his efforts to expel Christianity from the country. The native Christians have been tortured and massacred, their priests executed, and the European missionaries in many instances put to death. Partly in consequence of the cruelties thus inflicted on their missionaries, and partly from the determination on the part of France to secure to herself oriental possessions, which, in their extent and value, should equal those of Great Britain, Spain, and Holland, an expedition was sent out in 1858 from France, and joined by a small Spanish contingent, to redress the wrongs of which the French and Spanish missionaries had complained. The expedition captured Touran, a town on the coast of Cochin-China Proper, about thirty miles below Hue, the capital of the empire; and in 1859, after a siege and battle of some severity, took Saigon, an important town on the river of the same name, in lat. 10° 50′ N., in Lower Cochin-China. The Emperor Tu-Duc, however, was obstinate in his resistance, and neither made nor admitted any overtures for peace, and when the war in China had called off a portion of the French force, he promulgated edict after edict, each bearing with greater severity than its predecessor on the unfortunate Christians, whom he had evidently determined to exterminate; and having regained possession of Touran, he threatened Saigon, declaring his intention of driving the vagabond barbarians from his shores. This could not be permitted, and in January, 1861, the French Vice-Admiral Charner set sail from Woo-Sung, China, and arrived in the harbor of Saigon on the 11th of February. He had at his command an effective force of about 3,000 men. In the next thirteen days he had attacked and carried by storm the immense and strongly-fortified camp of *Ki-Hoa*, with a loss of twelve killed, and 225 wounded, and had driven the Anamese out of the province of Saigon. He next proceeded to attack the fortified town of Mytho, situated on the Me-kong or Cambodia river, the most considerable place in the possession of the Emperor Tu-Duc, in Lower Cochin-China. After a sharp action of three days, this important post was taken on the 10th of April, 1861, and with it a number of war vessels of large size and great quantities of guns, ammunition, and stores. Colompe, a town farther up on the Me-kong, was soon after taken, as well as several villages of smaller size, and trade was opened by proclamation between Saigon and foreign ports. On the 29th November, 1861, Vice-Admiral Charner was succeeded by Rear-Admiral Bonard, who found it necessary to assume at once the offensive, as Tu-Duc, irritated by the losses he had suffered, and the threatened insurrection of a portion of his subjects, had killed his principal generals, and was becoming daily more desperate and fierce. On the 14th of December Rear-Admiral Bonard attacked *Bien-hoa*, an important place, lying on the Long-tao river, where the Anamese had accumulated a large amount of stores, and, after a four days' siege, captured it; and, as the fruits of his victory, obtained eleven war junks, four large shallops, 50 cannon, and large quantities of rice and other stores. The next object of attack was Ving-long, an important citadel, some distance above Mytho on the Me-kong river, the most important position held by the Anamese in the south of the empire. The siege commenced on the 20th of March, 1862, and on the 23d the place was carried; sixty-eight large cannon were captured, a magazine, 488 feet in length, filled with rice, a cannon foundry, mortars, powder, saltpetre, &c. This blow so completely broke the power of the Emperor Tu-Duc that he almost immediately made overtures for the cessation of hostilities, and on the 5th of June, 1862, a treaty of peace was signed, by which the provinces of Saigon, Bienhoa, and Mytho were ceded to France; three ports of Tong-king were opened to commerce; the other provinces of Lower Cochin-China not ceded to France were to receive only such number of troops as the French Government should permit; Christianity was to be tolerated, and the Christians protected in their lives, persons, and property throughout the em-

pire. This treaty was forwarded to France for confirmation by the Imperial Government. In December, 1862, the Anamese rose in insurrection, and on the 17th of that month penetrated into the interior of the fort of Saigon, but were repulsed with heavy loss. On the 27th they attacked Mytho, but were forced to retreat with 225 killed.

COLT, SAMUEL, the inventor and manufacturer of Colt's revolver, was born at Hartford, Conn., July 19, 1814, died in that city Jan. 10, 1862. His ancestors were among the early residents of Hartford; his father was a man of great energy, intelligence, and enterprise, at first a merchant, and afterward a manufacturer of woollen, cotton, and silk goods. His mother was a lady of superior ability and talent, the daughter of Major John Caldwell, an eminent banker of Hartford. The son had the opportunity of acquiring a good English education in the schools of his native city, but his energetic and restless spirit led him, even when a child, to prefer the workroom to the schoolroom. At the age of ten years he entered his father's factory, and remained there with occasional intervals spent on a farm and at school, till his 14th year, when he was sent to Amherst, Mass., for the further prosecution of his studies. Here, again, the restless spirit which had animated him from childhood, appeared; he ran away from the school, and before his friends knew anything of the matter, he had, in July, 1827, shipped as a boy before the mast, on the ship Corvo, Captain Spalding, on an East India voyage. From this voyage, though subjected to severe hardships in its course, young Colt returned, no whit subdued in spirit, enterprise, or resolution. After a short apprenticeship in his father's factory, at Ware, Mass., in the dyeing and bleaching department, under the tuition of Mr. William T. Smith, a scientific man and highly practical chemist, where, with great readiness, he familiarized himself with the leading principles of chemistry, and became a dexterous and skilful manipulator, he again left home, to seek his fortune. Though but 17 or 18 years of age, and with but a meagre education, either in chemistry or anything else, yet under the assumed name of Dr. Coult, he traversed every state, and visited almost every town of 2,000 inhabitants or over, in the Union and British N. America, lecturing on chemistry, and, owing mainly, no doubt, to his skill and success as an experimenter, drew full houses almost everywhere. The profit from these lectures, which was very considerable, during the two years which followed, was not squandered, as it would have been by many a youth under similar circumstances, but every dollar beyond his actual necessities was devoted to the prosecution of the great invention which is indissolubly connected with his name, and the germ of which he had already devised while on his voyage to Calcutta with Captain Spalding. The first model of his pistol made in wood in 1829, with the imperfect tools at his command, while he was a sailor boy on board the Corvo, is still in existence. The money acquired by his chemical lectures enabled him to manufacture other models, which, in their practical results, exceeded even his own most sanguine expectations, and in 1835, when only 21 years of age, he took out his first patent for revolving firearms. Before obtaining his patent in this country he visited England and France, and secured the protection of their patent laws. At this time, and, indeed, for several years after, he was not aware that any person before himself had ever conceived the idea of a firearm with a rotating chambered breech. On a subsequent visit to Europe, while exploring the collection of firearms in the Tower of London and other repositories of weapons of war in England and on the Continent, he found several guns having the chambered breech, but all were so constructed as to be of little practical value, being far more liable to explode prematurely and destroy the man who should use them than the objects at which they might be aimed. Unwilling, however, to seem to claim what had been previously invented, he read before the Institution of Civil Engineers in England (of which he was the only American associate), in 1851, an elaborate paper on the subject, in which he described and illustrated, with appropriate drawings, the various early inventions of revolving firearms, and demonstrated the principles on which his were constructed. But to return to our narrative: patents having been issued in England, France, and the United States for the revolver, as it was called, he succeeded, despite the croaking of many of his acquaintances, in inducing some New York capitalists to take an interest in it, and a company was formed at Paterson, N. J., in 1835, with a capital of $300,000, under the name of the Patent Arms Company. His next step was to prevail upon the U. S. Government to adopt the arm. For a long time he was foiled in this: the officers of the Government and of the Army and Navy frowned upon the invention: they objected to the percussion cap, to the supposed liability of the arm to get out of order, to the tendency of several of the charges to explode at the same time, and to the greater difficulty of repairing it than the arms in common use. These objections Mr. Colt met by careful explanations, by repeated experiments, and where improvements were possible, by modifications in the construction of the weapon. The company with which he was connected expended about $300,000 in the manufacture of the arms and in improvements in them, and in the machinery for their manufacture. In 1837, during the Florida war, the officers of the army were baffled in their attempts to drive the Indians from the Everglades by their skill in the use of the rifle. At length a few of the troops, under the direction of Lt.-Col. (afterward Gen.) Harney, were armed with Colt's revolvers, and their success was such that more were at once ordered, and the

Indians were easily disheartened and defeated when they found that their enemies could fire six or eight times without reloading. This triumph of his arms was, however, a misfortune to the ingenious inventor, for the speedy conclusion of the war deprived him of a market. In 1842, the Patent Arms Company were forced to suspend, and from that time till 1847 none of the repeating firearms were manufactured. Meantime, the market was entirely drained of them by the demand from Texas and the Indian frontier. In 1847, the Mexican war having commenced, Gen. Taylor, who knew their value from his experience in the Florida war, sent Captain Walker, of the Texan Rangers, to Col. Colt to procure a supply. There were none to be had; the colonel had parted with the last sample to one of the Texan Rangers, and when the Government ordered one thousand more, on his offer to make them for $28,000, after advertising in vain for one to serve as a model, he was compelled to make a new model, and in so doing, incorporated into it some improvements which the experience of military officers suggested. This first thousand were made at an armory temporarily hired at Whitneyville, near New Haven, Conn. Other orders following immediately on the completion of the first, Col. Colt procured more commodious workshops at Hartford, commenced business on his own account, and filled the orders with promptness. The extraordinary emigration to California and afterward to Australia greatly increased the demand for the revolvers, and assured the permanency of the business. Finding that more room and greater facilities for manufacturing were required, he planned in 1852, and subsequently executed, the gigantic project of erecting an armory, unequalled in the world in extent and perfection of machinery, and under circumstances which would have deterred most men from the effort. Within the corporate limits of the city of Hartford, and south of the Little or Mill river, lay a tract of meadow, of about 250 acres in extent, which, owing to its being flooded by the annual freshets of the Connecticut river, was available only for grazing purposes, and even for them only at certain seasons of the year. This tract he purchased, and surrounded with a dike or embankment, about two miles in length, one hundred and fifty feet wide at the base, from thirty to sixty at the top, and from ten to twenty-five in height. The strength of this dike having been tested by a severe freshet, and it having been further protected by covering the sides with willows, he erected within it his armory, of Portland stone, consisting of two main buildings connected by a central building, the whole being in the form of the letter H. The front parallel is 500 by 60 feet, the rear parallel 500 by 40, and the central building 250 by 50 feet; the front parallel and central building are three stories in height; connected with these are other buildings for offices, warerooms, watchmen's houses, &c. In 1861 a second building of the same size as the first was erected, the great increase in the demand for his arms rendering more room for their manufacture indispensable. In this establishment there is ample accommodation for the manufacture of 1,000 firearms per day, being more than double the capacity of the national armories at Springfield and Harper's Ferry united. The number made the present year is about 120,000, while the two U. S. armories together, in 1860, made about 35,000. A part of the establishment is devoted to the manufacture of Col. Colt's machinery for making these firearms elsewhere, which has already supplied a large portion of the machinery for the armory of the British Government at Enfield, England, and the whole of that for the Russian Government armory at Tulin. On the land enclosed by the dike he also erected numerous dwellings for his employés, and warehouses for other kinds of business, the entire expenditure upon the grounds and buildings amounting to more than $2,500,000. On the first terrace beyond the river valley, overlooking this busy hive, he erected his own palatial residence. After establishing himself at Hartford, Col. Colt repeatedly visited Europe, and his arms being extensively used by many of the European Governments, especially those of Russia and Great Britain, he was received with great attention, and several times had occasion to explain his views respecting firearms before the most eminent military authorities, and even the crowned heads themselves of those countries. In 1856 he visited Russia, with his family, and was present, as an honored guest, at the coronation of Alexander II.

Soon after the Mexican war, the suggestions derived from the use of these arms by the military forces, led to extensive improvements in their construction, which were then patented, and to their adoption by the Government of the United States as a regular weapon for the army. Subsequently, long service in the field in the Crimean and Indian campaigns suggested still further improvements and simplifications in the construction, which were also secured by patent, and which render the arm comparatively perfect and certainly superior in efficiency to any other firearm in existence. From almost all the Governments of Europe, as well as from several of the Asiatic monarchs, he received orders of merit, medals, diplomas, rings, and other tokens of their esteem and appreciation of his great invention.

All the accessories of these arms, balls, cartridges, bullet moulds, powder flasks, lubricators, &c., &c., are manufactured at the armory, and most of them, as well as the greater part of the machinery for manufacturing the arms, were the invention of Colonel Colt, or the development of his suggestions, by some of his skilful workmen. Amid his other cares, the intellectual and social welfare of his numerous employés were not forgotten. Few mechanics are favored with as convenient residences as those he has erected

for them; and a public hall, a library, courses of lectures, concerts, the organization of a fine band of music, formed entirely from his own workmen, to whom he presented a superb set of musical instruments, and of a military company of his operatives, provided by him with a tasteful uniform, and otherwise treated with great liberality, were among the methods by which he demonstrated his sympathy with the sons of toil.

But Col. Colt's claims to distinction, as an inventor, do not rest solely on his inventions of firearms. His *submarine battery*, the powers of which have been repeatedly tested in the presence of distinguished naval officers, is probably the most destructive weapon of defence, and the most effective protector of harbors against maritime attacks ever devised. Among the inventors of the submarine telegraph cable, too, a distinguished place belongs to him, he having laid and operated with perfect success, in 1843, such a cable from Coney Island and Fire Island to the City of New York, and from the Merchants' Exchange to the mouth of the harbor. This cable was insulated by being covered with a combination of cotton yarn with asphaltum and beeswax, and the whole enclosed in a lead pipe, gutta percha being then unknown. A portion of it is still in existence. He married in 1855 Miss Elizabeth Jarvis, daughter of Rev. Dr. Jarvis, of Portland, Conn., who survives him.

COMMERCE. The commerce of the United States for the past year has been, through the operation of the war, shorn of its proportions, but, under the circumstances, prosperous. The leading features of the year 1861, when the several relations of trade were violently broken, and produce, turned from its accustomed markets, was suddenly forced into new channels, have, in 1862, been more strongly marked, exaggerated as they are by the growing evils connected with the currency and the damage done on the ocean by cruisers of the enemy. The nations of Europe, as well as the English, began at the close of 1861 to feel the want of cotton in a most urgent manner, and their representatives at Washington expressed to the Government informally the desire for some relaxation of the blockade which should permit the egress of that article. This desire induced greater exertion on the part of the executive to hasten a movement of troops, which should bring within the control of the national arms such tracts of country as allowed a reopening of the trade. The advance into Kentucky and Tennessee in January and February, opening the Cumberland and Tennessee rivers, on these grounds excited great hopes, which were, however, not fulfilled. The Confederates when driven back ordered the destruction by fire of all cotton and tobacco likely to fall into the hands of the Federals, and this was carried out to some extent. When the Tennessee region was "reopened," therefore, very little cotton was found. The disposition, that might have existed on the part of the planters to bring forward their crops was checked by the want of protection to private interests, and the complicity of commanders in private cotton speculations in a manner incompatible with general business interests. There was a great want of money in all that region, and the good prices that cotton commanded in specie at first produced a little business, which drew upon the resources of the West for specie to meet its requirements. This growing confidence was suddenly blasted, by an order from Gen. Curtis that specie should not be paid for cotton, as if specie could have any more important function than to procure that cotton, for the want of which so many mills were idle, and so many persons out of employ. The order was subsequently rescinded, but the mischief was done, and the cotton trade killed. As the troops progressed, the Secretary of the Treasury issued special licenses, March 29th, for commercial intercourse under the Act of July, 1861, which prohibits shipments from those ports of the United States heretofore declared by the President to be in insurrection, without a written permit. The licenses did not extend further than Nashville and intermediate points. Nothing shipped under them was to be disposed of to persons in arms against the United States, or to others furnishing them aid and comfort. An order was also issued for the restoration of the mail service between Boonesville, Mo., and Independence, which was suspended in December, in consequence of the war. Soon after the Secretary of the Treasury issued instructions to the Treasury agents, collectors and surveyors, on the Ohio and Mississippi rivers, dispensing with applications to the Secretary for licenses to trade, and authorizing the shipment of all goods not intended for aid to the enemy, to all places occupied by Federal forces in the valley States. A little renewed business followed these regulations, but the regions designated in them, being deprived of their produce, had no means of payment. The little cotton bought by the army speculators did not add to the business means of the section. Down to the 11th of May, permits were granted for the shipment from Nashville of 3,512 bales of cotton. To this amount may be added from 50 to 100 bales shipped by outsiders. The whole amount shipped from the 11th of March, when trade was opened, may be set down at not less than and probably something over 3,600 bales. From two to three thousand bales were burnt by the Confederate troops—chiefly in Giles county, Tenn.

At the close of April the expedition to the Atlantic coast had opened some ports, but failed to elicit any trade. The fall of New Orleans, however, awakened the greatest hopes, and the occasion was at once seized by the Government to invite trade. Mr. C. L. Lathrop was appointed collector at that port, and the following circulars were addressed to the foreign ministers at Washington, announc

ing the reopening of communication with reconquered Southern localities:

DEPARTMENT OF STATE, WASHINGTON, *May* 2, 1862.

SIR: I have the honor to state for your information, that the mails are allowed to pass to and from New Orleans and other places which, having heretofore been seized by insurgent forces, have since been recovered, and are now reoccupied by the land and naval forces of the United States. It is proper, however, to add that a military surveillance is maintained over such mails, as far as the Government find it necessary for the public safety. I am, sir, your obedient servant,

WM. H. SEWARD.

DEPARTMENT OF STATE, WASHINGTON, *May* 5, 1862.

SIR: I have the honor to state for the information of your Government, that a Collector has been appointed by the President for New Orleans, and that the necessary preparations are being made to modify the blockade so far as to permit limited shipments to be made to and from that and one or more other ports, which are now closed by blockade, at times and upon conditions which will be made known by proclamation.

I am, sir, your obedient servant,

WM. H. SEWARD.

A great number of vessels at once left the northern ports for that city with good outward bound cargoes. The President then issued a proclamation declaring that the blockade of the ports of Beaufort, Port Royal, and New Orleans shall so far cease and determine from and after the 1st of June, 1862, that commercial intercourse with these ports, except as to persons and things and information contraband of war, might from that time be carried on, subject to the laws of the United States, and to the limitations and in pursuance of the regulations which were prescribed by the Secretary of the Treasury, as follows:

Regulations relating to trade with ports opened by Proclamation.

TREASURY DEPARTMENT, Monday, *May* 12.

First. To vessels clearing from foreign ports and destined to ports opened by the proclamation of the President of the United States of this date, namely Beaufort in North Carolina, Port Royal in South Carolina, and New Orleans in Louisiana.

Licenses will be granted by consuls of the United States, upon satisfactory evidence that the vessels so licensed will convey no person, property, or information contraband of war, either to or from said ports, which licenses shall be exhibited to the collector of the port to which said vessels may be respectively bound, immediately on arrival, and if required to any officer in charge of the blockade; and on leaving either of the said ports every vessel will be required to have a clearance from the collector of the customs according to law, showing that there has been no violation of the conditions of the license. Any violation of the said conditions will involve the forfeiture and condemnation of the vessel and cargo, and the exclusion of all parties concerned from any further privilege of entering the United States during the war for any purpose whatever.

Second. To vessels of the United States, clearing coastwise for the ports aforesaid, license can only be obtained from the Treasury Department.

Third. In all other respects the existing blockade remains in full force and effect as hitherto established and maintained; nor is it relaxed by the proclamation except in regard to the ports to which the relaxation is by that instrument expressly applied.

(Signed.) S. P. CHASE, Secretary of Treasury.

The appointment of Gen. Butler to the command at New Orleans was followed by a line of policy which neutralized the commercial results anticipated from the possession of the port. The Secretary of State wrote to the minister, Mr. Adams, at London, July 28, 1862, as follows:

We shall speedily open all the channels of commerce, and free them from military embarrassments, and cotton, so much desired by all nations, will flow forth as freely as heretofore. We have ascertained that there are three and a half millions of bales yet remaining in the region where it was produced, though large quantities of it are yet unginned and otherwise unprepared for the market. We have instructed the military authorities to favor, so far as they can consistently with the public safety, its preparation for and despatch to the markets, where it is so much wanted; and now, notwithstanding the obstructions which have necessarily attended the reëstablishment of the Federal authority in that region against watchful and desperate public enemies, in whose hands the suppression of the cotton trade by fire and force is a lever with which they expect to raise up allies throughout Europe, that trade has already begun to revive, and we are assured by our civil and military agents that it may be expected to increase fast enough to relieve the painful anxieties expressed to us by friendly nations. The President has given respectful consideration to the desire informally expressed to me by the Governments of Great Britain and France for some further relaxation of the blockade in favor of that trade. They are not rejected, but are yet held under consideration, with a view to ascertain more satisfactorily whether they are really necessary, and whether they can be adopted without such serious detriment to our military operations as would render them injurious rather than beneficial to the interests of all concerned. An answer will be seasonably given, which will leave foreign powers in no uncertainty about our course.

It resulted, however, that no renewal of business took place with the interior, and the occupation of New Orleans, from which great hopes were entertained, not only as having direct influence upon the war, but on the means of freeing the 2,000,000 bales of cotton usually delivered at that port, and which would not only have kept alive the 772 northern mills, with their 5 million spindles and 125,000 looms, employing more than 100,000 hands, but would have largely supplied exchange, stopped the outward flow of specie, diminished the distress in England and France, and smoothed the foreign relations of the country, while it would have supplied immense resources to the Government, did not justify those hopes. The causes of the failure to realize these objects changed the whole face of business during the year, and while it made the occupation of the mouths of the Mississippi barren of useful results, added greatly to the exasperation of the South, and led to serious complications with foreign consuls, whose rights and duties became by no means clear in the position in which they were placed. Their functions necessarily brought them in contact with a people under martial law, and whose rights of property depended upon the will of the military commander.

The trade of New Orleans, showing the receipts of the principal articles from the interior, during the year ending 31st of August, 1862, with their total value, is represented in the following table:

Articles.	Amount.	Value.
Alcohol, bbls.	307	$18,420
Apples	24,127	168,889
Bacon, assorted, hhds. and casks	4,073	651,680
" assorted, boxes	681	40,860

" in 1858-'59		172,952,664
" in 1857-'58		167,155,546

The aggregate shows a decline of more than 100 millions upon the year's business, consisting mostly of cotton, which did not arrive at that port from the interior during its military occupation, since the military commander failed to inspire confidence among the planters in respect to the safety of property. On page 113, "Annual Cyclopædia of 1861," will be found the returns for the years 1860 and 1861—a comparison indicating the vast decline in the receipts of western products, mostly coal and provisions. The blockade of the river cut off the usual routine of commerce, by which the West, in sending produce South, makes exchange with which it pays the cost for goods consumed at the West. There was nearly $12,000,000 less pork received thence, 3½ millions less tobacco, and 11 millions less corn and wheat —making nearly 27 millions less value for those three articles, of which the West was deprived, and which necessarily diminished its means of purchasing goods; on the other hand, the West was deprived of its usual supplies of sugar and cotton. The receipts of sugar at New Orleans were very large, in consequence of the plantations being within reach of the troops; and there being no other outlet for the crops, the value, even under the extraordinary proceedings of the commanders at that point, reached $31,796,053. The vessels which sought New Orleans from the North on the opening of the port found no outward cargoes that would pay.

The opening of the ports in North Carolina and South Carolina was not more successful. A small quantity of Sea Island cotton was seized by the troops at Port Royal, and sent forward in gunny bags, unginned and dirty. Attempts made to plant and raise it were unsuccessful. Some efforts to open trade with North Carolina, by sending down assorted cargoes from the North, ended disastrously, and were not renewed. Naval stores, therefore, continued to command a very high price at the North.

The internal condition of the country during the year had much influence upon its external commerce, since a very large proportion of its industry was turned in a military direction, and the accustomed demand for goods and supplies for exports, was greatly interfered with. More than 700,000 men were called into the army and navy during the year, and the number who were engaged in the service of the Government in all departments, was represented at nearly 1,200,000. The accustomed sources of revenue for these persons were changed for Government pay, and this, to the extent of, in round numbers, 500 millions, flowed from the Treasury through the hands of individuals to the support of their families in all the States, satisfying their necessary wants, but somewhat changing the character of the articles consumed, while those usually produced became less abundant. The natural tendency under such circumstances is for prices to rise, and this tendency was accelerated by the paper paid out by the Government in such quantities as to cause it rapidly to depreciate. The first effect of this state of affairs was to induce larger imports, and to diminish exports, causing an outward flow of the precious metals which gave a new impetus to the decline of the currency. Other circumstances combined to push on these effects.

For the first time the trade of the entire year 1862 was confined to the Northern ports, and Baltimore, Philadelphia, Boston, and New York, were the points of exports as well as of imports for the whole country. The exports from

New York represented by far the largest portion of the whole quantities shipped out of the country, and the results of the year's business show a singular reversal in the course of many important items. Thus, last year the national export of cotton, as seen in page 117, "Annual Cylopædia, 1861," amounted to $34,051,488, which amount had been sent out of the country before the blockade became strict. This year the imports of cotton into the port of New York were 70,565 bales, valued at $6,121,403. The imports of wool were as large. The imports of sugar and molasses figured at nearly 17 millions; tobacco and rice nearly $3,800,000; so with many other articles that are usually of domestic supply. Guns reached nearly $10,000,000. The effect of the war was thus to cause a large and unwonted import of certain articles, while the usual medium of payment for imports was not forthcoming. The products of the West indeed formed the basis of the export trade; but the wants of England and Europe were much less than in the previous year; hence the quantities exported realized much lower sums of money abroad, and it is probable, but for the influence of paper money upon the shipments, the amounts would have been much less than they were. The following table shows the leading articles exported as compared with the previous year:

Exports from New York to Foreign Ports of Certain Leading Articles of Domestic Produce for Eleven Months of the Year.

Articles.	1861.	1862.
Ashes: Pots, bbls.	$13,608	$9,508
Pearls	3,507	1,580
Beeswax, lbs	3,507	1,580
Breadstuffs: Wheat flour, bbls.	3,110,646	2,961,518
Rye flour	11,807	8,397

Tobacco, crude,* packages	116,598	113,575
" manufactured, lbs.	3,152,484	1,598,044
Whalebone	975,075	1,191,907

* Included in the exports of crude tobacco are 45,850 hogsheads.

The quantity of wheat exported in the shape of flour and wheat was equal to 40,000,000 bushels, against 44,000,000 bushels in the previous year, but the prices realized were much less. In provisions the increased export was very large, as was also the case with oils. The new trade which sprang up in petroleum seems to have been greatly developed by the introduction of the article into Europe, and nearly 12 millions of gallons were shipped. The exports for the year were as follows:

Places.	Gallons.	Value.
New York	6,783,547	$2,037,413
Philadelphia	2,607,203	929,575
Boston	891,616	457,859
Baltimore	1,120,000	500,000
Total	11,402,366	$3,524,847

According to the annual statement of the superintendent, in the year 1862 there passed through the ship canal, at St. Mary's Falls, Michigan, which forms the gateway to Lake Superior, $12,000,000 worth of copper and iron, besides general merchandise to the value of $10,000,000. The following statement, prepared by the superintendent of the canal, shows the extent and character of this trade more in detail: 543 schooners, aggregating 170,595 tons; 121 propellers, 65,124 tons; and 174 steamers, 124,838 tons—making a total tonnage for the year of 359,612 tons. By this it appears that the whole number of vessels, sail and steam, that passed through the canal last year was 838, with an aggregate tonnage of 359,612 tons. In the year previous there were 527 vessels, sail and steam, with a tonnage of 276,637 tons. At six cents per ton, the rate now collected, the tolls for the last year amounted to $21,676.72, of which $14,120 were deposited with the State Treasurer. A careful estimate of the trade of the Lake Superior region for the year 1862 gives the following results: Iron, pig and ore, 150,000 tons; copper, 9,300 tons; general merchandise, 80,000 tons. The iron and copper mines of Lake Superior were never in a more prosperous condition, and there is every reason to believe there will be a large increase of exports in the current year, though the business of 1862 shows an increase of about 50 per cent., compared with the year immediately preceding.

In the early part of the year the trade underwent a great depression, and the prices fell to a very low point, with a great accumulation of stock on hand; a remarkable upward movement then took place, and a very rapid advance in prices suddenly developed a great traffic. This, like most others, was powerfully affected by the effect of paper money upon the exchanges of the country, since as the price of bills rose it imparted a stimulus to the shipment of all available goods, and consequently the export value of the produce by no means represents the value realized abroad, since the value is in paper prices. The export value of the month of December was $14,805,112 for domestic

produce, but in a paper depreciated 35 per cent. Hence the amount realized was $11,000,000 only, falling below the import value, and necessitating the export of the precious metals to make good the margin. The export trade of the port of New York, monthly, for the year, represents the greatest proportion of the national commerce for the year:

EXPORTS, PORT OF NEW YORK.

Months.	Specie.	Foreign.		Domestic.	Total.
		Free.	Dutiable.		
January	$2,658,374	$27,193	$149,493	$12,053,477	$14,948,437
February	3,776,919	49,066	208,757	10,078,101	14,112,843
March	2,471,233	65,388	458,917	8,985,176	11,980,714

December	3,673,112	108,489	352,902	14,805,112	18,939,615
Total, 1862	$59,436,985	$2,758,415	$4,996,798	$149,179,591	$216,341,807
" 1861	4,236,250	2,154,947	5,203,959	131,235,995	142,931,151

The banks of New York suspended at the close of 1861; but inasmuch as the institutions, in consequence, sought rather to contract than to expand their operations, no material depreciation took place until the issues of Government paper began to make their appearance in April, and became the basis of the bank paper. In the first three months the exports of produce were small. As soon, however, as the depreciation of paper began to show itself by a rise in gold, and a consequent higher price for exchange, an impetus was imparted to the export of produce, for the reason that if the market did not promise a profit abroad, the shipper by selling his bill at a higher rate for paper money realized a profit. Thus in April the price of sterling was 11 per cent., in June it had risen to 21, or 10 per cent. advance. Accordingly the exports of domestic produce in April were 8,000,000, but exceeded 10,000,000 in June; notwithstanding prices abroad were more unfavorable for shipments, with every successive rise in the bills as measured in paper money, there was more activity in shipments. Inasmuch, however, as prices became more unfavorable abroad, these shipments did not always prove profitable, notwithstanding the high price obtained for the bill, the value of which came to be regulated by that of specie. The current of the metals continued to set out in a broader stream, although they apparently bore a premium. The mode of quotation is deceptive, and the fact that specie continues to leave the country in a large volume indicates that it is still the best remittance out of the country for the banker who sells bills, even if he ships American gold. Many individuals who had remittances to make out of the country invested in produce of different descriptions; but the results were not always so favorable as if gold had been depended upon exclusively. The rise in prices of produce at the seaboard did not much improve the condition of the producer at the West, since the cost of transportation was proportionately advanced, and the cost of goods taken in return was swollen not only by higher charges for carriage, but also by taxes and depreciation of the currency. The gradual decline in the supplies of cotton as a material for manufacture diminished the activity of an industry that usually employs a capital of 100 millions, but also that of all persons engaged in the buying and selling, and transportation of the material and goods. When the blockade took place, cutting off the supply of cotton, there was a stock in the hands of dealers and manufacturers possibly equal to six months' consumption, and the stock of goods in stores was fair. Those stocks have dwindled away under the demand for consumption, at gradually rising prices; and the stock of cotton has continued to shrink, although held by speculators generally in advance of the market for goods. Month by month, and day by day, the shelves have been thinned out, and the number of bales that form the last resort of the spinners for materials has become less. One can imagine the careful manufacturer, like a shipwrecked mariner, anxiously inspecting his pile of biscuit saved from disaster, and ruefully counting what remains after each day's inevitable consumption, and fixing the date beyond which the utmost economy will not stretch the scanty supply—the moment when the last bale will have been opened for the picker, amid preparations for the final closing of the mill. With this prospect in view, the mills have diminished their work; and the weakest, one after the other, have stopped, as the stronger have bid up for the shrinking stock of cotton 10 to 20, 30, 40, 50, 60, 70, and, finally, 90 cents, without increasing the supply, until the figures have come to represent a famine rather than a trade. These circumstances have caused strong houses to hold the goods for the use of regular customers. The remains of the once great cotton manufacture were eagerly bought up, without much regard to price; and staple goods have come to be regarded as of more value even than gold, amidst a depreciated currency.

The great apparent rise in value has doubt-

less conferred great gains upon holders as well as upon mills, the stocks of which have risen 50 to 100 per cent., as expressed in paper money, a medium certainly a little unstable, more particularly when it is borne in mind that whatever may have been the dividends of the past year, the future value depends upon food for the spindles. The machinery may be changed, and adapted to other materials; but whence are those other materials to be derived? The wool crop of the United States is always short, and foreign supplies can be had only in competition with foreign buyers at great disadvantage.

The holders of goods found great advantage in the rise, but to replace most goods became, as the year advanced, a matter of more difficulty, inasmuch as while the domestic goods diminished in supply in face of the declining supply of material, the cost of importation rose in a similar ratio under the influence of higher duties, and depreciation of the currency. The imports into the port of New York were monthly as follows:

IMPORTS, PORT OF NEW YORK.

Months.	Specie.	Free goods.	Entered for		Total.
			Consumption.	Warehouse.	
January	$163,658	$2,552,050	$6,663,396	$3,141,725	$12,620,829
February	62,007	3,381,473	7,058,174	3,370,486	13,872,140
March	89,327	3,476,004	10,312,689	4,841,846	18,719,866
April	26,152	2,232,315	7,141,197	3,853,218	13,252,882
May	110,383	1,146,093	8,091,120	4,600,920	12,948,516
June	61,023	1,122,092	7,278,953	2,874,127	12,336,195
July	219,001	1,831,932	13,799,505	4,502,764	20,353,202
August	92,713	982,992	10,289,427	2,939,721	14,304,843
September	121,318	1,784,804	11,890,711	4,351,084	18,147,917
October	256,676	1,004,870	8,462,554	3,689,806	13,413,906
November	109,708	1,526,496	6,565,185	2,108,009	10,309,398
December	78,316	1,950,504	6,831,073	4,212,725	13,072,618
Total, 1862	$1,390,282	$22,991,625	$104,383,984	$44,486,431	$173,352,312
" 1861	37,068,413	30,353,918	54,254,231	41,072,228	162,768,790

The importations varied from month to month, and reached the highest point in the month of July, after which the expenses of importation increased so as to weigh heavily upon the cost of goods, and make the business more hazardous. On some articles the duties were increased.

The most necessary articles, or those for which the country depends for a supply mainly upon imports, were the first to advance to such prices as would permit the importation in face of the taxes. The imports of cotton goods were much larger than for the previous year, but far less than for the corresponding period of 1860. There were about 95,000,000 yards imported against 195,000,000 in 1860. The high price of cotton in England drew large supplies from India, and this laid the groundwork of a derangement of the finances, since the larger the amount of cotton imported from a country which demands silver mostly in payment, caused a disturbing drain upon England and western Europe. The effect of this influence may be seen in the value of cotton imported into England in the first ten months of three years, as follows:

Value of Cotton Imported into Great Britain.

Countries.	1860.	1861.	1862.
United States	$132,109,870	$132,741,160	$2,496,625
Brazil	2,327,980	1,521,855	6,370,315
Egypt	5,923,335	6,225,330	13,566,660
Other places	963,495	936,830	7,825,095
East India	13,487,245	31,165,565	61,161,905
Total	$154,811,925	$172,580,740	$91,420,600

Although the aggregate imports of cotton were less, the increased purchases from India were $30,000,000 more in 10 months of 1862 than in 1861; as a consequence, the exports of silver to that country increased $15,000,000, and of gold $4,000,000. A larger portion of the silver was procured from France, whence England imported $10,500,000, and in return sent thither $30,000,000 worth of gold. A considerable portion of this gold was required to meet American bills running on England for French goods. In ordinary years the exports of produce from the United States to Great Britain are such as to pay for United States purchases of English goods, and leave due to the United States a large balance, which is drawn against in favor of the Continent and elsewhere for balances due those countries over and above the sum of their purchases of American produce. In the past year the whole circle of trade has been interrupted. The United States have not been able to send their usual quantities of produce to France, and although less French goods have been bought, the amount has sufficed to aid the drain of coin from England to France, while the want of American cotton in England has compelled her to buy more of Indian at cash prices. This tendency has been counteracted to some extent by the increased sales of English produce to France under the new treaty. The exports from England to France and the United States for eleven months of 1862 were as follows:

Countries.	1860.	1861.	1862.
France	£3,986,545	£5,920,359	£7,207,769
United States	16,623,902	7,044,592	9,933,549

As compared with 1860, France bought of England $16,500,000 more, and the United States $33,000,000 less. The tendency of a drain of the metals is such, however, as to in-

duce the greatest caution in England in respect to the currency. Of the exports of England to the United States in the last year the greatest increase has been in linens to the amount of $3,500,000, and the next largest in woollens, both of which have to some extent been more in requisition by reason of the high price of cotton. The tendency to higher rates of money in England caused also lower rates for goods as well as produce, and aided in swelling the list of American imports. The tariff of July 14, 1862, increased the duties on many articles, to take effect August 1. By the new tariff woollens were charged with 18 cents per lb., and 30 per cent. *ad valorem.* Linen goods 30 per cent., and cotton goods from 1¾ to 5 cents per square yard, and cotton prints 6½ cents per yard, and 10 per cent. *ad valorem.* The duty did not, however, raise the amount of revenue as much as was expected. The amount of duties for the port of New York was as follows:

Receipts for Customs at New York, Jan. 1 *to Dec.* 31.

	1861.	1862.
1st quarter	$7,077,865 41	$11,543,583 91
2d quarter	3,507,469 54	13,519,804 17
3d quarter	5,270,797 40	17,213,444 72
October	1,672,616 84	4,309,419 87
November	1,851,384 73	3,003,270 23
December	2,334,847 44	2,664,593 78
Total	$21,714,981 36	$52,254,116 68

The importation of goods paying duty, and the average duty paid for three years were as follows:

YEARS.	Imports, duty paid.	Customs.	Average, per cent.
1860	$185,664,421	$36,027,481	19.14
1861	93,971,490	21,714,981	23.00
1862	146,047,738	52,254,116	36.00

Thus the apparent increase of duties under the various tariffs during the war has been a little less than 17 per cent. on the value imported. Practically the duties were much higher, growing out of the fact that they are to be paid in gold, which rose in premium from June to January. The change wrought by the tariff, and by the depreciation of paper, becomes apparent in comparing the cost of imports in two months, April and December, as follows:

	April.		December.	
	Per cent.	Amount.	Per cent.	Amount.
Duty average	34	$4,149,952	36	$2,664,593
Exchange	11	123,966	45	2,804,893
Gold for duty	1	41,499	32	852,669
Total cost	36	$4,315,417	80	$6,322,155
Value of imports	..	12,496,530	..	8,013,981

The three items in April amounted to $4,315,417, or 36 per cent. of the value of imports paying duty. In December the same items were $6,322,155, or 30 per cent. of the dutiable imports. Under this increasing pressure the value imported declined, and for the last month in the year the amount received was not much larger than in the corresponding month for 1861.

The supply of shipping during the year was good, but the circumstances of the war were such as to interfere with the course of freights, since the operations of the Confederate cruisers compelled an advance in the insurance for war risks upon American bottoms, and as a consequence caused a great demand for foreign vessels, of which an unusual number entered American ports during the year.

A large amount of American tonnage was taken into the service of the Federal Government, and a number of vessels, in consequence of the depredations of the enemy on the ocean, availed themselves of the present state of the English navigation act to get out British registers. The following are among the number of American vessels registered at the port of Liverpool:

Present British name.	Late American name.	Where built.	When built.	Tonnage.
Vanguard	Samuel Lawrence	Medford	1851	1,304
Ethiopian	Usebia N. Raye	New Haven.	1852	188
Star of England	E. Crichton	Thomaston	1860	1,544
Eagle's Wing	West Indian	Baltimore	1856	177
Prioress	Prioress	Scarboro'	1856	562
Julia	Cavalier	Baltimore	1855	240
Com.-in-Chief	I. H. Boardman	Portsmouth.	1855	1,718
Julie Usher	Annie Childs	New York	1861	449
D. Illion	R. C. Dyer	Belfast	1855	178
Adelaide	Adelaide	Philadelphia	1857	267
Rosalind	Louisa C. Johnson	Newbern	1854	152
Jessie	Mungo Park	Bangor	1854	272
Lilla	Mary Wright	Wells	1858	285
Sophia	Sophia	Charleston	1852	322
Emily Caroline	Alexander	Portsmouth.	1830	502
City of Melbourne	Black Warrior	Newcastle	1853	1,828
The Cobb	James Loper	Rochester	1837	308
Edith	Jas. H. Chadburn	Hoboken	1853	342
Blanche Moore	Blanche Moore	Boston	1854	1,838
Gorilla	Kalamazoo	Portsmouth.	1840	756
Ernest	Champion	Harpswell	1851	560
Dakotah	Unknown	Cumberland	1851	914
Campanero	Campanero	Baltimore	1859	271
Crossfell	W. V. Moses	Unknown	1860	1,019
Anna Helen	Emily St. Pierre.	Maine	1854	986
Wm. Graham	Alexander	Baltimore	1839	653
Nora	Noami	Newburg	1848	589
Connecticut	Connecticut	Saybrook	1849	1,193
Earl Canning	Bareda Bros	Boston	1854	729
Margaret	Margaret	Philadelphia	..	254
Biafra	J. Darling	Brookhaven	1851	195
India	Marathon	Bowdenham	1849	594
Emily	Moses Wheeler	Boston	1850	982
Traveller	Wisacumcon	Newburg	1841	388
Samson	Samson	Rockland	1855	410
Rhine	Rhine	Bowdenham	1849	608
Cambay	Aregona	Maine	1857	796
Saguenay	Adams	Castine	1840	605
Sedbergh	John Knox	Bucksport	1854	614
Mary Francis	Isnardon	Maine	1846	275
Horizon	Horizon	Ellsworth	1854	1,768
Golden City	Chickasaw	New York	1851	1,365
Tim Whiffler	Madurese	NewBedford	1862	1,138
Young England	Oracle	Thomaston	1853	1,018
Peep o' Day	Ella Flemming	Waldoboro'.	1848	169
Lochnagar	J. Webster Clark.	Waldoboro'.	1859	1,318

This change of nationality in connection with the change from the merchant service to that of the Federal Government, made a considerable difference in the tonnage returns, which for the port of New York show the following entries:

YEARS.	No. of vessels.	American tonnage.	Foreign tonnage.	Total tonnage.
1855	3,391	1,340,257½	220,000	1,562,257½
1856	3,861	1,684,596½	386.262¾	2,070,859¼
1857	3,851	1,478,579½	492,425	1.971.004½
1858	3,421	1,260,043	433,828½	1,693,871½
1859	3,905	1,302,024¾	597,826½	1,899,851¼
1860	4,346	1,487,539¼	677.062	2.164,601¼
1861	4,977	1,618,258	865,446¾	2,483,704¾
1862	5,406	1,472,989½	1,079,492	2,552,481½

The increase in foreign is very marked. In 1860 the amount of foreign tonnage was less than 30 per cent. of the whole amount entered, and in 1862 it was nearly 40 per cent. The number of arrivals has however been larger than ever, and if foreign vessels found their gain in the fears excited as to the safety of American bottoms, the supply of the latter was greatly decreased as well through the cessation of building as through the purchases of the Government. The immense outward grain freights of the past ten years have to some extent made up for the want of cotton and tobacco. The clearances of vessels have been as follows:

	No. of vessels.	Tonnage.	Seamen.
American vessels	2,202	1,281,722	34,543
Foreign vessels	2,814	1,206,130½	42,493
Total cleared in 1862	5,016	2,487,852½	77,036
" in the year 1861	4,608	2,388,766½	74,925
" in the year 1860	3,812	1,970,997¾	66,750

The number of foreign vessels exceeded that of the American, as also did the number of seamen, although the aggregate tonnage was not so large. The American vessels are generally of a larger size than the foreign. Many of the latter, which run short voyages, in effect coasting voyages to and from the provinces, are small, and making a number of trips in the year, swell the tonnage to a high figure. The same remarks apply to the entries which have been as follows, distinguishing foreign vessels and seamen:

	No. of vessels.	Tonnage.	Seamen.
American vessels	2,693	1,472,989½	39,762
Foreign vessels	2,713	1,079,492	42,055
Total entered in 1862	5,406	2,552,481½	81,817
" in the year 1861	4,977	2,483,704½	78,264
" in the year 1860	4,346	2,164,601¼	72,510

The arrivals and departures of the ocean steamers have been very active during the year. The following table shows the number of passengers carried to and brought from Europe by the various lines during the past year:

LINES.	Eastward.	Westward.	Total.
Liverpool, New York, and Philadelphia steamers	10,881	18,454	29,335
Cunard New York line	2,853	2,786	5,639
Cunard Boston line	2,260	1,946	4,206
Bremen line	2,347	4,298	6,645
Hamburgh line	3,682	7,411	11,093
Liverpool, Quebec, and Portland	4,611	10,014	14,625
Anchor line, Glasgow, Quebec, &c.	1,051	3,746	4,797
Great Eastern	796	1,357	2,153
Irregular steamers	38	395	433
Total in 1862	28,519	50,407	78,926
" in 1861	28,956	40,351	69,307
Increase in 1862 over 1861			9,619

The number of persons arrived from abroad has in the past ten years greatly exceeded the number of those who departed. None of the lines of steamers lost any vessel during the year. The oldest line, the Cunard, ran with their accustomed regularity, and have placed two new steamers on the route: the Scotia, a side wheel, and the China, a screw. This, with the Australasian, makes two screw steamers, and there are indications that the screws may supplant the side wheels for mail and passenger service. The Scotia, however, made the shortest passages of the year, both ways, viz.: western passage, June 21 to July 1, 9 days 22 hours, and eastern passage, August 27 to September 5, 9 days 7 hours.

The City of Washington of the Liverpool, New York, and Philadelphia line made the passage to Liverpool in 9 days and 22 hours. This line has 8 steamers, and the Cunard 6, but it carries by far the greatest number of passengers, having nearly one third of the whole.

The Fulton and Arago, formerly running between New York and Havre, have been employed by the Federal Government during the past year.

A few transient steamers have made one or more voyages within the year, among which were the Stella, Congress, Melita, &c.

The Great Eastern made four passages during the year. The longest, west, 11 days 3 hours, and the shortest, east, 9 days 20½ hours. She did not thus sustain her reputation founded on her great size, of being able to make the shortest passages.

The statement of the coasting trade is made up with more difficulty since, in order to facilitate intercommunication with domestic ports, all vessels engaged in coastwise commerce may arrive and depart without official record, unless they have foreign goods or distilled spirits on board. Few of the vessels arriving from domestic ports come within this exception, and the official record of coastwise arrivals includes but a fraction of the actual trade. The vessels which clear from New York for other domestic ports oftener carry the description of goods specified, and thus the clearances on this record are far greater than the entries. During the last two years the coastwise commerce has, of course, been greatly interrupted, and the record is very small. The official returns, however, show the following results:

YEARS.	Entered coastwise.		Cleared coastwise.	
	No. of vessels.	Tons.	No. of vessels.	Tons.
1849	1,855	424,976	3,994	895,589
1850	1,928	459,395	4,719	1,020,070
1851	1,768	455,542	4,803	1,214,942
1852	1,766	497,840	4,680	1,173,762
1853	1,733	507,531	4,789	1,310,697
1854	1,880	543,452	4,779	1,499,968
1855	1,966	614,045	4,563	1,378,888
1856	1,669	539,461	4,696	1,482,310
1857	1,569	503,679	4,182	1,425,810
1858	1,559	499,138	4,331	1,640,473
1859	1,838	572,232	4,698	1,726,993
1860	1,571	529,015	4,908	1,902,508
1861	1,240	393,024	2,905	592,919
1862	1,382	477,010	2,302	619,807

CONFEDERATE STATES. The States united in the Southern Confederacy are Alabama, Arkansas, Florida, Georgia, Louisiana, Mississippi, North Carolina, South Carolina, Tennessee, Texas, and Virginia. Their population and resources, as presented by the returns of the census of 1860 are important considerations in the present struggle to maintain a separation from the other States. Their population was as follows:

States.	White.	Free Colored.	Slave.
Alabama	526,431	2,690	435,080
Arkansas	324,191	144	111,115
Florida	77,748	932	61,745
Georgia	591,588	3,500	462,198
Louisiana	357,629	18,647	331,726
Mississippi	353,901	773	436,631
North Carolina	631,100	30,463	331,059
South Carolina	291,388	9,914	402,406
Tennessee	826,782	7,300	275,719
Texas	421,294	355	182,566
Virginia	1,047,411	58,052	490,865
Total	5,449,463	132,770	3,521,110

The ratio of increase during the ten years closing with 1860, was as follows:

States.	White.	Free Col'd.	Slave.
Alabama	23.43	18.76	27.18
Arkansas	99.88	81.25	135.91
Florida	64.70	....	57.07
Georgia	13.42	19.41	21.10
Louisiana	39.98	6.78	35.50
Mississippi	19.68	16.88	40.90
North Carolina	14.12	10.92	14.73
South Carolina	6.13	10.65	4.53
Tennessee	9.24	13.67	15.14
Texas	173.51	10.58	213.89
Virginia	17.06	6.83	3.88

In the cotton-growing States of Alabama, Mississippi, Arkansas, and Texas, the increase of the slave population is more rapid than that of the white population. In Louisiana, which raises sugar and cotton, the increase is nearly in the same ratio as that of the white population. In Virginia and South Carolina the increase of the white population is in the most rapid ratio. In these two States such physical causes were in operation as might ultimately have released the slaves.

The white population of the Confederate States, according to sex was, in 1860, as follows:

States.	Male.	Female.
Alabama	270,190	256,081
Arkansas	171,477	152,666
Florida	41,128	36,619
Georgia	301,066	290,484
Louisiana	189,648	167,808
Mississippi	186,273	167,626
North Carolina	313,670	316,272
South Carolina	146,160	145,140
Tennessee	422,779	403,943
Texas	228,585	192,306
Virginia	528,842	518,457
Total	2,799,818	2,647,402

About 250,000 should be deducted for the population of western Virginia.

The following is a statement of the amount and value of certain articles produced in the Confederate States during the year ending June 1, 1860, and in all the States during the same period:

Pig Iron.

States.	Tons of ore mined.	Tons of pig iron.	Value.
Tennessee	53,220	18,417	$457,000
Virginia	23,217	9,096	251,173
Total	76,437	27,513	$708,173
In the United States	2,514,282	884,474	$19,487,790

Bar and other Rolled Iron.

States	Tons.	Value.
North Carolina	1,007	$92,948
South Carolina	275	24,750
Tennessee	5,024	483,248
Virginia	17,870	1,147,425
Total	24,176	$1,748,371
United States	406,298	22,248,796

Iron Founding.

States.	Value.
Alabama	$142,480
Arkansas	52,000
Florida	63,000
Georgia	79,000
Louisiana	525,800
Mississippi	147,550
North Carolina	56,650
South Carolina	5,000
Tennessee	552,050
Texas	70,877
Virginia	809,955
Total	$2,504,362

Aggregate in the United States for the same period $28,546,656.

States.	Copper.		Lead, value.
	Tons.	Value.

The amount of capital invested in the manufacture of cotton goods in the Confederate States during the year ending June 1, 1860, was $9,303,921; total in the United States, $99,551,465.

The amount of capital invested in the manufacture of woollen goods in the Confederate States during the same period was $1,317,980; total in the United States, $35,520,527.

The annual product of the manufacture of boots and shoes in the four States of Virginia, Louisiana, Tennessee, and Georgia, during the same period, was $2,729,327; total in the United States, $89,549,900.

The value of the product of leather in the Confederate States, during the same period, was $4,074,406; total in the United States, $63,090,751.

In the production of the staples for food above mentioned, the proportion of the Confederate States is well maintained. In manufactures they are less advanced. These States possess also their peculiar products of sugar, cotton, and tobacco, which are an inexhaustible source of wealth, and enable them to be consumers of the productions of all the other States.

States.	Tobacco, lbs.	Ginned cotton, bales.	Sugar, hhds.

Total	191,835,279	5,047,232	301,922

A provisional government for the Confederate States, to continue for one year, was adopted by the Provisional Congress at its first session in February, 1861. This was simply a temporary form for the regulation of the actions of those persons who should exercise the combined authority of these States during the first year of their union as Confederate States. It consisted of the Constitution of the United States with such modifications as were necessary to adapt it to the peculiar circumstances then existing. The members of this Provisional Congress were appointed by the conventions in the respective States, who were elected by the people while they were a part of the United States. The Provisional Congress elected the Executive and clothed him with powers to organize and execute the duties of a Government, in opposition to the United States. During the year a permanent form of government was proposed and submitted to the approval of the Conventions or Legislatures of the respective States. It was approved unanimously. The time for it to go into operation by superseding the Provisional Government, was the 18th of February, 1862. Thus far nothing had been submitted to the action of the people. When last at the polls they were citizens of the United States. Now they were declared to be citizens of another country, acting under another Government, and performing duties prescribed by another supreme law. This change had been produced, not by the natural operation of forms already adopted by themselves, but in consequence of their destruction. It was provided that in November the officers under the Permanent Government should be elected. The name of one candidate for the Presidency only was submitted to the people. Like the election in France, the people were perfectly free to vote for electors who would choose him, or not vote at all. He was unanimously elected. At the same

* This includes the salt mines of western Virginia held by United States forces.

time, members of Congress under the Permanent Constitution were elected. The only point involved before the people in these elections, was whether this or that man should be chosen to Congress. Every question relative to the previous condition of the people, as citizens of the United States, and the change which had been made, had passed beyond the consideration of the voters. In fact, no such question was ever submitted to their action. Such were the forms under which the Government of the Confederate States came into operation, and at the close of 1861, when nearly a year had passed away, it was weak and trembling under the uncertainty of its future existence. A frenzy, like that which suddenly created it, might as suddenly extinguish it. It had no hold upon the hearts of the people, arising from convictions long entertained of its necessity. There had never been any peculiar interests in existence, which required its organization for their special protection; and there never would be, unless the Government of the United States by future hostile action should assail the interests of the people, and demonstrate its necessity. In that case only, and under such adverse circumstances, could it be expected to become so rooted in the hearts of the people as to receive their unanimous and unfaltering support. The existence of the Confederate Government at this period was entirely in the hands of the Federal Government; and the statesmanship with which the latter was wielded, was destined either to extinguish the former or to nurse it into vigorous life. The causes of this weakness were developed as early as the beginning of the year 1862, and were then in operation. The movement to establish the Confederate States was urged upon the people as necessary to save themselves from degradation and to preserve their property in slaves against the hostile action of the Federal Government, as it would be administered by the newly elected President, Abraham Lincoln. These arguments were addressed to two classes of citizens—those who were wealthy and the owners of slaves, or whose interests were interwoven with this class, and those who were comparatively poor, and whose labor suffered under the competition of that of the slaves. They were insufficient to convince the majority of either class to espouse the movement, and it would have been an utter failure had there been no stimulating causes created outside of the limits of the Confederate States. Even with the aid of the latter it was successful only by a resort to all those arts which the skilful can devise to bias the public mind. In the choice of delegates to the State Conventions, a large minority of the voters did not appear at the polls. Thus the Confederate Government came into existence by the tolerance of a large mass of its citizens. This mass was the chief element which Federal statesmanship should have used for its destruction. The new Administration of the United States was not entirely insensible of the advantages within its grasp. Its first movements aimed to secure the confidence of this mass of the citizens in the Confederate States. President Lincoln denied that he had any designs hostile to the institutions of those States, and declared that he would not be foremost to commence hostilities, but would continue the benefits of the Government to those States as far as practicable in their existing posture. He said:

> Apprehension seems to exist among the people of the Southern States that, by the accession of a Republican Administration, their property, their peace, and personal security are to be endangered. There has never been any reasonable cause for such apprehension. Indeed, the most ample evidence to the contrary has all the while existed, and been open to their inspection. It is found in nearly all the published speeches of him who now addresses you. I do but quote from one of these speeches when I declare that "I have no purpose, directly or indirectly, to interfere with the institution of slavery in the States where it exists." I believe I have no lawful right to do so, and I have no inclination to do so. And, more than this, they placed in the platform, for my acceptance, and as a law to themselves and to me, the clear and emphatic resolution which I now read:
>
> *Resolved*, That the maintenance inviolate of the rights of the States, and especially the right of each State to order and control its own domestic institutions according to its own judgment exclusively, is essential to that balance of power on which the perfection and endurance of our political fabric depend; and we denounce the lawless invasion by armed force of the soil of any State or Territory, no matter under what pretext, as among the gravest of crimes.
>
> I now reiterate these sentiments; and in doing so I only press upon the public attention the most conclusive evidence of which the case is susceptible, that the property, peace, and security of no section are to be in any wise endangered by the now incoming Administration. I add too, that all the protection which, consistently with the Constitution and the laws, can be given, will be cheerfully given to all the States when lawfully demanded, for whatever cause, as cheerfully to one section as to another.

The effect of these and similar declarations was to stop the progress of secession, and the great States of Virginia, North Carolina, Tennessee, Arkansas, and Missouri quietly continued as members of the United States. Still the declarations of a President are of little value, any further than they express the views of the political party he represents. The Confederate Government, as yet powerless at home, protested that peace was its only wish. As it gathered strength by completing its independent organization, it soon became apparent that without hostilities with the Federal Government it must soon perish through deficient vitality. The brilliant and dazzling dreams of the future republic still failed to warm the hearts of a portion of the Southern people in its favor; the most bitter denunciations of the tyranny of the North were equally unable to kindle the anger of those citizens, and rouse in them a stern determination to sustain the new union with a patriot's firmness. War alone would relieve the Confederate Government of these embarrassments. It would cut off all communication between the North and the South. It would shut out the Federal Government, and destroy all its means of access to the

minds of the Southern people. It would become an inexhaustible fountain to furnish bitterness between the North and the South. It would separate the neutral mass of Southern citizens from the Federal Government, and render them powerless against the new Government over them. The gauntlet of hostilities was thrown down by the Confederate Government, and as quickly caught up by the Federal Government. Instantly four of the States above mentioned, Virginia, North Carolina, Tennessee, and Arkansas, were precipitated out of the Federal Union, and joined the Confederacy. The Confederate Government then appealed to its citizens to bear witness to the truth of the original charges of hostile designs against them on the part of the Federal Administration—asserting that the convictions of the reality of these hostile designs had led to its own organization, and demanded their undivided and hearty support. This *coup d'etat* on the part of the Confederate Government was immediately followed by a system of rigid and arbitrary measures in the Confederate States, to repress and extinguish every indication of sympathy for the Federal Union. The most bitter denunciations were hurled against the Northern people, and contempt cast upon them as designing to accomplish a social and political equality between the mass of the white people and the negroes.

Notwithstanding all these efforts, the Confederate Government at the beginning of 1862 was still weak and insecure of the confidence and honest support of a portion of its citizens. The action of the Federal Government had been such as to cause to some extent this withholding of confidence. When it accepted hostilities with the South and became aware of the advantages it thereby lost for reaching the minds of the Southern people, it proclaimed in the most solemn manner, by a nearly unanimous vote of Congress, "that in this national emergency, Congress, banishing all feeling of mere passion or resentment, will recollect only its duty to the whole country; that this war is not prosecuted on our part in any spirit of oppression, nor for any purpose of conquest or subjugation, nor for the purpose of overthrowing or interfering with the rights or established institutions of those States, but to defend and maintain the supremacy of the Constitution and all laws made in pursuance thereof, and to preserve the Union, with all the dignity, equality, and rights of the several States, unimpaired; that as soon as these objects are accomplished the war ought to cease." Its public action had thus far been generally consistent with this declaration, and the effect of it was to preserve the adhesion of the slaveholding States of Delaware, Maryland, Kentucky, and a majority in Missouri to the Federal Union. At the same time it produced an unfavorable effect upon secession.

Other causes had operated against the success of the Confederate States which may be briefly mentioned. The expectation that the manufacturing necessities of England and France would force them to a speedy recognition of the Confederacy and to an interference with the Federal blockade, had proved entirely groundless. The supply of cotton was as large in Liverpool at the beginning of 1862 as at the beginning of 1861, although the blockade of the Southern ports had then existed more than six months. No necessity for an interference existed, and no disposition voluntarily to interfere had been manifested anywhere. At the courts of Europe the Confederate embassadors were not noticed in their official character. The Governments of those nations, grown hoary during an existence of a thousand years, stood far aloof from the youthful aspirant. The Confederate people said: "They who have managed our public affairs have not, with any Government, any class, or any description of people, succeeded in securing one reliable friend; and so insupportable has the position of Commissioner to Europe become, that Mr. Yancey is impatient for his recall." The news of the capture of Messrs. Mason and Slidell brought gold down at Richmond from thirty-five to fifteen per cent. premium. Confidence in the Confederate Government increased as the prospect of a war between the United States and England appeared. The release of these men was a bitter disappointment, and under the depression gold mounted rapidly again to an exorbitant premium. The ardent adherents of the Confederate Government, those most deeply involved in the cause, exclaimed against the North in their anger. "Wonderful people! wonderful press! wonderful Congress! wonderful Secretaries! wonderful Yankeedom! Certainly the world never saw your like before. Even Egypt, 'the basest of kingdoms,' is respectable when compared to you." The hope that the commercial enterprise of England would spring at once to the enjoyment of the high prices the blockade established, by sending forward cargoes of arms, munitions, medicines, and other stores most needed, was found likewise to be a delusion. The Governors of several of the States were obliged to issue appeals to the citizens to contribute their shot guns and fowling pieces to arm the Confederate troops. In Alabama an appropriation was made by the Legislature to manufacture pikes with which to arm the soldiers. It consisted of a keen two-edged steel head, like a large bowie-knife blade, nearly a foot and a half in length, with a sickle-like hook, very sharp, bending back from near the socket. This was intended for cutting the bridles of cavalrymen, or pulling them off their horses, or catching hold of an enemy when running away. The head was mounted on a shaft of tough wood about eight feet long. In the southwest Gen. Beauregard issued a proclamation, in which he appealed to the people to contribute brass and other metal to the Government to be moulded into cannon. Under this call the bells of churches and plantations

in vast numbers were given, and even brass andirons and the weights of clocks and windows were not withheld by some. Appeals were made to the people to rouse them to new exertions, which proclaimed the desperateness of their situation: "A thousand proofs exist that the Southern people are not sufficiently alive to the necessity of exertion in the struggle in which they are involved. Our very victories have brought injury upon the cause, by teaching us to despise the public adversary. The immense magnitude of his preparations for our subjugation has excited no apprehension and had little effect in rousing us to exertion." Again it was cautiously said: "It seems to be the popular impression, we see it in men's faces, when we do not hear it in their words, that the military affairs of the Confederacy are not very cheering." The Governor of Virginia issued a proclamation to the people, saying: "The exigencies of the times are not duly appreciated by many of our people. The dangers which environ us are too lightly estimated. We must see and feel their imminence before we can be aroused to that action which is necessary to save us from alarming ills, and to avert evils which threaten our existence, our peace, and our organization as a Government." Complaints and charges of imbecility were now brought against the Confederate Government in terms like the following: "There has been a sad absence of enterprise, genius, and energy in the conduct of public affairs, such as gives nerve to the soldier's arm and kindles a flame in his heart." "We ask why the year has passed and we further than ever from recognition at home or abroad. We ask why we are fifty-fold worse off than when the war commenced?" "The want of faith in the Government is more and more clearly manifested every day." Apprehensions of the power of the United States oppressed the citizens of the Confederacy; they said: "A lull, a pause, a suspense exists, preceded by minor events which cause a feeling of apprehension more than of confidence in the future. We know that the enemy are in great power and meditate mischief, and we feel that ere long their blows, the heaviest of the war, must fall." "The dark hour of our trial will come whenever McClellan has succeeded in converting his Yankees into the involuntary machines known to the military science as regiments, brigades, and divisions. This is the end that he proposes to himself. This is the secret of his long delay. This is the work of his hands and his head at this moment." The flattering hope was also indulged that the finances of the United States would soon be exhausted, that the spirit of the people would soon be discouraged. These circumstances serve to show the weakness of the Government in the confidence of the people. On the other hand, public bodies, as if to produce an inspiriting and reviving effect, passed resolutions expressive of the greatest determination.

In the Legislature of Tennessee resolutions were offered "that all propositions of the Congress of the (so called) United States to reconstruct a union which they have prostituted to the base purposes of annihilating the liberties, trampling upon the rights, destroying the lives, and plundering the people of the Confederate States, is but another form under which our enemies would subjugate the South and reduce us to the despotism of their degrading doctrines, &c., and that any such proposition should be met promptly and unhesitatingly with our indignant rejection."

The Legislature of Georgia passed resolutions at this time declaring that the separation "is, and ought to be final, and irrevocable," and that no proposition having for its object reconstruction would be entertained; and that Georgia pledged herself "to stand by her sister States of the Confederacy throughout the struggle."

Governor Letcher of Virginia, in his Message to the Legislature, said: "We have therefore separated from them, and now let it be understood that the separation 'is, and ought to be final and irrevocable,'—that Virginia will under no circumstances entertain any proposition from any quarter, which may have for its object a restoration or reconstruction of the late Union on any terms and conditions whatever." It should be remembered that the Legislatures which received or passed these resolutions, and the governor who expressed similar views—were all elected while their constituents were citizens of the United States, and by their acts the secession of their respective States was accomplished.

On the 26th of February, a resolution was offered in the Confederate Congress, then in session at Richmond, by a Senator from Kentucky, and referred, which declared "that the people of the Confederate States will to the last extremity maintain and defend their right to self-government, and the government established by them, and to this end will pledge their last man and their last dollar for the vigorous prosecution of the war, until their independence is acknowledged; and also that they will submit to any sacrifice and endure any trial, however severe, and firmly relying on the justice of their cause, and humbly trusting in the providence of God, will maintain their position before the world and high heaven while they have a voice to raise or an arm to defend."

On the next day it was observed in Richmond that the walls in different parts of the city were "scrawled over with inflammatory and treasonable mottoes." The circumstances were thus described: "They attracted but little attention at first, as the chalked letters were supposed to be the amusement of some idlers. On further examination, however, it was found that these mottoes were displayed all over the city with a system and consistency that showed that there were purpose and organization in this appeal to the multitude. The follow-

ing are some of the mottoes; they were written in large and singularly well-formed letters, at different points in the city, extending even to the suburbs on Church Hill, and show a literary merit that could hardly be ascribed to blackguards, and is seldom found in mere rowdy scrawls on the street corners:

"Nationals, to the rescue!"

"Nationals, arise and gird on your strength!"

"Unionists, it is time to assert your rights!"

"Too many stars on the flag!"

"The Scorpion of Secession—it has stung itself!"

"The South—the land of the white man!"

"The Northern advance—it is the tread of the freeman," &c.

It was declared to be the work of traitors, and demands were made for the appointment of a vigilance committee as required "by the most conservative and precious interests of society." At the same date one of the daily prints of the city, made the following statement: "Our Tennessee exchanges give us gloomy prospects for the future in that part of the Confederacy. Several leading journals intimate plainly that there is really a threatening state of idolatrous love of many of these people for the old Union."

A letter from the interior of Tennessee, published at this time in the city of Memphis, stated thus: "The condition of the interior counties is not improved by the lapse of time. The people apprehend an immediate advance of the Northmen, and traitors to the South evince their joy in every village and neighborhood. The Unionists are making demonstrations in many of the northern counties, and even at Memphis there were exhibitions of joy at the arrival of the news from Beech Grove.

"In the remote counties many have been shot at night in their own houses, who adhered to the fortunes of the South."

On the part of those who had been the principal actors in accomplishing the secession of the Confederate States, the same determined purpose was still manifested. This is illustrated by the following address to the people of Georgia by their representatives in the Provisional Congress, which was issued on the 31st of January:

FELLOW CITIZENS: In a few days the Provisional Government of the Confederate States will live only in history. With it we shall deliver up the trust we have endeavored to use for your benefit, to those more directly selected by yourselves. The public record of our acts is familiar to you, and requires no further explanation at our hands. Of those matters which policy has required to be secret, it would be improper now to speak. This address, therefore, will have no personal reference. We are well assured that there exists no necessity for us to arouse your patriotism, nor to inspire your confidence. We rejoice with you in the unanimity of our State, in its resolution and its hopes. And we are proud with you that Georgia has been "illustrated," and we doubt not will be illustrated again by her sons in our holy struggle. The first campaign is over; each party rests in place, while the winter's snow declares an armistice from on high. The results in the field are familiar to you, and we will not recount them. To some important facts we call your attention:

First.—The moderation of our own Government, and the fanatical madness of our enemies, have dispersed all differences of opinion among our people, and united them forever in the war of independence. In a few border States a waning opposition is giving way before the stern logic of daily developing facts. The world's history does not give a parallel instance of a revolution based upon such unanimity among the people.

Second.—Our enemy has exhibited an energy, a perseverance, and an amount of resources which we had hardly expected, and a disregard of constitution and laws which we can hardly credit. The result of both, however, is that power, which is the characteristic element of despotism, and renders it as formidable to its enemies as it is destructive to its subjects.

Third.—An immense army has been organized for our destruction, which is being disciplined to the unthinking stolidity of regulars. With the exclusive possession of the seas, our enemy is enabled to throw upon the shores of every State the nucleus of an army. And the threat is made, and doubtless the attempt will follow in early spring to crush us with a giant's grasp by a simultaneous movement along our entire borders.

Fourth.—With whatever alacrity our people may rush to arms, and with whatever energy our Government may use its resources, we cannot expect to cope with our enemy either in numbers, equipments or munitions of war. To provide against these odds we must look to desperate courage, unflinching daring, and universal self-sacrifice.

Fifth.—The prospect of foreign intervention is at least a remote one, and should not be relied on. If it comes, let it be only auxiliary to our own preparations for freedom. To our God and ourselves alone we should look.

These are stern facts, perhaps some of them are unpalatable. But we are deceived in you if you would have us to conceal them in order to deceive you. The only question for us and for you is, as a nation and individually, What have we to do? We answer:

First.—As a nation we should be united, forbearing to one another, frowning upon all factious opposition and censorious criticisms, and giving a trustful and generous confidence to those selected as our leaders in the camp and the council chamber.

Second.—We should exert every nerve and strain every muscle of the body politic to maintain our financial and military healthfulness, and by rapid aggressive action, make our enemies feel, at their own firesides, the horrors of a war brought on by themselves.

The most important matter for you, however, is your individual duty. What can you do?

The foot of the oppressor is on the soil of Georgia. He comes with lust in his eye, poverty in his purse, and hell in his heart. He comes a robber and a murderer. How shall you meet him? With the sword, at the threshold! With death for him or for yourself! But more than this—let every woman have a torch, every child a firebrand—let the loved homes of our youth be made ashes, and the fields of our heritage be made desolate. Let blackness and ruin mark your departing steps, if depart you must, and let a desert more terrrible than Sahara welcome the Vandals. Let every city be levelled by the flame, and every village be lost in ashes. Let your faithful slaves share your fortune and your crust. Trust wife and children to the sure refuge and protection of God—preferring even for these loved ones the charnel house as a home than loathsome vassalage to a nation already sunk below the contempt of the civilized world. This may be your terrible choice, and determine at once and without dissent, as honor and patriotism and duty to God require.

FELLOW CITIZENS: Lull not yourselves into a fatal security. But prepare for every contingency. This

is our only hope for a sure and honorable peace. If our enemy was to-day convinced that the feast herein indicated would welcome him in every quarter of this confederacy, we know his base character well enough to feel assured he would never come. Let, then, the smoke of your homes, fired by women's hands, tell the approaching foe that over sword and bayonet they will rush only to fire and ruin.

We have faith in God, and faith in you. He is blind to every indication of Providence who has not seen an Almighty hand controlling the events of the past year. The wind, the wave, the cloud, the mist, the sunshine, and the storm have all ministered to our necessities, and frequently succored us in our distress. We deem it unnecessary to recount the numerous instances which have called forth our gratitude. We would join you in thanksgiving and praise. "If God be for us, who can be against us?"

Nor would we condemn your confident look to our armies, when they can meet with a foe not too greatly their superior in numbers. The year past tells a story of heroism and success, of which our nation will never be ashamed. These considerations, however, should only stimulate us to greater deeds and nobler efforts. An occasional reverse we must expect—such as has depressed us within the last few days. This is only temporary.

We have no fears of the result—the final issue. You and we may have to sacrifice our lives and fortunes in the holy cause; but our honor will be saved untarnished, and our children's children will rise to call us "blessed."

HOWELL COBB,
R. TOOMBS,
M. J. CRAWFORD,
THOMAS R. R. COBB.

Such was the public sentiment in the Confederate States at the beginning of 1862. In a military aspect their position appeared extremely favorable. Their extreme line of defence had been unassailed, and was believed to be impregnable. The intrenchments at Manassas, the fortifications on the Cumberland, and at Bowling Green and Columbus were regarded as too strong to be taken by any Federal force. In the contests of the previous year, the Confederate soldiers claimed that victory had constantly fallen to their cause, and in personal prowess they had no fears of their foe. There were, however, other causes more hidden that threw a cloud over these cheering prospects. The United States were known to be preparing to exert their utmost strength, and it could be clearly seen that a fearful struggle was at hand. Arms and munitions of war could not be had in sufficient abundance. The commerce of the Confederate States was annihilated, and a most stringent blockade endangered every venture. The luxuries of life were consumed, and even the necessary articles were becoming scarce. The credit of the Government was declining, and its obligations vastly depreciated. At such a time the Federal troops began their march of invasion, and the strong Confederate positions in Kentucky were captured or evacuated. (*See* ARMY OPERATIONS.)

Amid such circumstances the Provisional Government ceased to exist, and the Permanent Government was inaugurated. This ceremony took place at Richmond, the seat of Government, on the 22d day of February. At half past 7 o'clock on the morning of that day the two Houses of Congress assembled, having organized on the 18th, and appointed committees to wait upon the President and Vice-President elect, by whom they were escorted to the Hall of the House of Delegates of Virginia. At half past twelve the assemblage moved by the eastern door of the capitol in grand procession, formed similar to those in Washington on such occasions, to the statue of Washington on the public square. At the statue of Washington the President elect, the Vice-President elect, the President of the Senate, the Speaker of the House of Representatives, the officiating clergyman, Confederate Judges, Governors of States, Judges of the Supreme Courts of States, the Chief Marshal and his aids, and six of the Committee of Arrangements, took positions on the platform. Prayer was then offered by Bishop Johns. The delivery of the inaugural address by Jefferson Davis then followed (*see* PUBLIC DOCUMENTS), and the oath of office was administered by Judge J. D. Halyburton.

In this address President Davis asserted that the Confederate Government was established to maintain their "ancient institutions;" "to preserve in spirit as well as in form a system of government we believed to be peculiarly fitted for our condition." For proofs of the sincerity of this purpose he says: "We may point to the Constitution of the Confederacy and the laws enacted under it, as well as to the fact that through all the necessities of an unequal struggle there has been no act on our part to impair personal liberty, or the freedom of speech, of thought, or of the press." He then points to the acts taking place in the United States under the Federal Administration as flagrant violations of private rights, and asserts that if any Union feeling has thus far existed it must now expire as hopeless. "Whatever of hope some may have entertained that a returning sense of justice would remove the danger with which our rights were threatened, and render it possible to preserve the Union and the Constitution, must have been dispelled by the malignity and barbarity of the Northern States in the prosecution of the existing war. The confidence of the most hopeful among us must have been destroyed by the disregard they have recently exhibited for all the time-honored bulwarks of civil and religious liberty—bastiles filled with prisoners, arrested without civil process or indictment duly found; the writ of *habeas corpus* suspended by executive mandate, &c." (*See* ANNUAL CYCLOPÆDIA, 1861, *Habeas Corpus.*)

It was by such appeals as this that he sought to convince men of Union sentiments of the futility of all hopes for a restoration of the Union, unless at the sacrifice of their rights, their honor, and their independence. Unfortunately the facts alleged by him as existing under the Federal Government, were undeniable, and within the limits of the Confederacy they furnished powerful arguments with which to urge the justice of its organization, and the necessity of yield-

ing to it a most hearty support. The influence of such views upon the minds of the people must have been very favorable to the cause of the Confederacy, for they are advanced by President Davis on every opportunity.

Three days after the inauguration, a Message on the State of Affairs was sent to Congress by President Davis, in which he says: "Since my Message at the last session of the Provisional Congress, events have demonstrated that the Government had attempted more than it had power successfully to achieve. Hence in the effort to protect by our arms the whole territory of the Confederate States, seaboard and inland, we have been so exposed as recently to encounter serious disasters." To withstand these diasters, and to secure its successful existence, the only hope of the Confederate Government now was founded upon its own efforts and the mistakes of its adversary. Its efforts soon became of the most vigorous nature. The system of voluntary enlistments had furnished all the soldiers required during the first months of the war. These, however, had volunteered for short terms, under the expectation that there would be an early peace. To supply their places, as the term of enlistment expired, the Provisional Congress, in January, passed an act providing for receiving individual volunteers as they might offer their services without requiring a whole company to be formed and organized before they could be mustered in. It provided subsistence, transportation, and pay from the day of enlistment. Additional inducements were held out to those who might raise companies, battalions, or regiments. About the 1st of February a call upon the States for troops was made by President Davis, which he expected would be answered in full by the close of March. On the 25th of February the number of Confederate troops in the field was four hundred regiments of infantry, with a proportionate force of cavalry and artillery. The true position of the military at this time is found in these remarks of President Davis, made at the same date: "I deem it proper to advert to the fact that the process of furloughs and reënlistments in progress for the last month had so far disorganized and weakened our forces as to impair our activity for sucessful defence; but I heartily congratulate you that this evil, which I had foreseen and was powerless to prevent, may now be said to be substantially at an end, and that we shall not again during the war be exposed to seeing our strength diminished by this frightful cause of disaster—short enlistments."

The Confederate army of 1861 was composed chiefly of men enlisted for twelve months. These enlistments commenced immediately upon the secession of the States to which the troops belonged. The expiration of their terms of service therefore took place during the first months of 1862.

To meet this decrease of the army, the Provisional Congress offered, as above stated, inducements to volunteers, and the President called upon the respective States to fill up their quotas of men to serve during the war. The number which had been demanded from each State was such as to make the proportion of troops in the field from each nearly equal. The minimum number for companies when mustered in as such was sixty-four privates and twelve officers. The call upon Mississippi was for seven regiments; on Alabama for twelve regiments; on Georgia for twelve thousand men; on North Carolina for five additional regiments. If the quota was not made up by volunteers, drafting was threatened by the Govnors of the States.

These men, with those in service for the war and volunteers for twelve months who were expected to reënlist, were intended to form the armies of 1862. By the 1st of April the Government expected the whole body of new levies and reënlisted men to be ready in the ranks. The Federal Government, however, had brought its troops into camp during the latter part of 1861, and immediately commenced to organize and drill them, and prepare the immense materials necessary for an active campaign. It was thus at least four months in advance of the Confederate Government. The army of Gen. McClellan before Washington, hanging like an ominous cloud near the horizon, created much uneasiness at Richmond, but so long as the Confederate army remained at Manassas, no vigorous and active measures for future military operations were made. Amid this position of affairs, the Federal movements were ordered to be commenced on the 22d of February. Forts Henry and Donelson were captured, Bowling Green and Columbus evacuated, and Nashville surrendered. The entire Confederate line of defence in the West was swept away, and a march by the Federal troops into the heart of the Southwestern States was threatened. Consternation seized the Southern people. The Government was aroused to action, and the President sent the following cautious Message to Congress:

To the Senate and House of Representatives of the Confederate States:

The operation of the various laws now in force for raising armies has exhibited the necessity for reform. The frequent changes and amendments which have been made have rendered the system so complicated as to make it often quite difficult to determine what the law really is, and to what extent prior amendments are modified by more recent legislation.

There is also embarrassment from conflict between State and Confederate legislation. I am happy to assure you of the entire harmony of purpose and cordiality of feeling which has continued to exist between myself and the executives of the several States; and it is to this cause that our success in keeping adequate forces in the field is to be attributed.

These reasons would suffice for inviting your earnest attention to the necessity of some simple and general system for exercising the power of raising armies, which is vested in Congress by the Constitution.

But there is another and more important consideration. The vast preparations made by the enemy for a combined assault at numerous points on our frontier

and seaboard have produced results that might have been expected. They have animated the people with a spirit of resistance so general, so resolute, and so self-sacrificing, that it requires rather to be regulated than to be stimulated. The right of the State to demand, and the duty of each citizen to render military service, need only to be stated to be admitted. It is not, however, a wise or judicious policy to place in active service that portion of the force of a people which experience has shown to be necessary as a reserve. Youths under the age of eighteen years require further instruction; men of matured experience are needed for maintaining order and good government at home, and in supervising preparations for rendering efficient the armies in the field. These two classes constitute the proper reserve for home defence, ready to be called out in case of any emergency, and to be kept in the field only while the emergency exists.

But, in order to maintain this reserve intact, it is necessary that in a great war like that in which we are now engaged all persons of intermediate ages not legally exempt for good cause, should pay their debt of military service to the country, that the burdens should not fall exclusively on the most ardent and patriotic. I therefore recommend the passage of a law declaring that all persons residing within the Confederate States between the ages of eighteen and thirty-five years, and rightfully subject to military duty, shall be held to be in the military service of the Confederate States, and that some plain and simple method be adopted for their prompt enrollment and organization, repealing all of the legislation heretofore enacted which would conflict with the system proposed.

JEFFERSON DAVIS.

The 1st of April found not only the new levies and reënlisted men in the ranks, but the Confederate Congress, in compliance with the above Message, was about to pass a conscript law to bring all men between the ages of eighteen and thirty-five into the field. All furloughs were revoked by the following order from the War Department:

ADJUTANT AND INSPECTOR GENERAL'S OFFICE,
RICHMOND, *March* 24, 1862.

General Order, No. 16.

All leaves of absence and furloughs, from whatever source obtained, are revoked; and officers and men absent from duty, except on surgeon's certificate of disability, will return at once to their respective commands. It is with extreme reluctance that the Department adopts a measure which deprives our patriotic soldiers of the relaxation they have so well earned; but the enemy presses on every side, and the necessities of the service demand new illustrations of that noble self-denial which has been so many times evinced since the commencement of our struggle for independence. The furloughs of all who have engaged for the war, which are thus curtailed, will be extended hereafter, when circumstances will permit. But judging from the past, no fears are entertained of an unwilling response to the call. Those who have so many times proved their devotion to their country, cannot be diffident or backward in the hour of her greatest need

By order of the President. S. COOPER,
Adjutant and Inspector-General.

Thus, although the Confederate losses were severe at first, they were soon prepared to meet the enemy. The danger which they escaped was thus stated at Richmond: "The disasters we have suffered are mortifying to us, and exhilarate our enemies; but they have startled without crippling the Confederacy. Had it lain still two months more, with the army dwindling daily under the furlough system, disgusted with the inaction of stationary camps, while the Government was quarrelling with the generals, and the people sinking under indifference, we would have been overrun between the 15th of April and the 1st of May."

On the 16th of April the conscript act, having passed both Houses of Congress, was approved by the President. This act annulled all previous contracts made by volunteers, and by explicit terms made all men under the age of thirty-five years and over eighteen years, soldiers for the war, or until they attained the age of thirty-five years. It drew every male citizen within the prescribed ages immediately and entirely from the control of State action, and placed them at the disposal of the President during the war. It also provided, "That all persons under the age of 18 years, or over the age of 35 years, who are now enrolled in the military service of the Confederate States, in the regiments, squadrons, battalions, and companies hereafter to be organized, shall be required to remain in their respective companies, squadrons, battalions, and regiments for ninety days, unless their places shall be sooner supplied by other recruits, not now in the service, who are between the ages of 18 and 35 years, and all laws and part of laws provided for the reorganization of volunteers, and the organization thereof into companies, squadrons, battalions, and regiments, shall be, and the same are hereby repealed."

The existing organization of companies, regiments, &c., was preserved, but the companies were required to be filled up to the number of 135 men. When thus filled up, the privates had the privilege of electing their officers in the same manner as under former laws, but the commissions were issued by the President. The provision of the law annulling the contract with volunteers and requiring those under 18 years or over 35 to continue in service 90 days after its passage, without regard to their term of enlistment, was construed by these volunteers as entitling them to a discharge on the 16th of July. Previous to that date, however, an order was issued by the War Department placing them on the same footing as conscripts, and requiring them to continue in the service. So extreme was this order that it retained in service all enlisted men without regard to the time of their enlistment or their ages. Thus youths of 17 and men of 50 were not allowed to withdraw, nor any who were in the army at the time of the passage of the law. In a word, the law set aside all contracts, and the Government retained all the soldiers in the field and sought to add to them every man between the required ages. Not even physicians were exempted. President Davis, in a letter to the governor of Georgia, thus states the reason for this injustice to the volunteers:

I would have very little difficulty in establishing to your entire satisfaction that the passage of the law was not only necessary, but that it was absolutely indispensable: that numerous regiments of 12 months' men were on the eve of being disbanded, whose places would not be supplied by new levies in the face of su-

perior numbers of the foe without entailing the most disastrous results; that the position of our armies was so critical as to fill the bosom of every patriot with the liveliest apprehension, and that the provisions of the law were effective in warding off a pressing danger.

The regulations for executing the law detailed an officer to each State to take charge of the enrolment, mustering in, subsistence, transportation, and disposition of the recruits. The cooperation of State officers in making the enrolment was requested of the governors of the States, and in any cases in which such assistance might be refused, the duty was performed by officers of the army. Not more than two camps of instruction were established in each State, where the recruits were made ready for the field with the utmost despatch. The recruits were not organized in force as separate bodies, but were sent to supply deficiencies in regiments, battalions, squadrons, or unattached companies, and, so far as practicable, in corps from their own region of country. Recruits were allowed to choose any corps to which they desired to be attached, in which vacancies existed. They could also join any corps, the formation of which had been authorized by the Government. All 12 months' volunteers in service were required to reorganize by the election of new officers within 40 days after the act passed. Those who preferred a guerilla service were authorized to form as partisan rangers by an act specially passed for that purpose. The operation of the act was suspended in Missouri and Kentucky, under a provision authorizing it to be done by the President. Troops from those States were received under the acts passed previous to the conscription law. Maryland was regarded as exempt from the law, as appears by the following from the Secretary of War, dated April 26:

Major J. A. Weston:

In reply to your letter of the 17th inst., you are respectfully informed that Marylanders are not subject to the conscription act.

G. W. RANDOLPH, Sec. of War.

This extreme measure met with much opposition on the part of the people in the Southern States. It was an evidence, in itself, that the ardor of the people had ceased to be a safe medium of reliance in the conduct of the war. It was a measure which had never before been adopted in the States of the Union during any previous war. It necessarily established a consolidated government founded on military principles, and was thus spoken of by some of the Southern leaders:

If it be absolutely necessary to save us from a conquest by the North, we are willing to submit to it, but we fear the public mind must prepare itself for a great change in our government.

President Davis, in the letter to Governor Brown of Georgia, above mentioned, argued at much length that the act may be pronounced "constitutional" in spite of its seeming invasion of State rights, and said:

There seems to me to be a conclusive test on that whole subject. By our constitution, Congress may declare war offensive as well as defensive. It may acquire territory. Now, suppose that, for good cause and to right unprovoked injuries, Congress should declare war against Mexico and invade Sonora. The militia could not be called forth in such case, the right to call it being limited "to repel invasion." Is it not plain that the law now under discussion, if passed under such circumstances, could by no possibility be aught else than a law to "raise an army?" Can one and the same law be construed into a "calling forth the militia," if the war be defensive, and a "raising of armies," if the war be offensive?

At some future day, after our independence shall have been established, it is no improbable supposition that our enemy may be tempted to abuse his moral power by depredations on our commerce, and that we may be compelled to assert our rights by offensive war. How is this to be carried on? Of what is the army to be composed? If this Government cannot call on its arms-bearing population more than as militia, and if the militia can only be called forth to repel invasion, we should be utterly helpless to vindicate our honor or protect our rights. War has been well styled "the terrible litigation of nations." Have we so formed our government that in litigation we may never be plaintiff? Surely this cannot have been the intention of the framers of our compact?

The most serious opposition to the act was manifested in the State of Georgia. The attempt was made to enrol militia officers holding commissions as such under the State authority. The following correspondence took place between the governor of that State and the Confederate Secretary of War:

ATLANTA, *June* 17, 1862.

Your enrolling officers have enrolled several of the State officers of the militia, who will not be permitted to be carried away from their commands. You stated in your letter of the 20th ultimo that no State officer is liable to enrolment, and asked me to call your attention to it if done. Please send me by telegraph an order for the release of all such who have been enrolled, and direct Major Dunwoody to stop the enrolment of State officers, or I shall order the arrest of each officer who arrests a State officer. I wish an immediate reply.

JOSEPH E. BROWN.

Hon. G. W. RANDOLPH, Sec. of War, Richmond.

The Secretary of War replied as follows:

RICHMOND, *June* 18, 1862.

Major Dunwoody has been instructed not to enrol militia officers recognized by the State authorities as in commission. Request him to show you his instructions. If you arrest him, or any of our enrolling officers, in their attempts to get men to fill up the Georgia regiments now in the face of the enemy, you will cause great mischief. I think we might as well drive out our common enemy before we make war on each other.

G. W. RANDOLPH, Secretary of War.

His Excellency Governor BROWN.

To this the Governor in answer said:

MARIETTA, *June* 23, 1862.

As Major Dunwoody's subordinates in different parts of the State do not seem to regard your orders to him, please direct him to give them the necessary instructions to stop the enrolment of the officers of the militia. I agree with you fully that we should unite all our energies to drive out the common enemy, and not make war among ourselves. I am most happy, therefore, that the Confederate Government has decided to respect the constitutional rights of the State so far as not to force her to the alternative of permitting any department of her constitutional government to be disbanded and destroyed, or to defend the existence and integrity of her government by force.

JOSEPH E. BROWN.

Hon. G. W. RANDOLPH, Sec. of War, Richmond.

Soon after, some measures were taken to test the constitutionality of the law before the courts of that State. James M. Levingood, who had been enrolled as a conscript, sued out a writ of *habeas corpus* before Judge T. W. Thomas, of the superior court in the county of Elbert, Georgia. The principal point made before the court was thus expressed: "The conscript act is unconstitutional, and therefore the act itself, and all regulations and orders based upon it, are likewise void." A lengthy opinion was given by the court, which concluded thus:

In the preamble of our Confederate Constitution care is taken to assert and maintain that the States are sovereign and independent. In what sense can this be said of Georgia, if every man of her militia can be taken from under the control of her constitutional commander-in-chief without his consent? Must he abdicate his most important duties by permitting himself to be disarmed of his forces, and all this too in violation of his oath of office, in case he should think them necessary for the protection of the State?

If Congress can pass a conscript act with certain exemptions, they can pass it without exemptions. No one will deny this. If, therefore, they have the power to prescribe what shall be militia and to conscribe at pleasure, they may take the governor, general assembly, and the whole judiciary, and thus annihilate the State government.

The palpable infraction of the Confederate compact is sometimes—indeed, principally—defended on the plea of necessity. What a dangerous fallacy! We have expended 100,000 lives and untold millions of money to maintain the constitution and the independence of the States, and shall we now violate it, and destroy the State government? As reasonably might we commit suicide to avoid personal danger.

Nor is this plea of necessity true in fact. The conscript law can only furnish men. We have, and had before, State laws to reach every man in the State between 18 and 45, and to say the conscript law was necessary to procure men is to maintain the arithmetical absurdity that there is more men in the country between 18 and 35 than between 18 and 45.

Whereupon, and for these reasons, it is ordered and adjudged by the court that the act of the Confederate Congress known as the conscript law, and entitled "An act to further provide for the public defence," is void; and the plaintiff, James M. Levingood, be released and discharged from the custody and control of Sidney P. Bruce, and from the custody and control of the sheriff of this court, and be set at liberty, to go wherever he pleases.

The case was immediately carried up to the Supreme Court of the State, which overruled this decision.

Subsequently, on the approach of the Federal forces into Camden county, an application was made to Governor Brown for authority to call out the local militia for its defence. Instead of authorizing the call of the non-conscripts, he laid the subject before the Legislature. The joint committee to whom it was referred were divided. A majority reported most decisive resolutions against the constitutionality of the conscript act, but the minority recommended acquiescence in the measures of the Confederate Congress. (*See* GEORGIA.) While the discussion was going on in the Legislature, the subject was taken up before the people, and Mr. A. H. Kenan, a member of the Confederate Congress, delivered a public address at Milledgeville, the seat of government, in which he thus stated that their safety depended on the success of the conscription law:

Georgia is the last State that ought to complain and resist this law. Georgia has not yet been invaded. We have not yet suffered at our doors and in our estates from the presence of a hostile foe. The battles in our defence have been fought hundreds of miles away from us. The Virginians have suffered in person and property to an extent that you who are at home and far from the enemy cannot appreciate. You have never had your patriotism and devotion to our cause and country tested. The people of Virginia have lost their property, their negroes, their food, their all. Their houses, their barns and fences have been burned before their eyes, their wives and children insulted and driven from home, and themselves carried away captives, and still they are true. You know nothing of the ravages of war. When you and your wives and children are driven from home without food and clothing, to hide in the mountains and caves, your negroes stolen and the torch applied to your premises, then your patriotism will be tested. Can you endure that? Had you not better do all you can to keep the war away from your borders? Is it well for you to be squabbling about State rights and who shall appoint captains and colonels when the enemy is thundering at your doors? We have had brilliant victories, and our arms have performed such deeds as history has nowhere recorded. Conscription has done it for us. If this war goes on, we have to whip 500,000 of the best men the enemy has got before next spring, or they will whip us. If we whip them, conscription will have done it—without it we will fail.

In Alabama a citizen not exempt under the law, was elected a justice of the peace. The probate court refused to accept his bond on the ground that he was ineligible, being between the ages of 18 and 35, and virtually a conscript. An application was made to the circuit court for a mandamus to the probate court. The circuit court, Judge Henry, ruled: 1st. That the probate court had no right to inquire into the question of eligibility. 2d. The court also ruled, *obiter dictum*, that by the passage of the conscript law, and the call of the President, and instructions of the Secretary of War, every man between the ages fixed by the law was virtually a conscript, and could not, by having office cast upon him subsequently, escape the conscription.

These were the most important instances of opposition to the law. All methods were resorted to by private individuals to escape its operation which the most skilful ingenuity could devise. In the city of Mobile, nearly 500 men of the ages subject to military duty, applied for and received certificates of citizenship from consular agents. These were certificates of their allegiance to other powers than the Southern Confederacy. Others took shelter under the exemptions to be found in the militia laws of the State Legislatures. This, in some instances, was acquiesced in by the Confederate authorities, although the conscript law did not recognize any acts of State Legislatures.

The call of the President was for the whole body of men between the ages of eighteen and thirty-five. Immediately after the publication of the call the enrolment commenced. Much time elapsed during the preliminary arrangements and it was not until the month of June

that the benefits of the conscription began to be felt in the increase of the armies. Although the act declared every man a soldier with a few exceptions, between certain ages, yet the number of exempts was comparatively large and the number of conscripts less than might be supposed. A certain number were exempted in proportion to the number of slaves; the officers of the Confederate and State Governments, those incapable from physical disability, clergymen, persons engaged in Government work and some others exempted from militia duty by State laws. Still during the summer months the Confederate force largely outnumbered the Federal armies, and caused the issue by President Lincoln in July, of a call for three hundred thousand men for the war and an additional three hundred thousand for nine months.

The usual consequences of the enforcement of a conscription law were apparent in this instance. While the enrolment was going forward, substitutes were sought out and engaged at bounties from one hundred to two thousand dollars. It became such a serious evil in the city of Richmond as to cause the issue of the following order:

HEADQUARTERS, DEPARTMENT OF HENRICO, }
RICHMOND, Va., *August* 1, 1862. }

The obtaining of substitutes through the medium of agents is strictly forbidden. When such agents are employed, the principal, the substitute and the agent will be impressed into the military service, and the money paid for the substitute, and as a reward to the agent, will be confiscated to the Government. The offender will also be subjected to such other imprisonment as may be imposed by a court martial.

By order of Brigadier General JOHN H. WINDER, commanding Department, &c.

I. R. PAGE, Assistant Adjutant-General.

Desertions also followed in such vast number as to call for the interference of the War Department. The following orders were accordingly issued from that quarter:

WAR DEPARTMENT, ADJT. AND INSP. GENERAL'S OFFICE, }
RICHMOND, *June* 13, 1862. }

I. With the consent and approbation of his Excellency Governor Letcher, all sheriffs, deputy sheriffs and constables of the State of Virginia are authorized and requested to apprehend deserters from the army wherever they may be found, and to deliver them to an officer of the army at the most convenient post or station, or to lodge them in jail, and report their names and regiments to General S. Cooper, Adjutant and Inspector General, Richmond.

Thirty dollars will be paid for all deserters delivered to an officer and fifteen dollars for each deserter lodged in jail. No allowance will be made for expenses of apprehension or transportation. All jailors receiving deserters are requested to detain them. The usual allowance for the support of prisoners will be made.

II. Transfers from the line to partisan corps will not be permitted, and if any officer of partisan corps knowingly enlist them from the line, the authority to raise the partisan corps will be revoked in addition to such punishment as a court martial may inflict.

By command of the Secretary of War.

S. COOPER, Adjutant-General.

WAR DEPARTMENT, ADJ'T AND INSP. GENERAL'S OFFICE, }
RICHMOND, *July* 14, 1862. }

General Orders No. 49.

All persons engaged in enrolling conscripts are hereby authorized and required to arrest deserters from the army and to deliver them to the commandant of the nearest camp of instruction, or to lodge them in the nearest jail, and to return their names, company, and regiment to the Adjutant and Inspector General. Jailers are requested to detain them, and will be allowed the fees and charges for the detention of prisoners prescribed by the laws of the State in which the jail is situated.

Enrolling officers are also required to report to the Adjutant and Inspector General the names and address of all persons absent from the army without leave, whether by the expiration of their leaves of absence, furloughs, details, or otherwise. And where this unauthorized absence exceeds the time required to correspond with the War Department, the enrolling officer will arrest the person and send him to the nearest camp of instruction, reporting the arrest to the Adjutant and Inspector General.

Commandants of camps of instruction are required to forward deserters and persons absent without leave to their regiments, and have the powers of arrest conferred upon the enrolling officer.

By command of the Secretary of War.

S. COOPER Adjutant and Inspector General.

Circular to Officers enrolling Conscripts.

ADJUTANT AND INSPECTOR GENERAL'S OFFICE, }
RICHMOND, *July* 14, 1862. }

Agreeably to General Orders No. 49, current series, this day published, you are required to arrest all deserters, and, under certain circumstances, all persons absent from the army without leave.

The public welfare requires you to discharge this duty, and the more important duty of enrolling conscripts, with the utmost activity, and without fear, favor, or affection.

Our capacity to improve the brilliant victories now favoring our arms depends mainly upon your exertions to fill the ranks of our armies.

If you are zealous and active we shall make our enemy taste the bitterness of war; if you are negligent we shall continue to witness its ravages on our own soil.

By command of the Secretary of War.

S. COOPER,
Adjutant and Inspector General.

This circular was issued just before the invasion of Maryland was commenced.

The public press appealed to the citizens in all parts of the South to assist in the apprehension of deserters and stragglers from the army "by giving information to the authorities of the place of refuge of these creatures." They said: "There should be no resting place for the feet of these creatures. Every man and woman in the country is able to do something in pursuing, shaming, and driving back to the ranks those who have deserted their colors and their comrades and turned their backs upon their country's service. Let all ages and sexes in the country assist the Government in reclaiming deserters and stragglers, and in maintaining the integrity of our army. We trust this exhortation will not be lost upon the country. Desertions are reducing our army, defying its discipline, corrupting its spirit and morals, and seriously endangering the fortunes of our cause."

The unrelenting vigor with which this work of conscription was pushed forward was sufficient to bring out the full power of the Confederacy. The defeat of these armies would necessarily have taken away the principal strength of its military resistance.

At the time when the conscript law was passed by the Confederate Congress, another act, to provide for Partisan Rangers, was also adopted. It was as follows:

"*An act to organize bands of Partisan Rangers:*"

SECTION 1. *The Congress of the Confederate States of America do enact,* That the President be and he is hereby authorized to commission such officers as he may deem proper, with authority to form bands of Partisan Rangers, in companies, battalions or regiments, either as infantry or cavalry, the companies, battalions or regiments to be composed, each of such number as the President may approve.

SEC. 2. *Be it further enacted,* That such Partisan Rangers, after being regularly received into the service, shall be entitled to the same pay, rations and quarters, during their term of service, and be subjected to the same regulations as other soldiers.

SEC. 3. *Be it further enacted,* That for any arms and munitions of war captured from the enemy by any body of Partisan Rangers, and delivered to any quartermaster at such place or places as may be designated by a Commanding General, the Rangers shall be paid their full value in such manner as the Secretary of War may prescribe.

Approved April 21, 1862.

Its practical operation is fully set forth in the following correspondence between a member of the Senate from Missouri and the Secretary of War:

SPOTTSWOOD HOTEL, RICHMOND, *July* 15, 1862.

Hon. GEORGE W. RANDOLPH, Secretary of War:

SIR—I respectfully desire to know from you whether the several Partisan Corps of Rangers, now organized or that may be organized in the several States of the Confederacy, are to be regarded as part of the army of the Confederacy, and protected by the Government as such; and whether, if any of said corps are captured in battle, or otherwise while in the line of their duty, by the enemy, this Government will claim for them the same treatment, as prisoners of war, which is now exacted for prisoners belonging to our provisional army.

Are not all Partisan Rangers, organized by your authority, emphatically a part of the Confederate army, and will they not be regarded and treated as such?

I consider that it is not only the right, but the duty of every loyal citizen of the Confederate States, to resist, by all means in his power, even to the death, if necessary, the attempt of the enemy in a body or singly to invade his domicile or to capture his person, or that of his wife, child, ward, or servant, or to take from him against his will any of his property; and if, in making such resistance, whether armed or not, our citizens are captured by such invading enemy, have they not the right to demand to be treated by the enemy as other prisoners of war; and will not this Government exert all its power, if necessary, to the end that its citizens are thus protected and treated?

This is a war waged against the sovereignty of the several States of the Confederacy, and against the lives liberty and property of every citizen yielding allegiance to the States and Government of their choice, in which they reside. Such a war has no parallel in the history of Christian nations.

I respectfully request you to give me your opinions on the several points in this letter, in a form to be submitted to my constituents, to enlighten them in regard to the extent of their rights and powers as viewed by this Government, and how far their Government will protect them in the exercise of those rights, which, to an intelligent freeman, are dearer than life itself. Your early answer is respectfully requested.

With great respect, JOHN B. CLARK.

CONFEDERATE STATES OF AMERICA,
WAR DEPARTMENT, RICHMOND, Va, *July* 16, 1862.

Hon. John B. Clark, Confederate States Senate:

SIR—I have the honor to acknowledge the receipt of your letter of the 15th instant, and to reply, that Partisan Rangers are a part of the provisional army of the Confederate States, subject to all the regulations adopted for its government, and entitled to the same protection as prisoners of war. Partisan Rangers are in no respect different from troops of the line, except that they are not brigaded, and are employed oftener on detached service. They require stricter discipline than other troops to make them efficient, and without discipline they become a terror to their friends and are contemptible in the eyes of the enemy.

With reference to your inquiry as to the protection which the Government will extend to private citizens taken in hostile acts against the enemy, it is not easy to lay down a general rule.

War, as conducted by civilized nations, is usually a contest between the respective governments of the belligerents, and private individuals, remaining quietly at home, are respected in their rights of person and property. In return for this privilege they are expected to take no part in hostilities, unless called on by their government.

If, however, in violation of this usage, private citizens of Missouri should be oppressed and maltreated by the public enemy, they have unquestionably a right to take up arms in their own defence, and if captured and confined by the enemy, under such circumstances, they are entitled, as citizens of the Confederate States, to all the protection which that Government can afford; and among the measures to which it may be useful to resort is that of the *lex talionis.*

We shall deplore the necessity of retaliation, as adding greatly to the miseries of the war, without advancing its objects; and, therefore, we shall act with great circumspection, and only upon facts clearly ascertained. But if it is our only means of compelling the observance of the usages of civilized warfare, we cannot hesitate to resort to it when the proper time arrives. Very respectfully your obedient servant.

GEORGE W. RANDOLPH, Secretary of War.

Notwithstanding these extreme efforts by the Confederate Government to obtain men, such was the power of its adversary, now marshalling nearly six hundred thousand fresh volunteers for the field, and such the reduction of the Confederate forces by desertion, sickness, and losses in battle, that renewed exertions were demanded. The Confederate Congress, therefore, in September, passed another act of conscription, calling out every man between the ages of thirty-five and forty-five, and all youths as soon as they became eighteen years of age. The important part of the act was as follows:

An act to amend an act, entitled "An act to provide further for the public defence," approved April 16, 1862.

The Congress of the Confederate States of America do enact, That the President be, and he is hereby authorized, to call out and place in the military service of the Confederate States, for three years, unless the war shall have been sooner ended, all white men who are residents of the Confederate States, between the ages of thirty-five and forty-five years, at the time the call or calls may be made, and who are not at such time or times legally exempted from military service; or such parts thereof as, in his judgment, may be necessary to the public defence, such call or calls to be made under the provisions and according to the terms of the act to which this is an amendment; and such authority shall exist in the President, during the present war, as to all persons who now are, or may hereafter become, eighteen years of age; and, when once enrolled, all persons between the ages of eighteen and forty-five years shall serve their full time; Provided, That if the President, in calling out troops into the service of the Confederate States, shall first call for only a part of the persons, between the ages hereinbe-

fore stated, he shall call for those between the age of thirty-five, and any other age less than forty-five; Provided, that nothing herein contained shall be understood as repealing or modifying any part of the act to which this is amendatory, except as herein expressly stated; and Provided further, that those called out under this act, and the act to which this is an amendment, shall be first and immediately ordered to fill to their maximum number the companies, battalions, squadrons, and regiments from the respective States at the time the act to further provide for the public defence, approved 16th April, 1862, was passed; and the surplus, if any, shall be assigned to organizations formed from each State since the passage of that act, or placed in new organizations, to be offered by the State having such residue, according to the laws thereof, or disposed of as now provided by law; Provided, that the President is authorized to suspend the execution of this, or the act to which this is an amendment, in any locality where he may find it impracticable to execute the same; and that in such localities, and during such suspension, the President is authorized to receive troops into the Confederate service under any of the acts passed by the Confederate Congress prior to the passage of the act further to provide for the public defence, approved 16th of April, 1862.

On the 8th of October President Davis, in a Message to Congress, relative to incompetent army officers, stated that numerous regiments and companies had been so reduced by the casualties of war, by sickness and other causes, as to be comparatively useless under the existing organization. There were companies in the army in which the number of officers exceeded that of the privates present for duty, and regiments in which the number of such privates did not exceed that which was required for a single effective company.

Such were the measures by which the Confederate Government succeeded in obtaining men for its armies during 1862. It was equally deficient at the beginning of the year, in the munitions of war. When the new levies came forward, at the call of the President at the beginning of the year, the Ordnance Department had not the arms for them. The Government issued a call upon the people for their shot guns as follows:

HEADQUARTERS ORDNANCE DEPARTMENT,
RICHMOND, Va., *March* 28, 1862.

This department is desirous of purchasing arms from those parties having good double barrel shot guns, sporting rifles, or any kind of weapon that will be useful in the field. These arms will be fairly appraised on their delivery in Richmond, and payments will be promptly made. Agents heretofore collecting State arms for this department are requested to collect and forward these private arms as promptly as possible.

O. DIMMOCK, Colonel of Ordnance of Virginia.

Of the fifty-nine regiments of infantry, one regiment of cavalry, and eleven cavalry battalions sent into the field from Tennessee, the Confederate Government had found arms for only fifteen thousand of them, and the remainder were furnished with the shot guns obtained from the citizens.

Official calls were also made by the Government for sulphur, lead, and saltpetre. The advance in the price of the latter article caused the Secretary of War to issue the following order:

CONFEDERATE STATES OF AMERICA,
WAR DEPARTMENT, *February* 4, 1862.

Bands of speculators have combined to monopolize all the saltpetre to be found in the country, and thus force from the Government exorbitant prices for an article indispensable to the national defence. The department has hitherto paid prices equal to four times the usual peace rates, in order to avoid recourse to impressment, if possible. This policy has only served to embolden the speculators to fresh exactions. It is now ordered that all military commanders in the Confederate States impress all saltpetre now or hereafter to be found within their districts, except such as are in the hands of the original manufacturers, or of Government agents and contractors, paying therefore forty cents per pound, and no more. The price fixed is the highest rate at which contracts have been made, and leaves very large profits to the manufacturer.

J. P. BENJAMIN, Secretary of War.

The deficiency of light artillery was so great that the Government issued the following notice:

The Ordnance Bureau of the Confederate States solicits the use of such bells as can be spared during the war, for the purpose of providing light artillery for the public defence. While copper is abundant, the supply of tin is deficient to convert the copper into bronze. Bells contain so much tin that 2,400 lbs. weight of bell metal, mixed with the proper quantity of copper, will suffice for a field battery of six pieces. Those who are willing to devote their bells to this patriotic purpose will receive receipts for them, and the bells will be replaced, if required, at the close of the war, or they will be purchased at fair prices.

Bells may be directed as follows: Richmond Arsenal, Richmond, Va.; Fayetteville Arsenal, Fayetteville, N. C.; Charleston Arsenal, Charleston, S. C.; Augusta Arsenal, Augusta, Ga.; Mount Vernon Arsenal, Mount Vernon, Ala.; Columbus Depot, Columbus, Miss.; Atlanta Depot, Atlanta, Ga.; Savannah Depot, Savannah, Ga.; Knoxville Depot, Knoxville, Ga.; Baton Rouge Arsenal, Baton Rouge, La.; Montgomery Depot, Montgomery, Ala.

The Government will pay all charges to these places, and receipts will be promptly returned to the proper parties.

Persons and congregations placing their bells at the service of the Government, are requested to send a statement of the fact, with a description and weight of the bell, to the Chief of the Bureau of Ordnance, at Richmond, for record in the War Department.

At the same time Gen. Beauregard, in command at the Southwest, issued an appeal to the people to contribute their church bells to be manufactured into cannon. In response to these calls, the stewards of St. Francis street Methodist church, in Mobile, met and voted to send their bell to the Government foundery. The Presbyterian, Methodist, and Episcopal churches in Marietta, Ga., sent forward their bells. The Methodist, Presbyterian, Episcopal, Cumberland Presbyterian, and Baptist churches in Huntsville, Ala., sent forward their bells, weighing 4,259 pounds. These were considered sufficient to make two batteries of six guns each. The church bells of Fredericksburg, weighing in the aggregate 4,500 pounds, were tendered to the Government. The planters of Louisiana sent forward the bells used on their plantations. The public prints contained notes like the following:

MESSRS. EDITORS: I see Gen. Beauregard has called for bells, to be manufactured into cannon. Cannot the

ladies assist by sending all their bell metal—preserving kettles? I send mine as a beginning.

A SOUTHERN WOMAN.

MOBILE, *March* 19, 1862.

MESSRS. EDITORS: I see a call made through your paper for the ladies of Mobile to send their old brass to make cannon for the defence of our beloved city. I, therefore, send you my mite, hoping that, small as it is, it may be of some use. With many prayers for the success of our beloved cause, I remain, yours respectfully.

GENTS: I send you, as a contribution to the Confederacy, the lead weight which was attached to the striking part of my clock, with the hope that every one, not only in our city but in the whole Confederacy, who may have such within their reach, will do likewise.

But there were other and more important sources for the supply of the munitions of war. Arms must be had or the Government would be vanquished. Swift steamers, freighted in England, were sent out to run the blockade, and while many were captured, others succeeded in reaching port. The value of their cargoes, and that of the cotton obtained for the return voyage, was more than sufficient to compensate the owners for the loss of two or three vessels. Munitions of war were also obtained from Mexico, whither they had been sent from Europe, and transported through Texas. Large quantities of small arms, clothing, and army wagons were captured from the United States. Manufactories were also put in operation extensively in the Confederate States, and at the close of the year the Government was better supplied with the munitions of war than at any previous period.

The plan of defensive operations adopted by the Provisional Government at the commencement of the war was from necessity continued. At the beginning of the year the Confederate armies were pushed forward to extreme positions on the territory claimed as a part of the Confederacy. On the North their line extended from Columbus, Kentucky, eastward through Bowling Green, the Cumberland river post, with advances on the Big Sandy and Kanawha rivers, Staunton, Winchester, Leesburg, Centreville, Aquia Creek and the Potomac. The weak points presented by the Tennessee and Cumberland rivers were strongly guarded by Forts Henry and Donelson. This line was on the verge of the Northern States, and any advance from that quarter would soon meet with resistance. It was quietly occupied chiefly by twelve months' volunteers, confident of their ability to maintain their ground and feeling a degree of contemptuous defiance of their adversary. The comparative inactivity of the Federal forces since their defeat from Bull Run had lulled the apprehensions of the Southern people, and even the Confederate Government was reposing under an impression of security. This apparent inactivity of the Federal forces, however, concealed careful and laborious preparations for a most formidable and overwhelming campaign. An expedition had been sent to Port Royal, South Carolina, and another subsequently to North Carolina, not only to serve the purpose of seizing important localities and assisting the blockade, but to divert the attention of the Confederate Government from the magnitude of the armies preparing at Washington, Louisville, and Cairo. The only effect which they produced upon the Confederate Government was to occupy its attention and move it to call for new levies to take the place of the twelve months' volunteers whose terms of enlistments soon expired. In this posture of affairs the Federal army was ordered by the Government to move even in the middle of winter, and while nearly half its gunboats at the West were without men. It swept the Confederate line of defence away from near Cumberland Gap to the Mississippi, which it relieved of blockade above and advanced into Arkansas beyond the river, and it opened the eyes of the Confederate Government to the real dangers of its position. A new line of defence was immediately adopted, intended to command the railroad system of the Southwest. It extended from Memphis on the west through Grand Junction, Corinth and Chattanooga. But the most vigorous and determined efforts, as above stated, were made by the Government to turn the tide of disasters that set in upon it. Circumstances favored its efforts. The Federal army at the West, having pushed into the field in an incomplete condition, was now forced to move slowly in order to secure its effectiveness. Nothing of importance was done by it after the capture of Fort Donelson and the escape of a part of it from destruction at Shiloh, until the end of May, when Corinth was acquired. The eastern portion of the line of defence remained unchanged sometime after it had been lost at the West, and was finally evacuated. The difficulties arising from the weather, the incomplete state of preparations, and the repeated changes in the destination of some of the forces for the campaign so retarded the army of the Potomac that it did not pass Yorktown and Williamsburg and begin to move directly upon the Confederate capital until the middle of May. Even at that period, so incomplete were the preparations of the Confederate Government for the great defence they were required to make, that Richmond was filled with consternation. The state of excitement there is thus described by an officer of the Confederate army: "All who could possibly get away packed up everything they had and fled southward. The nearer the hostile army approached the city the fiercer the tumult and uproar became. The burning waves of popular alarm could not be stayed. The Government itself furthered the confusion. Instead of resolving to triumph or to fall with the army in front of Richmond, it at once ordered all the different bureaux to pack up, and caused the officers of ordnance to empty the magazines and convey their stores further south. Even President Davis took to the road and hastened, with his wife and children,

to North Carolina. As may be readily divined, this loss of presence of mind threw the people at large in the most frantic excess of terror. There was nothing on all sides but shouting and uproar, and confusion reached its utmost height. The secret police of Gen. Winder had lost all control. The civil authorities of Richmond were anxious to do something, but knew not what, and also lost their senses. A small number of the Baltimore rabble took advantage of the hubbub, and, in public meeting, passed resolutions condemning Richmond to conflagration so soon as the Union troops should enter it. Yet all who could escape did so. The sick and the wounded were carried farther into the interior; many public and private buildings were marked out for destruction; and, in short, a frightful catastrophe seemed to be impending over the Southern capital."

This contraction of the line of defence produced a greater concentration of forces and a capacity for more powerful resistance. At the same time the coast line of defence had been abandoned, and with the loss of the harbors of North Carolina and Florida, Fort Pulaski and New Orleans, the forces were withdrawn to interior lines. The first step of the Government under this aspect of affairs was to render Richmond impregnable. The next was to take such measures as would disperse the powerful force threatening it on the Chickahominy. The Federal Government was led to believe by rumors thrown out for the purpose, that the force of Gen. Jackson was designed, after defeating Gen. Banks, to march upon Washington or cross into Maryland, and reënforcements were sent forward to confirm the deception. It was successful. But Gen. Jackson was immediately brought back to cooperate in an attack on the flank and rear of the Federal army on the Chickahominy at the same time that it was assailed in front by Gen. Lee. The plans were successful. The Federal army was forced back upon the James river and finally evacuated the peninsula. The condition was now entirely changed. The Confederate forces were triumphant, while their enemy was everywhere reduced. It was determined to make the latter "taste of the bitterness of war." A Confederate campaign in Maryland and Kentucky was resolved upon, 'to obtain meat and bread and munitions of war." The Confederate States at this time were exhausted, in consequence of supporting not only their own population, but the armies of friend and foe. It was thus argued:

> The great and true source of meat supply is the State of Kentucky. If our armies could push directly forward on that State and occupy it to the banks of the Ohio, the political advantages secured to the South would be of no small account compared with those she would derive in a sumptuary point of view. There are more hogs and cattle in Kentucky available for general consumption, two or three to one, than are now left in all the South besides, and steps ought to be taken by Government to drive these animals, as well as mules and horses, as the armies march forward, and place them within our lines. It is not only positively important to us that these animals should be promptly secured as they fall within our grasp, but it is negatively so also, in depriving the enemy of the convenient supplies of meat for their army which they have derived from Kentucky. In this point of view the campaign in Kentucky becomes doubly important, and assumes an interest as great as that in Maryland.

The capture of the stores at Manassas Junction and Harper's Ferry, and the spoils taken from Kentucky, were of immense service to the cause. The results of the campaign, however, developed to the Government the first fact of the war, which was that it could not carry on an offensive war against the North. Its military plans for the remainder of the year were confined to annoying the enemy, to preserving Richmond from danger, and to keeping up the blockade of the Mississippi by holding the strong positions of Vicksburg and Port Hudson. (*See* ARMY, CONFEDERATE, and ARMY OPERATIONS.)

The civil organization of the Government was as follows:

Secretary of State—J. P. Benjamin, of Louisiana.
Secretary of War—George W. Randolph, of Virginia.
Secretary of the Navy—S. R. Mallory, of Florida.
Secretary of the Treasury—C. G. Memminger, of S. C.
Attorney General—Thomas H. Watts.
Postmaster General—James H. Reagan, of Texas.

In November the Secretary of War resigned, and James A. Seddon, of Virginia, was appointed to his place. He was one of the commissioners sent by the Virginia Legislature to the Peace Conference at Washington in 1861, and had been a Representative to Congress from 1845 to 1847, and from 1849 to 1851.

The finances of the Confederate States have apparently not improved during the past year. The only dependence has been upon issues of paper money, which have followed their natural tendency to depreciation and ultimate worthlessness. It is probable that in the isolated condition of the Confederacy, being cut off from external intercourse, paper may float to better advantage in the currents of internal trade than where similar issues, as at the North, are exposed by commercial transactions to continual contact with the specie currencies of the countries with which commerce is conducted. On the other hand, the Confederate system of finance has lacked the support which, with a powerful navy to keep its commerce open, it might have had from the duties on imports and upon the exports of cotton. Those two items were made a dependence for certain loans early in the war, but they have failed to realize the expectations based upon them. The first loan authorized, that of Feb. 28, 1861, was on a very sound principle, had it been possible to export cotton. The act provided for a loan of $15,000,000, bearing 8 per cent. interest, to be discharged by a duty of about 55 cts. per bale of cotton exported. It was supposed that the product for 1862 would be $2,200,000, which would pay the interest $1,200,000, and $1,000,000 of the principal. This operation, with an increasing crop of cotton, would, it was estimated, discharge the debt in 1870. The debt was contracted, but the duty is not forthcoming. This money was soon ex-

hausted; and the war assuming greater proportions, on the 16th of April, 1861, a law authorized the issue of Treasury notes, bearing $7\frac{3}{10}$ interest, fundable in 8 per cent. Confederate bonds, and payable on demand in currency. In Aug. 1861, the authority was extended to the issue of notes not bearing interest, but fundable in 8 per cent. Confederate bonds. These issues immediately began to affect prices and cause an apparent rise in the value of gold, which indeed immediately disappeared from circulation, being hoarded by those who had the means; and in August, 1861, it was at 12 per cent. premium at Richmond. The downward tendency in the value of the paper produced its usual effects. Money was apparently very plenty, with an evident growing scarcity of capital; and on the 24th of Dec. 1861, Congress authorized the receiving of the paper money on deposit, in exchange for certificates bearing 6 per cent. interest. These certificates were payable on demand at any time in currency. There were thus, at the commencement of 1862, three classes of paper, the $7\frac{3}{10}$ notes fundable in 8 per cent. bonds, the currency notes also fundable, and the call certificates bearing 6 per cent. These all performed more or less the functions of currency. Congress then authorized an issue of $1 and $2 notes, and also a limited amount of two-year notes. The premium on specie had now risen to 50 per cent., and but a small amount of capital had been really subscribed to the loans of the Government. Indeed it was not to be expected, inasmuch as that the mass of Southern capital was locked up by the war. The great staples of cotton, rice, tobacco, naval stores, lumber, corn, &c., which are exported in usual years, remained on hand in useless accumulation. The owners would subscribe to the Government wants if they could sell their produce. The subscriptions to this loan were very ample, but when the time came to realize they were found very difficult to be turned into money. On April 21st, 1862, an act was passed by the Permanent Government, which provided that the Government should take the products of the field and issue 8 per cent. bonds to the owners, under the following form of agreement:

In consideration of ——— dollars, paid me in bonds of the Confederate States, I ———, of the county and State aforesaid, have sold to the Confederate States of America, —— bales of cotton, marked and numbered as in the margin, now deposited at —— (naming location of plantation), and I hereby agree to take good care of the said cotton while on my plantation, and to deliver the same, at my own expense, at —— (naming the usual shipping point), in the State of ——, to the order of the Secretary of the Treasury, or his agents, or his or their assigns.

The agreement must be endorsed by an agent, who certifies to the quality, quantity, weight, condition, and market value of the cotton; that it is under secure cover, and has been marked with the name of the planter and the initials of the Confederate States.

The bonds of the Confederate States draw interest at 8 per cent., payable semi-annually by the Treasury agent in each State, which is secured by the war tax or an export duty on cotton. The purchases thus made, together with the collections on the loan, at the close of the year, amounted to nearly $13,000,000, and, it is reported, were negotiated. The total amount of subscriptions to the loan, valued in money, was about twenty-five millions of dollars, of which $7,631,044 were collected at an expense of one third of one per cent. The purchases of cotton thus far reported by the agents amount to 69,507 bales, costing $4,474,400. The purchases a few months later probably reached 250,000 bales. In order to dispose of the cotton, two forms of certificates were devised. By one the various parcels of cotton were registered and disposed of. By the other the Government obligated itself to deliver certain quantities at certain points at a fixed price. By the advice of ministers abroad some of the latter certificates, covering about 30,000 bales of cotton, have been placed as an experiment in the foreign market.

Congress, on the 12th of April, 1862, authorized a loan at 8 per cent., payable in from 10 to 30 years, but no bonds were issued under the act. The $100,000,000 loan, into which notes are fundable, is also an 8 per cent. loan, and is made payable in instalments, which fall due every six months in eighteen years, from the 1st of January, 1864. The first instalment of the prinpal of $1,288,700 is payable 1st of January, 1864; the second, of $1,340,200, is payable 1st of July, 1864.

The expenditures of the Government continued to be met in paper money, and according to the official report made to Congress on August 1, 1862, the revenue and expenditures up to that date had been as follows since the commencement of the war:

Expenditures—War department		$298,376,549 41
Navy department		14,605,777 86
Civil and miscellaneous		15,766,503 43
Total		$328,748,830 70
Outstanding requisitions		18,524,128 15
Total expenditure, February, 1861, to August, 1862		$347,272,958 85
Total receipts, Feb. 1861, to August, 1862		302,482,096 60
Deficient Treasury notes authorized	$16,755,165 00	
Do. to be provided	28,035,697 25	$44,790,862 25

The receipts were derived as follows:

Customs	$1,437,399 96	
War tax	10,539,910 70	
Miscellaneous	1,974,769 33	$13,952,079 99
Loans—Bonds, February, '61, 8 per cent.	$15,000,000 00	
Bonds, August, '61, 8 per ct.	22,613,346 61	
Call certificates, Dec. 1861, 6 per cent.	37,515,200 00	
Treasury notes, April, 1861, $7\frac{3}{10}$ per cent.	22,799,900 00	
Demand notes, August, '61, no interest	187,130,670 00	
$1 and $2 notes	846,900 00	
Due banks	2,625,000 00	288,531,016 61
Total receipts		$302,483,096 60

The customs collected were mostly before the

blockade became very rigid. The war tax was paid in by the several States about as follows:

North Carolina	$1,400,000 00
Virginia	2,125,000 00
Louisiana	2,500,000 00
Alabama	2,000,000 00
Georgia	434,126 12
Florida	225,374 11
Mississippi	1,484,467 67
Total	$10,168,967 90

The State of Georgia has substantially paid in the balance due by her, and the State of South Carolina paid the whole amount due by her into the Treasury, in the form of 6 per cent. call certificates. The States of Alabama and Louisiana paid their taxes in advance.

Thus the whole amount of funded debt at that date was a little over 37 millions. The balance was mostly due on demand serving for money, and authority then existed to issue 20 millions more paper under the law. Under this operation the depreciation of the currency was further marked by the prices of commodities. Some of the quotations were in Richmond as follows: gold 140 per cent., equal to 42 cents per dollar for paper. Flour was $14.50 in paper, or $6 in specie; corn $2 in paper, or 80 cents in specie; wheat $3.30 in paper, or $1.30 specie; rye $2.50 in paper, or $1 specie; butter $1 in paper, or 42 cents specie; wool $1 in paper, or 42 cents specie; coffee (Rio) $2 paper, or 84 cents specie; brown sugar was 65 cents paper, or 26 cents specie. For those articles like flour and grain, of which the South is usually an exporter, the prices were not higher than at the North, measured in specie; but for those of which she is usually an importer the dearth of supply was greatly aggravated by the depreciation of paper. Nevertheless prices were very unequal even in home produce. Thus while flour was $14.50 in Virginia, it was $30 in Georgia. At the same time shirtings and sheetings were selling at 60 cents, equal to 24 cents in specie, or not more than the price in New York at that time. One cause of the higher price of flour in North Carolina and Georgia was the fact that the millers had depended on Virginia wheat, and the Government of that State prohibited its export, and the usual transfer of flour was checked. Salt, on the other hand, was at 26 cents paper, 10 cents specie. The occupation of the Kanawha by the forces under Gen. Loring, produced in October great activity to obtain supplies of salt sufficient for all the purposes of preserving the fall meats, from the Kanawha salines. These works, in the immediate neighborhood of Charleston, the county seat of Kanawha, produce annually an immense quantity of salt, and many hundred thousands of bushels were on hand at the time of the evacuation of Charleston by the Union troops. Long trains of wagons started for the salines from points as far distant as Staunton and Buchanan, and at one time three hundred wagons were awaiting at Gauley Ferry their turn to cross the river. When the Confederates first entered Charleston the salt was offered for thirty-five cents the bushel; but under the stimulus of the rapid demand for the article from abroad, it very speedily rose to one dollar a bushel. A great demand also sprung up for the Louisiana rock salt.

These prices give some idea of the utter derangement of the currency under the continued issues of paper for which there seemed to be no remedy. Since August 1, the appropriations outstanding and estimates for expenses for 5 months up to Jan. 1, 1863, reached $209,550,487. To supply this amount there was no resource but the issue of paper money, which might be changed by the holders into 7 3/10 bonds, receivable for dues, 6 per cent. certificates, payable on demand in currency, or 8 per cent. bonds, redeemable in from 10 to 30years. The privilege of funding in the 8 per cent. bonds was to cease April 22, 1863, in order to hurry the conversion. After that date the holder would only get 7 per cent. bonds.

The following official notices indicate the uses of the several classes of paper:

TREASURY DEPARTMENT, RICHMOND, *Aug.* 1, 1862.

JOHN BOSTON, Esq., Depositary, Savannah.

SIR: In answer to the inquiries of the 25th ult. you can say:

1. That the 7.30 interest notes will at any time be accepted in exchange for eight per cent. Confederate bonds, or for any debt due the Government, and that interest will be allowed as well as principal.

2. That I shall recommend that Congress pay annually the interest due on these notes to the respective holders thereof on the 1st of January.

3. That the six per cent. call certificates cannot be issued for these interest bearing notes, because such certificates are payable on demand in general Treasury notes of every denomination.

4. The 7.30 notes may be issued in exchange for the six per cent. call certificates. Such exchange effects directly what the holder of the certificates may do indirectly by calling for payment of his certificate in current notes, and then exchanging them for interest notes.

5. The purpose intended by the issue of interest bearing notes is to take them out of the general circulation. This is effected by the fact that a circulation of interest takes place at every transfer. It is not expected, therefore, that they will pass into the general deposits or circulation of the banks. In passing them from hand to hand, the interest grows each day by an easy calculation of two cents on each hundred dollar note, until the end of the year, when the interest will be paid up, if Congress shall accept my recommendation. With much respect,

C. G. MEMMINGER, Secretary of Treasury.

TREASURY DEPARTMENT, C. S. A., RICHMOND, *Nov.* 6, 1862.

DEAR SIR: Your letter of the 3d instant inquires whether "deposits made under the call loan can be funded on or before next April in the eight per cent. bonds." The conclusion of the department is, that the certificates of deposits issued under the six per cent. call loan entitle the holders to the same rights which they would have if they held the notes which had been deposited. It follows that certificates issued in exchange for the present issues of Treasury notes can be funded in eight per cent. bonds at any time on or before the 22d of April next, and up to that date this privilege will be the same, whether the certificates are issued before or after the 1st day of December next. Certificates which shall be taken for the deposit of new Treasury notes, to be issued after the first of December

next, will be fundable only in seven per cent. bonds.
Respectfully,
C. G. MEMMINGER, Secretary of Treasury.

All these operations continued down to the close of the year, and the result was the following amount of debt, Jan. 1, 1863:

CONFEDERATE DEBT.

CLASS.	August 1, 1862.	Dec. 31, 1862.	Increase.
Bonds	$41.577.240	$88,886,400	$47,309,160
Call certificates	32,784,400	66,488,970	33,704,570
Interest notes	22,799,900	121,472,000	98,672,100
Currency	183,244,135	289,157 692	105,913,557
Total debt	$280,405,675	$566,005,062	$285,599,377

Thus the debt apparently increased more in the last five months than in the previous sixteen months of the war. One cause was the rise in prices, which reacted upon the Government, requiring more money for the same purpose. This increase is however less than it appears; since, of the interest Treasury notes, $11,004,-600 were still on hand. Also of the 8 per cent. bonds $8,000,000 were on hand. Of the real increase of these bonds outstanding, $7,-000,000 were derived from the produce loan, and $17,422,250 from funded notes. There was a large increase of interest bearing Treasury notes; and this increase added to the amount of bonds funded, makes nearly 20½ millions per month derived from that source. There remained, however, $290,149,692 paper money outstanding at the close of the year, and the estimates required the sum of $357,929,229 to carry on the Government to July, 1863. The disasters that must flow from a further issue of paper to that amount induced many of the States of the Confederacy to guarantee a war debt of the Confederate Government. The Secretary of the Treasury therefore proposed that; 1st, all the paper money issued prior to Dec. 1 should cease to be currency on the 1st of July, 1863, up to which time it may be funded in bonds; 2d, to impose a war tax on property that should yield $48,000,000 per annum to meet the whole interest on the public debt; 3d, that the States' guarantee should be accepted for $500,000,000, to be issued in a 6 per cent. stock.

The interest on the bonds being payable in paper suffers virtual decline through the rise in the prices of commodities. It was argued, therefore, that although by requiring the funding of the notes, the price of the bonds would decline in the market, their value to the holders would rise by reason of the better currency in which they get their interest. By the same means the expenses of the Government would be reduced, and the ultimate aggregate of the debt be decreased. The war tax proposed upon property, it was estimated, would give $35,000,-000, and an income tax of $28,000,000 would give 63 millions, or 60 millions net, which would leave 12 millions to apply to so much of the principal of the debt annually.

The report of the Secretary of the Treasury, for the close of the year, gave the revenue and expenditure from the 18th of February, 1862, when the Provisional Government terminated, to Dec. 31, 1862, being almost 10½ months. The results were as follows:

Customs	$668,556	
War tax	16,664,518	
Miscellaneous	6,171,583	$23,504,657
Bonds, 8 per cent.	$41,398,286	
Call certificates, 6 per cent.	59,742,796	
Treasury notes, 7 3/10 per cent.	113,740,000	
Loans, February, 1861, 8 per cent.	1,375,276	
Coin from Bank of Louisiana	2,530,799	
Currency	215,554,885	434,342,042
Total		$457,846,699
Expenses	$375,244,413	
Public debt paid	41,727 322	416,971,735
Balance		$40,874,964

The war tax collected was large, but included a tax upon State bonds. In relation to which the Secretary remarks: "The very large amount of money invested in this form was included in the war tax of the last year, and the tax thereon was paid everywhere, except by those who raised the question in South Carolina. For the ensuing year the case would be different. If the same tax were laid by Congress, it is probable that the holders of State bonds would claim exemption under this decision, and Congress itself might be unwilling to reënact, in the same form, a law which had been declared unconstitutional by the coördinate branch of the Government, until that decision is reversed. The question is of such magnitude, and involves such great interests, that an appeal was taken. But this appeal cannot be decided until a Supreme Court shall be organized."

When the advance of the Federal armies into the Confederate States, both at the West and on the coast, commenced, the citizens were urged to burn all the cotton and tobacco. In Richmond, on the 26th of February, a convention of Representatives from a number of the States was held. Its object was thus stated by the chairman: "As cotton was king and tobacco vice-regal, it was proposed to ascertain how far they could be made to subserve the cause of independence." Several propositions were made, viz., "that the crops should be voluntarily destroyed,—that the Government should purchase them and then destroy them if necessary." The result of all the proceedings on the subject was the passage of a law by Congress ordering all cotton to be destroyed "when it was about to fall into the hands of the enemy." The amount of cotton raised during the year was about one fourth of that of the previous year. More land was devoted to raising crops of grain, and the demands of the war reduced the number of cultivators. The British consul at Savannah returned to the Foreign Office the following estimate of the stock on hand at the close of the year:

According to reports made to the Comptroller General of this State by the tax collectors, the amount of land planted in cotton this year in Georgia is about 260,000 acres, yielding in round numbers 60,000 bales of cotton of 500 pounds each; ordinarily the production is 700,000 bales, requiring an area of about 3,000,000

acres. I am, of course, unable to report as accurately respecting the crops of other States, but the best information at my command strongly induces the belief that the entire crop gathered this year did not exceed 1,000,000 bales, proving the correctness of the approximate estimate transmitted to your lordship in my despatch, No. 16, of the 10th of May last.

The crop of 1861 was estimated at 4,500,000 bales. Deducting from the crops of 1861 and 1862 the quantity of cotton which has run the blockade, the amount destroyed to prevent capture by the Federalists, and the quantity used for home consumption, which, since the commencement of the war, has enormously increased, being now fully 500,000 bales per annum, it will leave in the South not more than 3,500,000 bales. The urgent necessity for the cultivation of breadstuffs since the Federal occupation of Kentucky and the best grain growing regions of Virginia, Tennessee and North Carolina, and the consequent strong popular opposition to the planting of cotton, together with other causes of hardly less importance, such as the entire want of bagging and rope necessary to put the cotton into merchantable condition, will tend hereafter to prevent any increase in the stock, possibly to diminish it; while, should the Federals succeed in making farther advances into the interior of the cotton growing States, the cultivation of that plant will be entirely abandoned, and the negroes removed to the mountainous districts, where breadstuffs alone can be raised. E. MOLYNEUX.

The manufacturing industry of these States became more extensive than ever before, and in some branches more highly developed. The necessities of the Government and people, and the advancing prices, furnished a most powerful stimulant. Munitions of war and manufactures of cotton constituted the most important branches of this industry.

The high postage imposed by the Government greatly reduced the correspondence of the people, who were forbidden to transmit letters in any other manner than through the mails. The advance in the rates was made in order to enable the department to defray its expenses with its receipts. The effect, however, was to reduce the receipts and increase the demands of the department. The Government now had the choice either to reduce the amount of mail service exacted of the department, or to contribute to its expenses from the treasury. The President doubted the constitutionality of the latter measure and referred the subject to Congress. The Constitution says:

> Congress shall have power to "establish post offices and post routes; but the expenses of the Post Office Department, after the 1st day of March, in the year of our Lord eighteenth hundred and sixty-three, shall be paid out of its own revenues."

Congress took into consideration the meaning of the word "expenses," and thus avoiding the constitutional question, recommended a loan to the department, for payment of the interest and principal of which its revenues should be pledged. The postage stamps were imported from England; so stringent was the blockade that some of the colors required in their manufacture could not be obtained within the Confederacy.

Martial law was proclaimed at Richmond, Norfolk, and other places during the year. This was done by proclamations of the President, of which the following is the form stating that it is done by the authority of Congress:

> By virtue of the power vested in me by law to declare the suspension of the privilege of the writ of *habeas corpus* in cities threatened with invasion, I, Jefferson Davis, President of the Confederate States of America, do proclaim that martial law is hereby extended over the City of Richmond and the adjoining and surrounding country to the distance of ten miles, and I do proclaim the suspension of all civil jurisdiction, with the exception of that of the Mayor of the City, and the suspension of the privilege of the writ of *habeas corpus* within the said city and surrounding country to the distance aforesaid.

The subject of conciliating the northwestern States by the free navigation of the Mississippi river and the opening of the markets of the South to the inhabitants of those States upon certain terms and conditions, was the first proposition suggested toward a settlement of the difficulties. This was considered in Congress. (*See* CONGRESS, CONFEDERATE.)

The relations of the Confederate States to foreign nations during the year are seen from the speeches and letters of their agents. Mr. Yancey, on his arrival at New Orleans on the 17th of March, made an address to the citizens, which is thus stated:

> He remarked, on rising, that it was within ten days of a year since he left the country as the representative of the Confederate States to endeavor to procure the recognition of that independence for which his countrymen were gallantly contending. He should undoubtedly surprise his auditors when he told them that they had no friends in Europe; that they must depend for the accomplishment of the end for which they are striving upon themselves alone. And what he said of European feeling with regard to this Confederacy was equally true of its feeling toward the North, whose people, whose Government, and whose press, the statements and writings of whose public men and literary writers they believed to be altogether mendacious. The sentiment of Europe was anti-slavery, and that portion of public opinion which formed and was represented by the Government of England was abolition.
>
> At the same time it is very well understood and believed that the pretexts upon which this war was inaugurated and is carried on against us were utterly false. They would never recognize our independence until our conquering swords hung dripping over the prostrate heads of the North. Their opinion of the character of the people of these States, and of the cause in which we are engaged, was derived altogether from Northern sources. They never see the journals and the periodicals of the South, and all the accounts with regard to us come to them filtered through those of the North. They believed that we are a brave and determined people, and that we are resolved upon obtaining our independence by the most unyielding devotion to the cause in which we are contending. But they would like to see the two Confederacies crippled by the war, and so would give aid to neither. He alluded to the erroneous and hostile opinions entertained in England with regard to the people of these States, which had been sedulously inculcated by the North, by whom we were habitually represented as cruel, lawless, and oppressive; that the owner had the liberty to treat his slaves without reference to the laws of society or nature, and that the slaves were bred as the English breed their Durham cattle, &c.
>
> As to the blockade, he said that the nations of Europe would never raise it until it suited their interest. In his own private opinion, he believed that that necessity would occur by a very early day. He said

it was an error to say that "Cotton is king." It is not. It is a great and influential power in commerce, but not its dictator. He alluded to the dependence which British statesmen placed upon the probability of obtaining cotton from other sources than America, and showed that this, to any practical extent or purpose, was impossible, and that the idea was a fallacy. He thought, he said, that the blockade was a blessing to the Confederate States, for it was teaching—nay, compelling—us to depend upon ourselves and to do that for ourselves for which we have hitherto been depending upon others, and they our deadliest foes.

He then counselled a firm, united, and generous support of the Government which has just been inaugurated. The chosen and the choosers were both in the same boat. The storm was raging, the wind was howling, and the waves were beating upon our bark. We had placed them at the helm. They might commit errors, but all history teaches that when there is mutiny in the crew the bark must go down. He concluded by expressing the strongest confidence in the final success of the cause in which we are engaged, and at the close was greeted with the most enthusiastic cheers.

At this period of the year Mr. Mason was in London, Mr. Slidell in Paris, Mr. Rost in Spain, and Mr. Mann in Belgium, as representatives of the Confederate States. They continued to occupy these positions during the year, but were unsuccessful in obtaining a recognition of the Confederacy, or the adoption of any act which might change the existing relations.

The position of the Confederate Government at the close of the year was in some respects much stronger than at its commencement. The population of the States was brought to a more united action to sustain the cause. The determination manifested by the authorities of the States to sustain the Government, without agitating any vexatious questions as to the constitutionality of its measures, destroyed all opportunities for dissatisfied citizens to organize opposition. The declaration of the Federal Government that slavery was the cause of the war and that, to put an end to it, the cause must be utterly removed, placed the two Governments on the most extreme grounds of disagreement. President Davis appealed to the people in his Message to resist unitedly this attempt to destroy their domestic institutions, and reminded them that the declarations of the States as to the cause of secession were now shown to be true by the acts of their enemies. The measures of the Federal Government were thus used to produce union and determination of purpose in the Southern mind to continue the struggle to the very last extremity. The address of Vice-President Stephens to the citizens of Crawfordsville, Ga., in Nov. 1862, presents an instance of the manner in which appeals were then made to the people:

> If asked on our side, what is all this for? the reply from every breast is, that it is for home, for firesides, for our altars, for our birthrights, for property, for honor, for life—in a word, for everything for which freemen should live, and for which all deserving to be freemen should be willing, if need be, to die. In whatever trials and sacrifices this war may bring upon us, when the thought of "what is all this for," comes to the mind, recollect that it is, on our part, for everything most dear and sacred, and whatever reverses may await us in a struggle for such objects, let the watchword of the last survivors be, "Never give it up." Let the world know, and history record the fact if such should be our unhappy fate, that though our country may be invaded, our land laid waste, our cities sacked, our property destroyed, the people of the South could die in defence of their rights, but they could never be conquered.

Exhaustion, however, was gradually doing its work. The territory of the Confederate States was constantly growing smaller by the occupation of their enemies, who never gave up an important place, where they once got a foothold. The number of able-bodied men was becoming fatally reduced, and when the conscription acts were exhausted, none would be found for recruits but old men and boys. The depreciation of the currency was approaching that verge beyond which it would be worthless. Well could the Vice-President exclaim, with the indomitable heroism of the Red Man at the stake, "Let the watchword of the last survivors be, Never give it up."

CONGREGATIONALISTS. During the year 1862, the number of Congregationalists in the United States has remained nearly stationary. The "Congregational Quarterly," which gives every year in its January number a very careful compilation of the statistics of the denomination, reported for January, 1862, a membership of 259,119, and for January, 1863, 261,474; increase during the year 2,355. The number of churches, in January, 1863, was 2,884; of ministers 2,643 (of whom 904 are pastors, 861 stated supplies, 215 not specified, and 663 not in service). Sabbath school scholars, 255,257.

The Congregationalist denomination in the United States is almost entirely confined to the Free States. Not one State association has yet been organized in any of the slaveholding States. A few churches, however, have been organized in Missouri, and a solitary church existed in Charleston, South Carolina. The church edifice of the Charleston congregation (the Circular Church) was destroyed by fire in the great conflagration at the close of 1861. Its pastor, Mr. Rice, was formerly settled in Connecticut, and at the time of the secession of the State was still a member of the Suffolk (Mass.) South Association. The great majority of the Congregational churches entertain the most thorough antislavery principles, and at the meetings of their State Associations strong resolutions were passed in favor of the emancipation measures of President Lincoln, declaring slavery to be the chief cause of the secession, and expressing the hope that the war would result in its extermination.

The Congregationalists of the United States, although far from being one of the most numerous American denominations, exceed most of the other denominations in ably conducted and influential theological periodicals. The "Independent," of New York, has the largest circulation of any religious newspaper of the world, while among the theological reviews the "Bibliotheca Sacra" and the "New Englander"

occupy a prominent place. During the year 1862, however, the Congregational press has been reduced—not less than four papers (the Lewiston "Maine Evangelist," Concord, N. H., "Congregational Journal," Chicago "Congregational Herald," and Oberlin, O., "Evangelist") having been suspended. There remained at the beginning of the year 1863, six weeklies, among which, next to the "Independent," the "Congregationalist," of Boston, had the largest circulation, four monthlies, and three quarterlies. In California the Congregationalists are united with the Old and New School Presbyterians in the issue of a weekly paper.

In Great Britain, the "Congregational Year-Book" for 1860, reports 1,840 churches in England, 719 in Wales, 101 in Scotland, 27 in Ireland; total in Great Britain 2,678. Of these not more than 759 made a report of their membership. The aggregate amounted to 96,754, being an average of more than 127 members to each church. The number of churches in the British colonies, in 1862, was as follows: The Canadas 87, other British North American provinces 16, British Columbia 1, Australasia 125, South Africa 9, Demerara 3—total 241. In connection with the London Missionary Society, which is chiefly under the control of the Congregationalists, there were 203 churches. The grand total of all the Congregational churches in the British dominions, in 1862, was 3,131. This number does not, however, include the village chapels, out stations, school houses, and other places in connection with the churches. The number of these is not reported, but is estimated at twice the number of the churches themselves, reaching a total of at least 10,000 places where the preaching is supplied by Congregationalist ministers and helpers.

The Congregationalists of England, in union with the other dissenting denominations, celebrated in 1862, with great solemnity, the bicentenary of the ejectment of the two thousand non-conforming ministers from the English State Church in 1662. Two separate societies were formed with a view to encourage and direct the movements of the year—the "Bicentenary Committee," in connection with the Congregational Union, and the "United Bartholomew Committee," composed of persons of different denominations. The Bicentenary Committee of the Congregational Union collected a Memorial Fund, with a view to extend and perpetuate the remembrance of the day. This fund, of some £120,000 or more, has been raised for various objects, as the erection of chapels and schools, the liquidation of debts on chapels, the augmentation of the various funds connected with the Pastors' Retiring Fund, the British Missions, and the erection of a Memorial Hall.

The London Missionary Society had for the year 1861–'2, inclusive of some special contributions for India, China, etc., an income of £79,576. In connection with it were 170 European missionaries, 40 missionary students, 800 native agents, catechists, etc., 203 churches, 23,192 communicants, 715 schools, 36,361 scholars. This summary does not include the native Christians of Madagascar, among whom the veteran missionary Ellis, together with other missionaries of the London Society, resumed during the past year their labors.

In France, the Evangelican Church of Lyons, which sustains six places of worship in the city of Lyons, and two in the country, is a Congregational body. Several other Congregational churches are united with Free Presbyterian churches into the "Union of Evangelical Churches in France," which was formed in 1849, and had in 1862 about 30 places of worship, and 2,000 members. In Italy, the Free Evangelical churches hold independent principles. In Switzerland, the Free churches of Vaud, now 42 in number, are Congregationalist; and small Independent churches have also been formed in twelve places in other cantons.

CONGRESS, CONFEDERATE. The sessions of the Provisional Congress, which commenced on the 18th of November, 1861, were continued until the 15th of February, 1862, when its term of existence expired. These sessions were almost entirely held in secret, and no reports have been made public. It was a body elected by the State Conventions and Legislatures, and more truly and unanimously a representative of them than of the people. It was created for the great purpose of combining the States which had resolved to withdraw from the Federal Union, and to prepare the way for the organization of a separate and independent Government. These duties were boldly and resolutely performed.

On the 18th of February the Government commenced its existence under the "Permanent Constitution." On that day at noon the Confederate Congress assembled at Richmond, and the Vice-President elect, Alexander H. Stephens, of Georgia, took the chair in the Senate, and under the authority of the Constitution formally opened the session of that body. He caused to be read the last clause of the Constitution and the act of the Provisional Congress putting in operation the permanent Government of the Confederate States, and the act supplemental to the same. All the slave-holding States were represented, except Delaware and Maryland.*

* The following is a list of the members of both houses:

SENATE.

Alabama.—Clement C. Clay, Wm. L. Yancey.
Florida.—J. M. Baker, A. E. Maxwell.
Kentucky.—Wm. E. Simms, H. C. Burnett.
Mississippi.—James Phelan, Albert G. Brown.
North Carolina.—George Davis, Wm. S. Dortch.
Tennessee.—Gustavus O. Henry, Landon C. Haynes.
Arkansas.—Robert W. Johnson, C. B. Mitchell.
Georgia.—John W. Lewis, B. H. Hill.
Louisiana.—Thos. J. Semmes, Edward Sparrow.
Missouri.—John B. Clark, Robert L. Y. Peyton.
South Carolina.—Robert W. Barnwell, James L. Orr.
Texas.—Lewis T. Wigfall, Wm. S. Oldham.
Virginia.—Wm. B. Preston, R. M. T. Hunter.

Nineteen Senators being present, the oath to support the Constitution was then administered. R. M. T. Hunter, of Virginia, was chosen president *pro tem.* and the Vice-President retired. James H. Nash, of South Carolina, was chosen secretary, and James Page, of North Carolina, doorkeeper.

The House of Representatives assembled at the same hour, and were called to order by Howell Cobb, president of the late Provisional Congress. The act of that Congress was then read, whereby it was made his duty to preside at the organization of the House of Representatives of the Permanent Congress. A quorum being present, the following oath was administered to the members by States: "You, and each of you, do solemnly swear, that you will support the Constitution of the Confederate States of America. So help you God." Mr. Thomas S. Bocock, of Virginia, being the only person nominated, was then elected Speaker. He was the candidate for the same position at the first session of the Thirty-sixth Federal Congress. Mr. Bocock, on taking the chair, addressed the House as follows:

GENTLEMEN OF THE HOUSE OF REPRESENTATIVES: I return to you my sincere thanks for the honor you have done me in selecting me to preside over your deliberations during this the first Congress under our permanent constitution. And I desire to say that it will be my one great aim, in discharging the duties of this office, so to conduct myself as to show to you and to the world that your confidence has not been altogether misapplied. I may be permitted to say that I have a firm determination, so far as I may be able, to maintain the dignity and preserve the decorum of this body; to administer its rules with firmness and courtesy, and to conduct its business with the strictest impartiality. If such a determination, united with a sincere desire to see our legislation take such shape as will best tend to secure the independence, maintain the honor, and advance the welfare of this entire Confederacy—if this could command success—I am sure I might expect to succeed. But other qualifications are requisite, about which it is not for me to promise. If in anything I may fall short, I trust that the same kind partiality which has called me to this position will throw the mantle of charity over my defects, and will give me, in every time of trial, that kind coöperation and generous support which my deficiencies may require. The unanimity with which you have made this election is a happy augury of the spirit with which your proceedings will be governed. This is no time for resentments, no time for jealousies or heartburnings. Influenced by a great common purpose, sharing together the same rich hope, and united by a common destiny, let us hush every murmur of discontent, and banish every feeling of personal grief. Here let us know no man save as a co-laborer in the same great cause, sustaining those whom circumstances may designate to go forward; seeking nothing for the sake merely of personal gratification, but willing rather to yield everything for the public good—"in honor preferring one another." That some of you, influenced by momentary impulse, should grow restive under the enforcement of those rules which you may make for your own government would be a matter neither of surprise nor of complaint. But he will prove himself either a weak or a bad man who, on reflection, fails to call back his wayward spirit, and subject it to necessary restraint. Submission to constituted authority is the primary necessity in all communities, and self-control is the chief lesson of individual life. In the light of passing events we can measure the height and the depth of the excellence intended to be conveyed, when it is said, "Better is he who ruleth his own spirit than he who taketh a city." The gaze of the world is fixed upon us. Nations look on, curious to see how this new system of government will move off, and what manner of men have been chosen to guide its earliest movements. It is, indeed, a new system; for though coinciding in many particulars with that under which we lived so long, it yet differs from it in many essential particulars. When the Constitution of 1787 was put in operation the War of the Revolution had been successfully closed. Peace prevailed throughout the whole land, and hallowed all its borders. The industrial operations of the country, long held back, now bounded forward and expanded with all the vigor and rankness of tropical vegetation beneath the influence of a midsummer sun. The trial which that constitution had to encounter in its earliest, as well as in its more matured existence, was simply one engendered by a conflict of these interests. The question was whether it could give protection to all these interests without becoming the partisan of one and the oppressor of another; or, in fact, whether it had the sustaining power to preserve its integrity against the influence of interest wielded by ambition. We have seen the result. The case with our constitution is very different. It is put into operation in time of war, and its first movements are disturbed by the shock of battle. Its trial is one created by the urgencies of this contest. The question to be decided is, whether, without injury to its own integrity, it can supply the machinery and afford the means requisite to conduct this war to that successful conclusion which the people, in their heart of hearts, have resolved on, and which, I trust, has been decreed in that higher court, from whose decisions there is no appeal. The solution of this question is in the bosom of the future. But our system can never perish out like that to which I have alluded. When ambition and interest seized upon that, and destroyed its integrity, they were not allowed to appropriate the rule altogether to themselves. Fanaticism

---

HOUSE OF REPRESENTATIVES.

Alabama.—E. L. Dargan, W. P. Chilton, James E. Pugh, Jabez M. L. Curry, Wm. R. Smith, John P. Rawles, Thomas J. Foster, David Clopton, L. F. Lyon.

Arkansas.—Felix J. Batson, G. D. Royster, A. H. Garland, T. B. Hanley.

Florida.—James B. Dorkins, R. B. Hilton.

North Carolina.—Wm. H. N. Smith, Robert Bridges, Owen R. Keenan, J. G. McDowell, Thos. S. Ashe, Archibald Arrington, Robert McLean, William Lander, R. C. Gaither, A. S. Davidson.

South Carolina.—Wm. W. Boyce, Wm. P. Miles, M. L. Bonham, John McQueen, L. M. Adger, James Farran.

Georgia.—A. H. Keenan, Hines Holt, A. R. Wright, Julien Hartridge, L. J. Gartrell, Wm. W. Clark, Robert P. Trippe, D. W. Lewis, J. C. Monnalym, Hardy Strickland.

Kentucky.—Willis B. Machen, John W. Crockett, H. E. Read, Geo. W. Ewing, Jas. S. Crisman, Geo. P. Hodges, H. W. Bruce, S. S. Scott, E. M. Bruce, R. J. Breckinridge, Jr., John M. Elliott.

Louisiana.—Duncan F. Kenner, Charles Villiers, John Perkins, Jr., Charles M. Conrad, Henry Marshall, Lucien Dupose.

Mississippi.—John J. McRae, J. W. Clapp, Reuben Davis, Israel Welsh, H. C. Chambers, Otho R. Singleton, E. Barksdale.

*Missouri.**—Wm. H. Cooke, Thomas A. Harris, Casper W. Bell, A. H. Conrow, George G. Vest, Thomas W. Freeman, Samuel Hyer.†

Tennessee.—A. G. Watkins, D. M. Currin, J. D. C. Atkins, H. E. Foster, Thomas Menees, George W. Jones, Meredith P. Gentry, William G. Swann, W. H. Tibbs, N. S. Gardner, I. T. Heiskell.

Texas.—John A. Wilcox, P. W. Gregg, C. C. Herbert, W. B. Wright, M. P. Graham, S. B. F. Sexton.

Virginia.—John R. Chambliss, M. R. H. Garnett, James Lyons, —— Collier, Thomas S. Bocock, John Goode, Jr., James P. Holcomb, D. C. Dejarnette, William Smith, A. R. Boteler, John B. Baldwin, Waller R. Staples, Walter Preston, Vacancy vice A. G. Jenkins, Robert Johnson, Charles W. Russell.

---

* Missouri, under the apportionment, is entitled to thirteen members. The State has not been districted, and the above members—to the Provisional Congress—hold over.

† Taken the oath of allegiance to the United States, and not present.

came forward and demanded to be received as a participant of power with them, and it claimed not in vain. Beneath the sway of this unholy triumvirate justice was forgotten, intolerance was established, private morals were ruined, and public virtue perished. All feeling of constitutional restraint passed away, and all sense of the obligation of an oath was forever lost. The whole machinery of government degenerated into the absolute rule of a corrupt numerical majority. Already the weaker section was marked out for destruction by the stronger, and then came disruption and overthrow. Since then tyranny the most absolute, and perjury the most vile, have destroyed the last vestige of soundness in the whole system. Our new system is designed to avoid the errors of the old. Certainly it is founded in a different system of political philosophy, and is sustained by a peculiar and more conservative state of society. It has elements of strength and long life. But at the threshhold lies the question I have already stated. Can it legitimately afford the means to carry the war to a successful conclusion? If not, it must perish; but a successful result must be achieved. But it must be destroyed, not by the hand of violence, or by the taint of perjury. It must go out peacefully and in pursuance of its own provisions. Better submit to momentary inconvenience than to injure representative honor or violate public faith. In the whole book of expedients there is no place for falsehood and perjury. Let us, on the contrary, assiduously cultivate the feeling of respect for constitutional limitation, and a secret reverence for the sanction of an oath. Seeing, therefore, gentlemen of the House of Representatives, that we are custodians of the nation's life and the guardians of the Constitution's integrity, what manner of men should we be? How cool, how considerate, how earnest, how inflexible, how true. Having no prospect in the future, save through the success of our cause, how regardless should we be of all selfish views and plans of personal advancement. Selected by the people to take care of the State in this time of difficulty and of trial, how we ought to dedicate ourselves in heart, mind, soul, and energy to the public service. Neither history has recorded, nor song depicted, nor fable shadowed forth higher instances of self-devotion than ought to be shown in the conduct of this Congress. It is not allowed us to pursue a course of obscure mediocrity. We inaugurate a Government, we conduct a revolution. We must live, live forever in the memory of man, either for praise or for blame. If we prove equal to the crisis in which we are placed, we shall win imperishable honor. But if, on the contrary, we show ourselves incompetent to the discharge of our duty, we shall sink beneath the contempt of mankind. Truly our position is one of great import. Our gallant army now holds, as it deserves, the first place in the thoughts and affections of our people. But of scarcely less importance, in the estimation of all, is the legislative authority, which initiates the civil policy of the Confederacy, and which sustains and upholds that army itself. And when the latter shall have accomplished its holy mission by driving the invader from the soil which he desecrates and pollutes; and when the hearts of a grateful and free people, more generous than a Roman Senate, shall, for this service decree to it one lifelong ovation; if true to ourselves, and competent to our duty, this Congress will be united in the triumphal honors. And if this Constitution be destined to go forward, as we hope and believe it will, to a distant future, gaining new strength from trial, and winning new triumphs from time, giving protection and peace to successive generations of happy and enlightened people; as the gray haired sires and venerated patriarchs of ages now remote shall seek to inspire the courage and fire the hearts of the ingenuous youth of their day by recounting the heroic deeds of the army which achieved our independence; let the lesson be extended and enlarged by our enabling them to tell also of the self-sacrificing patriotism and enlarged statesmanship of the Congress which inaugurated the Permanent Constitution of the Southern Confederacy. Again I thank you.

Although all important measures introduced at this and the subsequent sessions of Congress were discussed with closed doors, and no reports have ever been made public of the speeches or votes, yet some measures were incidentally discussed in open session, which furnish a view of the opinions of members. On the next day the Senate came to the House, and the votes for President were counted. The form of proceeding was that adopted under the Federal Constitution. The votes were as follows:

Total number of States voting	11
Number of electoral votes cast	109
For Jefferson Davis, of Mississippi, for President	109
For Alexander H. Stephens, of Georgia, for Vice-President	109

The number of votes cast by the States was as follows:

Alabama	11	North Carolina	12
Arkansas	6	South Carolina	8
Florida	4	Tennessee	13
Georgia	12	Texas	8
Louisiana	8	Virginia	18
Mississippi	9		
Total	109		

On the 22d of February the Inaugural Address was delivered, and on the 25th a Message was sent to Congress by the President. (*See* PUBLIC DOCUMENTS.)

The following resolution was offered by Mr. Foote, of Tennessee, in the House on the 20th:

Resolved, That whatever propriety there may have been in the original adoption of what is known as the defensive policy in connection with the prosecution of the pending war for Southern independence, recent events have already demonstrated the expediency of abandoning that policy henceforth and forever, and that it will be the duty of the Government of the Confederate States to impart all possible activity to our military forces everywhere, and to assail the forces of the enemy wherever they are to be found, whether upon the land or water, with a view to obtain the most ample indemnity for the past, and the most complete security for the future.

Mr. Jenkins, of Virginia, hoped that the House would not concur in the resolution without discussion, impeaching as it did the Administration. Gentlemen may argue as if the policy of the Government could be changed by the mere substitution of one word for another, but the change of policy proposed would necessitate the increase of our army to double its present size.

Mr. Foote earnestly advocated the resolution, which expressed, he was sure, the universal conviction of the country, and which he hoped would meet a favorable response from this House. He denounced the defensive policy, which all history would show was not the policy which a people in revolution should adopt. President Davis did not need the vindication of the gentleman from Virginia, for he had high authority for saying here that the President was opposed to the defensive policy which "somebody"—he could not say who—had imposed upon the country. Judge Harris, of Mississippi, an intimate friend of the President, had authorized him (the speaker) to declare that the latter had no hand and no parti-

cipation, however remote, in stopping the onward movement of our armies; on the contrary, the President had allowed to the generals in the field the most liberal discretion. They alone are responsible for the deplorable non-action of our forces. The speaker then pointed out the advantages which, to his mind, might have occurred to us, had a vigorous onward movement been adopted immediately after the battle of Manassas. And of such a movement he was yet in favor; he desired that the Yankees shall be made to pay the whole expenses of this war, that the commercial magnates of New York, Boston, and Philadelphia be made to unlock their strong boxes, and to indemnify the South for losses which they had imposed upon her. He desired, above all things, to drive the enemy beyond our borders. All this he would have, and nothing less. He desired to show to the world, that which the adoption of this resolution would express, that the Southern people, far from being disheartened by reverses, are invigorated in their determination to achieve their independence. Southern freedom, he contended, could have been achieved six months ago had we pushed boldly forward. Had we passed into Maryland—heroic Maryland—rescued Baltimore and Annapolis, and cut off the railroad communication with the North, that independence which we must now purchase with a vast expenditure of blood and treasure, could have been secured to us at less than one fourth of what the war has already cost us.

Mr. Jenkins said, while listening to the gentleman's eloquent illustration of the *art militaire*, there came across his mind the vision of a bygone scene. He referred to that scene related in ancient history, when a philosopher of classic renown endeavored to prove to Hannibal the error of his system of warfare. No doubt he did it quite as eloquently and as plausibly as the philosopher from Tennessee had discoursed here to-day. When the philosopher had departed from the presence of Hannibal, a friend asked him what he thought of his instructor. The reply, said the speaker, is doubtless familiar to all here. He had too much respect to apply it directly to his friend from Tennessee, whom the quotation fitted as nicely as a wedding garment.

Mr. Foote said he remembered well the quotation alluded to, and in reply to the gentleman from Virginia, would demand to know whether he intended to apply it personally to him. If so, he should make a special issue with the gentleman upon it.

Mr. Jenkins said he did not remember the entire quotation, but if it contained aught which could be deemed disrespectful, he here disclaimed any intention of applying it to the gentleman from Tennessee.

Mr. Foote accepted the disclaimer, and said that as the gentleman's memory was so defective, he would recite Hannibal's reply, which was that the philosopher "was the greatest fool he had ever seen."

Mr. Boyce, of South Carolina, said: "He had thought that we should proceed with all possible energy. We should have aimed at an offensive warfare. All the slave States should be included. In his opinion the war between the North and the South might last a long time, and that hostilities would exist forever. We cannot afford to give up one inch of our Southern soil. The North now exceeds us to the number of eighteen or twenty millions of white people. We should have pursued, from the very first, more of an aggressive policy, which would have given a position to the Southern States; it would have encouraged our friends and discouraged our enemies, and such a policy had been indicated by our distinguished President from Mississippi, when on his way to be inaugurated as President of the Provisional Government—that we should wage war on the enemy's own ground. Mr. L. P. Walker, the former Secretary of War, had said at an early day that the flag of the South should float shortly over the Capitol at Washington. He, the speaker, had thought the expression unwise at that time. We should have talked peace and acted war; used peaceful terms, but prepared for active war. Audacity! audacity! audacity! is the key to success. Make no show of fear; prosecute the war with great vigor. Talk of risk—have we not risked a revolution? and shall we see it fail? We should have pursued an aggressive policy from the very first. The enemy at that time were unprepared; they had but 75,000 men, and most of them were holiday soldiers, and came South as to a sort of Fourth of July celebration. The genius of our policy should then have been action."

Mr. Machen, of Kentucky, said: "I came from a land which is now resonant with the drum and fife of Yankeedom. Still I am not in favor of adopting a new policy or of having Congress dictate what shall be the disposition of our forces with regard to the enemy. Congress should not usurp the military power."

Mr. Foote, rising, said: "I want to know if a simple proposition is usurpation. If simply to express an opinion is to be styled and considered usurpation, I want to go home."

The resolution was laid on the table.

In the Senate, the Committee on Military Affairs reported a bill to indemnify the owners of cotton, tobacco, military and naval stores, or other property of any kind whatever which might be of use to the enemy, that should be destroyed to prevent its capture.

The bill was finally passed in the following form:

Be it enacted by the Congress of the Confederate States of America, That it shall be the duty of all military commanders in the service of the Confederate States to destroy all cotton, tobacco, or other property, that may be useful to the enemy, if the same cannot safely be removed, whenever, in their judgment, the said cotton, tobacco, and other property is about to fall into the hands of the enemy.

This cuts off all compensation to owners. It

was estimated that the amount of cotton liable to destruction would not amount to much more than 5 per cent. of the entire crop. The same was the case with tobacco.

The following joint resolutions were presented in the House by Mr. Rowles of Alabama, on the 24th of February, and unanimously adopted:

Whereas, The United States are waging war against the Confederate States, with the avowed purpose of compelling the latter to reunite with them under the same constitution and government; and whereas, the waging of war with such an object is in direct opposition to the sound republican maxim that "all government rests upon the consent of the governed," and can only tend to consolidation in the general government and the consequent destruction of the rights of the States; and whereas, this result being attained, the two sections can only exist together in the relation of the oppressor and the oppressed, because of the great preponderance of power in the Northern section, coupled with dissimilarity of interests; and whereas, we, the representatives of the people of the Confederate States, in Congress assembled, may be presumed to know the sentiments of said people, having just been elected by them; therefore, be it

Resolved, That this Congress do solemnly declare and publish to the world that it is the unalterable determination of the people of the Confederate States (in humble reliance upon Almighty God) to suffer all the calamities of the most protracted war, but that they will never, on any terms, politically affiliate with a people who are guilty of an invasion of their soil and the butchery of their citizens.

The compensation of members of Congress was fixed, by an act, at $3,000 per year, and mileage at the rate of 20 cents per mile.

The following rates of compensation were also adopted: Secretary of the Senate, $2,500; Assistant do., $2,000; two clerks, each $1,500; sergeant-at-arms of Senate, $2,000; doorkeeper, $1,500.

In the House, Mr. Foote, from the Committee on Foreign Affairs, reported that they had had under consideration a bill to send commissioners to represent the Confederate States in the Industrial Exhibition to be held at London in the year 1862. They reported back the same, and asked to be discharged from the further consideration of the subject, and that the bill lie on the table.

On the 27th of February a resolution was unanimously adopted in the Senate, declaring that the Confederate Government would entertain no peace propositions excluding any portion of the soil of any of the Confederate States, and that the war should be continued until the enemy had been expelled entirely from the Confederacy.

In the House, on the 3d of March, a resolution was passed advising planters to withdraw from the cultivation of cotton and tobacco, and devote their energies to raising provisions, cattle, hogs, sheep, &c.

On the 4th, a Message was sent to Congress by President Davis, in which he stated that he had suspended Gens. Floyd and Pillow from their commands until they could give a more satisfactory account of the action at Fort Donelson. He said that neither of these generals says that reënforcements were asked for, nor do they show that the position could not have been evacuated and the whole army saved as well as a part of it. Neither is it shown by what authority two senior generals abandoned their responsibility by transferring their command to junior officers. Subsequently, on the request of the Legislature of Virginia, Gen. Floyd was reinstated. On the same day a vote of thanks to Capt. Buchanan and the officers and crew of the Merrimac for their gallantry in the action in Hampton Roads, was passed.

On the 12th of March the Senate took up the resolution of the House, proposing to advise the planters of the Confederacy to abstain from raising cotton and tobacco this year, and to devote themselves exclusively to the production of grain and provisions.

Mr. Brown, of Mississippi, moved to lay this resolution on the table, for the purpose of allowing him to introduce a bill to curtail the cotton crop for the year 1862.

The measure proposed by Mr. Brown provided that no planter or head of a family should sow more cotton seed than would produce three bales of the staple for himself, and one bale for each of the hands employed in the culture during the year 1862; and, in case of exceeding this number, the penalty shall be $40 fine for each bale; and, further, that the planter or head of family should be required to swear to the exact number of bales raised during the year, and to be treated as a perjurer if he swears falsely.

Mr. Brown said that the resolution of the House was not of the slightest use in the world. If anything, it would have a bad effect, inasmuch as it virtually offered a premium for treachery. Patriotic citizens would not plant any cotton, with or without the resolution; but the large class of grasping Shylocks, bent on gain and personal aggrandizement, would pay no attention to the advice of Congress; and for these Mr. Brown would have a compulsory law. He conceived that a large cotton crop this year would be ruinous to us, since the labor of plantations would be withdrawn from the production of provisions absolutely needful for the support of our armies and our people. He thought that if there was evil in the cotton crop we should strike at the root, or take it by the throat.

Mr. Orr, of South Carolina, said the gentleman was mistaken as to the number of unpatriotic planters. The class, in his judgment, was very small.

Mr. Clay, of Alabama, suggested that the measure proposed by the gentleman was unconstitutional. The forfeiture of the $40 per bale was an indirect mode of raising revenue, and all bills for this purpose, under the constitution, must be originated in the House of Representatives.

Mr. Wigfall, of Texas, said that if any power was laid down clearly in the constitution of the old government and in the new, it was the definition of the powers of Congress regarding the

punishment of the crimes of treason, of piracy, and of felony on the high seas. Here it is clearly laid down that Congress cannot create crime. Apart from the unconstitutionality of the proposition, Mr. Wigfall objected to the measure proposed for other reasons. He was not sure that it was good policy for us to neglect raising cotton. Unless we continue to raise the staple in abundance, England would foster its cultivation, and after the war it would be difficult for us to monopolize the markets of the world. If we raised no cotton in 1862 it would keep the price up so high that it would pay the other nations of the world to invest largely. This is the policy most desired by English statesmen, and it is that which has prevented the raising of the blockade.

Mr. Brown could not understand why a bill to punish people for not burning cotton likely to fall into the hands of the enemy was not unconstitutional when one to punish the production of the article was. He conceived that in time of war the powers of Congress were augmented, and that it was quite different from peace.

Mr. Clay replied that persons allowing cotton to fall into the hands of the enemy were guilty of treason: for it is giving aid and comfort to the foe, and that is treason, and treason is one of the crimes defined by the constitution. Mr. Clay denied, also, that the constitution was so elastic that it expanded its powers in war and contracted them in peace. The constitution was the same always.

Mr. Barnwell, of South Carolina, was not prepared to abandon the cultivation of cotton under any circumstances, though he admitted a great deal of labor should be bestowed upon the production of supplies, especially at this juncture. On the cultivation of cotton and increase of supplies for market depend not only our sources of wealth, but our importance and consequence, and weight with foreign nations. All our interests appeal to us never to give it up. We must raise it, hold it, and fight for it. We must let the world know that we have it, and that we will sell it cheap, and that we will fight to keep it from our enemy and to protect it. We should not only protect ourselves against our enemy, we should not give our sole strength to the production of articles of subsistence, but we must keep up the cultivation of that which gives us position in the world as a nation, and by which we will control the world. We must have a monopoly of all the markets. We begin to find out that we have not a monopoly, that cotton can be produced elsewhere. Plentiful crops, low prices, and superiority of the article will alone achieve our ends. These at the end of the war will give us our former preponderance. The proposition of the gentleman from Mississippi (Mr. Brown) excited his unfeigned astonishment. He had conceived it to be a long settled principle that this Government, or one with similar powers, could not create a crime under the common law. He protested warmly against this the grossest assumption of authority he had ever witnessed.

Mr. Semmes, of Louisiana, would like the vote direct on the resolution, and for this purpose asked that the motion to lay on the table be withdrawn.

This was done and the resolution was put upon its passage.

Mr. Hunter, of Virginia, objected to the bill of Mr. Brown, for two reasons: First, he did not wish to tax the patriotism of the planters; and, secondly, the want of power of Congress to interfere with the internal affairs of any of the States. The policy which diminishes the supply of cotton will hold out no inducements for England to break up the blockade. By keeping cotton scarce and high, its production is stimulated in other countries; India, for instance. If we are denied admission to the markets for several years, and the price is kept to 25 or to 30 cents, see what powerful incentives are given to its production elsewhere. To bring about this state of things and to become the main producer is the secret of all British legislation. This stimulates the planters in their tropical colonies to raise cotton under any disadvantage; otherwise their interests as manufacturers would have compelled them to raise the blockade. Cotton is a source of power and influence only so long as we can raise and keep it in vast quantities at low prices. As to the constitutionality of the bill proposed by Mr. Brown, Mr. Hunter said the Confederate States Government had not the least right to go to any of the States and say how much cotton should be produced. The sovereignty of the States themselves hardly dare do this, much less the delegated power of the Confederacy. If he believed that Congress would pass any such act, or the Government possessed any such power, he would pronounce it a most notorious despotism, worse even than that from which we have just escaped.

Mr. Brown urged that the main object of the enemy being to pass down to the Mississippi Valley and seize our cotton, we should prevent any more being there than could be helped. The idea that cotton could be raised in India was, to use a homely phrase, played out. He was in favor of burning all the cotton we now had, and planting no more until the world was disposed to do us justice. Then we could test the question of cotton raising in India, with no fears as to the result. Regardless of every power on earth, let us act for ourselves and strike blows for our own superiority.

Mr. Semmes, of Louisiana, had long since abandoned the idea that cotton is king. He had arrived at the conclusion that this was a mistake. Nations would violate the laws of nations to supply themselves with cotton, and interest was the ruling principle of the world. We have tested the powers of King Cotton, and have found him to be wanting. We must now abandon all dependence on foreign intervention. The English never will interfere, be-

cause it is not for their interest. Rather than make war with the United States she would convert her Government into an eleemosynary for the maintenance of her hordes of starving operatives. She would do this because it would be cheaper, and because the darling projects of her statesmen could be fostered and cotton be produced in her colonies. He voted for the resolution for the reason that warning should be given the people to prepare for the continuance of a lengthy war, and that produce must be raised for our subsistence.

Mr. Wigfall acknowledged that cotton was not king, but merely the badge of royalty to him who possessed it. This was the reason England abstained from raising our blockade. She wished to see us destroyed as cotton producers, so that she could become raiser as well as spinner, and thus command the world. She abandoned her own West Indies to abolition in order to foster cotton-raising in India.

The resolution was finally put to vote on its adoption, and lost, as follows:

YEAS.—Messrs. Clay, Clark, Davis, Dorch, Henry, Mitchell, Sparrow, and Semmes—8.

NAYS.—Messrs. Barnwell, Baker, Horner, Hill, Hunter, Johnson, Oldham, Phelan, Peyton, Preston, and Wigfall—11.

The surrender of Roanoke Island was investigated by a committee of the House, who presented a voluminous report concluding as follows: "Whatever blame or responsibility is justly attributable to any one for the defeat of our troops at Roanoke Island, on the 8th of February last, should attach to Maj.-Gen. Huger and Mr. Benjamin, the late Secretary of War."

In the Senate a resolution was offered to appropriate a sum of money to pay the persons engaged in taking the census of 1860 in the State of Louisiana, for which services the United States had not paid.

Mr. Semmes, of Louisiana, who urged the matter, proposed to disburse the balance (about $6,000) from moneys seized by the State of Louisiana and transferred to the Confederate States Government, a part of which was originally intended by the United States Government for that purpose.

Mr. Burnett, of Kentucky, opposed the bill on the ground that it would open the door to any number of claims (perhaps amounting to millions of dollars) of a similar nature, all of which would most properly be attended to after a treaty of peace.

Mr. Semmes made the following exhibit of money transferred to the Confederate States Government by the several States named:

North Carolina	$26,200 in bullion.
" "	1,175 in customs.
Louisiana	457,859 in bullion.
"	147,875 in customs.
Alabama	18,731 in customs.
Georgia	23,763 in bullion.
" (Savannah)	3,483 in customs.

The resolution was rejected.

The sum of $4,275,000 was appropriated for the use of the Navy Department, of which $2,100,000 was for the equipment and repair of vessels, for ordnance and ordnance stores, and for the purchase and building of steamers, and $500,000 for gunboats for coast defences.

Propositions were considered for a new flag and a new seal, which finally failed to pass.

A resolution was offered in the House to request the Executive to recall at once the Commissioners sent to Great Britain, and to abandon all further attempts to conciliate the favor and secure the recognition of that Government. It failed to pass. Another bill was passed in the House to repeal the tariff and throw open the Confederate ports to the commerce of the world except the United States. It failed in the other House.

The following resolutions were offered in the House on the report of the battle on the first day at Shiloh:

Resolved, That Congress have learned, with feelings of deep joy and gratitude to the Divine Ruler of nations, the news of the recent glorious victory of our arms in Tennessee.

Resolved, That the death of Gen. Albert Sidney Johnston, the commander of our forces, while leading his troops to victory, cannot but temper our exultation with a shade of sadness at the loss of so able, skilful, and gallant an officer.

Resolved, That, in respect to the memory of Gen. Johnston—the Senate concurring—Congress do now adjourn until twelve o'clock to-morrow.

In the Senate on the same day Mr. Haynes, of Tennessee, moved that the resolutions touching the victory near Corinth, and lamenting the death of Albert Sidney Johnston, be taken up, so that he could offer resolutions in lieu. Resolutions were then presented by the Senator, expressive of the joy of Congress on hearing of the great victory of our army in Tennessee, paying a glowing tribute of respect to the memory of the commander-in-chief, and conveying the thanks of Congress to Gen. Beauregard and the officers under his command for their services on that memorable day.

Mr. Haynes stated that he was one of the Tennessee delegation who requested the President to transfer Gen. Johnston's command to some other officer after the retreat from Nashville. Subsequent information had caused him to alter his opinion, and he therefore felt it his duty to offer the resolutions named.

Mr. Yancey, of Alabama, moved that the resolutions be so amended as to designate the place of the battle as indicated by Gen. Beauregard—viz.: the battle field of Shiloh. He moved, also, that the resolutions be so amended as to tender the thanks of Congress to Gen. Beauregard and the surviving officers and soldiers for their gallantry and skill on that memorable field.

On a subsequent day Mr. Barnwell, from the Finance Committee, reported back favorably the bill to authorize the issuance of Treasury notes of a denomination less than five dollars. As before explained, the bill authorizes the utterance of one, two, three, and four-dollar

notes, and notes for the fractions of these sums, provided the whole amount issued does not exceed five millions of dollars in the aggregate.

Mr. Brown, of Mississippi, offered an amendment to the last clause of the bill to increase the clerical force of the Treasury Department, requiring the Secretary of the Treasury to give preference to applicants for clerkships under the bill to those who have served in the army, and have been discharged on account of physical inability, or from wounds received in battle.

Mr. Barnwell, of South Carolina, opposed the amendment because he looked upon it as an indirect mode of pensioning disabled soldiers. He was of the opinion that other modes could be provided for taking care of this class of the population.

The amendment was adopted and the bill was passed.

The joint resolution passed by the House, voting the thanks of Congress to the patriotic women of the country for their voluntary contributions to the army, and in aid of the cause in every conceivable way, was taken up and unanimously passed.

Mr. Sparrow offered a resolution authorizing the Senate to furnish the Senators from North Carolina with copies of all reports, &c., received by the Senate from the President, in relation to the Roanoke Island affair, for the use of the Convention of North Carolina—upon the consideration of which the Senate went into secret session.

The conscription act passed on the 9th of April and was approved on the 16th. (*See* CONFEDERATE STATES.) A bill was also passed to organize a battalion of sharpshooters, and another appropriating $1,500,000 to construct a railroad between Galveston and New Orleans.

On the 21st of April Congress adjourned to meet on the third Monday of August. Its important business was entirely transacted in secret session.

On the 18th of August the second session of the Confederate Congress under the Permanent Constitution commenced. A quorum was present in both Houses, and the President's Message was delivered. (*See* PUBLIC DOCUMENTS.)

The seat of Roger A. Pryor, of Virginia, resigned, was taken by Mr. Collier. Mr. A. G. Jenkins, of Virginia, also resigned his seat in the House. As his district was mainly within the lines of the Federal army, there was no legal mode by which to fill the vacancy. In the House a number of bills were submitted, which indicate to some extent the nature of its business.

By Mr. Gartrell, of Georgia: A bill making Treasury notes a legal tender in payment of debts. This bill was made the special order for the 26th of August.

Also, a resolution instructing the Committee on Military Affairs to inquire into the expediency of compelling the Commissary Department to furnish the soldiers with more and better food. Agreed to.

By Mr. Miles, of South Carolina: A bill to amend the conscription act. It extended the application of the law to all citizens under forty-five years of age. Referred.

Also, a bill to punish slaves taken in arms, and the white men assuming to be their officers. It provided that the slaves so taken should be delivered up to the authorities of the State in which captured, to be disposed of by its laws; and the white officers either to be hung or also delivered up to the State authorities. Referred.

By Mr. Foote, of Tennessee, a bill for retaliatory purposes. It recited that the enemy refused to treat the partisan soldiers as prisoners, and had also punished innocent private citizens for their acts. It provided that an officer who may have ordered such atrocities be put to death if captured. An equal number of prisoners (officers to be preferred) taken from the enemy to suffer the fate inflicted on the captured soldiers or citizens. Referred.

Also, a bill for the treatment of captives. It provided that any officer or private captured by the army, who should have committed any offence pronounced felonious by the laws of the Confederacy or any State, should be delivered up for trial. Referred.

Also, a bill to punish negroes in arms. It provided that Federal armies incongruously composed of white and black should not be held entitled to the privileges of war, or to be taken prisoners. Of such as may be captured, the negroes shall be returned to their masters or publicly sold, and their commanders to be hung or shot, as may be most convenient. Referred.

Also, a bill to retaliate for the seizure of citizens by the enemy. It provided that of the prisoners held by us a number equal to that of the citizens should be retained as hostages for their safety, and subjected to like treatment; any officers, civil or military, concerned in their seizure should be imprisoned during the war. Referred.

Also, a bill to provide for raising an additional force of 250,000 men. Laid on the table.

Also, a bill providing an export duty of twenty per cent. on cotton and tobacco, to aid in indemnifying the losses of citizens by the enemy.

A vote of thanks was tendered to Col. Forrest, the partisan leader, "for his recent victories in Tennessee."

That portion of the President's Message relating to the increase of the army was taken up. Mr. Foote of Tennessee referred to the manner in which the conscription act had been passed. Its constitutionality at the time of passage was doubted, and if the plan prescribed in it should be allowed to grow into a system, it would be subversive of State sovereignty and popular freedom. The necessity which

was alleged to exist formerly, for the present law no longer existed, and even that necessity was artificial, having grown out of the failure of the Provisional Government to provide for expected deficiencies in the army in season. He insisted that two hundred and fifty thousand men could be raised by requisition upon the States sooner than in any other way, and would not awaken distrust or alarm, nor occasion any collision with State authorities. If the new law recommended by the Secretary of War should be adopted, collision with Virginia, Tennessee, and all the other States would be inevitable, as it would sweep into its vortex all the militia now or to be organized. Nothing but a military despotism could be the result.

Mr. Dargan, of Alabama, contrasted the present condition of the army with the past. He thought every man should be subject to the call of the President.

Mr. Bonham, of South Carolina, was in favor of raising troops as was done when we resisted Great Britain, and as we did in 1812.

In the Senate, on the same day, the Committee on Military Affairs reported a bill prohibiting the employment of substitutes, except for persons skilled and actually employed in some mechanical pursuit important to the public interest, or where the person is the only white male adult on the farm or plantation having thereon not less than fifty slaves. If the substitute deserts, however, the person who employed him was to serve. The second section provides that the commanders of brigades and divisions, under certain restrictions, may detail to any farms or plantation worked by slaves, when the owner is a *femme sole*, a minor, or a person in the public service, one enrolled private for duty.

The bill was ordered to be printed.

A long discussion ensued upon a resolution, offered by Mr. Yancey, to transact business with open doors, instead of in secret session, against which there were loud complaints by the press and the people. The resolution was rejected.

On the 21st a bill was introduced declaring Kansas to be within the limits of the Southern Confederacy.

Mr. Clay introduced a bill providing that any "Federal officer, soldier, or adherent who may fall into our hands with counterfeit Confederate notes in his possession, or who may be proved to have passed off any such, shall be courtmartialed and punished with death."

In the House of Representatives, Mr. Foote offered a series of resolutions favoring an aggressive war; also favoring a proclamation to the inhabitants of the Northwestern States, offering to guarantee the free navigation of the Mississippi and Ohio rivers to their mouths if they will desist from the further prosecution of the war.

In the Senate, on the 2d of September, Mr. Semmes, of Louisiana, from the Finance Committee, reported a bill providing for the coinage of copper (alloy) tokens, of the value of five, ten and twenty cents, to the extent of $5,000,000, and the appropriation of $200,000 for the purpose.

Mr. Sparrow, from the Committee on Military Affairs, reported back the petitions from various religious organizations, asking exemptions in certain cases, from the further consideration of which the committee was discharged.

Mr. Sparrow also reported a bill providing for the extension of the conscript age to forty-five, which was ordered to be printed, and made the special order for another day.

Mr. Brown, of Mississippi, from the Committee on Naval Affairs, reported a joint resolution of thanks to Commander Eben Farrand, and the officers and men under his command, for gallant services in repulsing the enemy's gunboats at Drury's Bluff, on the 15th of May last. Adopted.

The following Message, with despatches, from President Davis, was received and read.

To the Senate and House of Representatives of the Confederate States:

I have the gratification of presenting to Congress two despatches from Gen. Robert E. Lee, commanding the army of Northern Virginia, communicating the result of the operations north of the Rappahannock. From these despatches it will be seen that God has again extended his shield over our patriotic army, and has blessed the cause of the Confederacy with a second signal victory on the field already memorable by the gallant achievement of our troops. Too much praise cannot be bestowed upon the skill and daring of the commanding general who conceived, or the valor and hardihood of the troops who executed, the brilliant movement whose result is now communicated. After having driven from their intrenchments an enemy superior in numbers, and relieved from siege the city of Richmond, as heretofore communicated, our toil-worn troops advanced to meet another invading army, reënforced not only by the defeated army of Gen. McClellan, but by the fresh corps of Gens. Burnside and Hunter. After forced marches, with inadequate transportation, and across streams swollen to unusual height, by repeated combats they turned the position of the enemy, and forming a junction of their columns in the face of greatly superior forces, they fought the decisive battle of the 30th, the crowning triumph of their toil and valor. JEFFERSON DAVIS.

The House resolution, voting thanks to Captain Raphael Semmes, of the Confederate States steamer Sumter, was referred to the Military Committee.

The bill amendatory of the act to organize bands of partisan rangers, restricting the privilege of raising such bands, as given by the original bill, and also authorizing the Secretary of War to brigade them as troops of the line, was taken up.

A lengthy debate succeeded, sundry amendments were adopted, and, finally, the bill was defeated by a vote of 12 to 7.

In the House, on the 12th of September, Mr. Hilton, of Florida, from the Committee on Military Affairs, to whom were referred the Message of the President communicating the despatches from General Lee relative to the late victories, and the resolutions of the Senate in relation to the movement of the armies

across the Potomac, reported the following substitute for said resolutions:

Resolved, That the thanks of Congress and of the country are eminently due, and are hereby tendered to Gen. Robert E. Lee and the officers and men of his command for their late brilliant victories, culminating in the signal defeat of the combined forces of the enemy in the second great battle of Manassas.

Resolved, That Congress has heard with profound satisfaction of the triumphant crossing of the Potomac by our victorious army, and assured of the wisdom of that masterly movement, reposes with entire confidence on the distinguished skill of our commanding general, and the valor of his troops, to achieve, under favor of the Great Ruler of nations, new triumphs, relieve oppressed Maryland, and advance our standards into the territory of the enemy.

Resolved, That the President be requested to communicate the foregoing resolutions to General Lee and the officers and men under his command.

Mr. Hilton advocated the immediate passage of the resolutions.

Mr. Lyons moved to amend the second resolution by striking out all after the words "distinguished skill of," and inserting in lieu thereof, "the commanding general and the valor of his troops to relieve oppressed Maryland, and, under favor of the Great Ruler of nations, achieve new triumphs over the enemy." He approved the movements of our armies thus far, and thought a resolution of thanks eminently proper; but if it were passed with the words proposed to be stricken out, it would be an invitation from Congress to advance into the enemy's country, and that was a responsibility which he, for one, was not prepared to assume.

Mr. Miles, of South Carolina, was somewhat surprised to hear a sentiment indicating hesitation from the gentleman who had just taken his seat. The press throughout the country had clamored for an onward movement, and wherever the people assembled we had always heard the same sentiment expressed—that we were pursuing a mistaken policy in waiting for the enemy to advance, and that our armies should advance and pluck victory upon the enemy's soil. After we had commenced this aggressive policy, and our armies were across the borders, we are told by the gentleman from Virginia that we ought to hesitate.

Mr. Lyons said that the gentleman had mistaken his position. He stated plainly that he approved of Gen. Lee's crossing the Potomac and threatening Maryland; but at that point, with his present information, he was constrained to stop—he could not take the responsibility of advising an advance into Pennsylvania.

Mr. Miles still differed with the gentleman from Virginia. What he meant by an aggressive war was to carry the war into the enemy's country, and this was what the resolutions said. They had been carefully and deliberately weighed in the committee, and they were expressive of the unanimous sentiment of the gentlemen who composed it. What the people wanted was an aggressive war. While the enemy had overrun our territory and reduced our people to a condition of bondage without parallel in the history of warfare, were we to hesitate to retaliate upon them? He could not believe any such sentiment. The resolution, in his opinion, could not be construed as an instruction to our generals; but, when we have their assurance that they will bear our standards onward, and will relieve oppressed Maryland, shall we hesitate because, forsooth, they may not be able to carry out the plan? The resolutions were intended to encourage our President, our generals, and our armies. He wished every branch of government to understand that this Congress does not think the war has been hitherto waged upon a mode best calculated to bring it to a speedy close. He was opposed to Congress assuming the conduct of the war, but he hoped the people would understand that we do propose to wage an offensive warfare.

Mr. Lyons asked if the gentleman believed that our army, great and glorious as it is, could safely go into the heart of the North.

Mr. Miles replied that he did. He would endorse the language of a well known gentleman —give Jackson half of our present army, and he would drive the whole 600,000 of the North before him. Mr. M. closed by enforcing the opinion that the time to strike was while our armies were flushed with success, and while they were veteran troops, accustomed to the roar of battle.

Mr. Conrad, of Louisiana, was in favor of the amendment. He viewed the resolutions as an instruction to our armies, and thought our President and generals better qualified than Congress to conduct the war. It was not a war of conquest, but a war for independence; everybody agreed in that, and hence there was no difference in opinion as to the policy of the war. The mode of conducting it ought to be left alone to the Executive, without interference from Congress or elsewhere. He believed that the conduct of the war up to this moment had been just what it ought to have been.

Mr. Ayer, of South Carolina, was in favor of the aggressive policy. He would say to the Executive, we desire that the enemy's country shall be invaded, and leave it to him to judge of its expediency. He would have our armies.

> Go with banner, brand and bow,
> As foeman meets his mortal foe.

He would not assume to speak for all; but so far as his constituents were concerned he knew this to be the prevailing sentiment.

Mr. Foote moved the previous question, which was sustained.

Mr. Goode, of Virginia, demanded the yeas and nays on the motion to strike out and insert.

The roll was then called, and Mr. Lyon's amendment was defeated by the following vote:

YEAS.—Messrs. Arrington, Ashe, Atkins, Barksdale, Bocock, Bridgers, Conrad, Conrow, Currin, Curry, Davidson, Dupre, Farrow, Garland, Gentry, Hanly, Johnson, Jones, Kenan, of Georgia, Lyons, Machen, McDowell, McLean, Read, Roston, Smith, of Alabama Smith. of North Carolina, Swan, Villere—29

NAYS.—Messrs. Ayer, Batson, Bell, Bonham, Boteler, Boyce, Breckinridge, H. W. Bruce, E. M. Bruce, Chambliss, Chrisman, Clapp, Clark, Clopton, Collier, Cook, Crockett, Dargan, Davis, Dawkins, De Jarnette, Elliott, Ewing, Foote, Foster, Freeman, Gardenheir, Gartrell, Goode, Graham, Gray, Harris, Hartridge, Heiskell, Herbert, Hilton, Hodge, Holcomb, Holt, Kenan, of North Carolina, Kennar, Lander, Lyon, Marshall, Menees, Miles, Moore, Munnerlynn, Perkins, Preston, Pugh, Russell, Sexton, Strickland, Tibbs, Trippe, Vest, Welch, Wilcox, Wright, of Georgia, Wright, of Texas—61.

The substitute of the committee was then agreed to, and the question recurring upon the passage of the resolutions,

Mr. Smith, of Alabama, addressed the House in opposition to the second of the series, being unwilling to commit himself to an aggressive policy. He did not believe in advancing into the enemy's country. We had not been invited into Maryland, and it was a question of time, and yet to be learned, what reception we would meet with upon the soil of Maryland. We had been driven from the soil of Kentucky after having been invited thither. We had to fight Kentuckians, steel to steel, and knee to knee, and this had promoted our disasters. The gentleman from South Carolina had indicated that the people had forced an unwilling Administration to depart from its policy, and that the Government of the Confederate States may be opposed to an aggressive policy. Could it be possible that the President of the Confederate States, who was known to be so wise in military affairs, as well as a wise civilian, should be driven into undue haste, and made to change his whole policy, and to yield to popular clamor?

Mr. Hodge, of Kentucky, replied to the remarks of the last speaker in relation to that State, showing that the enemies of the South there were not natives. The true sons of Kentucky had shed their blood freely on many well fought fields in behalf of the Confederacy. When the time comes that arms can be placed in the hands of her people, Kentucky will do her duty, or her sons will be found lying dead upon the field with their feet to the foe.

Mr. Foote, of Tennessee, answered the positions assumed by the gentleman from Alabama (Mr. Smith), and favored the passage of the resolutions. Toward the conclusion of his remarks, he said it was known officially that our army had crossed into Maryland, and were on their way to Harrisburg. He hoped not two days would elapse before the plan would be consummated. He would not say it was for the purpose of conquest—it might be for the purpose of destroying railroad communications, or for some other object not proper to mention. The God of battles he believed was with us, and he had perfect confidence that the acting out of the present aggressive policy would give us the most complete success that could be desired.

Mr. Barksdale, of Mississippi, took the ground that Congress had no right to pronounce upon the policy of the war, in the manner that had been asserted in the debate to-day. If a plan had been agreed upon by the leaders of our army in secret council, it was criminal in this Congress thus to make itself a council of war, and proclaim that plan to the world.

Mr. Machen, of Kentucky, combated the idea of running over the enemy's country roughshod, though he was not entirely opposed to the policy of invasion. He thought, if we could capture and hold Cincinnati, the Northern people could be brought to terms, and made to give up their accursed cause. He would vote for the resolutions, but wanted the generals to be left free to decide for themselves.

Mr. Heiskell, of Tennessee, moved the previous question, which was ordered, and the vote being taken, the first resolution passed unanimously, the second by 63 yeas to 15 nays, and the third unanimously.

Mr. Kenan, of Georgia, moved a reconsideration of the vote by which the second resolution was adopted.

On motion of Mr. Davis, of Mississippi, the motion to reconsider was laid upon the table—ayes 45, noes 26.

Mr. Kenan desired to offer an additional resolution, declaring that Congress does not intend to indicate in these resolutions a policy different from the policy of President Davis, nor to indicate a plan for the conduct of the war.

Mr. Foote said that he had intended to offer a resolution to show that by the action just taken it is not intended to pass upon the military policy of the Administration, but to harmonize with and sustain the same.

The Speaker decided that neither of the resolutions could be entertained.

Mr. Jones, of Tennessee, moved that the title of the resolutions be amended so as to read: "Joint resolutions in relation to the movements of Gen. Lee's army and General Congressional Order No. 1."

Mr. Gentry, of Tennessee, availed himself of the opportunity to address the House upon this motion. He held that the resolutions undertook, in effect, to indicate the policy which Congress desired the Executive to pursue. He thought the war had been well and gloriously conducted, and that it was unwise in Congress to interfere. With regard to the policy of invading the enemy's country he was not prepared to commit himself.

Mr. Miles offered a substitute for the title proposed by Mr. Jones, as follows: "Joint resolutions in relation to the late victories and the crossing of the Potomac by the Army of Northern Virginia."

The amendment offered by Mr. Jones was rejected—yeas 13, nays 56—and the substitute of Mr. Miles adopted.

In the House, on the 26th of September, the Committee on Foreign Affairs, to whom had been referred several resolutions relative to the true policy of the war, and recommending to the President to issue a proclamation touching the free navigation of the Mississippi and its

tributaries, and the opening of the market of the South to the inhabitants of the Northwestern States upon certain terms and conditions—reported:

A majority were in favor of the resolutions, and a minority opposed. The majority recommended a vigorous prosecution of the war with invasion of the enemy's territory. Relative to a proclamation of the freedom of the Mississippi and the opening of the Southern markets to the inhabitants of the Northwestern States, they said:

Such a proclamation as that recommended in the resolution referred to the committee, it is confidently believed, would have a tendency greatly to strengthen the efforts of the advocates of peace in the Northwestern States, be calculated to bring those States quickly into amicable relations with the States of the South, withdraw them ultimately altogether from their present injurious political connection with the States of the North and East, with which they have really so little in common, and thus enable us to dictate the terms of a just and honorable peace from the great commercial emporium of that region through whose influence mainly has this wicked and unnatural war been thus far kept in progress.

The minority of the committee reported, that in their opinion it was a work of supererogation for the House to decide on the policy on which the war should be conducted. As to opening the Southern markets to the inhabitants of the Northwestern States they say:

The undersigned dissent from the recommendation that this Government should tender to a portion of the citizens of the Government with whom we are at war exclusive commercial privileges. It is not the part of wisdom to commit our Government to any fixed policy in advance. Legislation should not be anticipated, but should be shaped by existing events. If a deviation from this plain suggestion of wisdom be advised in the present instance upon the idea of the influence of an appeal to the self-interest of the inhabitants of the Northwestern States, it should not be forgotten that the same argument might, with equal propriety, be addressed to the inhabitants of the New England States. The manufacturers of that section would be conciliated by pledges that a discriminating tariff would at the close of hostilities, be put into speedy operation for building up their interests, and shipowners would be propitiated by pledges that they would be permitted to perform the carrying trade of the South as under the old Union. And the city of New York would be induced to pause in her course of folly and wickedness toward the Confederate States if assured that they would confer upon her the privilege of conducting their commercial affairs, and enriching herself upon the proceeds of her labor.

The Northern people derived, under the former Government, an annual profit of not less than $100,000,000 upon Southern trade. Their implements of war will be laid aside when assured that their coffers shall be filled with the proceeds of Southern labor. But the undersigned do not hesitate to repel the suggestion that the people of the South are willing to purchase peace by such a sacrifice of their rights, and by so degrading a concession to Northern cupidity. To be respected, our course must be firm and our legislation rational and just.

At an early period after the organization of the Government of the Confederate States a law was passed declaring the free navigation of the Mississippi river, with certain salutary restrictions. The policy of the Government has not been changed on this subject. It is presumed to have been known to the inhabitants of the Northwestern States before they embarked in a wicked and unjustifiable war against the people of the Confederate States. To proclaim this policy at the present time, coupled with offers of their lucrative trade, in the manner suggested by the majority, would be, in the highest degree, derogatory to the dignity of the Government. It would bring upon it the imputation of pusillanimity. It would be accepted by the enemy as a confession of conscious weakness, and its inevitable tendency would be to prolong the war.

The undersigned are firm in the opinion that the most effective mode of conquering a peace is not to be found in extending to the enemy propositions of reconciliation, but in the vigorous prosecution of the war.

The signs of returning reason, indicating a desire for peace among the inhabitants of the Northwesten States, upon the discovery of which the majority have congratulated the House, are believed to be delusive. The undersigned regret to say that they have not been able to discern them. But, in the event of the actual existence of these alleged pacific indications, it is clear that they are the result, not of temporizing expedients on the part of the Government of the Confederate States, but of its manifestation of purpose to prosecute the war with vigor and effect.

For these reasons the undersigned dissent from the views of the majority, and ask the concurrence of the House in the opinion that they should be rejected.

E. BARKSDALE,
J. R. McLEAN,
W. R. SMITH.

The second conscription bill to call into service all persons above thirty-five years of age, led to a disagreement of the two Houses, when a committee of conference was appointed by each. In the House the following debate took place on the report of the committee.

A message was received from the Senate stating that they had agreed to the report of the committee of conference in relation to the bill "further to provide for the public defence."

Mr. Miles, of South Carolina, from the committee of conference, reported that the committee recommended that the House concur in the report of the committee of conference.

Mr. Boteler, of Virginia, obtained the floor.

Mr. Foote hoped the gentleman did not rise to call the question. If he did, he appealed to him by every consideration of courtesy and patriotism not to do it.

Mr. Boteler replied that he was blind to any appeal to courtesy, and to everything but the welfare of his country, at the present moment. Whatever his will might have been, his patience was exhausted, and many an hour had been lost already in discussion. He had recently returned from the army of the Potomac, and he had heard the appeals of soldiers made again and again, asking when reënforcements were coming. It is now time that the eternal talk on this bill should cease. It was an easy matter to vote down the question if gentlemen did not desire to sustain it; but he was impelled by a sense of duty. He did call the question upon the bill, and he should adhere to it.

The call of the question having been sustained, the bill was passed, 59 to 24.

Mr. Kenan, of Georgia, moved to reconsider the vote by which the bill had been passed. The measure just passed struck out the only adjustment looking to peace between the State and Confederate Governments—that by which

the House bill had authorized the President to make a requisition upon the Governors of the States for the troops needed. Is it proper, at a time like this, to create dissension and collision in any State of this Confederacy? Where could be the ojections to this feature of the bill? He would always sustain the Government, but there had always been dissension upon the conscript law. In the State of Georgia it had been declared null and void because it was unconstitutional. He had no doubt but if the President were to make requisitions upon the Governors they would be complied with. He could tell gentlemen now there was danger of dissension between the Government and States in this Confederacy. He hoped it could be avoided, but he greatly feared it would come. Therefore he appealed to the House to reconsider the vote by which they passed the Senate bill.

Mr. Foote said that he was very happy that the gentleman from Georgia had found that opportunity to address the House, which the gentleman from Virginia (Mr. Boteler) had so ungraciously refused him. The House had been informed by a member of the state of things in the State of Georgia. That member had said that there was danger of a collision between the States and the Confederate Government. He would tell the House that a similar state of things existed elsewhere. There have been facts reported which showed it. Why should the House be restricted to the edict, and be dictated to as to what course it should pursue by a party of consolidationists in the other legislative branch of the Government? Mr. Foote said that he spoke of some who were then outside of the hall, and not in the other branch of the Government. It was well known that some time since he had emphatically declared, in unequivocal language, that there was danger existing, and now they had it from the lips of a high-toned gentleman from Georgia, making magnanimous disclosures in relation to the condition of the country, and appealing to them not to involve this country in civil war. By the bill of the House the country would have been quieted, and an abundance of soldiers procured for the war. Let all the consolidation men of this day, and all the federalists of the old Government cry out; let all those who have been enemies of State rights, and those who voted against paying back the fine of Gen. Jackson, all consolidationists and federalists, utter their sentiments in a voice of thunder; let them come on, he was done, he had had his say; he had expressed his opinion, and called the question.

The House refused to reconsider—yeas 24, nays 53.

Subsequently an exemption act was passed. It exempted the police for sections of country which have dense negro populations; also, editors and such helps as they require in their business; also, the employés of transportation and telegraph companies, ministers of the gospel, physicians, shoemakers, tanners, blacksmiths, wagon makers and millers; also, superintendents and employés in hospitals, wool, cotton, and paper mills, employés of the government works, overseers of plantations, and one man to every five hundred head of cattle. The exemption act, passed April 21st, was repealed.

Several propositions under the form of bills, were introduced into the Senate respecting retaliatory measures. These propositions were brought forward in consequence of the proclamation of President Lincoln, issued on the 22d of September, declaring that on the 1st of January ensuing an emancipation proclamation would be issued. The subject came up for the first time on the 29th of Sept., when Mr. Semmes, of Louisiana, offered the following resolution:

Resolved by the Congress of the Confederate States, That the proclamation of Abraham Lincoln, President of the United States of America, issued in the city of Washington, in the year 1862, wherein he declares "that on the first day of January, in the year of our Lord 1863, all persons held as slaves within any State, or designated parts of a State, whereof the people shall be in rebellion against the United States shall be henceforth and forever free," is levelled against the citizens of the Confederate States, and as such is a gross violation of the usuages of civilized warefare, an outrage on the rights of private property, and an invitation to an atrocious servile war, and therefore should be held up to the execration of mankind, and counteracted by such retaliatory measures as in the judgment of the President may be best calculated to secure its withdrawal or arrest its execution.

Mr. Clark, of Missouri, moved that the resolution be referred to the Committee on Foreign Affairs. He was in favor of declaring every citizen of the Southern Confederacy a soldier, authorized to put to death every man caught on our soil in arms against the Government.

Mr. Semmes, of Louisiana, said that the resolution had not been drawn without reflection. The question of retaliation was exclusively an Executive one, to be regulated by circumstances. But it was proper that the legislative department of the Government should express its approval of the retaliation contemplated by the resolution.

Mr. Henry, of Tennessee, said that the resolution did not go far enough. He favored the passage of a law providing that, upon any attempt being made to execute the proclamation of Abraham Lincoln, we immediately hoist the "black flag," and proclaim a war of extermination against all invaders of our soil.

Mr. Phelan, of Mississippi, said that he had always been in favor of conducting the war under the "black flag." If that flag had been raised a year ago the war would be ended now.

Mr. Burnett, of Kentucky, moved that all of said resolutions be referred to the Committee on the Judiciary. This was agreed to.

Subsequently, onthe 1st of October, a majority of the Judiciary Committee made a report recommending the passage of the following bill:

Whereas, these States, exercising a right consecrated by the blood of our Revolutionary forefathers, and recognized as fundamental in the American system of government, which is based on the consent of the

governed, dissolved the compact which united them to the Northern States, and withdrew from the Union created by the Federal Constitution; and whereas, the Government of the United States, repudiating the principles on which its founders, in their solemn appeal to the civilized world, justified the American Revolution, commenced the present war to subjugate and enslave these States under the pretext of repressing rebellion and restoring the Union; and whereas, in the prosecution of the war for the past seventeen months, the rights accorded to belligerents by the usages of civilized nations have been studiously denied to the citizens of these States, except in cases where the same have been extorted by the apprehension of retaliation, or by the adverse fortune of the war; and whereas, from the commencement of this unholy invasion to the present moment, the invaders have inflicted inhuman miseries on the people of these States, exacting of them treasonable oaths, subjecting unarmed citizens, women, and children to confiscation, banishment and imprisonment; burning their dwelling houses, ravaging the land, plundering private property; murdering men for pretended offences; organizing the abduction of slaves by government officials and at government expense; promoting servile insurrection, by tampering with slaves, and protecting them in resisting their masters; stealing works of art and destroying public libraries; encouraging and inviting a brutal soldiery to commit outrages on women by the unrebuked orders of military commanders, and attempting to ruin cities by filling up the entrances to their harbors with stone: And, whereas, in the same spirit of barbarous ferocity the Government of the United States enacted a law, entitled "An act to suppress insurrection, to prevent treason and rebellion, to seize and confiscate the property of rebels, and for other purposes," and has announced by a proclamation, issued by Abraham Lincoln, the President thereof, that in pursuance of said law, "on the 1st of January, 1863, all persons held as slaves within any State, or designated part of a State, the people whereof shall be in rebellion against the United States, shall be thenceforward and forever free," and has, thereby, made manifest that this conflict has ceased to be a war as recognized among civilized nations, but on the part of the enemy has become an invasion of an organized horde of murderers and plunderers, breathing hatred and revenge for the numerous defeats sustained on legitimate battle fields, and determined, if possible, to exterminate the loyal population of these States, to transfer their property to their enemies, and to emancipate their slaves, with the atrocious design of adding servile insurrection and the massacre of families to the calamities of war; and, whereas, justice and humanity require this Government to endeavor to repress the lawless practices and designs of the enemy by inflicting severe retribution: Therefore, the Confederate States of America do enact,

1. That on and after the 1st of January, 1863, all commissioned and non-commissioned officers of the enemy, except as hereinafter mentioned, when captured, shall be imprisoned at hard labor, or otherwise put at hard labor, until the termination of the war, or until the repeal of the act of the Congress of the United States, herein before recited, or until otherwise determined by the President.

2. Every white person who shall act as a commissioned or non-commissioned officer, commanding negroes or mulattoes against the Confederate States, or who shall arm, organize, train, or prepare negroes or mulattoes for military service, or aid them in any military enterprise against the Confederate States, shall, if captured, suffer death.

3. Every commissioned or non-commissioned officer of the enemy who shall incite slaves to rebellion, or pretend to give them freedom, under the aforementioned act of Congress and proclamation, by abducting, or causing them to be abducted, or inducing them to abscond, shall, if captured, suffer death.

4. That every person charged with an offence under this act shall be tried by such military courts as the President shall direct; and after conviction, the President may commute the punishment, or pardon unconditionally, or on such terms as he may see fit.

5. That the President is hereby authorized to resort to such other retaliatory measures as in his judgment may be best calculated to repress the atrocities of the enemy.

Mr. Phelan, of Mississippi, submitted a minority report from the same committee, in the form of a lengthy preamble, and the following resolution:

Be it resolved, &c., That from this day forth all rules of civilized warfare should be discarded in the future defence of our country, our liberties and our lives, against the fell design now openly avowed by the Government of the United States to annihilate or enslave us: and that a war of extermination should henceforth be waged against every invader whose hostile foot shall cross the boundaries of these Confederate States.

Mr. Hill, of Georgia: I must be allowed to say for myself that I regard the proclamation of Mr. Lincoln as a mere *brutum fulmen*, and so intended by its author. It is to serve a temporary purpose at the North. I fear we are dignifying it beyond its importance. As the Senate has concluded to notice it, I am in favor of the simplest and most legal action. We must confine our action within the line of right, under the laws of nations. In my opinion we have the right to declare certain acts as crimes, being in conflict with civilized war, and the actors as criminals; and a criminal, though a soldier, is not entitled to be considered a prisoner of war. While, therefore, I approve the general idea to treat persons guilty of certain acts as criminals, contained in the bill reported by the Senator from Louisiana (Mr. Semmes), and agreed to that report as being the one most favored by the majority of the committee, I also, in accordance with the understanding of the committee, propose the following bill, and ask that it be printed for the consideration of the Senate:

1. That if any person singly, or in organized bodies, shall, under pretence of waging war, kill or maim, or in any wise injure the person of any unarmed citizen of the Confederate States, or shall destroy, or seize, or damage the property, or invade the house or domicil, or insult the family of such unarmed citizen; or shall persuade or force any slave to abandon his owner, or shall, by word or act, counsel or incite to servile insurrection within the limits of the Confederate States, all such persons, if captured by the forces of the Confederate States, shall be treated as criminals and not as prisoners of war, and shall be tried by a military court, and, on conviction, suffer death.

2. That every person pretending to be a soldier or officer of the United States, who shall be captured on the soil of the Confederate States, after the 1st day of January, 1863, shall be presumed to have entered the territory of the Confederate States with intent to incite insurrection and abet murder, and unless satisfactory proof be adduced to the contrary, before the military court before which the trial shall be had, shall suffer death. This section shall continue in force until the proclamation issued by Abraham Lincoln, dated at Washington, on the 22d day of September, 1862, shall be rescinded, and the policy therein announced shall be abandoned, and no longer.

Mr. Clark, of Missouri, read a preamble and resolution embracing his views on the subject under consideration. The resolution proposed

to recognize the enemy as "savage, relentless, and barbarous," and declares that it "is the duty of the Government of the Confederate States neither to ask quarter for its soldiers nor extend it to the enemy until an awakened or created sense of decency and humanity, or the sting of retaliation, shall have impelled our enemy to adopt or practise the usages of war which prevail among Christian and civilized nations."

On the motion of Mr. Semmes, of Louisiana, the several bills and resolutions were ordered to be printed.

The whole matter was finally disposed of on the last day of the session by the passage of a resolution, declaring that Congress would sustain the President in such retaliatory measures as he might adopt. (*See* PRISONERS, and PUBLIC DOCUMENTS.)

In the Senate, on the 7th of October, the bill to extend the operation of the sequestration act to all persons, natives of or residents within any State of the Confederate States, who have refused to submit themselves to the constitution and laws of the Confederate States, &c., was considered.

A substitute proposed by the Committee on the Judiciary was adopted. This substitute provides that the President of the Seceded States shall issue his proclamation ordering all persons within the limits of those States who adhere to the United States Government to leave the Southern Confederacy within forty days on pain of forfeiture of property. Another of its provisions is the granting of immunity to all persons adhering to the United States Government who, within forty days, should take the oath of allegiance to the Southern Confederacy.

The following is a sketch of the debate on this bill, which, however, failed to become a law at this session:

Mr. Clark, of Missouri, opposed the bill, because it would work a hardship upon good citizens of the South, who had acquiesced in the Yankee rule under duress, and were still within the Yankee lines. If citizens of the South could be given a fair chance to join our cause and still adhere to the enemy, he would be in favor of nailing them to the cross.

Mr. Haynes, of Tenn., took the same views.

Mr. Wigfall, of Texas, thought the bill entitled to serious consideration. It was not clear to him that it was entirely constitutional. Citizens and residents of the States of the Confederacy who had afforded aid and comfort to the enemy had been guilty of treason—a crime defined by the Constitution, and for which said citizens were responsible to their States and to the Confederate States.

Mr. Hill, of Georgia, held that every citizen had the right to elect with which Government, that of the North or the South, he would side. The Southern Government had the right to say whether residents or citizens who did not take sides with us but with the enemy, should leave its limits and go over to the territory of the enemy. If a citizen has once elected to be a citizen of one of the Confederate States, that act makes him a citizen of the Confederacy, and he cannot throw off his allegiance. It belongs to the Confederate Government to define who are alien enemies. These rules had prevailed in all revolutions—in England and in the Netherlands.

Mr. Wigfall said the gentleman was as much mistaken as Abraham Lincoln or William H. Seward if he thought this was a revolution—that we were subjects fighting against an established Government. If we were we would be entitled to the term "rebels." This is no civil war. It is a war of some sovereign States against other States. There was civil war in Kentucky, where citizens of the same State were at war against one another. There was no such thing as a citizen of the Confederate States. No citizen owed allegiance to the Confederate States.

Mr. Hill held that the citizen did owe allegiance to the Confederate States. Gentlemen might call it "obedience," but this was a sublimated theory. The States have formed a Confederate Government, to which is delegated the sovereign power to declare war, &c. The citizen's first allegiance is due to his State, but through the State he owes allegiance to the Confederate Government.

He held, however, that the people had a right to choose their own Government. If this were not so, then the United States had the right to hang Gen. Buckner for proving false to the allegiance he once owed to them. This conclusion was inevitable. And the Confederate States would have a right to hang Andrew Johnson for violating an allegiance to the Government to which he never admitted he owed allegiance.

Gentlemen, he said, may shake their heads at the proposition as much as they please, but when they deny it, they deny a fundamental principle of the Government, and the people who accept the contrary rule of action are drifting on a rapid current into monarchy. You come to the old exploded doctrine that a man who once owes allegiance always owes allegiance; you deny the principle of expatriation in toto; you say a man shall render allegiance to a Government even before he has promised it; that no man has a right to choose his Government; and, finally, that Government does not rest upon the consent of the governed. This is monarchy. I deny that you can take a man by the nape of the neck and force citizenship down his throat. Citizenship is made up as well of the consent of the individual as of the Government. Neither party has a right to violate it against the consent of the other, and by that violation bind the other, unless it be upon terms before agreed upon. You cannot, therefore, hang a man as a traitor to a Government that has been made without his consent.

I do not know what particular acts Andrew Johnson may have done which would imply he intended to become a citizen of this Government. I say that when his State seceded he had a right to abandon his State; and if he did, in good faith, abandon that State, he is an alien enemy, and not a traitor. How far his specific act goes, of attempting to represent Tennessee in the United States Senate, is another question. I am not putting it upon that ground. I ask this: Do you hold Andrew Johnson, who abandoned the State of Tennessee and never came under obligation to the Confederate Government, to be a traitor? Can he be a traitor? I am discussing the general proposition. I say that, as regards every man who held allegiance to the United States originally, while he had a right to adhere to that allegiance, there was no power on earth could break his allegiance against his consent. This proposition I assert, and when a gentleman denies it he need not talk about State rights and individual rights. He erects the Government into a despotism, whether it goes by the name of monarchy, aristocracy, or democracy. If you can lay hold of a citizen and tear him loose against his will from his acknowledged allegiance, you exercise the greatest power a tyrant is capable of exercising. I say again that no power can rightly force a man to break his allegiance. The very violation of allegiance implies a consent of the will.

The senator says that there are no citizens of the Confederate States. But the Constitution says there are. "The electors in each State shall be citizens of the Confederate States." The gentleman says it does not mean that. I should suspect any theory that drove me to destroy or change the language of the Constitution itself. Here it is plainly written; and because I abide by it the gentleman calls me a "nationalist." God save the mark!

Mr. Wigfall: I hope he will.

Mr. Hill: I have always understood that the fundamental principle of State rights is, that the power shall be found in the grant, and that it is to be defined by the words used, and that "construction" was the old theory of the nationalists. We will take the doctrine of State rights, if we go by the letter. The words are, "citizen of the Confederate States." The gentleman, to save State rights, steps in and begins to construe. "It did not mean than; I grant that it says so, but it does not mean it." Who construes? He not only applies words not used, but changes words used, puts in words, reads new meanings, and talks to me about construction and "nationalism." It is not a question; it is not used in that one single sense, but here it is again: "No person shall be a representative who has not attained the age of twenty-five years, and been a citizen of the Confederate States." It did not mean it, of course. But it says, furthermore, "No person shall be a Senator who shall not have attained the age of thirty years, and been a citizen of the Confederate States." Now, unless my friend will admit he is a citizen of the Confederate States, he ought to be ousted from his seat in this body; he is incompetent to hold it by the Constitution—that is, by the Constitution as it reads. Of course, if my friend is allowed to decide by "national" and "federal" rules, to construe the Constitution, to pay no attention to what it says, but only to what he thinks or desires it to mean, he will be entitled to his seat.

Mr. Semmes: I would like to ask the senator one question. This Constitution says "the people of the Confederate States." Do you suppose it means other than the citizens of the States?

Mr. Hill: I certainly do not. They become citizens of the Confederate States through the States, except they be aliens. I grant that no person can be a citizen of the Confederate States who is not a citizen of some one of the States, but it does not follow that a citizen of a State is necessarily a citizen of the Confederate States. Gentlemen may indorse sublimated theories that define our Constitution after the manner of the interpreters of the will in Dean Swift's "Tale of a Tub." They wanted to construe it, not according to what it said, but according to the measure of their own wishes. The text did not suit them, so they took sentences; but sentences would not give the meaning, so they took words; they could not find the right consecutive words, so they took syllables, and, finding they would not do, they selected letters, and putting them together they made a will to suit their taste. Gentlemen upon the same principle may destroy the Constitution, and make it mean what they please, in order to accomplish their purposes. But I am thus much of a State rights man: I deny the Confederate Government has any power not granted; and I say you must look to the language of the grant to find the extent of the power, and that which necessarily results from the grant—the power to carry out the grant must be in the grant. The language "citizens of the Confederate States" is used in the Constitution no less than three times. It is true, they are first citizens of the respective States, but they become citizens of the Confederate States through the States compacting together—confederating together.

The Constitution also declares what shall be treason against the Confederate States. What is treason? A violation of one's allegiance. A gentleman gets up to argue or to intimate that a man cannot owe allegiance to the Confederate States on account of some legislation in North Carolina——

Mr. Oldham: Do you argue he can?

Mr. Hill: I say he can owe allegiance to the Confederate States as far as the Constitution binds him. He did not owe original allegiance, I grant.

Mr. Oldham: Obedience.

Mr. Hill: Treason is defined by jurists and

by dictionaries as the violation of one's "allegiance"—that is the word.

Mr. Oldham: I will explain the purport of my question. I hold that every citizen of a political community owes allegiance to the sovereign power. In this country the people are the sovereign power, and every citizen owes allegiance to the political community that constitutes his State. He owes obedience to the State Government which that community may establish as the agency; and, whenever this sovereign directs him to change that obedience to any other source, he is bound to obey in consequence of his allegiance to his sovereign. He owes precisely the same allegiance to this sovereign as the people of Great Britain owes to the English Crown.

Mr. Hill: I do not quibble about words. I do not care by what circumlocution you arrive at the origin of allegiance. I do not care how a citizen owes allegiance, or by whose allegiance, or by whose agency he gets to owe allegiance. All I say is that under the Constitution every citizen of the Confederate States owes allegiance to the Confederate States. You may call it obedience.

Mr. Oldham: I only desire the gentleman not to confound terms.

Mr. Hill: He confounds terms himself. He gets up a word to define authority, and employs the same to overturn authority.

Mr. Oldham: Our Government overturned authority.

Mr. Hill: It did not say the treason we define is different from the treason that has been settled for all time. One of the definitions is, that treason shall consist in levying war against the Government. It adjudicates upon cases coming within the meaning of the word. What is meant by the word? A breach of one's allegiance. The gentleman says it is a breach of one's obedience. Then, I suppose a violation of the law may be made treason—for that is disobedience. Desertion or any other violation of a penal statute may be made treason. You may call it allegiance or obedience. I say citizens of this Government owe that which only citizens can owe—they owe allegiance; and if they violated that allegiance they can be hung. You need not go and read your sublimated theories to the man upon the gallows; you need not try to comfort him by saying it is all wrong to hang a man for violation of his allegiance, but ought first to decide his obedience. I fear he would be hung before you conclude your rhapsodies.

There is no necessity for the introduction of these theories to bring about a conflict between the State Governments and the Confederate Government. My idea—I do not know whether it is a national one or not; certainly it does not depend upon a change of words in the Constitution, upon refined arguments and well spun theories for its justification—is this: the States were originally sovereign, independent States—they are original and sovereign yet—and as such they had a right to exercise absolute and sovereign power. They have by their own free will and consent delegated these sovereign powers to a common Government. And they made it a Government, not simply an agency, for they call it a Government in the compact, and they have said all citizens of the respective States shall be citizens of the Confederate States. They have established laws requiring these citizens to obey that which the States have agreed they shall obey—the common compact.

To the extent of the powers delegated, the Confederate Government exercises the sovereign power. I grant that it did not have original, national sovereignty—nor do I care whether it has or not. It has the power to declare war, the power to make money, to collect duties, and these powers are sovereign powers; they are expressly delegated to the Confederate Government. Violence done to the Government, by a citizen, is treason, because it is a violation of the citizen's allegiance. I admit that the men who were originally citizens of the States, and who are yet citizens of the States, owe their first allegiance to the States, but through the States they owe allegiance to the Confederate Government. The State, of course, under certain circumstances, has a right to qualify that allegiance; and I say when you dissolve the compact the citizen has a right to elect. If we, upon the part of the Government, will exercise powers plainly delegated to us, and exercise none that are not delegated, there will never be any conflict between the States and the Confederate Government. If the States will exercise their reserved powers properly, and the Confederate Government exercises its delegated powers properly, there will never be any difficulty.

I say to gentlemen here who make such a clamor in defence of State sovereignty, for which they say this war has been waged, that if they will recur to history they will find that the great cause of the disruption was the interference, by States, with a compact into which they had solemnly entered. No man found cause for dissolution in anything the Federal Government did; for all declared they wanted to preserve the Union until Lincoln was elected. Not against the Supreme Court—that tribunal was faithful to the last. Not against the Federal Congress, for there you had a majority. Not against Mr. Buchanan—*par excellence* the man chosen by the South. What was the difficulty, Mr. President? The Northern States, sir, passed their personal liberty bills and nullified the acts of Congress. The State Governments would not render up fugitives, declaring they were not criminals because they stole negroes, which were not property; and the State judges took it upon themselves in their State courts, to set aside the acts of Congress for carrying out the fugitive slave law. These were the enormities that drove the South to her condition of determined secession. I know that, through my section of the country, these facts

had more influence upon the popular mind than any other; and when Mr. Lincoln was elected it was thought he was seeking not to continue the Federal Government, but pervert the Government, and to accomplish, through Federal agency, what the Northern States had already sought to do. That perfected the argument.

I am not national, in one sense; I am not Federal in another, I am sure. I regard the reserved rights of the States as much as any other man, and will never seek to intrench upon them. The powers I am sworn to exercise I will exercise with strict reverence for the purposes of the grant. I think if we would all go to work in the exercise of delegated powers, and act instead of theorizing, we would accomplish more satisfactory results for the people.

Mr. Wigfall: I propose to answer the gentleman, with the simple prefatory remarks, that I am as much astonished at his recollection of the facts as his avowal of principles. For a senator to rise in this Confederate Congress, within a few brief months after the nation has been dissolved, and declare the Federal Government of the United States never trespassed upon our rights——

Mr. Hill: I never said that.

Mr. Wigfall: If you did not, you said something bearing a wonderful resemblance to it.

Mr. Hill: I said the trespasses of the Federal Government were not the evils alleged by the people in seceding; it was not the trespasses of the Government that influenced the people to secede. I said it was the trespasses of the Northern States in their faithlessness to the common compact. I always held the Missouri compromise was unconstitutional, and things of that sort; but the Federal Government, as such, did not commit these trespasses which drove the people to secede.

Mr. Wigfall: Well, I ask, if they had any complaint against the judiciary?

Mr. Hill: None.

Mr. Wigfall: I need not ask him about the legislative branch, for he says we had no cause of complaint here. "Surely not," he says, "for you had a majority there." His language is plain and unmistakable. Why, sir, in that Congress the Black Republicans had an overwhelming majority in the House against us, and a tie vote in the Senate, with a Black Republican casting vote.

Mr. Hill: It was not from any act of the Supreme Court or of Congress, or of the Federal Executive, we seceded. I do not say they always did right. I was utterly opposed to the administration of Mr. Buchanan.

Mr. Wigfall: He forgets Congress passed a law abolishing slavery in the District of Columbia, declaring no slave should be sold there.

Mr. Hill: When did it pass?

Mr. Wigfall: In 1850.

Mr. Hill: And the people expressly said they would not secede on account of it.

Mr. Wigfall: I do not know what Georgia politicians said.

Mr. Semmes: I call the gentleman to order.

The President: The gentleman will make no remarks not pertinent to the issue.

Mr. Wigfall: The senator asks if Andrew Johnson is a traitor. He gets up and makes a terrible to do about my denying the right of taking up arms to resist tyranny, and trying to hold men to their allegiance. I never denied any such right. A man may change his allegiance, provided he does it in good time and good faith. No man has ever asserted the contrary—and if it were not for the lax notions of the senator about the organization of the Government, and the patent, palpable errors he has fallen into heretofore on this question, I should be surprised at the attitude he assumes. He asks when did Andrew Johnson become a citizen of the Confederate States? (I use that term—we are obliged always to use it—the meaning is, a citizen of Tennessee when it entered the Confederate States.) He was a citizen of Tennessee originally. When Tennessee became one of the Confederate States he was in the position of every other citizen of Tennessee. He never disavowed his allegiance to Tennessee; on the contray, he pretended to represent her in the Federal Senate, and he went back there, and pretended to be Governor. How was he released from his allegiance? Tennessee becoming one of the Confederate States, he was obliged to give obedience to her laws, or become amenable to indictment and conviction for treason if he gave aid and comfort to the enemy, or levied war against her. The Constitution the senator has relied upon so confidently in support of his position has also the clause, "We the People," equivalent to saying we do not mean the people of one single consolidated nationality, but the people of the several States.

Mr. Hill: I have never contended it was consolidated.

Mr. Wigfall: The other sentence I allude to is in the second clause of the fourth article, in which it says, "citizens of each State shall be entitled to all the privileges and immunities of citizens in the several States," &c. I don't conceive any additional argument necessary to combat the gentleman's most untenable position.

This debate was terminated by laying the bill on the table.

Subsequently Mr. Foote reported resolutions, which were referred to Committee on Foreign Affairs, to appoint a Joint Committee to address the people of California, Oregon, and the various Territories beyond the Rocky Mountains, on the expediency of hereafter establishing a league, offensive and defensive, between such States and Territories and the Confederate States.

An act was passed to encourage the manufacture of shoes and clothing for the army of the Confederacy. It provides for bringing into the country, duty free, of cards, card cloth, machinery, and other articles necessary for the purpose.

A bill was also introduced against foreign

counterfeiters of treasury notes. It provides that if such notes are introduced by officers, soldiers, and others of the United States, the offender shall be deemed guilty of felony, and suffer death on conviction in any military court.

Mr. Clay said he hoped senators would give this bill the attention it deserved. The enemy, by counterfeiting our currency, had aimed one of their deadliest blows at our cause. They had boldly advertised these counterfeits for sale, and among their dead, who fell in battle, it was rare to find one who had not upon his person more or less of spurious Confederate treasury notes. The faith in our currency of some of the loyal inhabitants of the Confederacy had already been impaired by the quantity of counterfeits which had found their way into circulation. Some law to repress this counterfeiting by the enemies of the Confederacy, by providing for their speedy punishment, should be passed. Mr. Clay moved to amend the bill by providing that persons charged with passing counterfeit notes, shall be tried by any military court or military commission, as provided by a law of Congress, instead of by the slower and more cumbrous mode of trial by court martial.

In the House of Representatives, Mr. Foote, of Tennessee, offered the following joint resolution proposing to send a commissioner to Washington empowered to propose terms of just and honorable peace:

Be it enacted by the Congress of the Confederate States of America, That the signal success with which Divine Providence has so continually blessed our arms for several months past would fully justify the Confederate Government in despatching a Commissioner or Commissioners to the Government at Washington City, empowered to propose the terms of a just and honorable peace.

Mr. Holt, of Georgia, asked the consent of the House to offer the following substitute for the resolution:

The people of the Confederate States are, and have been from the beginning, anxious that this war with the United States should be conducted with the sense established by the rules of civilized and Christian nations, and have, on their part, so conducted it, and the said people ardently desire that said war should cease and peace be restored, and have so announced from the beginning: therefore,

Resolved, That, whenever the United States Government shall manifest a like anxiety and a like desire, it shall be the duty of the President of the Confederate States to appoint —— Commissioners to treat and negotiate with the said United States Government upon said subjects, or either of them.

On motion of Mr. Kenan, of Georgia, the resolution and substitute were laid upon the table —yeas 59, nays 26.

On the 9th of October, Elias C. Boudinot was admitted to a seat in the House as a delegate from the Cherokee Nation of Indians.

A bill was introduced into the House as a tax measure which proposed to collect for the support of the government and the defence of the country, one fifth the value of all the wheat, corn, rice, rye, oats, potatoes, hemp, flax, peas, beans, barley, hay, wool, rosin, tar, pitch, turpentine, cotton, sugar, molasses, and tobacco produced in the Confederate States during the previous year; also one fifth the value of the increase of the horses, asses, cattle, sheep, swine, and also one fifth of the yearly incomes. Upon the collection of the tax a receipt was to be given, which should be exchangeable for income tax bonds bearing 6 per cent. interest. This bill was regarded as a forced loan, and failed to pass.

An act was passed making appropriations for the support of the government for the month of January, 1863, and for certain deficiencies and other purposes therein mentioned. Among the appropriations made by this act were the following: For the ordnance service, $2,500,000; pay of the army, $18,660,189; transportation of troops, &c., $7,464,075; subsistence of prisoners of war, &c., $200,000; bounty of fifty dollars to soldiers, $3,000,000; medical and hospital supplies, $400,000; to pay deficit in the post office department, $800,000; for deficiencies in the quartermaster's department, $39,000,000; interest on the public debt, for the month of January, 1863, $2,500,000; subsisting the army for the month of January, 1863, $6,571,672 91. The aggregate sum appropriated by it was nearly $85,000,000.

A bill entitled "An act to provide for raising and organizing, in the States of Kentucky and Missouri, additional forces for the provisional army of the Confederate States," with a recommendation that the House concur in the amendments which authorize the President to appoint general and field officers for the organization of such troops, was also taken up in the House and passed.

In the Senate, on Oct. 11, the House bill to reduce the rate of interest on the funded debt of the Confederate States was passed, with an amendment fixing the rate of interest on the new issue of bonds at 7 per cent. instead of 6 per cent. A proviso was also added renewing the authority to issue 6 per cent. reconvertible bonds. A House bill to relieve the army of incompetent and disabled officers was also passed.

In the House, on Oct. 11, the Senate bill to punish and repress the importation of counterfeit treasury notes was passed, with an amendment. A substitute for the Senate bill fixing the seal of the Confederate States was adopted.

An act was also passed authorizing the Secretary of the Treasury to issue copper coins of the denomination of five, ten, and twenty-five cents to the amount of five millions of dollars, and appropriating $200,000 to carry the act into effect.

Some change in the members of Congress took place near the close of this session. Chas. J. Jenkins was elected from Georgia to fill the vacancy occasioned by the resignation of Gen. Toombs. Samuel A. Miller was elected to fill the vacancy occasioned by the resignation of A. G. Jenkins, of Virginia.

CONGRESS, U. S. The second session of the thirty-seventh Congress* convened at Washington on the 2d of December, 1861. At this session the legislation of Congress assumed a new aspect. Two positions were taken, which became the basis of the action of the controlling majority in that body on all subjects relating to the troubles of the country. The first one was that slavery was the cause of those troubles. Of course, all the power of the Government must be directed against this cause. This power was to be wielded in two ways, viz., by negative measures and by positive. The negative measures consisted in withholding all restraints upon the slave. Practical emancipation followed the progress of the armies. The slave could go wherever he pleased, and be fed and clothed when destitute at the public expense, and be protected from the apprehension of his master, unless the latter could prove his loyalty, although residing in a country where the Government of the United States was utterly unable to afford to him any protection. The positive measures consisted in emancipation in all places under the exclusive control of the Government, in prohibiting the extension of slavery to territories, and in a universal emancipation in the disloyal States through confiscation. The second position taken was that, the Government was engaged in a struggle for its existence, and could, therefore, resort to any measure which a case of self-defence would justify. This was said to be one of the hitherto undeveloped powers of the Constitution, and was called the "war power." The limitations which are prescribed in the Constitution to the powers of the Government, were supposed not to apply under the existing circumstances of the country, but Congress could pass all measures which it considered necessary to sustain the Government in the exercise of its authority. Practically the Constitution is of no force under this view, so far as it relates to the measures deemed necessary; or it is regarded as silent on the subjects in question. If the Government is considered to be one simply of delegated powers, the question may naturally be asked, how Congress can legislate upon measures relative to which it has no power? If the Constitution

* The following is a list of the members of both Houses:

SENATE.

Maine—Lot M. Morrill, William P. Fessenden.
New Hampshire—Daniel Clark, John P. Hale.
Vermont—Solomon Foot, Jacob Collamer.
Massachusetts—Henry Wilson, Charles Sumner.
Rhode Island—James F. Simmons, Henry B. Anthony.
Connecticut—James Dixon, Lafayette S. Foster.
New York—Preston King, Ira Harris.
New Jersey—John R. Thompson, John C. Ten Eyck.
Pennsylvania—Edgar Cowan, David Wilmot.
Maryland—Anthony Kennedy, James A. Pearce.
Delaware—James A. Bayard, Willard Saulsbury.
Virginia—John S. Carlile, Waitman T. Willey.
Kentucky—Lazarus W. Powell, Garrett Davis.
Ohio—Benjamin F. Wade, John Sherman.
Michigan—Zachariah Chandler, Jacob M. Howard.
Indiana—Jesse D. Bright,* Henry S. Lane.
Illinois—Lyman Trumbull, O. H. Browning.
Wisconsin—James R. Doolittle, Timothy O. Howe.
Iowa—James W. Grimes, James Harlan.
Minnesota—Henry M. Rice, Morton S. Wilkinson.
Missouri—John B. Henderson, Robert Wilson.
Tennessee—Andrew Johnson.
California—Milton S. Latham, James A. McDougall.
Kansas—Samuel C. Pomeroy, James H. Lane.
Oregon—James W. Nesmith, Benjamin F. Stark.

HOUSE.

Maine—John N. Goodwin, Charles W. Walton, Samuel C. Fessenden, Anson P. Morrill, John H. Rice, Frederick A. Pike.
New Hampshire—Edward H. Rollins, Thomas M. Edwards, Gilman Marston.
Vermont—E. P. Walton, Justin S. Morrill, Portus Baxter.
Massachusetts—Thomas D. Eliot, James Buffinton, Benjamin F. Thomas, Alexander H. Rice, John B. Alley, Chas. R. Train, Goldsmith F. Bailey, Charles Delano, Henry L. Dawes, Samuel Hooper, Daniel W. Gooch.
Rhode Island—William P. Sheffield, George H. Browne.
Connecticut—Dwight Loomis, Alfred A. Burnham, Geo. C. Woodruff, James E. English.
California—Aaron A. Sargeant, T. G. Phelps, F. F. Low.
New York—Edward H. Smith, Moses F. Odell, William Wall, Frederick A. Conkling, Elijah Ward, Edward Haight, Charles H. Van Wyck, John B. Steele, Stephen Baker, Abraham B. Olin, Erastus Corning, William A. Wheeler, Socrates N. Sherman, Richard Franchot, Roscoe Conkling, R. Holland Duell, William E. Lansing, Ambrose W. Clark, Charles B. Sedgwick, Theodore M. Pomeroy, Robert B. Van Valkenburgh, Augustus Frank, Burt Van Horn, Elbridge G. Spaulding, Reuben E. Fenton, Benjamin Wood, James E. Kerrigan, Isaac C. Delaplaine, James B. McKean, Chauncey Vibbard, Jacob P. Chamberlain, Alexander S. Diven, Alfred Ely.
New Jersey—William G. Steele, George T. Cobb, Nehemiah Perry, John T. Nixon, John L. N. Stratton.
Pennsylvania—William E. Lehman, John P. Verree, William D. Kelley, William Morris Davis, John Hickman, Sydenham E. Ancona, Thaddeus Stevens, James H. Campbell, Galusha A. Grow, Charles J. Biddle, Joseph Bailey, Edward McPherson, Samuel S. Blair, Jesse Lazear, James K. Moorhead, Robert McKnight, John W. Wallace, John Patton, Elijah Babbitt, Thomas B. Cooper, John W. Killinger, Hendrick B. Wright, Philip Johnson, James T. Hale, John Covode.
Maryland—Cornelius L. L. Leary, Henry May, Francis Thomas, Charles B. Calvert, John W. Crisfield, Edwin H. Webster.
Virginia—Charles H. Upton, Jacob B. Blair, Joseph Segur, William G. Brown, Kelliam V. Whaley.
Ohio—George H. Pendleton, John A. Gurley, Clement L. Vallandigham, William Allen, James M. Ashley, Chilton A. White, Richard A. Harrison, Samuel Shellabarger, Warren P. Noble, Carey A. Trimble, Valentine B. Horton, Samuel S. Cox, Samuel T. Worcester, Harrison G. Blake, James R. Morris, Sidney Edgerton, Albert G. Riddle, John Hutchins, John A. Bingham, Robert H. Nugen, William P. Cutler.
Kentucky—Charles A. Wickliffe, George W. Dunlap, John W. Menzies, Aaron Harding, Samuel L. Casey, George H. Yeaman, Henry Grider, Robert Mallory, John J. Crittenden, William H. Wadsworth.
Tennessee—Horace Maynard, A. J. Clements.
Indiana—John Law, James A. Cravens, W. McKee Dunn, William S. Holman, George W. Julian, Albert G. Porter, Schuyler Colfax, William Mitchell, Daniel W. Voorhees, Albert S. White, John P. C. Shanks.
Illinois—Elihu B. Washburne, Isaac N. Arnold, Owen Lovejoy, Wm. Kellogg, Wm. A. Richardson, James C. Robinson, Philip B. Fouke, John A. Logan, Anthony L. Knapp.
Missouri—Francis P. Blair, jr., Elijah H. Norton, John W. Noell, James S. Rollins, William A. Hall, Thomas L. Price, John S. Phelps.
Michigan—Bradley F. Granger, Fernando C. Beaman, Rowland E. Trowbridge, Francis W. Kellogg.
Iowa—William Vandever, James F. Wilson.
Wisconsin—John F. Potter, Luther Hanchett, A. Scott Sloan.
Minnesota—Cyrus Aldrich, William Windom.
Delaware—George P. Fisher.
Oregon—George K. Shiel.
Kansas—Martin F. Conway.
Dakota—John B. S. Todd.
Nebraska—Samuel G. Daily.
Utah—John M. Bernhisel.
Nevada—John Cradlebaugh.
Colorado—H. P. Bennet.
New Mexico—John S. Watts.
Washington—William H. Wallace.

* Mr. Bright was expelled, and Joseph H. Wright appointed by the Governor.

was considered to be silent respecting the duties and powers of the Government amid such circumstances as existed, then it was asked if the law of nations was not a rule by which the Government should act in its treatment of the people of the seceded States. These questions were extensively discussed at this second session of the thirty-seventh Congress. To the American citizen, the history of his country presents no subjects of such serious importance.

In the Senate, immediately after the organization, Mr. Trumbull, of Illinois, gave notice "of his intention hereafter to ask leave to introduce a bill for the confiscation of the property of rebels, and giving freedom to the persons they hold in slavery."

The President's Message was sent to Congress on the next day. (*See* ANNUAL CYCLOPÆDIA, 1861, PUBLIC DOCUMENTS.)

In the House, immediately upon its organization, Mr. Lovejoy, of Illinois, offered a joint resolution tendering the thanks of Congress to Capt. Wilkes. It declared that "the thanks of Congress are due and are hereby tendered to Capt. Wilkes, of the United States Navy, for his brave, adroit, and patriotic conduct in the arrest and detention of the traitors James M. Mason and John Slidell." It was immediately read three times and adopted. This resolution was referred to the Naval Committee in the Senate, and no further action taken upon it.

Mr. Colfax, of Indiana, offered the following resolution, which was adopted:

Whereas, Colonel Michael Corcoran, who was taken prisoner on the battle-field of Manassas, has, after suffering other indignities, been confined by the rebel authorities in the cell of a convicted felon: therefore,

Resolved, That the President of the United States be requested to similarly confine James M. Mason, late of Virginia, now in custody at Fort Warren, until Col. Corcoran shall be treated as all the prisoners of war, taken by the United States on the battle-field have been treated.

A similar resolution was offered by Mr. Odell, of New York, relative to John Slidell, in consequence of the imprisonment of Col. Alfred M. Wood. It was agreed to.

Mr. Eliot, of Massachusetts, then offered the following joint resolution on the conduct of the war:

Resolved, by the Senate and House of Representatives of the United States of America in Congress assembled, 1. That, in behalf of the people of these States, we do again solemnly declare that the war in which we are engaged against the insurgent bodies now in arms against the Government has for its object the suppression of such rebellion, and the reëstablishment of the rightful authority of the national Constitution and laws over the entire extent of our common country: 2. That, while we disclaim all power under the Constitution to interfere by ordinary legislation with the institutions of the several States, yet the war now existing must be conducted according to the ordinary usages and rights of military service, and that during its continuance the recognized authority of the maxim that the safety of the State is the highest law, subordinates rights of property, and dominates over civil relations: 3. That therefore we do hereby declare that, in our judgment, the President of the United States, as the Commander-in-chief of our Army, and the officers in command under him, have the right to emancipate all persons held as slaves in any military district in a state of insurrection against the national Government, and that we respectfully advise that such order of emancipation be issued whenever the same will avail to weaken the power of the rebels in arms, or to strengthen the military power of the loyal forces.

Its consideration was postponed to Tuesday of the ensuing week, and again postponed to Dec. 12.

Mr. Campbell, of Pennsylvania, offered the following:

Resolved, That, in legislating to meet the exigencies of the present rebellion, Congress should confiscate the property, slaves included, of all rebels, and protect the property and rights, under the Constitution and laws, of all loyal citizens.

Mr. Stevens, of Pennsylvania, also offered the following:

Whereas, slavery has caused the present rebellion in the United States; and *whereas* there can be no solid and permanent peace and union in this Republic so long as that institution exists within it; and *whereas* slaves are now used by the rebels as an essential means of supporting and protracting the war; and whereas by the law of nations it is right to liberate the slaves of an enemy to weaken his power: therefore,

Be it resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the President be requested to declare free, and to direct all of our generals and officers in command to offer freedom to all slaves who shall leave their masters, or who shall aid in quelling this rebellion.

Sec. 2. *And be it further resolved*, That the United States pledge the faith of the Union to make full and fair compensation to all loyal citizens who are and shall remain active in supporting the Union for all the loss they may sustain by virtue of this act.

The consideration of these resolutions was postponed. In the Senate, on the 4th of December, Mr. Saulsbury, of Maryland, offered the following joint resolution proposing a conference for the settlement of the existing national difficulties. This was the only proposition made at this session, which contemplated a peaceful adjustment of the difficulties between the North and South. It was publicly declared in South Carolina that more was to be feared from this proposition than from all the armies of the North:

Whereas, the people of the States of Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, Texas, Arkansas, and Tennessee, are in revolt against the constitutional Government and authority of the United States, and have assumed to secede from the Federal Union, and to form an independent government under the name of the Confederate States of America; and *whereas* the Congress of the United States, approving the sentiment expressed by the President, in his annual message, "that the Union must be preserved, and hence all indispensable means must be employed," and believing that kind and fraternal feeling between the people of all the States is indispensable to the maintenance of a happy and prosperous Union, and being willing to manifest such feelings on their part, to the end that peace may be restored to a distracted country, and the Union and Constitution be preserved and maintained, and inviting the coöperation of the people of the aforesaid States in the accomplishment of objects so beneficial to each and all, do resolve as follows:

Resolved, by the Senate and House of Representatives of the United States of America in Congress assembled, That Millard Fillmore, Franklin Pierce, Roger B. Taney, Edward Everett, George M. Dallas, Thomas Ewing, Horace Binney, Reverdy Johnson, John J.

Crittenden, George E. Pugh, and Richard W. Thompson be, and they are hereby, appointed commissioners on the part of Congress, to confer with a like number of commissioners, to be appointed by the States aforesaid, for the preservation of the Union and the maintenance of the Constitution, and that they report the result of their said conference to Congress for approval or rejection.

Resolved, That upon the appointment of commissioners, as hereby invited, by said States, and upon the meeting of the joint commission for the purpose of conference as aforesaid, active hostilities shall cease, and be suspended, and shall not be renewed unless said commission shall be unable to agree, or in case of an agreement by them, said agreement shall be rejected either by Congress or by the aforesaid States.

Mr. Sumner, of Massachusetts, objected to its reception. It was, however, received, and laid on the table.

Mr. Wilson, of Massachusetts, gave notice of his intention to ask leave to introduce a bill "to punish officers and soldiers of the Army of the United States for arresting, detaining, or delivering persons claimed as fugitives to any person."

Mr. Sumner, of Massachusetts, offered the following resolution:

Resolved, That the Secretary of War be requested to furnish to the Senate copies of any general orders in the military department of Missouri relating to fugitive slaves.

He said: "Mr. President, my attention has been called, by letters from St. Louis, to certain general orders purporting to come from Maj.-Gen. Halleck, in command of the department of Missouri, relating to fugitive slaves, wherein it is directed that such persons shall not be received within his camps, or within the lines of his force when on march; and that any such persons now within such lines shall be thrust out; and the reason strangely assigned for this order is, that such fugitive slaves will carry information to the rebels.

"Now, it is difficult to speak of an order like that and to keep within bounds. Besides being irrational and inhuman on its face, it practically authorizes the surrender of fugitive slaves beyond any constitutional obligation. Such an order must naturally be disheartening to our soldiers, and it gives a bad name to our country, both at home and abroad.

"Gen. Halleck is reputed to be a good tactician; but an act like this, with which he chooses to inaugurate his command, does not give to us assurance of any great success hereafter. He may be expert in all the details of military science; but something more than that is now needed. Common sympathy, common humanity, and common sense are needed in the conduct of this war. I take the liberty here of saying—and I wish that my words may reach him—that every fugitive slave that he surrenders will rise in judgment against him hereafter with a shame which no victory that he can win can remove."

The consideration of the resolution was postponed until the next day, when it was agreed to.

On the same day, the following resolution was adopted unanimously in the Senate:

Whereas, John C. Breckinridge, a member of this body from the State of Kentucky, has joined the enemies of his country, and is now in arms against the Government he has sworn to support: therefore,

Resolved, That the said John C. Breckinridge, the traitor, be, and is hereby, expelled from the Senate.

Mr. Wilson, of Massachusetts, offered the following resolution, which was referred to the Committee on the District of Columbia:

Resolved, That all laws now in force within the District of Columbia relating to the arrest of persons as fugitives from service or labor, together with all other laws concerning persons of color within the District of Columbia, be referred to the Committee on the District of Columbia; and that the committee be further instructed to consider the expediency of abolishing slavery in the District, with compensation to the loyal holders of slaves.

In the House, on the same day, Mr. Holman, of Indiana, offered the following resolution:

Whereas, this House, on the 22d day of July last, by an almost unanimous vote, adopted the following resolution, submitted to the House by Hon. J. J. Crittenden, of Kentucky:

"*Resolved, by the House of Representatives of the Congress of the United States*, That the present deplorable civil war has been forced upon the country by the disunionists of the Southern States now in revolt against the constitutional Government, and in arms around the capital; that in this national emergency Congress, banishing all feelings of mere passion or resentment, will recollect only its duty to the whole country; that this war is not waged, upon our part, in any spirit of oppression, nor for any purpose of conquest or subjugation, nor for the purpose of overthrowing or interfering with the rights or established institutions of the States; but to defend and maintain the supremacy of the Constitution and to preserve the Union with its dignities, equality, and the rights of the several States unimpaired, and that, as soon as these objects are accomplished, the war ought to cease:"

And *whereas*, since that time, no event has occurred to change the policy of the Government: therefore,

Resolved, That the principles above expressed are solemnly reaffirmed by this House.

This was laid on the table: ayes, 71; noes, 65.

Mr. Dunn, of Indiana, also offered the following resolution:

Resolved, That the Committee on Foreign Affairs be instructed to inquire into and report whether it is practicable and expedient to obtain the rights and privileges of settlement and of citizenship in any part of this continent, or in the adjacent islands south of the United States, for the benefit of such free persons of African descent as may choose to emigrate thereto from the United States, or where such emigrants may form themselves into independent colonies, under such protection as may secure them from foreign molestation.

On the 5th of December, in the Senate, Mr. Trumbull, of Illinois, introduced his bill, according to previous notice, "for the confiscation of the property of rebels, and giving freedom to the persons they held in slavery. It provided for the absolute and complete forfeiture forever to the United States of every species of property, real and personal, and wheresoever situated within the United States, belonging to persons beyond the jurisdiction of the United States, or beyond the reach of civil process in

the ordinary mode of judicial proceeding, in consequence of the rebellion, who, during its existence, should take up arms against the United States, or in anywise aid or abet the rebellion; this forfeiture to be enforced against property in the rebellious districts through the military power, and against property in the other portions of the United States in which the judicial power is not obstructed by the rebellion, through the courts; and the proceeds of the property of each individual seized and forfeited, subject to the just claims of his loyal creditors, to be held for the benefit of loyal citizens despoiled of their property by the rebellion, and to defray the expenses incurred in its suppression. The bill also forfeited the claims of all rebels, and those who gave them aid and comfort, to the persons they held in slavery, declared the slaves thus forfeited free, and made it the duty of the President to provide for the colonization of such of them as might be willing to go, in some tropical country, where they might have the protection of the Government, and be secured in all the rights and privileges of freemen. The property belonging to traitors, or those giving them comfort, who might be convicted by the judicial tribunals, was to be forfeited on their conviction; the realty for life, and the personal property for ever."

Mr. Trumbull thus stated the principles in accordance with which this bill had been framed:

"The Constitution declares that Congress shall have power 'to declare war,' and 'make rules concerning captures on land and water,' 'to raise and support armies;' 'to provide and maintain a navy; to make rules for the government and regulation of the land and naval forces; to provide for calling forth the militia, to execute the laws of the Union, suppress insurrections, and repel invasions,' and 'to make all laws which shall be necessary and proper for carrying into execution the foregoing powers.' Acting under these grants of power, Congress has provided for bringing into service more than half a million of men who are now engaged in suppressing the insurrection; and has, to some extent, made rules for the government of these forces, which, as far as they go, are obligatory on them; but in the absence of any regulation as to how the army is to be used in suppressing the insurrection, its commander would be at liberty to make such use of it, consistent with the rules of civilized warfare, as he believed most conducive to the service of the state, and best calculated to secure the end for which it was called into being; upon the principle that every man intrusted with an employment, or duty, is presumed to be invested with all the power necessary to enable him to perform the service. Hence the authority of the army in the suppression of an insurrection to seize, imprison, or shoot the insurgents, to desolate the country they occupy, to seize and appropriate for the time being their property, and free the persons they hold in bondage, is as ample and complete under the Constitution as that of a court in peaceful times to arrest, imprison, try, and execute a murderer.

"That the judicial tribunals have no right or power to interfere with the army in the exercise of its powers in suppressing an insurrection, either by issuing writs of *habeas corpus* or otherwise, is apparent, from the fact that the only ground on which the military authority can be invoked at all, is, that the judicial tribunals, being overborne, are incompetent to the task. The judicial authority ceases at the very point where the military begins. It may be, and often is, a delicate question to determine this particular point, and decide in what localities the military, and in what judicial authority should have sway. This the Constitution has left to be provided for by Congress, by declaring that it shall have authority to call forth the militia to suppress insurrection; and Congress, soon after the adoption of the Constitution, passed an act authorizing the President to call forth the militia for that purpose, whenever the laws of the United States were obstructed by combinations too powerful to be suppressed by the ordinary course of judicial proceedings; and by an act passed at the first session of the present Congress, the President is authorized, in certain cases, to declare the inhabitants of a State, or part thereof, in a state of insurrection, and make use of the army to suppress it. The responsibility, therefore, of determining when and in what districts of the United States the military power may be used to suppress a rebellion, is devolved by Congress on the Executive, and when the military power is called into requisition, the judicial authority can no more interfere with its action, than can the military with the judicial tribunals in time of peace. Under certain circumstances either may be called to the aid of the other. The courts sometimes make use of the military in aid of the execution of their powers, and the military would doubtless have like authority to make use of the aid of the judicial tribunals in districts under insurrectionary control, should they be deemed a proper means by the military power to aid in suppressing the rebellion. In each case the power called to the aid of the other, whether it be the military in time of peace to the assistance of the judicial, or the judicial in time of rebellion to the assistance of the military, would be subordinate to the power making the call."

The Constitution defines the offence of which the Southern people have been guilty, and prescribes the extent of their punishment. This fact seems to be overlooked by Mr. Trumbull. The bill was referred to the Committee on the Judiciary. On the same day, in the House, Mr. Gurley, of Ohio, offered the following resolution, which was adopted:

Resolved, That the Judiciary Committee be requested to inquire if a telegraphic censorship of the press has been established in this city; if so, by whose authority and by whom it is now controlled: to re-

port if such censorship has not been used to restrain a wholesome political criticism and discussion, while its professed and laudable object has been to withhold from the enemy important information in reference to the movements of the army.

He also, on the same day, introduced a bill "to confiscate the property of rebels, to liberate their slaves and employ or colonize the same, and for other purposes," which was referred to the Committee on Military Affairs.

On the same day Mr. Lovejoy, of Illinois, offered the following resolution:

Resolved by the Senate and House of Representatives, in Congress assembled, That the Secretary of War be, and he is hereby, required to revoke the first section of General Order No. 3, bearing date of November 20, 1861, of Major-General Halleck, commanding the Western Department.

[The section of Gen. Halleck's order referred to in the resolution was as follows:

HEADQUARTERS, DEPARTMENT OF MISSOURI,
ST. LOUIS, *November* 20, 1861.
GENERAL ORDERS, NO. 3.

I. It has been represented that important information, respecting the number and condition of our forces, is conveyed to the enemy by means of fugitive slaves, who are admitted within our lines. In order to remedy this evil, it is directed that no such persons be hereafter permitted to enter the lines of any camp, or of any forces on the march; and that any now within such lines be immediately excluded therefrom.]

Mr. Lansing, of New York, offered the following substitute, which was accepted, and its consideration postponed:

Whereas, Major-General Halleck, of the Western Department, has issued an order prohibiting negroes from coming within the lines of our army, and excluding those already under the protection of our troops; and *whereas* a different policy and practice prevails in other departments, by the direct sanction of the Administration; and *whereas* said order is cruel and inhuman, and, in the judgment of this House, based upon no military necessity: therefore,

Resolved, That the President be respectfully requested to direct General Halleck to recall said order, or cause it to conform with the practice of the other departments of the army.

On the same day Mr. Bingham, of Ohio, offered the following, which was referred to the Judiciary Committee:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That all acts and parts of acts in force in the District of Columbia, which authorizes the commitment to the jails of said District, of persons as runaways, or suspected or charged with being runaways, and of free negroes, mulattoes, and other persons found living idle and without visible means of maintenance; and all acts and part of acts which authorize the sale of persons so committed, for charges of commitment or jail fees, be, and the same are hereby, repealed; and to so commit, or imprison, or sell any person for the causes aforesaid, within said District, is hereby declared a misdemeanor, and any person or persons so offending after the passage of this resolution shall, upon indictment and conviction, be subject to a fine not exceeding $500, and imprisonment not exceeding one year, nor less than three months, at the discretion of the court.

Mr. Riddle, of Ohio, offered the following, which was agreed to:

Resolved, That the Secretary of the Interior be requested to furnish to this House information as to the number of slaves now holden, or resident within the District of Columbia, and of their estimated value; and also such information as he may possess as to their intellectual and moral condition.

Mr. Fessenden, of Maine, offered the following, which was agreed to:

Resolved, That the Committee for the District of Columbia be requested to report the number of fugitive slaves that have been confined in the Government jail in Washington within the last year and a half; by whom claimed, whether any have been returned to the claimants; by what authority, and to whom, &c.

In the House, on the 11th, the resolution relative to the order of Gen. Halleck abovementioned was considered.

Mr. Stevens, of Pennsylvania, said: "We all know—for we have seen it in the orders—that the successor of Gen. Fremont, more, I believe, for the purpose of hunting down Gen. Fremont than from any general principle, has ordered that all slaves that have been received within our lines by order of Gen. Fremont should be excluded and returned to their masters, and that, in future, none others shall be permitted to come within those lines, upon a pretence, which any man who reads must know is a false pretence, that they are spies, and carry intelligence to the enemy. That is too bald a pretence to secure the belief of a child even. That slaves who have run away from their masters and sought protection from us, should have any desire to return as spies, and give information to the enemy, seems incredible. All our information from every source, so far as I have heard, is that these persons never desire to return, and that they are faithful to those who protect them. I hope the resolution will be passed, for the purpose of affecting our generals everywhere else.

"We know that this system of excluding fugitives from labor from our lines, and returning them to their masters, was inaugurated by Gen. McClellan in Western Virginia. Afterward came the magnificent proclamation of Gen. Dix, when he sent down an army into Eastern Virginia, amidst enemies and secessionists—for I venture to say that in those counties of Virginia, as well as in the adjoining counties of Maryland, there are not fifty loyal men—which ordered, in effect, the arrest of all fugitive slaves which came to them, and their delivery of them to their masters, and to exclude them entirely from their lines, because special care was to be taken that nobody's slaves should be liberated.

"In my judgment, all these cases which I have recited are a disgrace to the profession of arms; and if done on the mere motion of the commanding generals, they deserve to have the epaulets stripped from their shoulders. If done by the direction of higher authority, I have only to say, God forgive them, for they know not what they do."

Mr. Lovejoy, of Illinois, followed, and said: "But I desire to state, in reference to the last remark of the gentleman from Pennsylvania, that it is my honest conviction that these orders are given by the promptings of the gener-

als themselves, and that they have no authority to issue them from the President. I am satisfied that that is true. While the President does not remove and cashier them, as I would do, yet I do not believe he has given them any authority whatever, directly or indirectly, to proceed in this inhuman and shameful manner; for it is the concurrent testimony of every general in the field—and it is in accordance with my own observation while in the western department—that these slaves never play the game of spy; and that they are truly loyal and faithful. I remember very well that Gen. McDowell, before that fatal battle, was careful to inquire of every fugitive whom he met in relation to the position and movements of the enemy, and the topography of the country. I am satisfied that they are the most reliable scouts we have; that they give us the best information we have; and I do think it is most shameful, and mean, and contemptible for a major-general of the United States to slander a race already degraded, poor, and despised. It is an utter shame."

Mr. Blair, of Missouri, replied: "I desire to state to the House, in justification of Gen. Halleck, what occurred between us when I called on him the day after that order was issued. I know I may speak of it, because he does not care to conceal his sentiments. I told him I believed his order would be misunderstood and misconstrued, as it has been here today. He told me then that he had no idea of contravening the law of Congress, or the policy of the Administration on this subject; that his simple object was to exclude from his camp—not his lines—persons who could convey information to the enemy. As an instance of what he intended to guard against, I will say that at Cairo it was the habit of slaves to come into camp from Kentucky and southeastern Missouri for the purpose of selling provisions, and then going back into Missouri and Kentucky, where they fell into the hands of the enemy, who exacted information from them. He desired to put a stop to this thing, and that was the moving cause of his having published this order. I believe that what he stated in reference to this matter can be corroborated by gentlemen who were at Cairo at the time; and he said, moreover, that he not only intended to exclude from his camp these fugitive slaves who came there, and then went back to the enemy's camp, but that he meant to exclude everybody, white and black; that he meant to make no distinction in the matter, but that it was a mere military order, to preserve the discipline of his camp, and prevent the enemy from getting information."

Mr. Fouke, of Illinois, made the following statement: "Inasmuuch as Cairo has been alluded to, I will state the fact that the officers and soldiers there regard this order of Gen. Halleck as a most wise and salutary one. I care not what motives prompted him to make it, it was one which was much needed. The statement of my colleague in regard to the fidelity of these slaves is, in the main, untrue. We were misled on the 7th of November last by one of them, and my own regiment was led into ambush, and suffered the consequences. You cannot, therefore, rely upon the fidelity and loyalty of the slaves of Missouri, or any other State. I merely state facts which are known to our whole army there; and let my colleague's views prevail, and there is an end of recruiting for the volunteer service in my section of the State. These negroes come into our camps to sell their produce, and then communicate to the enemy information regarding the situation of our army. These are facts; and I know that every man bearing arms there will substantiate what I say."

Mr. Lovejoy, of Illinois, replied: "The concurrent testimony of all these generals with whom I conversed was in contravention of the statement of my colleague as to the general principle, not in reference to that particular case. I would ask my colleague what became of the negro who betrayed his regiment? Will my colleague be kind enough to answer?"

Mr. Fouke answered thus: "I do not happen to know what became of him afterward. We fell into the engagement at half past ten o'clock in the morning and remained under fire until five o'clock in the evening, and I had no time to look after the negro, about whom my colleague seems to be more concerned than the wounded and slain upon the battle-field; and I think if he would pay less attention to the negro and more to the interests of his country, we would get along much better with this war."

Mr. Blair, of Missouri, added: "Gen. Halleck stated, in addition to what I have already said, that he intended to use those slaves who ran away from their masters if he could use them with advantage to the Government; that he intended, if he found that it would weaken the enemy, to take their slaves from them wherever he found them; but he did not intend that that class of persons, or any other unauthorized persons, should come into his camp."

Mr. Julian, of Indiana, followed, saying: "This resolution relates to the policy adopted by Gen. Halleck in his division of the army. I think that the policy of the Administration itself is in favor of delivering up to their masters such slaves as come into the camps. I state this from the fact that within the past few days a slave girl, claimed by a Mr. Jessup, of Cockeysville, Maryland, found her way into the camp of Col. Brown, of the Twentieth Indiana regiment, and accompanied the regiment to Fortress Monroe. The master, learning her whereabouts, demanded his slave. Col. Brown refused to deliver her up. Application was then made to Secretary Cameron, who ordered Gen. Wool to have her delivered up to her claimant, which I understand, in pursuance of the order, he did. I infer, therefore, that the general policy of the Administration sanctions the conduct of Gen. Halleck in reference to

this matter, and renders necessary some action on the part of Congress, looking to a change of that policy."

Mr. Blair, of Missouri, replied: "I infer quite the contrary from the sentiments expressed by the President in his annual message. Whatever Mr. Cameron, or any other officer, may have done, I take what the President says to be at least an indication of his policy—and he is at the head of the Administration."

Mr. Kellogg, of Illinois, said: "The gentleman from Indiana charges pretty clearly that the Administration favors the line of policy indicated by the order under consideration. If the gentleman knows that President Lincoln, by any act or word communicated to this House, or spoken out of it, is in favor of it, I would like him to point to it now. I assume to say, however, that the Administration has had no hand, directly or indirectly, in the order of Gen. Halleck, or in shaping the policy which is in the general line of that order, as construed by my colleague. I am inclined to say this from watching tolerably closely the acts of the Administration, and reading, tolerably carefully, all that the President has said on the subject. I do not hesitate to say that the Administration is in no way complicated with the policy indicated in this order. I do not assume to say that the President is opposed to or in favor of it; but I do say, that no action of this Administration has induced that order, and that, in my judgment, the Administration will not indicate such a general policy."

Mr. Blair, of Missouri, again said: "I think, Mr. Speaker, that when the Congress of the United States shall itself have indicated a policy on this subject, and shall have passed a law justifying the Administration in taking such and such grounds, it will be time enough for us to censure the Administration or to censure others for not following the policy laid down by us. Up to this time no such policy has been indicated by Congress."

The resolution was subsequently laid on the table: yeas, 76; nays, 64.

On the next day Mr. Blair, by permission, read the following from Gen. Halleck:

HEADQUARTERS, DEPARTMENT OF THE MISSOURI,
ST. LOUIS, *December* 8, 1861.

MY DEAR COLONEL: Yours of the 4th instant is just received. Order No. 3 was, in my mind, clearly a military necessity. Unauthorized persons, black or white, free or slaves, must be kept out of our camps, unless we are willing to publish to the enemy everything we do, or intend to do. It was a *military*, and not a *political* order.

I am ready to carry out any lawful instructions in regard to fugitive slaves, which my superiors may give me, and to enforce any law which Congress may pass. But I cannot make law, and will not violate it. You know my private opinion on the policy of confiscating the slave property of the rebels in arms. If Congress shall pass it, you may be certain that I shall enforce it. Perhaps my policy as to the treatment of rebels and their property is as well set out in Order No. 13, issued the day your letter was written, as I could now describe it.

Hon. F. P. BLAIR, *Washington.*

The resolutions offered by Mr. Eliot, of Massachusetts, and others, were then taken up. (*See* p. 276.) Mr. Eliot, after explaining the resolution, said: "Our President may act, our commander-in-chief, within his province, and the officers under him in command may act, and I believe are called upon to act, by every consideration of humanity and of patriotism. And, coming from the commonwealth I represent, in part—a State which has performed no small service in this war—I call upon you to aid me in giving such expression of the judgment of this House as shall command respect. I am not here to boast of the bravery or the patriotism of Massachusetts soldiers. In their name and in their behalf I pray you to call upon the military arm to strike that blow more effective for peace and for freedom than armies or victories can be, and convert the slave, which is the power of the enemy, into the free man who shall be their dread. So shall the sword intervene for freedom! If I have read the history of Massachusetts aright, that is the intervention her fathers contemplated!"

Mr. Steele, of New York, replied: "There is a consideration, in my judgment, in opposition to these resolutions which we must heed, and that is this: that, whether right or wrong, a very large majority of the soldiers of our army are opposed to this anti-slavery agitation. Is it possible that these extreme measures are to be forced through Congress simply for the purpose of showing the sense of Congress upon this question, when gentlemen opposite tell us there is no need of any such laws? And do you suppose it can be done without demoralizing our army? These men have been educated all their lives in the idea that this agitation of the slavery question was unprofitable, and that it was likely to produce the very state of things which now exists; and they believe—whether right or wrong, they religiously believe—that the unnecessary agitation of this slavery question is the sole and only cause of all our troubles. Now, sir, let it be understood, let it be read in our camps, that this war is prosecuted, as has been more than intimated by the gentleman from Massachusetts, for the extinction of slavery, and I tell you, gentlemen, whether you believe it or not, the power of our army is paralyzed."

Mr. Conway, of Kansas, said: "To retain slavery under existing circumstances, in our body politic, would, in my judgment, evince the very worst kind of folly or wickedness. To eliminate it forever should be the unwavering determination of the Government. Nevertheless, the Administration refuses to heed such counsel, and persists in regarding the institution as shielded by such constitutional sanction as it is not at liberty to infract. The President, in his recent message to Congress, refers only incidentally to the subject; and indicates no policy whatever for dealing with the momentous question."

On the results of the war he said: "The suc-

cess of the Government in subduing upon its present plan the rebellious States must inevitably result in restoring the domination of the slaveholding class by reinstating the institution, under the forms of our constitutional system, in the powers, privileges, and immunities which have always pertained to it. Hence, such a policy is calculated to bring no lasting peace to the country, and utterly fails to fulfil the object to which a wise statesmanship would strive to direct the present momentous occasion.

"It is no answer to me to say that it would elevate to power in the South men of more agreeable manners, or even more gentle pro-slavery views, than are now on the stage. In truth, the character of the agents whom the slaveholders select to represent them has no important relation to the question. Men are of but little consequence in this case. It is a contest of principles. The rehabilitation of slavery in the Union brings with it the whole train of evils under which the country has suffered from the origin of the Government.

"There are many persons, however, who believe that slavery may be placed where it will be in the course of ultimate exinction; that, indeed, the effect of this war, in any event, will be so to weaken it in all the States in which it exists that it will be unable to recover from the shock thereby inflicted, but will languish and ultimately die, without a disturbing struggle.

"This is, in my judgment, a mistake. The inexorable and eternal condition of the life of slavery is, that it must not only hold its own, but it must get more. Such is the unchangeable law, developed from the conflict of slavery with the order of justice; and no one is competent to render a judgment in the case who does not recognize it."

Mr. Harding, of Kentucky, said: "I ask, sir, whether the President does not stand pledged before the country and the world to this conservative policy? It is plain that Congress and that this Administration all stand pledged in the most solemn manner to the people of this country to follow this line of policy, and not depart from it.

"It follows, then, that Congress and the President being pledged to this conservative policy, he cannot now, nor can Congress, swerve from it without a palpable and plain violation of the plighted faith of both. To sanction the policy proposed by these resolutions would be to turn the war away from its legitimate purpose, and indeed to turn the bayonets of our soldiers against the institution of slavery. It would not only be a departure from the policy heretofore indicated, but would in fact be a betrayal of the loyal States who have been induced with such great unanimity to vote men and money to carry on this war for the defence of the Government. Why, sir, common honesty would demand, if I induce a man to engage in any enterprise on stipulated conditions, that I should stand by him and adhere to my agreement. Let me put the case to the gentleman from Massachusetts (Mr. Eliot), who introduced these resolutions. I take the ground that this war should have nothing to do with the institution of slavery, any more than with any other State institution. Let slavery alone, it will take care of itself. Let me argue with the gentleman from Massachusetts, who moved these resolutions. The President and the Secretaries and Congress, by their action, have induced us with great unanimity to raise a very large army. Some six hundred thousand men have been brought into the field. Large amounts of money have been voted and expended. Direct taxes have been imposed even upon the necessaries of life. All this has been done to sustain, defend, and preserve the Constitution and Government of our fathers.

"But after our troops are in the field, and have their armor on, suppose I come up from Kentucky and propose to divert the war from its legitimate objects by urging that the regiments from Massachusetts should be employed part of their time in capturing and returning runaway slaves? Would not the repesentatives from that State rise up and denounce such a proposition with the deepest indignation? What, then, is it you propose? If it would be bad faith and a fraud upon your troops to employ them in capturing and returning fugitive slaves, I ask whether it would not be far more fraudulent and in bad faith to the loyal men of Kentucky who have girded on their swords and gone out to fight for the Union, to tell them that from this time forth they shall be engaged in making war upon the institution of slavery—a war for the destruction of their own property, and leading on to all the bloody horrors of servile insurrection?

"Sir, let me illustrate a little further, to show how destructive this policy is, and how strange it is that a man should be so far misguided as to permit himself to be influenced by it. We all know that a man's honest conviction of right, the burning zeal which he feels within him when he is engaged in this abolition war, or war of emancipation, is no evidence whatever that he is right. I remember that Paul himself was never more zealous than when he was breathing out threatenings and death; when he was persecuting, wasting, and destroying the churches of God; and he was doing all that in the name of religion, and 'verily thought he was doing God's service.' But when the scales fell from his eyes he saw things in their true light, and he was a different man. I would that the scales might fall from the eyes of every one. What has this question of slavery to do with this war? We have no more right to interfere with slavery in a Southern State than with the common school system, or any other local institution of a Northern State. Suppose I should arise here and propose a bill to abolish or radically change the common school system of Massachusetts,

and should urge that dangerous political heresies were taught in those schools, such as the higher law doctrine and various other wild and extravagant notions, tending to disqualify men for self-government, and to array them against the Constitution of our country; and that therefore these schools are at war with the spirit of our free institutions, and must be put down. Might not the gentleman from Massachusetts with great propriety interrogate me thus: 'Sir, have you any property or interest in Massachusetts?' 'None whatever.' 'Were you ever there?' 'Never.' 'Do you desire to go there?' 'Not at all; I am satisfied to live in Kentucky.' 'Do you ever expect to be in Massachusetts?' 'No.' 'Why then concern yourself about our local institutions?' 'Ah, but you forget, I am engaged in *a philanthropic line of business;* that is all.' [Laughter.] 'Well, sir, perhaps you had better turn your attention to Kentucky. I have known men to show much good sense and acquire fine fortunes by simply attending to their own business; but no man ever manifested the one or secured the other by intermeddling with and giving his time to matters which no way concerned him. All that ever was accomplished in that way has been to annoy others and benefit nobody.' How would I respond to that argument of my friend? I think I should 'give it up,' and immediately move to lay the bill upon the table.

"Now, that is exactly a parallel case with this. It is manifest that the Constitution of the United States secures to each State the right to have or not to have the institution of slavery—just as essentially so as it does the right to regulate your own common school system. We have no more right to make war upon the institution of slavery than upon any other local institution. The Constitution secures to each State the right of regulating its own domestic institutions; and it must necessarily protect slavery, as certainly as it protects your own common school system. Our wisest men, the President of the United States, the heads of departments, and Congress, having with united voice declared that we have no constitutional power upon the subject, how are you to escape from the difficulty?

"Sir, the Union cause in the border States has already lost more strength by the agitation of this question in Congress, at this session, than was lost by the defeat of our arms at Bull Run. Gentlemen should take care, lest in their great zeal to strike off the bonds of the slave they should be preparing chains and slavery for themselves and posterity.

"Sir, the fearful responsibility, the deep guilt and crime, of plunging this great country into all the horrors of civil war and bloodshed, does not rest alone upon the leading secessionists of the South; a full share of that criminal guilt is justly chargeable to the leading disunion abolitionists of the North. If this Government shall outride the angry storms now threatening its destruction, and the fearful day of just retribution shall come, may it not be justly said to these leading spirits from the North and the South: You have been co-workers in the attempt to destroy the Government of your country You of the North sought to dissolve the Union of these States, *professedly* to destroy slavery. You of the South sought to dissolve it, *professedly* to protect slavery. You were both disunionists—all rebels against the Government. As State after State plunged into the gulf of disunion, your shouts of triumph from the North rose up and met the peals of joy from the South. You have smitten a great country with desolation and waste. You have crimsoned fields with kindred blood. You have filled the whole land with weeping widows and orphans. In guilt and crime you have been banded together, like Siamese twins, through life, and you ought not to be separated in death. It is but just that you should expiate your enormous crime together, on the same scaffold, and together be buried in the same traitors' grave."

The resolutions were then referred to the Committee on the Judiciary: ayes, 77; noes, 57.

In the Senate on the 16th, Mr. Ten Eyck, of New Jersey, offered the following resolution, which was laid on the table and ordered to be printed:

Resolved, That the present war is for the Union, according to the Constitution; that its object is to save the former and enforce the latter—was so in the beginning, is now as carried on, and should be, to the last; that measures, extreme and radical, disruptive in themselves, involving in a common fate as well the loyal as disloyal, should not be resorted to; and that in crushing treason—wide-spread and hateful as it is—the Government itself cannot prove traitor to organic law.

Mr. Hale, of New Hampshire, offered the following, which was agreed to:

Resolved, That the Committee on Military Affairs and the Militia be instructed to inquire into the expediency and propriety of establishing by law a uniform mode of dealing with the slaves of rebels escaping from their masters, or taken as prisoners by our Army.

Mr. Sumner, of Massachusetts, offered the following resolution, which was agreed to:

Resolved, That the Committee on Patents and the Patent Office be directed to consider if any further legislation is necessary in order to secure to persons of African descent, in our own country, the right to take out patents for useful inventions, under the Constitution of the United States.

Mr. Trumbull, of Illinois, offered the following resolution:

Resolved, That the Secretary of State be directed to inform the Senate whether, in the loyal States of the Union, any person or persons have been arrested and imprisoned and are now held in confinement by orders from him or his Department; and, if so, under what law said arrests have been made, and said persons imprisoned.

Mr. Dixon, of Connecticut, expressing his regret that the resolution had been introduced, said: "What are the arrests which the resolution proposes to consider? They are well known

to the country, so far at least as relates to their object and character. It is well understood that during the last six months, while our existence as a nation seemed for a time to hang upon a thread—while large armies threatened the capital, and its safety was, at one period, in great doubt, there were, in many of the loyal States, men of dangerous character and designs allowed to go at large, although it was well understood they were giving aid and comfort to the enemy in every possible manner. Some of them infested my own State. I am glad to be able to say that they were, for the most part, emissaries from other States, and that the disgrace of giving them birth, or of affording them a home, did not belong to us. They first manifested their treasonable purposes by attempting to institute a series of peace meetings (*see* ANNUAL CYCLOPÆDIA, 1861—*Connecticut*), so called, by which they hoped to debauch the public mind and prepare it for degrading submission, under the false pretence of restoring peaceful relations between the North and the South. What effect these meetings might have had in deceiving the more unthinking, does not appear; but acting in accordance with the wishes of almost our entire people, the Secretary of State put a sudden stop to their treasonable designs by arresting and confining one or more of the most obnoxious. It was precisely the right thing, done at precisely the right time; and it nipped treason in Connecticut in the bud. It struck terror to the hearts of all who sympathized with secession, and it encouraged the hearts and strengthened the hands of every true-hearted and patriotic citizen. It was, certainly, the opinion of many that the summary process of arrest and confinement did not go far enough; that others, equally guilty, ought to have been placed under restraint; but the desired effect was produced, and an appeal to the fears of a certain class accomplished what nothing else could accomplish.

"Now, sir, I maintain that the action of the Government in making the arrests alluded to was not only justifiable, but that not to have pursued it would have been moral treason on the part of the President. Was he to see the Government paralyzed by the unprincipled men who, under the false pretence of peace, were seeking to ruin the country by distracting and dividing our people? Was he to allow information and materials of war to be furnished to the enemy by open, avowed secessionists? For one, sir, I thank him—I thank the Secretary of State, as does every loyal citizen of Connecticut, for any and every arrest made there; and I shall not vote an inquiry into the legality of these arrests. They find their justification in the dire necessity of the times."

Mr. Trumbull, of Illinois, replied: "I have said upon this floor that I believe the Constitution of the United States confers all the power which is necessary to enable the Government to crush this gigantic rebellion. Why? Because the Constitution confers on Congress the power to raise armies to put it down, and when the power is given to raise armies to put down insurrection, the power comes also to crush it in the way that armies are accustomed to act. It is with powder and ball that it is to be done; and neither your jury trials nor your *habeas corpus* acts can interfere with the Army which, clothed with constitutional power to crush a rebellion, goes forth armed for the purpose of putting it down in the very way that armies subdue their enemies. But, sir, this is a resolution of inquiry, simply as to the arrest of persons in the loyal States. That is all it is. The Senator from Connecticut tells us there were persons in his State who were allowed to go at large when they were giving aid and comfort to the enemy. I am astonished at that. I should have supposed that in the goodly State of Connecticut men giving aid and comfort to the enemy would have been arrested and tried, and if convicted by a jury, would have been hung."

Mr. Dixon, interrupting for explanation, said: "If the Senator will allow me, I will repeat to him what kind of aid and comfort those men gave to the enemy. I stated that they gave aid and comfort to the enemy by instituting a series of meetings, falsely called 'peace meetings,' in which they addressed large assemblages of the people, and attempted to debauch the public mind on the question of this war, claiming that we were the aggressors; that the South were acting in self-defence; that the Administration was making war upon the South. Now, sir, if the Senator can inform me how such men can be attacked by arms, by powder and ball, I shall thank him for the information. I do not know how they could be arrested for treason. I do not say they were guilty of open treason. They were guilty of moral treason; and the Secretary of State, to the great joy of every loyal citizen of Connecticut, imprisoned one or more of those men and put a stop to the whole proceeding. I thank him for doing it. I will not ask him a single question as to the provisions of the law or the Constitution upon which he acted."

Mr. Trumbull responded: "The Senator assumes that these persons were traitors. Who is to decide that? He says he will ask no questions. Why, sir, how does he know that, in portions of this country where there is no disturbance and no insurrection, the right persons will be arrested? The unconstitutionality of such action as this seems to be admitted by the Senator who comes to the defence of this despotic power. Why, sir, the power—without charge, without examination, without opportunity to reply, at the click of the telegraph—to arrest a man in a peaceable portion of the country and imprison him indefinitely, is the very essence of despotism. I thought the Senator from Connecticut was engaged in a war to defend and uphold the Constitution. What, sir, becomes of constitutional liberty, what are we fighting for, if this broad ground is to be assumed and

to be justified in this body, and any man is to be thanked for assuming an unconstitutional and unwarranted authority? What are we coming to, if arrests may be made at the whim or the caprice of a cabinet minister? Do you suppose he is invested with infallibility, so as always to decide aright? Are you willing to trust the liberties of the citizens of this country in the hands of any man, to be exercised in that way? May not his order send the Senator from Connecticut or myself to prison? Why not?

"Now, sir, I am for regulating this thing by law. That is the object of my inquiry. If additional legislation is necessary for the purpose of punishing persons who sympathize with treason in Connecticut, or in any other loyal State of this Union, where the laws can be enforced through the judical tribunals, I say let us give that additional legislation, and let us not sanction the exercise of such high powers as these outside of the law, and as the Senator says, 'on the plea of necessity.' Why, sir, I deny the necessity. The principle contended for would justify riots and mobs in punishing criminals wherever found. Suppose a man has committed an offence apparent to the whole country, shall the citizens of the country get together and execute the man without trial; or imprison him and hold him in prison without trial? Is that the way the laws of the country are to be administered? Has the Constitution no meaning, and are laws to have no efficacy? We shall have anarchy at once if such doctrine is to prevail."

Mr. Dixon, of Connecticut, again replied: "I confess I never have heard anything in the Senate, which filled me with more astonishment than the remarks which have fallen from the Senator from Illinois; and they have strengthened me in the opinion that this resolution ought not to pass. He talks about the whim and caprice of the Secretary of State. Sir, I deny here, on behalf of that officer of the Government, that he has been actuated by whim or caprice. I say he was compelled to take the course he did; and, if he had not, he himself would have been a moral traitor. Now, if we are told that we ought to pass laws providing for such cases in the future, I have not the least objection. If the Senator refers to the future, very well. Let him make a law, if he can, which shall define the powers of the President in such a case. Let it be a precedent for the future; let it be a guide for the future, if we should ever be placed hereafter in similar circumstances. But when the Senator proposes to go back six months, and inquire of the Secretary whom he has arrested, why he has arrested him, and for what reason; and when he talks about innocent persons being arrested, and then discharged, I cannot comment upon it. I can only express my surprise that language like that should fall from a Senator known to be so devoted as he is to the cause of the country and the Constitution."

Mr. Wilson, of Massachusetts, followed. He said: "I regret, Mr. President, that the Senator from Illinois has introduced this resolution, and I deplore the speech he has made in its support. That Senator knows, as we all know, that the Secretary of State, in obedience to the order of the President of the United States, has made arrests in the loyal States. Why then ask the Secretary if such arrests have been made, and the law upon which they were made? If the Senator does not approve of the action of the Secretary of State in making those arrests, or rather the action of the President of the United States in ordering those arrests, instead of reflecting on the Secretary of State or the President, why does not that Senator come into the Senate with a bill proposing to enact a law that shall clothe the Government of this country with ample powers to arrest and imprison men who are in complicity with traitors? Why is it necessary at this time, in this crisis of our country's history, threatened by domestic traitors and by foreign Powers, to come into the Senate of the United States with a resolution that carries an implied censure with it upon the executive Government of the country?"

Mr. Hale, of New Hampshire, immediately rose and said: "Mr. President, instead of feeling grief and mortification and regret at the introduction of this resolution, I thank my friend from Illinois for introducing it. I think it eminently proper, eminently appropriate; and I shall feel mortified if the day has come when any act of your Executive may not be inquired into by his sworn constitutional advisers, the Senate of the United States. If, in answering that resolution, if it passes, the Secretary of State or the President shall deem it proper to send it to us under the seal of executive secrecy, I shall find no fault with that; but the right, the power, the propriety, and the necessity of making this inquiry, to my mind, eminently exists. What is the purpose of this inquiry? Have not arrests been made in violation of the great principles of our Constitution? If they have, let us know it, and let us know the necessity which impelled them. If the fact be that such arrests have been made, and if the necessity exists upon which they were made, then I trust there is magnanimity, there is justice, there is patriotism, there is forbearance enough in this Senate and in this Congress to throw the mantle over every act that has been prompted by a patriotic impulse to serve the nation and preserve its liberties. You may gain your victories on the sea, you may sweep the enemy from the broad ocean and from all its arms and from all its rivers, until you may hoist, as the Dutch admiral once hoisted at the head of his flag-staff, a broom, indicative that you have swept the ocean of your foes, and you may crush every rebel that is arrayed against you and utterly break their power; and when you have done all that, when you have established a military Power such as

the earth never saw, and a naval power such as England never aspired to be, and constitutional liberty shall be buried amid the ashes of that conflagration in which you have overcome and destroyed your foes; then, sir, you will have got a barren victory, and with all your glory you will have but achieved your everlasting shame."

Mr. Kennedy, of Maryland, followed. He said: "Mr. President, I do not know that I could add one word to the remarks that have been made by the Senator from New Hampshire, if I felt so disposed. I do not rise now for the purpose of entering into any debate upon the propriety of this resolution, but simply to express to the Senator from Illinois my hearty thanks for its introduction at this time. I believe it to be eminently proper and just. I think that the condition of the country, and especially of the loyal States, now demands some investigation of this sort. Arrests were made in the loyal States months ago that were charged to have been made without the authority of law. They were vindicated upon the ground of public necessity. It was said that we were then in the beginning of a great rebellion; that the whole country was in a state of alarm and terror, and that it was considered expedient and proper for the Government to use all the means it could command to suppress the insurrection, without reference to the existing laws at the time."

Mr. Doolittle, of Wisconsin, moved to refer the resolution to the Committee on the Judiciary.

Mr. Trumbull, of Illinois, objected, saying: "If there is a disposition in the Senate to make any inquiry into these matters, let us know it: and let us know it by a direct vote upon the resolution. I want to know whether or not we are fighting for the Constitution, and for constitutional liberty regulated by law. I hope the resolution will not be referred."

Mr. Pearce, of Maryland, opposed the reference, saying: "I want to know what is the ground upon which the Secretary rests this power. I want to know whether it is anything which we can find in the Constitution, directly or by implication, or whether it is a fancy of his, that in these troubled times there ought to exist at the seat of Government a great, subtle, vague, undefined power pervading the whole country, reaching through all the ramifications of the telegraphic system, which will enable him, while seated in his office, by a dash of his pen, to set the electric fire in motion, and to order arrests at Cincinnati, at Chicago, at Baltimore, or even in Connecticut, where there is no treason, but too much love of peace.

"Sir, I do not believe in the necessity of any such power, lawfully claimed or unlawfully claimed. I do not believe that it is necessary to the management of this war. I do not believe that it promotes the purposes of those who desire to see this Union brought together again—an object of all others to me the most desirable if it be possible. I believe, on the contrary, that it disaffects a great many good and worthy men who desire to see the Union restored. This, sir, I do know, that if there is no power in the Constitution to authorize these arrests, and if this body shuts its eyes and closes its ears to all complaints on that subject, the day is not far distant when the vital spirit of a republican government will be entirely gone from us.

"Sir, I thank the Senator from Illinois, and the Senator from New Hampshire, for the just and noble sentiments they have expressed to-day, and I shall lament in despondency and grief if the Senate shall shrink from an inquiry so obviously (to me at least) proper as this."

Mr. Wilson, of Massachusetts, said: "Sir, when these arrests were made, by the authority of the President of the United States, first through the Secretary of War, and afterward, by arrangement, through the action of the Secretary of State, the loyal people of this country were electrified; they felt that they had a government that was ready to exert its power to save the country, and they rejoiced as they did when Mason and Slidell were clutched from the deck of a British vessel, and imprisoned at Fort Warren, under the direction of the Secretary of State. The people of the loyal States have expressed, in every form in which they could make their sentiments known, their approbation of these arrests.

"I should have no objection to the passage of this resolution if it could do any good, but if senators are opposed to these arrests altogether, say so; if they are in favor of these arrests, but believe that this is not the proper mode, then let them come into the Senate with a bill, and I think we shall all vote for a proper measure of that kind, and so arrange it that disloyal persons may be arrested according to the forms of law. That I think is the proper way; it carries no censure, it implies no reflection on any one; but I think the adoption of this resolution, especially after the remarks that have been made here to-day, will be regarded as a reflection upon the President and upon the Secretary of State; and, if it is so understood, traitors whose mouths have been closed during the last four or five months, will again open their treasonable lips, and Jefferson Davis, and the men who are supporting his rebellion, will express their joy, if they do not vote their thanks to the American Senate for thus reflecting upon their own government."

Mr. Trumbull again replied: "I have already stated that this is not a resolution to censure the Administration. Who makes it a censure on the Administration? Who seeks any such issue? The Senator from Massachusetts is trying to make such an issue. I have quite as high a regard for the Administration as he has. I stated the object of the resolution. It is a resolution of inquiry, and I have not even said that arrests had been made; but if there is no authority to make them, and it is necessary they should be

made, we want to pass the necessary law. The Senator from Massachusetts goes off, in his zeal, to denounce traitors. He is no more against traitors than I am, but I am for constitutional liberty and against traitors too. He is against traitors and against the Constitution of his country, and that is the only difference. I will put down treason and save the Constitution, save regulated liberty, and he does not care whether there is any Constitution or not. I am not to be put in such a position. The Senator shall make no such issue with me—that the resolution is introduced as a reflection on the Administration."

Mr. Latham, of California, said: "I see no necessity for trampling upon the Constitution in order to maintain it. I see no necessity for violating all law, and by our refusal to pass this resolution acquiescing in and endorsing usurpation of power, in order to preserve the laws. We present to the civilized world a very sad and humiliating spectacle, in upbraiding revolting States for violating the laws and the Constitution, when we ourselves are committing equal if not greater outrages upon that Constitution and against those laws. What is it? One man, unauthorized by the Constitution or the law, usurps the power to arrest the citizen, to incarcerate him, to discharge him or hold him in prison upon the tenure of his will, without the courts, Congress, the people, or anybody knowing the reasons for this usurpation."

Mr. Fessenden, of Maine, then presented his views, as follows: "I have no question, indeed I know, that, under the directions from the Secretary of State, certain individuals in the loyal States have been arrested and imprisoned. That is notorious; the whole country is aware of it. I will say here that I do not believe there is the slightest warrant of law for any such proceeding, and I do not suppose you will find a lawyer in the country who does think there is any warrant of law for any such proceeding; and yet I do not shrink from it. For the most part, so far as I know in the great majority of cases, certainly wherever the necessity existed—and I shall not undertake to judge as to that—I justify the act, although it was against law; I justify it from the necessity of the case, and especially in the instances referred to by my friends from Maryland. I will not say in all of those instances, but in many of them; for I am not aware of the facts in all the cases. There are others equally notorious. Why do I say that I justify it? Because, in my judgment, it was absolutely necessary to the protection of the commonwealth, if I may so call it—the Government of the country. It was the business of the Administration, under the circumstances, to see that no detriment was done to the Republic, and where they acted, believing conscientiously that the good of the country demanded this action in this the hour of her peril, although they may have acted against law, I honor the man who, under such circumstances, takes the responsibility; and I say here that if I were in power as an executive officer, and if I saw that the good of the country that I was serving demanded that I should stretch my authority, even at the risk of my official or of my own natural life, in order to protect the country, as God is my judge, I would do it, and take the consequences; and it is the duty of every man placed in such a trust to do it. A man who stops, who hesitates, in such a case to inquire, when he sees that the building is about to be wrapped in flames, whether there is a law to guide his action, and pauses for fear that the newspapers may be down upon him, or that he may be called to account, that he may be impeached even, is unfit for a great place.

"That is my opinion; but, sir, while I express that opinion, I say that when he steps beyond it, when the people see, or the representatives of the people see that he is daring for a moment to use that power and that pretence of necessity for a nefarious purpose, for any purpose that is not fully justified by the facts before him—when the country sees, or believes, or dreams, or suspects that he is acting from anything but the highest motives that should actuate a public officer, then I would be ready on the instant to check the first advance, and to lay my hand upon the man.

"Sir, we cannot trifle with these questions in times like those that have preceded the present moment. There have been hours, there have been days, weeks, and months in the progress of this rebellion, when it was the duty of the Executive to act promptly, without fear, without trembling, at their own risk and the risk of public reprobation; and when they did it from good motives and took that responsibility, it only showed them in my judgment so much the more fitted for the exigency which is upon us. But, sir, I agree with my honored friend from New Hampshire, I agree with my friend from Illinois, and others, that we should watch carefully, most carefully, the first approach to any exercise of illegal power that is not fully justified by the pressing exigency of the hour, because it has been well said, and is known as a principle which every man certainly of us must recognize, that we, standing here as the guardians of public liberty, must see that no man infringes on the liberty of the citizen, unless under such circumstances that all the world will justify him from the obvious necessity that requires the act."

Mr. Browning, of Illinois, opposed the passage of the resolution chiefly because it was an inappropriate time to adopt it. He said: "I regard the time at which the inquiry is proposed as the most inopportune that could possibly have been selected. At a time when the energies of every department of the Government are taxed to their utmost capacities and powers of endurance to meet and put down a formidable rebellion, threatening the very overthrow of the Government, and at a time when we are probably on the very verge

of a rupture with one of the most powerful nations of the earth, whose power is to be united with that of the rebels in the fierce struggle with us, I think it would be far better for us to expend our time and our energies in devising the means for the successful prosecution of the war, and the suppression of the rebellion, than to waste it in what will have the appearance, whether it is so in fact or not, and make the impression over all the country of an assault upon the Administration."

Mr. Trumbull, of Illinois, replied to this objection, saying: "My colleague further says that this is a bad time to offer such a resolution. Why, sir, it is the only time when there would be any occasion for such an inquiry. It is in just such times as these that this power is exercised. It is only on such occasions as this, I know, that he would attempt to justify it. In a time of quiet and peace in the country he would not agree that men should be arrested without charge, without complaint, without opportunity to answer. From necessity, if you ever make the inquiry, you must do it now.

"He says, moreover, we give aid and comfort to the enemy by this resolution. Sir, I disagree with him totally. If you will have a united people, if you will bring up the twenty millions of loyal people in this country as one man to crush out this wicked rebellion, you must bring them up believing they are fighting for constitutional liberty; you must bring them up believing they are fighting for law, and to maintain the institutions which are established by the Constitution; and you will weaken your Government, you weaken its hands when you do anything that creates the impression in any portion of the country that we are not fighting for this regulated liberty."

The resolution was referred to the Committee on the Judiciary.

YEAS.—Messrs. Anthony, Browning, Chandler, Clark, Collamer, Cowan, Dixon, Doolittle, Fessenden, Foot, Foster, Harris, Howe, Johnson of Tennessee, King, Lane of Indiana, Morrill, Pomeroy, Rice, Sherman, Simmons, Sumner, Ten Eyck, Wade, and Wilson—25.

NAYS.—Messrs. Bayard, Bright, Carlile, Grimes, Hale, Harlan, Kennedy, Latham, McDougall, Nesmith, Pearce, Powell, Saulsbury, Thomson, Trumbull, Wilkinson, and Willey—17.

On the 16th of December, a bill was brought before the House to authorize the raising of a volunteer force for the better protection of Kentucky. The objections advanced against this bill were that the measure was uncalled for—that there were more soldiers in the field than were necessary, &c. These objections were urged by members who asserted that slavery was the cause of the troubles of the country, and who feared that if this extra force in Kentucky, composed of citizens of the State, was authorized, it might serve as an additional protection to the institution of slavery in Kentucky. Mr. Lovejoy, of Illinois, opposed its passage. He said: "I am willing to vote all the men and all the money that are needed in defence of the country, and in defence of true and loyal men anywhere within the limits of the United States; but I insist that we have more soldiers now than can be used. If we have sixty thousand soldiers in Kentucky and thereabouts, advancing, and we need twenty thousand more to protect them as they march, or to keep the line of communication, twenty thousand more can be ordered from the Potomac, or from some other quarter, for I do not know where all our soldiers are now."

Mr. Richardson, of Illinois, replied: "I hope this bill will pass, sir, and I will state to my colleague why I think it ought to pass. They propose to raise twenty thousand troops in Kentucky who are familiar with all the country there; and the misfortune that has attended us heretofore has been that we have not been familiar with the country where we have had to fight. There are some limitations upon the raising of this force. They are to serve in Kentucky. They will make the most efficient soldiers there. Our base of operations has got to be at Louisville. Twenty thousand troops are necessary in order to guard our base and guard the line that you have got to advance as you go into the rebel States, and these are the best troops that you can get to guard that base, and to guard that line."

Mr. Wickliffe, of Kentucky, followed. He said: "What is proposed by the bill under consideration? It is, that when the main army gets ready for its operation on Columbus, and to open the navigation of the Mississippi river, the rear of the army shall be protected, and the people and homes of Kentucky defended from inroads from Tennessee and Virginia, on these seven hundred odd miles of border line. We think we will not want this force longer than twelve months, and that we can raise them—suitable, ready, and prompt, to perform that service. We do not say that they shall not serve their country anywhere else. If the commanding general deems it necessary that they shall be moved elsewhere, they will fight wherever an enemy is to be found; and I will guarantee that they will do it well, and will not stop to inquire whether they must cross the line."

Mr. Stevens, of Pennsylvania, objected to the passage of the bill on the ground of economy: "I think that if this House mean that the war shall be carried on to a successful termination, it must be done in such an economical manner as that the people shall not become alarmed, and that it shall not have to be abandoned before it is finished. The only way to guard against that is to use economy, and to restrain the expenditures of the Government within all possible bounds, consistent with carrying it on properly.

"Now, sir, the House ought to know something about what it will be called upon to appropriate, according to the estimates sent to us. The Committee on Ways and Means will

have to report a deficiency bill, even after Congress appropriating $318,000,000 last July. We shall have to appropriate from one hundred and sixty to two hundred and fourteen million dollars more to make up the deficiencies for this fiscal year. We shall also have to report a bill making an appropriation of $413,000,000 for next year. We will thus have to appropriate more than six hundred million dollars, without the addition of a single dollar beyond what is estimated for. Now, sir, that in itself is alarming. I confess I do not see how, unless the expenses are greatly curtailed, this Government can possibly go on over six months. If we go on increasing expenses, as we have been doing, and as we propose to do by this bill, the finances, not only of the Government, but of the whole country must give way, and the people will be involved in one general bankruptcy and ruin.

"Now what does this bill propose to do? We have already in the field an army of six hundred and sixty thousand men. I am told that eighty thousand of these are in Kentucky, constituting the command of Gen. Buell. If that be not enough, it is most remarkable that, out of the six hundred and sixty thousand now in the field, enough cannot be spared to guard Kentucky."

Mr. Diven, of New York, replied: "Mr. Speaker, I wish to advert briefly to the argument employed by the gentleman from Pennsylvania (Mr. Stevens) against this bill—that is, in reference to the enormous expenses that this country is incurring, and his unwillingness to add to that expense under any contingency. Sir, this country is advanced too far in this war to recede. It will not do to make calculations as to whether the expenses now running against the Government can be endured for two or three years. The expenses that are rolling up daily and monthly must be terminated? How terminated? By withdrawing our troops, disbanding our armies, and giving up this struggle? Who would thus terminate this expense? No, sir, that is not the way. There is but one determination as to the manner in which this expense shall be abridged. It is by going through with what we have undertaken. This rebellion must be put down, and put down speedily, or it will wear out the resources of the country. In deciding, therefore, whether I will vote for this additional expense or not, I will be controlled by the fact whether this rebellion will sooner be put down by my giving than by my withholding my vote. Let it be made apparent that by this additional force in Kentucky this rebellion can be subdued one month sooner than by withholding it, and it can be shown that no better economy can be employed than by the expenditure of this money in Kentucky."

Mr. Wright, of Pennsylvania, urged the passage of the bill at some length, during which he alluded to the object of the war in these words: "Sir, if this war is conducted upon legitimate principles, I have no fears in regard to its result. If you will confine yourself to the proclamation of Abraham Lincoln, issued on the 19th of April last, when he made his appeal to the people of this country, saying that he wanted an army to put down insurrection and rebellion, and to protect the rights of property and the rights guaranteed by the Constitution to the States—if gentlemen will but adhere to the principles contained in that proclamation, there is no danger with regard to the result of the war, with the number of troops we now have in the field. But if it be the desire and the plan to change the object of the war, and make it a war for emancipation, I can tell those gentlemen who hug the negro so closely to their bosoms that they do it at the hazard of the very life and existence of the Government itself. I do not pretend to say whether the gentleman from Illinois be of that party or not. If gentlemen will confine themselves even to the principles of the Message which the President sent in at the opening of this session, we need have no fear with regard to the result; but, as the gentleman from New York (Mr. Steele) observed the other day, I repeat, if you change the object and principle of the war, you paralyze the bravery of the army; you present another question; you present a divided North and a South united. That would be the effect of such a change of policy. It is a war for the supremacy of the Constitution and laws, and the honor of the flag, and not for the emancipation of slaves. I believe that it is the sworn duty of this Government to accept all the men who offer to come to our standard for that purpose, as these twenty thousand men seek to enlist under our standard in Kentucky, and to make our ranks formidable. I believe that we already have a well-disciplined army."

Mr. Hickman, of Pennsylvania, opposed the bill on the ground that it was giving to Kentucky a military system different from that in the other States, and thus replied to the remarks of the preceding speaker on the conduct of the war: "My colleague (Mr. Wright) has resorted not to argument, but to a declaration which I had hoped might have been avoided upon this floor. It is to this amount: that if this army should at any time be used, as I understand him, under any circumstances, to free negroes from slavery, you will have demoralized the army and imperilled the safety of the country. I enter my protest here against the truth or soundness of any such declaration. It is placing negro slavery above the country. It is making the salvation of slavery superior to and more sacred than the safety of the Constitution of the country. Sir, in my judgment, that man is not fit to conduct this war, either as chief Executive or as a member of the Cabinet or as Commander-in-Chief or as subordinate officer, who does not place the safety of the Constitution beyond and above, immeasurably beyond and above, the safety of negro

slavery. Whenever that sentiment shall predominate in the United States, as uttered by my colleague, then American liberty will sleep forever. There is but one sentiment which an American patriot can own: that is, that the American Constitution, the American Union, and American institutions, are superior to and above everything else, including local institutions of a peculiar character or the safety of any local people."

Mr. Bingham, of Ohio, met the objection against the merits of the bill by the following statement: "The bill in no respect differs in principle from a previous bill passed by this House on the 22d of last July, and which received the assent both of the gentleman from Pennsylvania and of my worthy friend from Illinois. This bill is as well guarded as that was, touching the objects and purposes for which these volunteers may be called into the field. That bill contains the same phraseology under which my friend from Illinois (Mr. Lovejoy) thinks is lurking a power to strike at the rights of the slave. The declared purpose of that bill and of this is, that the volunteers are to be used 'for suppressing insurrection, repelling invasion, and protecting the public property.' These words are used in the same sense in each of the bills."

Mr. Lovejoy, of Illinois, said: "I wish to ask the gentleman why it is necessary to raise this number of men, when we already have enough to perform the service; when we have ten thousand, at least, waiting in Illinois, and anxious to get into a fight somewhere?"

Mr. Bingham replied: "The difficulty is that I do not know that the fact is as it is stated by the gentleman from Illinois. On the contrary, I have the best evidence that the force in the field is not sufficient for the public interest, and therefore I am for the proposed increase."

Mr. Lovejoy, of Illinois, again rose and said: "I would like to know upon what facts the gentleman states that we really need more soldiers in the service of the United States?"

Mr. Bingham replied: "If the gentleman wants some authority, I will say that we have the report of the Adjutant General of the United States, stating that the whole force in Kentucky is not more than one third of what our public exigencies require. We have also the statement of the representative from Kentucky (Mr. Wickliffe) that the Secretary of War himself stated that this additional force of twenty thousand is needed now in the service in Kentucky."

Mr. Wickliffe, of Kentucky, repeated his previous statements. He said: "I stated that, before I received the communication from the Legislature of Kentucky, urging the organization of a force of this kind by the General Government, I had consulted the Secretary of War upon the propriety of it, and explained to him the purposes, objects, and necessity of the corps. He approved of it, or else my ears deceived me. I then went to the President of the United States, and submitted the proposition to him. He took it under consideration, and told me he would consult his cabinet. He afterward informed me that he approved the raising of the troops, that he believed them necessary."

Mr. Maynard, of Tennessee, urged the importance of the bill. He said: "I have not attended sufficiently close to the movement of this debate to know how the negro question has been introduced into it; but I cannot see how it properly has any connection with it. I suppose there are very few gentlemen—certainly I hope there are but few—upon either side of the House, who do not concur in the general sentiment that the preservation of this Union and the perpetuity of our American nationality is an object infinitely more important for us to consider than either the preservation of slavery or the abolition of slavery. We are told that this legislation is peculiar; that it is abnormal. In answer to that it is sufficient to state that the condition of Kentucky at this time is peculiar. Kentucky occupies a peculiar situation in connection with our public affairs. She is not only invaded by armies in large force and great strength, but she has the elements of disorder within her own limits. She has, in portions of the State, a large number of latent rebels who are very strong in their sympathy with those in active rebellion against the Government, and who are only waiting a fit opportunity to let their sympathy break out in open insurrection. She is surrounded by hostile forces on three sides, who wish to make her Union and loyal citizens feel the force of their wrath in consequence of the attitude of loyalty they have assumed toward the Government. Hence she is subject to invasion from those quarters. Her railroads, her bridges, and her other public property are in constant danger of being destroyed; and this not by the regular movement of armies and large bodies of men, but by guerilla bands who come in the night and go in the night; who go in small numbers by stealth through the byways of the country. In order to defeat them, you do not want armies, but bands of men equal in number and firmness of purpose to them. You want men familiar with the country; who have that sort of local knowledge which will enable them to meet this invading or insurrectionary force. It is manifest that such men must be drawn from the country itself, and that their organization should be in the nature of a police force, to preserve order and give protection to the people at home.

"Now, the State of Kentucky, as has been repeatedly said, has already furnishd her quota of troops for the armies of the country. She has, if I mistake not, a larger force in the field for the war than the State of Massachusetts, with her larger and entirely loyal population; yet her resources in the way of raising troops are not exhausted. It does not follow that

because she has already furnished nearly thirty thousand troops for three years, as we have been told she has, she cannot furnish half as many more. It is believed that, for a more limited period, and for the special purposes designated in this bill, she can and will furnish more. I need not say that there are many men who could go into the service for twelve months who would find it inconvenient, if not impracticable, to enlist for three years. If it is admitted that it is the duty of the Government to give protection to loyal citizens who have attested their loyalty to the country by as great sacrifices, at least, as the citizens of any part of the country, I see not how we can hesitate a moment about the passage of this bill. These men must be protected. It is a duty which the Government owes them."

Mr. Blair, of Missouri, rose and replied to the statement that the force was not needed. He said: "Mr. Speaker, I merely desire to occupy the attention of the House for five or six minutes in concluding this debate; and I want especially to reply to the remarks made by the gentleman from Illinois (Mr. Lovejoy), who first spoke in opposition to this bill. He asserted over and over again that this force is unnecessary, and that we have more troops than we want, and do not know what to do with them. Now, I would reply to that remark by saying that we have the best reason in the world for believing that we have not got enough men in the field, for we have not been able to conquer this enemy anywhere as yet. That is one proof of it, and another proof of it is that we never have met them anywhere that they have not outnumbered us. We have never confronted the enemy in battle yet when they have not been superior to us in numbers, and we have never been able to drive them back one foot. I think that that ought to be proof conclusive to the gentleman from Illinois that we have not got enough men."

Mr. Lovejoy, of Illinois, in reply, said: "I suppose that fact is accounted for by this, that the enemy never will meet us unless they are superior in numbers. They watch their opportunity, and never meet us on an equal field with equal numbers."

Mr. Blair answered: "Then why does not our army advance and overrun them?"

Mr. Lovejoy again replied: "Because we have no generals."

Mr. Blair responded: "Mr. Speaker, these gentlemen who insist all the time that we have got more men than we want, ought to be made to look the facts in the face. We have not as many men here—though the gentleman is complaining of being overrun in the city of Washington—as the enemy have in their breastworks on the other side of the river."

Mr. Hickman, of Pennsylvania, now rose and said: "I wish to ask the gentleman from Missouri how it comes, then, that this Administration is derelict in its duty in not asking Congress to raise more men"

Mr. Blair replied: "I do not know that the Administration is derelict; I rather think the gentlemen who refuse to vote troops are derelict."

Mr. Hickman responded: "That was not my question. I wish to know of the gentleman from Missouri how it is that the Administration is derelict in duty in this respect; why do they not ask Congress to raise more men? If we have not yet a number sufficient to conquer the enemy, then it is the plain duty of the Administration to ask us to vote more men; but they have not done so. This measure comes upon the recommendation of the Military Committee alone."

Mr. Blair again said: "Let me say to the gentleman from Pennsylvania that if the Administration is derelict, as he argues, that is no reason why we should be so; and when we see the fact as plainly as the Administration can see it, or as anybody else can see it, that our armies are not advancing, and that we have never met the enemy except when the enemy were in overwhelmingly superior numbers; when that is the undisputed fact before the country, we are ourselves derelict in duty if we do not vote additional troops.

"Now, sir, let me reply to another question which the gentleman from Illinois (Mr. Lovejoy) asked of the gentleman from Pennsylvania (Mr. Wright,) and that was, whether he was willing to accept all the men who would offer their service in this war? I say I would—every man. It would end the war quicker and more cheaply, in my opinion. I think the objection of the chairman of the Committee of Ways and Means (Mr. Stevens), that this is an expensive measure, and that our Republic is to be crushed by the expense of this war, is invalid. I believe that the more men we raise the more speedily will we end this war, and the more cheaply, too. I should have been in favor of doubling the number of men we have raised, and putting them in the field; and if it had been done sooner, in my opinion we should have felt the advantage of it now."

The bill was then read a third time and passed the House, but failed to pass in the Senate.

The subject of a reduction of the army came up also in the Senate, on the 28th of March. Mr. Grimes, of Iowa, moved that the Committee on Military Affairs and Militia be discharged from the further consideration of the following resolution:

Resolved, That in the opinion of the Senate no persons should be commissioned as generals of divisions or brigades except such as shall exhibit superior competency in the command of men, or gallantry in action against the enemy.

Mr. Grimes thus stated the object of the resolution: "I merely desire to get it before the Senate in order that we may put it in the proper form, and then express to the country and to those who have the authority to appoint general officers in the army, what are our con-

victions as to the proper course to be pursued. I wish the Senate and the country to know that at this time there have been appointed one hundred and eighty brigadier generals in the United States Army—one hundred and seventy-two irregular or volunteer brigadier generals and eighty brigadiers in the regular army. The pay of these officers is $3,954 a year, including their legitimate pay proper and a portion of the commutation of their rations; but in addition to that, they draw upon an average, as I have learned by investigation, a commutation for quarters amounting to $300 each, a commutation for fuel amounting upon an average to ninety-six dollars each, a small commutation for lights; and besides they receive medical attendance, drugs, medicines, and stationery free. I think it safe to say that the expenses to the United States growing out of the appointment of brigadier generals alone is $1,000,000 a year.

"Now, sir, I am prepared to say, and I think the facts justify me in saying, that the necessities of the army and the country do not require one half of this number of brigadier generals. We went through the Mexican war with only three generals in the field. Brigades and divisions were then commanded by colonels. Regiments were commanded by captains. In some instances regiments were commanded by first lieutenants. They acted bravely; they vindicated the honor of the country; they upheld the honor of its flag upon every field. The comparative expense, therefore, of conducting that war with officers enjoying those ranks was nothing at all by the side of the expense that we are now incurring."

Mr. Wilson, of Massachusetts, said: "I concur with the Senator from Iowa in the opinion that we have had quite enough general officers nominated. Still, sir, I think the Senator is somewhat mistaken in some of the views he has expressed. We have in the field something more than six hundred regiments, making one hundred and fifty brigades, and, of course, they require one hundred and fifty brigadier generals. We have forty-five or fifty divisions of the army, and they require so many general officers. Then we have several departments or *corps d'armée* in the service, which require some ten or fifteen general officers. We have had nominated one hundred and seventy-five brigadier generals for the volunteers, and about twenty major generals. I believe the one hundred and seventy-fifth brigadier general was nominated this morning, and his name will be down here by and by. A few of these nominations, I believe, we have rejected; a few more I certainly hope we shall reject for the good of the service and the credit of the country."

Mr. Fessenden, of Maine, followed saying: "It is absolutely necessary, in my judgment, that Congress should bring itself to consider the question of expense, and as well with reference to their own particular friends as to anybody else. They should remember that the country has to pay for it, and that we should not have any more of these gentlemen appointed, if we can help it, than are necessary in order properly to command the army. It is not for me to say how many may be necessary; but let the gentlemen look at the question for a moment. My honorable friend from Massachusetts says there are so many brigades in the army. We all know there are a great many more than Congress ever intended there should be; that we intended in the beginning, and we so legislated, that the number of volunteers to be raised should be limited to five hundred thousand; but although Congress in its language expressed the idea, and it was stated so over and over again, it accidentally gave a power which extended to a million, or was so construed as to extend to a million, and under that our army has been swollen up to over seven hundred thousand men. At this day I do not think a man can be found anywhere who will say that half a million are not all that we can possibly need or use; and yet we have this number of troops in the service, though not actually in the field. There are regiments in my own State to-day that have been raised, staying there—who have been staying there for months—paid by the Government, efficient men, the choice men of our State, waiting and begging to be called into the field and not to be left there doing nothing; not armed; ready to do everything, anxious to be in service; and the answer is: 'We have no occasion for you; we have got so many men here—more than we know what to do with;' men who make a most elegant appearance on days of review, and who undoubtedly would fight well if they could only get a chance. There are more men than the Government knows what to do with here on the Potomac to-day. What occasion is there to send for others? So it is in every State in the Union; there are men who are paid from month to month, and who have been paid for months, not armed, not called into the field, absolutely for the reason that the Government has no occasion to use them; and yet no step is taken to disband these men. Why not disband them, if they are not wanted? Because we have seven hundred and fifty thousand, if that is the number—two hundred and fifty thousand more than we ever intended to have—therefore my friend from Massachusetts argues you must have a number of generals to correspond! I dare say we have more brigadier generals to-day than there are brigades organized. What is the reason why we should go on and appoint generals to correspond with a number of men that are not needed and are not used? It is extravagance of the most wanton kind; and we may as well express our opinions upon it openly and let the country understand it. I mean to wash my hands of it. I have tried to do so here over and over again repeatedly. I offered a proposition the other day to stop all enlistments until the army should be reduced to the proper level, until we should get down to the number

we wanted, and no more. My friend from Massachusetts said we should have a bill soon where I could put on my amendment. I have not seen his bill yet; as soon as he brings it along so that I can put on my amendment I will, and I hope it will be forthcoming very soon. I understand, however, that the Department has absolutely stopped enlistments; but whether that be so or not, it is best to reduce it to shape and have a law on the subject. The country is ready to raise, I am ready for my constituents to say and we will all say that they will raise, whatever number of men may be needed, and put them in the field, and set them to doing the work we want done; but why should we saddle the country with a quarter of a million of men more than are needed, and simply for no other reason than because A, B, C, D, E, and F, and so on through the alphabet, are continually pressing for authority to raise men who are not needed? I for one thank my friend from Iowa for introducing this resolution, for if it has no other effect it gives an opportunity for those of us who desire to do so, to express to the country our anxious wish to stop this wanton waste."

Mr. Wilson, of Massachusetts, replied: "The Senator from Maine the other day proposed to reduce the number of men authorized by law down to five hundred thousand. I agree with him in that. Still we have not been able to do it. It was suggested also that we ought to stop recruiting. I agree to that; I have over and over again been to the War Office and urged upon the Department to stop recruiting in every part of the country. We have had the promise that it should be done; yet every day in different parts of the country we have accounts of men being raised and brought forth to fill up the ranks of regiments. The papers tell us that in Tennessee and other parts of the country where our armies move, we are filling up the ranks of the army. I believe we have to-day one hundred and fifty thousand more men under the pay of the Government than we need or can well use. I have not a doubt of it; and I think it ought to be checked. I think the War Department ought to issue peremptory orders forbidding the enlistment of another soldier into the volunteer force of the United States until the time shall come when we need them. We can obtain them any time when we need them.

"Then, sir, there is another thing that ought to be done; and I have pressed that on the War Office for weeks; and I suppose they are trying to do it; for I want it to be understood I make no complaint of the manner in which business is done in that office. They have a great deal to do, and a great deal must necessarily escape their attention. It is this: we have thousands of men in the volunteer force of the country unfit for duty. I know regiments that have moved down the river that have left forty and fifty men behind them about Washington who want to be discharged and who ought to be discharged, and who would be discharged if the medical men would attend promptly and vigorously to their business. We have in this army, with a great deal of energy and vigor, a great deal of this how not to do a thing. I think we have a great deal of that in that portion of the army. We have thousands of men who ought to be discharged from the Army of the United States, for they are physically unfit to bear the burdens of a campaign, and most of these men desire to be discharged.

"Now, sir, the Senator from Iowa thinks it will be difficult for us to get rid of these generals. We make them easily. I do not think, as a general rule, any difficulty will grow out of making them, more than other officers. I think we shall get rid of them just as easily as we make them."

The motion to discharge the committee was not agreed to.

In the Senate, on the 18th, Mr. Sumner, of Massachusetts, offered the following resolution:

Resolved, That the Committee on Military Affairs and the Militia be directed to consider the expediency of providing by additional legislation that our national armies shall not be employed in the surrender of fugitive slaves.

He said: "Sir, besides my general interest in this question, besides my interest in the honor of the national army, I have a special interest at this moment because Brigadier General Stone has seen fit to impose this vile and unconstitutional duty upon Massachusetts troops. The Governor of my State has charged me with a communication to the Secretary of War on this subject, complaining of this outrage, treating it as an indignity to the men, and as an act unworthy of our national flag. I agree with the Governor of Massachusetts; and when I call attention to this abuse now, I make myself his representative, as also the representative of my own opinions.

"But there are others besides the Governor of Massachusetts who complain. There are two German companies in one of the Massachusetts regiments who, when they enlisted, entered into the public service with the positive understanding that they should not be put to any such discreditable and unconstitutional service. Sir, they complain, and with them their own immediate fellow-citizens at home, the German population generally throughout the country. I am glad to know that my friend and colleague, the chairman of the Committee on Military Affairs, promises us at once a bill to meet this grievance. It ought to be introduced promptly, and to be passed at once. Our troops ought to be saved from this shame."

Mr. Cowan, of Pennsylvania, followed. He regarded the cause of the mischief complained of as arising from the injudicious proclamations of various Generals, but apprehended that there need not be any difficulty upon the question. Alluding to the views of the people of Pennsylvania, he said: "There is a tendency on the

part of a great many people in the South to insist that this war is to be a war for the emancipation of their slaves, and there is a tendency on the part of a great many people in the North to insist the same thing. Now, sir, I speak for Pennsylvania, the great State, the Keystone State, which lies between these extremes, and where we think we can look upon this question as coolly as it is possible for a disinterested person to examine anything. I say for her that she repudiates both these extremes. Her object, when she put her one hundred and five thousand or one hundred and six thousand men into the field upon which this battle is to be fought, was not that. Her object was to vindicate the Constitution and the laws, and to compel obedience to them everywhere, uncaring consequences. If in the flames of this war the chains melt from the slave, it is not her fault. They who lighted up the conflagration are alone responsible, and upon them let the responsibility rest. The object which she pursues is that one which I have stated, and that one alone. She has always at all times joined most heartily in indorsing that amendment to the Constitution which was passed here at the last session, and declared that she desired to interfere in no wise with the domestic institutions of any other State."

The resolution was agreed to.

A short time after hostilities commenced between the North and the South, an order was issued from the State Department, requiring passports to be procured by all persons intending to depart to foreign countries. Persons going to California were also included in this order. It led to a call by Congress upon the Department for an explanation.

Mr. Latham, of California, offered the following resolution:

Resolved, That the Secretary of State be requested to inform the Senate by virtue of what law, or for what reason, passports are required of passengers going direct from New York city to San Francisco, in California.

He said: "Mr. President, this is simply a resolution of inquiry, and I desire to state to the Senate that, in offering it, I had no intention to embarrass the Department of State. Neither do I propose, by making the inquiry, to do anything more than what I conceive is justice to the people that I have the honor in part to represent upon this floor. The people of California have a right to know why those of them, who are going to the West and returning to their friends in the East, are subjected to this imposition. They have a right to know by virtue of what law or for what reason it is done. I say it is an imposition, because the people of California are the only people in the Union among the loyal States that are now paying for the privilege of going to their home and of leaving it. I do not know, sir, by what right the Secretary of State can exact from the people of the Pacific coast the taking out of a passport, any more than he can of the citizens of Massachusetts who want to leave that State and go to the State of New York."

On a subsequent day the Secretary of State, Mr. Seward, sent the following letter to the Senate:

To the Senate of the United States:

The Secretary of State has the honor to acknowledge the receipt of the resolution of the Senate of yesterday, requesting him to inform the Senate by virtue of what law or for what reason, passports are required of passengers going direct from New York city to California. In reply, the Secretary of State has the honor to remark, that the twenty-third section of the act of Congress of the 18th of August, 1856, ordains, "that the Secretary of State shall be authorized to grant and issue passports, and cause passports to be granted, issued, and verified in foreign countries, by such diplomatic or consular officers of the United States, and under such rules as the President shall designate and prescribe, for and on behalf of the United States."

From the beginning of the insurrection there has been reason to believe that citizens of the insurgent States and agents of the insurgents have taken passage in the steamers from New York to Aspinwall for disloyal purposes, and especially for the purpose of embarking for Europe and elsewhere. Latterly, it was deemed imperative for the public safety to endeavor to check this practice. With this view, a few weeks since, the Secretary of State directed that all persons embarking in such steamers should obtain passports. These instruments are by law required to be gratuitously furnished in this country, and in order that travellers might experience as little inconvenience and delay as practicable in obtaining them, the Secretary of State authorized the despatch agent of the Department at New York to furnish them to loyal applicants in the same manner as if they should apply to the Department itself. Complaints of the inconvenience of the requirement, however, to travellers to California, having reached the Department, the regulation was for a time suspended; but information having been received that the suspension had led to abuses which it was the original object of the regulation to correct, it has been recently restored.

The Secretary of State is well aware of the importance of free communication between the Atlantic States and the possessions of the United States on the Pacific, and would, at all times, be reluctant in any way to trammel that communication. It is believed, however, that no loyal citizen will, under the circumstances, object to the temporary requirement of a passport. When the order referred to was restored, instructions were at the same time given to exempt from the requirement that class of passengers among whom dangerous conspirators against the Government and the Union would not probably be found.

WILLIAM H. SEWARD.

DEPARTMENT OF STATE,
WASHINGTON, *December* 19, 1861.

It has been stated that the legislation of Congress assumed an entirely new aspect at this session. Much time was spent during the first half of the session, in discussing resolutions, which, although of no unusual importance, yet served to develop the views of individual members, to incite the ardent, to push forward the timid, and secure the coöperation of a majority for those strong measures which finally prevailed. As is usual in a revolution or civil commotion, while the vigor of a country is unimpaired, the extreme champions of the movement are at first successful. But when the exhaustion of the country intervenes, they are supplanted by those hitherto regarded as timid

conservatives. The first class now proceed to triumph in this session of Congress.

In the Senate on the 19th of December, Mr. Willey, of Virginia, offered the following resolution:

Resolved, That the existing war, forced upon the country by the instigators of the rebellion without justifiable cause or provocation, was, and is, designed by them to destroy the Union and the Constitution; and their purpose, moreover, was at first, and is now, to disavow and repudiate the fundamental principles of republican government on which our fathers established the Union and the Constitution.

Mr. Willey proceeded to address the Senate, and to show that there had been at the South no just cause of dissatisfaction with the Government. It had most successfully accomplished the end of its institution in securing "life, liberty, and the pursuit of happiness" for the citizen, and in "promoting the general welfare." The policy of the Government had always been controlled by the South, and at the time of the outbreak the administration of the Government was completely within the power of the South and its friends. Slavery and the rights of slaveholders were secure from any successful aggression by the Republican party or the General Government. No dread of the Abolitionists precipitated secession. He then presented his view of the primary inciting cause of secession. He said:

"But what was the primary inciting cause of this rebellion? I answer—dissatisfaction with the principles and operation of democratic government. It was hostility to the simplicity and equality of republican institutions. We may not find any direct and unequivocal avowal of this fact on the part of the conspirators. It would be strange if we should. Satan ever approaches his victims as an angel of light. Liberty has always been destroyed in the name of liberty. Despotism is strategetic. It fights with masked batteries. All history will attest that encroachments on human rights have generally been made in the guise of freedom and friendship.

"Mr. President, I am not before you either as the defender or the denouncer of slavery. Its friends, however, claim that it is necessary to the perfection of any high degree of civilization; that, by exempting those who possess slaves from those menial and servile offices inseparably incident to the economy of any condition of society, it affords leisure and means for superior mental and social improvement, and imparts a dignity of character and polish of manners unattainable where slavery does not exist. If this assumption be confined in its application to the slaveholder, it may, to some extent, be true; but how small a proportion of the people of the South own slaves!

"Sir, I dare not say, with George Mason, of Virginia, that 'every master of a slave is born a petty tyrant,' for I am a slaveholder. I despise the vituperation so indiscriminately heaped upon slaveholders by the madness of fanatic abolitionists. They are the worst enemies of the slave in the world. They have already injured him much; and if their policy were carried out it would degrade the slave still below his present position, and entail miseries upon him exceeding the horrors of the slave ship. It would beggar both master and slave, and demoralize the whole country. Let us leave slavery where the Constitution and laws have placed it, and await the progressive influences of that blessed Christianity, which, in God's own time, shall redeem and regenerate the human race.

"But, sir, it may nevertheless be so that slavery does tend to foster in the feelings and mind of the slaveholder sentiments averse to the perfect level of natural and political equality upon which the system of American republican institutions is based. Labor is not so reputable in slaveholding as it is in non-slaveholding communities; and although the laws do not create or tolerate any distinctions predicated upon this fact, we find them existing with a power and influence as inexorable as if they were a part of the Constitution. I remember the startling effect of a passage in the speech which the eloquent Preston, sent as a commissioner from South Carolina to the late Virginia convention at Richmond, made before that body. Said he:

Southern civilization cannot exist without slavery. None but an equal race can labor at the South. Destroy involuntary labor, and the Anglo-Saxon civilization must be remitted to the latitudes from which it sprung.

"Sir, how I did wish that these remarkable sentences could have reached the ears of the five million laboring inhabitants in the South who own no slaves! Whatever may be the cause of this aristocratic sentiment in the South, and especially in the Gulf States, I shall leave the further discussion of it to philosophers and statesmen. It is the fact that I am at present considering; and that the fact exists is, I think, indisputable. It will not be denied that Judge Pratt, of South Carolina, is an eminently able man, and may justly claim to be considered an authoritative exponent of the views of a large portion of the people of his section. In a late eleborate article animadverting upon the temporizing measures of the confederate States, he says:

The contest is not between the North and South as geographical sections, for between such sections merely there can be no contest; nor between the people of the North and the people of the South, for our relations have been pleasant, and on neutral grounds there is still nothing to estrange us. We eat together, trade together, and practise, yet, in intercourse, with great respect, the courtesies of common life. But the real contest is between the two forms of society which have become established—the one at the North and the other at the South. Society is essentially different from government—as different as is the nut from the bur, or the nervous body of the shell fish from the bony structure which surrounds it; and within this Government two societies had become developed as variant in structure and distinct in form as any two beings in animated nature. The one is a society composed of one race, the

other of two races. The one is bound together but by the two great social relations of husband and wife and parent and child; the other by the three relations of husband and wife, and parent and child, and master and slave. The one embodies in its political structure the principle that equality is the right of man; the other that it is the right of equals only. The one, embodying the principle that equality is the right of man, expands upon the horizontal plane of pure democracy; the other, embodying the principle that it is not the right of man but of equals only, has taken to itself the rounded form of a social aristocracy. In the one there is hireling labor—in the other slave labor; in the one, therefore, in theory, at least, labor is voluntary; in the other, involuntary; in the labor of the one there is the elective franchise, in the other there is not; and, as labor is always in excess of direction, in the one the power of government is only with the lower classes; in the other, the upper. In the one, therefore, the reins of Government come from the heels, in the other from the head of the society; in the one it is guided by the worst, in the other by the best, intelligence; in the one it is from those who have the least, in the other from those who have the greatest, stake in the continuance of existing order.

"Mr. President, Judge Pratt is by no means singular in his repudiation of the cardinal principle of democratic institutions—the right of the majority to govern. The constitution of his State confines the political power, in fact, to a comparatively small number; and the fundamental laws of several of the other Southern States, including my own, have denied that population or suffrage is the true basis of political power, but secure to property a representation in the Legislature.

"Mr. President, Mr. Jefferson enunciated the axiom that 'absolute acquiescence in the decisions of the majority was the vital principle of republics.' Thus he summed up the argument in favor of adhering to the General Government and preserving it:

The preservation of the General Government in its whole constitutional vigor is the sheet-anchor of our peace at home and safety abroad; a jealous care of the right of election by the people—a mild and safe corrective of abuses which are lopped by the sword of revolution where peaceable remedies are unprovided; and absolute acquiescence in the decisions of the majority—the vital principle of republics, from which there is no appeal but to force, the vital principle and immediate parent of despotism.

"But, sir, Mr. Preston, the South Carolina commissioner, to whom I have already referred, delivered a very different message to us last spring, in the Virginia convention. He declared to us:

In the Free States, the simple, isolated, exclusive, sole political principle is a pure democracy of mere numbers, save a scarcely discernible modification, by a vague and undefined form of representation. In these States there can be no departure from this principle in its extremest intensity. The admission of the slightest adverse element is forbidden by the whole genius of the people and their institutions. It is as delicate in its sensitiveness as personal right in England, or slavery in Carolina; it is the vitalizing principle, the breath of the life of Northern socialism. The almighty power of numbers is the basis of all social agreement in the Northern States. A fearful illustration of this is at this moment exhibiting its results in the Government under which you are consenting to live. That Government was "instituted and appointed" to protect and secure equally the interest of the parts. By the agency of mere numbers, one section has been restricted and another expanded in territory; one section has been unduly and oppressively taxed, and one section has been brought to imminent peril; and in this hour the people of the North are consulting whether they can subjugate the people of the South by the right of number.

The "government by the people" is equally the rule of the South, but the modification of the "rule of numbers" is so essential in the Slave States, that it cannot coexist with the same principle in its unrestricted form. In the South it is controlled, perhaps made absolutely subject, by the fact that the recognition of a specific property is essential to the vitalization of the social and political organisms. If, then, you attempt to institute the rule of either form into the organism of the other, you instantly destroy the section you invade. To proclaim to the North that numbers shall not be absolute, would be as offensive as to proclaim the extinction of slavery in the South. The element of property would neutralize the entire political system at the North; its exclusion would subvert the whole organism of the South.

"This is not the opinion of isolated individuals. It is wide spread in the South. It is already incorporated, in some form or other, in the organic laws of several of the States; and other States are seeking to give it constitutional authority. Thus, in the constitutional convention of Virginia, recently in session, Mr. Stuart, formerly Secretary of the Interior, as chairman of the committee having the subject in charge, made a report, from which I read the following extracts:

Governments are instituted for the protection of the rights of persons and property; and any system must be radically defective which does not give ample security to both. The great interests of every community may be classed under the heads of labor and capital, and it is essential to the well being of society that the proper equilibrium should be established between these important elements. The undue predominance of either must, eventually, prove destructive of the social system. Capital belongs to the few—labor to the many. In those systems in which capital has the ascendency, the government must, to some extent, partake of the character of oligarchy; whilst in those in which labor is predominant, the tendency is to what Mr. John Randolph graphically described as "the despotism of king numbers."

In the opinion of your committee no system of government can afford permanent and effectual security to life, liberty, and property, which rests on the basis of unlimited suffrage, and the election of officers of every department of the government by the direct vote of the people.

"Sir, great astonishment has been expressed at the hostility of Southern statesmen to popular education. But, sir, we ought not to be surprised at it. Knowledge is power; and to keep the masses in ignorance is a necessary precaution to keep them in subjection. To maintain the oligarchy of the few owning the capital, it is necessary to bind down with the slavish chains of ignorance the many who perform the labor. Hence Mr. Stuart connects with the recommendations which I have just read, the following:

This tendency to a conflict between labor and capital has already manifested itself in many forms, comparatively harmless, it is true, but nevertheless clearly indicative of a spirit of licentiousness which must, in the end, ripen into agrarianism. It may be seen in the system of free schools, by which the children of the poor are educated at the expense of the rich.

"Sir, the true reason of this hostility to popular education is hostility to democratic institutions. I need not remind many of the members of this body with what pertinacity Mr. Calhoun resisted the application of the majority principle to our system of national government, as subversive of the rights of the States. He warred upon this great principle from the time of his Fort Hill address, and before that time, down to the day of his death, in the Senate, in popular addresses, and in labored volumes of essays. Nor need I advert to the mighty influence which this great man exerted on Southern opinion. Sir, there is a widespread hostility all through the Gulf States, more especially, to the great fundamental political right of the majority to rule.

"It will be remembered, moreover, that the headspring of this rebellion was in the very State where, in the war of the Revolution, the attachment of the people to the aristocratic institutions of the mother country was the hardest to subdue. This attachment was never wholly extinguished. Flashes of the old aristocratic flame have often gleamed out from the revolutionary ashes, as they did recently, when Mr. Russell was assured by many there that they longed to renew their allegiance to some descendant of the royal family of England. Sir, there is a wonderful 'hankering' in South Carolina after the 'fleshpots of Egypt.' By referring to the January (1850) number of the Democratic Review, I find an elaborately written article, from which I have taken the following extract:

The formation of the cotton States, with Cuba, into a great cotton, tobacco, sugar and coffee-producing Union, calling forth the boundless fertility of Cuba, and renovating the West India Islands with the labor of the blacks of the Southern States, in those hands in which their labor and numbers have thriven so well, and THIS EMPIRE ANNEXED TO BRITAIN, by treaties of perfect reciprocity, giving the latter the command of the eastern commerce by way of Nicaragua, and all the benefits of possession, without the responsibility of slave ownership, would be a magnificent exchange for the useless province of Canada.

"And, sir, I find the following in the newspapers of the day, giving some most significant antecedents of the present distinguished Secretary of the Treasury of the so-called Confederate Government:

I was very much surprised, Mr. Chairman, at the honorable member's speech from Charleston (Colonel Memminger), who said he had rather South Carolina was attached to the Government of Great Britain, as she was previous to the Revolutionary war, than to remain a member of this Union. Such an expression neither becomes an American nor a Carolinian, and must have been uttered in the heat of argument and declamation, without due consideration.—*B. F. Perry, in the South Carolina Legislature for* 1850–51.

"In an address which this gentleman made before the Virginia Legislature a year or two ago, he uttered sentiments as little in accord with the spirit and genius of our American democracy.

"I recently cut from the 'National Intelligencer'—a paper which, by its wise, conservative, and patriotic course through a long series of years, has placed the friends of constitutional liberty under the most lasting obligations—the following short article:

A NASCENT NOBILITY.—In the number of De Bow's Review for July, 1860, is an elaborate article from the pen of George Fitzhugh, Esq., author of "Sociology for the South," and long a prominent advocate of disunion. In the article designated he gives expression to the following aspiration:

"England has once tried to dispense with nobility, and France twice, but each experiment was a failure. In America we have the aristocracy of wealth and talents, and that aristocracy is somewhat hereditary. The landed aristocracy of the South, who own slaves, approach somewhat to the English nobility. Time must determine whether the *quasi* aristocracy of the South has sufficient power, permanence, and privilege to give stability, durability, and good order to society. It is sufficiently patriotic and conservative in its feelings, but, we fear, wants the powers, privileges, and prerogatives that the experience of all other countries has shown to be necessary."

If such was Mr. Fitzhugh's fear while the South remained in the Union and under the Constitution, we presume his hopes have considerably risen since the outbreak of the present war, for in the same article he avows a preference for a military government, as being the "most perfect" known to man, and imputes it as a fault to the Republican party that the more advanced of its number were averse to wars. Mr. Fitzhugh's language under this head is as follows: [It will be seen that he finds the perfection of military government in the fact that it allows "the least liberty" to its subjects.]

"The most perfect system of government is to be found in armies, because in them there is least of liberty, and most of order, subordination, and obedience."

"It is but a short time since Governor Brown, of Georgia, charged upon the leaders of the secession movement in that State a design to establish

a strong central government, probably preferring, if they did not fear to risk an avowal of their sentiments, a limited monarchy, similar to that of Great Britain, or other form of government that will accomplish the same thing under a different name.

"Only two or three days before the victory of our fleet at Port Royal, Governor Pickens, of South Carolina, closed his message to the Legislature of that State with the following significant intimations:

As far as the Northern States are concerned, their Government is hopelessly gone; and if we fail, with all our conservative elements to save us, then, indeed, there will be no hope for an independent and free Republic on this continent, and the public mind will despondingly turn to the stronger and more fixed forms of the Old World.

In this point of view I most respectfully urge that you increase the power and dignity of the State, through all her administrative offices, and adhere firmly to all the conservative principles of our constitution.

"It were easy to multiply the evidence of hostility among the instigators of secession to what Judge Pratt calls the 'horizontal plane of pure democracy.' The columns of most of the leading journals in the interest of the rebellion teem with assaults, direct or indirect, upon the great principles of political equality on which our republican institutions are based. I shall not weary the Senate by any detailed reference to them. I will give an extract from

one as an example of many. I have taken the following extract from the Richmond Whig, of June 14, 1861. Speaking of the Southern States:

> This vast region, inhabited by a people who are bred from childhood to horsemanship and the use of arms, and who know what liberty is, and love and adore it, is portioned out for subjugation by the disgusting Yankee race, who don't know how to load a gun, and look contemptible on horseback. That they may be drilled into respectable military machines by the Virginian, who commands them, is likely enough; but without disjointing the eternal fitness of things and dislocating the order of nature, that they should become capable of empire, is simply absurd. Grant that mere brute force should enable them to overrun the land like a cloud of Eastern locusts, their reign would pass with themselves. They possess not one quality that fits them for command. Since their beginning as a nation, and out of all their seething population, they have never yet produced a general or a statesman. That is an effort beyond their ability. But for organizing hotels, working machinery, and other base mechanical contrivances, they are without equals in the world. And the very law of nature which invests them with excellence in those inferior departments of humanity, condemns them to inferiority in those of a nobler and more exalted strain.

"Senator Hammond is by no means alone in his conception of the dignity of labor. There are hundreds of thousands who concur in his estimate of laboring men as the mere 'mudsills' of society, on which there should be erected an aristocracy, controlling the political power of the State.

"Do you ask me, do the masses of the people of the South understand the purpose of the advocates of this subversion of democratic government? Sir, I admit the proportion of the Southern people holding these views was, and perhaps still is, greatly in the minority. They consist mostly of slaveholders and their immediate dependants. The number of actual slaveowners in the Southern States does not, perhaps, exceed four hundred thousand, and the number of dependants and expectants in interest will not amount to above one million five hundred thousand more. But then it must be considered that these slaveholders are the principal men of wealth, education, intelligence, and social influence. Besides, sir, as I have already said, the aggressions of the few upon the rights of the many are always accomplished under false pretences. The cry of 'Southern rights,' 'Southern rights,' 'Southern rights,' has been rung in the ears of the people with such ceaseless, vehement importunity, as to create an honest impression on the public mind that grievous and outrageous wrong has been done to Southern rights already, and that still further and greater outrages are imminent. Especially has the opinion been propagated that slavery is everywhere to be abolished in defiance of constitutional guarantees, and the rights of the States are to be sacrificed to the caprices of Northern fanaticism. Thus has the 'Southern heart been fired.' Still it may be asked, how could such a meagre minority precipitate such a rebellion as now exists if the masses were not coöperating? I ask, what had the people to do in seceding the States out of the Union, and in the organization of the Provisional Confederate Government? What had the people in my own once honored State to do in attaching Virginia to the Southern Confederacy? Nothing, sir. Nothing. They knew not when it was done. They knew not that it was in contemplation till after it was done. In secret session, with doors barred against the popular ear, with hearts steeled against the expressed will of the people, the conspirators at Richmond not only withdrew my State from the Union, but transferred her arms and her finances and her liberties to the self-constituted authorities at Montgomery; and before the people knew of the dark, infernal deed, the tread of armed legions from the Gulf States was shaking the plains of Virginia, eager to transfer the horrors of war to the Potomac and Ohio—eager to involve my neighbors and friends and kinsmen in the carnage and desolation which they ought to suffer themselves."

Mr. Saulsbury, of Delaware, offered the following resolution:

> *Resolved*, That the Secretary of War be directed to furnish the Senate with a copy of the proclamation of Brig. Gen. J. W. Phelps, "to the loyal citizens of the Southwest;" and also to inform the Senate whether said proclamation was made by order of the Secretary of War, or with his knowledge or consent, and by what authority said proclamation was made.

He said: "All I want is for the people of the country to know authoritatively and positively that it is not an act of the Administration; that the Administration and this Government are not prosecuting this war for such purposes as are announced in that proclamation of Brig. Gen. Phelps. I think, sir, that that is important. I think that good will result to the country, that good will result in the prosecution of this war, by the disavowal, distinct and positive, of the Administration of any knowledge, consent, or authority to that proclamation which announces principles, wild, fanatical, and unworthy of any general in the army."

Mr. Sumner, of Massachusetts, replied: "Mr. President, it seems to me the Senator from Delaware perhaps has accomplished his purpose by introducing this resolution and calling the attention of the Senate to the proclamation in question. I presume there is no person here who assents to that proclamation, and there is no person who does not regard it as an indiscretion. At the same time, I am free to say that I consider it, to a certain extent, as an offset to the proclamation of General Sherman and the military orders of General Halleck. I do not know which is the worst. One errs on the side of the Constitution and of human liberty; the other errs on the side of human slavery. That is the difference between these two classes of documents. The fact that there is that difference is an argument that Congress should undertake to settle the whole question,

so as to give unity to the military power, so that when our army march they may march with a well-decided principle in advance. If the trumpet gives an uncertain sound, who shall prepare himself for battle? But the trumpet will give an uncertain sound just so long as we have these various discordant proclamations."

The views of members respecting slavery as the cause of the war, had now become ripe, and all future legislation on the subject was aimed to discourage and suppress it.

In the House, on the 20th of December, Mr. Shanks, of Indiana, offered the following resolution, which was laid over and agreed to on a subsequent day.

Resolved, That the constitutional power to return fugitives slaves to their masters rests solely with the civil departments of the Government; and that the order of the Secretary of War, under date of December 6, 1861, to Gen. Wool, for the delivery of a slave to Mr. Jessup, of Maryland, as well as all other military orders for the return of slaves, are assumptions of the military power over the civil law and the rights of the slave.

Mr. Julian, of Indiana, offered the following:

Resolved, That the Judiciary Committee be instructed to report a bill, so amending the fugitive slave law enacted in 1850 as to forbid the recapture or return of any fugitive from labor without satisfactory proof first made that the claimant of such fugitive is loyal to the Government.

This was adopted: ayes, 78; noes, 34.

Mr. Wilson, of Iowa, offered the following:

Resolved, That the Committee on Military Affairs be requested to report a bill to this House for the enactment of an additional article of war, whereby all officers in the military service of the United States shall be prohibited from using any portion of the forces under their respective commands for the purpose of returning fugitives from service or labor, and provide for the punishment of such officers as may violate said article by dismissal from the service.

It was adopted on a subsequent day.

Disloyalty was a most annoying offence in the eyes of Congress, and no efforts were spared to extinguish it. Of course, no greater crime could be committed against a government struggling for its existence. But this disloyalty showed itself in perfectly loyal communities, and consisted in almost every conceivable act which could be regarded as not supporting the Administration with "all the heart and soul," &c. The views of members were as follows:

In the House, on the 30th of December, Mr. Potter, of Wisconsin, offered the following resolution, which was adopted.

Resolved, That the Secretary of the Treasury be, and is hereby, requested to furnish, without any unnecessary delay, to the Committee of Investigation on the disloyalty of persons in the employment of the Government, the information asked for by letter of December 3, 1861, addressed by the chairman of said committee to the Secretary of the Treasury.

Mr. Potter, in explanation, said: "I have a similar resolution, which I desire to offer, calling for information from the Secretary of the Interior. Before doing so, however, with the consent of the House I will state that, on the 3d day of December, I was instructed by the Committee of Investigation to call upon the heads of the Executive Departments of the Government for certain information—information which it is necessary to have in the possession of the committee before they will be able to prepare their report and present it to the House. The committee received prompt replies from the heads of all the departments except the Treasury and Interior, but nothing from them; and on the 24th of December, I addressed notes to the Secretaries of the Treasury and Interior, calling attention to my letter as chairman of the committee of the 3d instant. Nothing has been heard from these departments in reply to either of the letters addressed to them by the committee, and we are compelled, therefore, to come to the House in order to obtain this information."

Mr. Wickliffe, of Kentucky, rose to make a request. He said: "I would like the honorable gentleman from Wisconsin to furnish the House with a copy of the letter which contains the facts or information which he desires to obtain, so that we may know what it is we are calling for."

Both letters mentioned by Mr. Potter were sent to the Clerk and read, as follows:

WASHINGTON CITY, *December* 3, 1861.

SIR: I had the honor to receive from you a communication, bearing date the 18th of July, in which you furnish the committee authorized to inquire into the loyalty of persons in office with a list of those holding positions under you. I have now to request a further statement of the removals which have been made, designating the individuals, since your communication of the above date.

I have the honor to be, very respectfully,

JOHN F. POTTER,
Chairman of Committee.

The Hon. SECRETARY OF THE ——.

WASHINGTON CITY, *December* 24, 1861.

SIR: On the 3d day of the present month, I had the honor to address you a communication on behalf of the Committee of Investigation of the House of Representatives, asking for certain information in relation to the removal of clerks in your department.

I have received no reply to that communication. As it is important that the information asked for should be imparted to the committee before their report is made to the House, I will thank you to furnish it with as little delay as possible.

Respectfully, JOHN F. POTTER,
Chairman of Committee.

Hon. SECRETARY OF ——.

Mr. Olin, of New York, said: "I wish to propound this interrogatory. Perhaps it is improper to inquire into the proceedings of this committee; but, if proper, I wish to learn from the gentleman from Wisconsin whether, in these cases where testimony has been taken before his committee implicating any one in the employment of any of the various departments of the Government, the gentlemen thus apparently implicated have been notified of the charges or representations or insinuations made in reference to them, and have had an opportunity to adduce such testimony as they saw fit in answer to or in explanation of the

charge? I have learned incidentally that such is not the fact."

Mr. Wickcliffe, of Kentucky, opposed the resolution, saying: "Sir, I do not approve of this exercise of power which does not legitimately reside in this House. The Secretary of the Treasury has the power of appointing clerks, and the power of removal, and if he has not got sense enough to exercise that power with discretion, I say let him be removed and somebody appointed who has. Let us not divert the great and legitimate powers of this House into an inquisition to find out something against the character of these poor dependent clerks."

Mr. Potter, in reply, stated as follows: "The committee was appointed at the July session of Congress. It has been at work during the period which has intervened; and in reply to the inquiry of the gentleman from New York as to whether we have permitted to come or have called before us clerks charged with being disloyal, I frankly say to him that we have not. The reason why the committee adopted the resolution to send the charges which had been made before them, with the evidence, as to the disloyalty of certain clerks to the heads of departments, was for the purpose of enabling the clerks so charged to have the opportunity of going before their respective heads of departments, who have the whole control of the matter, and vindicate themselves against the charges, if it was in their power to do so. The committee has no power and has claimed the exercise of no power of dismissal. They have merely sent the evidence taken by them to the departments, where the character of the clerks could be properly further investigated, and where the clerks could be heard in their own defence.

"The gentleman from New York asks why these poor, persecuted men were not permitted to appear before us in their own defence. Because such men who are properly charged with disloyalty have no right to ask to come before the committee; they have no right to ask to be retained in any position under this Government. I say that in these times no man should be retained in the employ of the Government against whom there is a reasonable suspicion as to his loyalty. I say that in times like these no head of department has the right to require from a committee of investigation, or from any other source, evidence against an employé under him strong enough to hang him for treason before he will dismiss him. Yet that seems to be the position taken by the heads of some of the departments."

In the Senate, on the 6th of January, the credentials of Benjamin Stark, a Senator from Oregon, appointed by the Governor to fill the vacancy occasioned by the death of Edward D. Baker, were presented and read, and it was asked that the oath of office be administered to him.

Mr. Fessenden, of Maine, moved that the oath of office be not administered, but that the credentials with certain papers be referred to the Committee on the Judiciary. He said: "The papers which I have in my hand are well attested—as well as they can be. They are in the shape of affidavits and written representations, most of them sworn to, and certified beyond all question to be from a large number of the most respectable inhabitants of the city of Portland, where Mr. Stark resides. They state in the most unqualified terms facts which, if true, in my judgment, go to show that Mr. Stark should not be admitted to a seat in this chamber. They state that Mr. Stark is understood by everybody in his vicinity to be an open and avowed supporter of secession; that he has openly defended the course of the South in seceding, and has given utterance to sentiments totally at war with the institutions and preservation of our country, such as approving the attack on Fort Sumter; making declarations to the effect that in the event of a civil war, which, in fact, had then already commenced, he would sell his property in Oregon and go South and join the rebels; that they were right; that Mr. Davis's government was the only government left; that there was, in fact, no government of the Union at all. Numerous declarations of that kind are sworn to by persons who are certified and proved to my satisfaction to be persons perfectly reliable. Under these circumstances, as they have been made known to the Senate in such an authentic form as they are, I think it grossly improper that the oath of office should be administered to Mr. Stark, and he be permitted to take a seat on this floor before an investigation has been had."

Mr. Bright, of Indiana, opposed the motion, saying: "I think, sir, there is no precedent for a motion of that kind. I have never known a case where the Senate refused to allow a Senator to take his seat when his credentials were properly authenticated, and he applied for admission upon this floor. I have a very accurate recollection of what took place in my own case, and in the case of my colleague, Dr. Fitch, when our right to seats on this floor was denied. I think there was a general admission on both sides of the chamber that a Senator presenting a *prima facie* case had a right to be sworn in, and that the Senate would, after the administration of the oath, take cognizance of any papers that might be presented questioning his right to a seat. I think there would be great propriety in allowing the Senator to be sworn, that he may be heard in his own defence. The fact that these papers are certified, and the fact that statements are made derogatory to the loyalty of the Senator who claims his seat, furnish no evidence to my mind of their truth. Never have baser falsehoods been put on record against any man than have been sent to the Senate against me since I took my seat at this session."

Mr. Fessenden replied by avowing his disin-

terestedness and his sense of duty, and said: "The question raised here is all about the precedents. As I said before, the times are those when we are compelled to make precedents—not to be bound by mere forms of proceeding, precedents in the body which go only to ordinary transactions, but, if necessary, to make them."

Mr. Bayard, of Delaware, followed and expressed a desire that the matter might be postponed for a day, until he could look over the papers. Alluding to the point of precedents, he said: "I differ greatly from the honorable Senator from Maine in his general principle. If there is any period of time in which there is a necessity of adhering to forms it is in times of high excitement. The mind is apt to become biased and prejudiced, and there can be no protection unless you adhere to forms under such circumstances. *Apices juris sunt jura* is a principle which the honorable Senator must know well must often be applied; that which may seem but form is really the protection of the rights of the party."

Mr. Trumbull, of Illinois, denied that credentials had not been referred before parties had been sworn in, in the Senate. Usually, where the credentials were fair upon their face, the person claiming a seat had been sworn in as a member; but the practice had not been uniform. He stated the cases of James Lanman, of Connecticut, in 1825, and Stanley Griswold, of Ohio, in 1809.

Mr. Sumner, of Massachusetts, said: "I desire, Mr. President, to make one single remark. It is said that the proposition now before the Senate is without a precedent. New occasions teach new duties; new precedents are to be made when the occasion requires. Never before in the history of our Government has any person appeared to take a seat in this body whose previous conduct and declarations, as presented to the attention of the Senate, gave reasonable ground to distrust his loyalty. That case, sir, is without a precedent. It belongs, therefore, to the Senate to make a precedent, in order to deal with an unprecedented case. The Senate is at this moment engaged in considering the loyalty of certain members of this body, and it seems to me it would poorly do its duty if it admitted among its members one with regard to whom, as he came forward to take the oath, there was a reasonable suspicion."

Mr. Bayard, of Delaware, responded: "This is not a new state of things as regards the question of precedent, founded on mere matter of opinion. Sir, in the war of 1812 there were men sitting in the Senate of the United States, and men admitted into the Senate of the United States, that were opposed to the war and opposed to the whole action of the Government. That was a war with a foreign enemy; a war with a domestic enemy is no worse. During the conspiracy of Burr there were men in the Senate of the United States that were believed to sympathize with it, as this gentleman is believed to sympathize with those opposed to our Government. I do not know him; to me he is a stranger. I neither know his opinions nor the evidence in relation to them; but I say there were gentlemen who were generally reputed to have sanctioned Burr's conspiracy who were Senators of the United States. The cases may not be exactly parallel to any existing at present; but condemnation for mere opinion, apart from acts, never can be justice under any circumstances."

Mr. Lane, of Indiana, urged the right and the duty of the Senate to make an investigation of the matter. In reference to precedents, he said: "A word in regard to the allegation of the want of a precedent in a case like this. I suppose there is no precedent, and I trust in God there may be no occasion hereafter for any similar precedent. There is no precedent for much of our action in referencce to this rebellion; there is no warrant in the Constitution for much of it, and why? Simply because no Government provides for its own dissolution; hence no precedents will reach this case."

The subject was then laid over until the 10th of January, when it was again taken up on the question of reference.

Mr. Bayard, of Delaware, said: "Now, sir, what is the state of facts? The gentleman's credentials are presented here by a Senator of the United States. According to the Constitution, each State—it is the right of the State—is entitled to two Senators; and if it happens that at any time a seat becomes vacant, and a term is broken by the death or resignation of a member of the body, the Executive of the State, in the recess of the Legislature, has the right of appointment vested in him. In this case, the credentials are presented, showing an authority, under the great seal of the State, appointing Mr. Stark a Senator of the United States until the next meeting of the Legislature of Oregon. The authority is unquestioned; no one has objected to it. Next comes the clause of the Constitution which prescribes the qualification of a Senator, and under that clause no one doubts that authority is given to a majority of this body to decide upon those qualifications. No one doubts that a majority decides on 'the returns,'—meaning the credentials—and 'the qualifications' of the member. That authority is vested by the Constitution in a majority of either House; and, therefore, when an individual applies to be sworn in as a Senator, if objection is made either to the authority to appoint him, or to the mode of appointment, or to his qualifications, beyond all question it is competent for the Senate, by a majority, judicially to decide that question, and that is what they always do. There may have been erroneous decisions made; but the presumption is, that every Senator feels that he is acting judicially in deciding, under the Constitution and on the credentials, whether the party is entitled to a seat.

"Among the qualifications prescribed by the Constitution you can find no ground for interposing an objection to a party being sworn in who is properly appointed, no matter how debased his moral character may be, no matter though he lie under the stigma of an indictment and conviction for crime. Your remedy is not by rejecting him, if the proper authority of his State chooses to appoint him, because that power is not vested in the majority of this body; but you are protected, as I will show you, by a subsequent clause, from anything of that kind. The question is left to the appointing power in the State as regards a Senator or Representative, the people or the people's agents in the State, to determine whether or not the individual is fit morally to represent them; and I suppose loyalty comes under the designation of moral character as well as under anything else. Even if there were a conviction for crime, forgery if you please, it would afford no ground, it would give no warrant to the Senate of the United States in rejecting by a majority a person who presented himself as a Senator, legally appointed by the proper authority in his own State. The Constitution prescribes the qualifications, and it has not touched any question of that kind relating to the capacity or the morality of the party. If he was an idiot you could not reject him. If he was a man destitute of all moral character, such that you would feel disgraced by associating with him, you could not by a majority of this body reject him when his State chose to send him here by the properly constituted authority. You have some authority over the subject, to be sure, as I admit; but you are violating the Constitution if, under the power which is given to you to decide by a majority on the returns and qualifications of a member, you undertake to usurp the power of adding qualifications which the Constitution has not prescribed.

"I submit, therefore, that Mr. Stark has a right to be sworn in. I speak now utterly irrespective of any opinion of what these papers may *prima facie* establish, or what would be the result of an investigation, or whether the facts stated (for they are mere declarations, not acts) would be sufficient for action in another form or not. All that is beside the question. There is no prescription by which you can make so indefinite a term as loyalty a qualification under the Constitution, which you have a right by a majority to decide is a qualification for a member."

Mr. Sumner, of Massachusetts, rose in opposition. He said: "If I understood the argument of the Senator, it was that the question of loyalty did not enter, under the Constitution of the United States, into the qualifications of a Senator, and that therefore at this moment on this threshold of the discussion the Senate was not in condition to entertain the question of loyalty raised with reference to the present applicant for a seat in this body. To that I have two precise answers: one of reason, and one of precedent. The first answer that I submit to the candor of the honorable Senator is one of reason.

"The Senator says the Senate should not at this time consider the loyalty of an applicant for an office here, for the reason that under the Constitution loyalty is not a qualification. Sir, why is an applicant that comes to this body to take a seat to go to your chair and take an oath to support the Constitution of the United States, if it is not to give the most open testimony before the country, and before God, of his loyalty to the Union and to the Constitution? And yet, sir, the Senator tells us, in the face of evidence now lying on that table, leading us to doubt the loyalty of the applicant, leading us to doubt the very oath which he is to take, we cannot go into every consideration of the question of loyalty; that in short, the loyalty of a Senator under the Constitution of the United States is no part of his qualifications. I believe I do not do injustice to the argument of the Senator, and I believe I answer it on grounds of reason completely.

"And now, sir, I answer in the second place on grounds of precedent." The precedent urged by Mr. Sumner was that of Philip Barton Key in 1808, in the House of Representatives. He was charged with being a pensioner of the British Government.

Mr. Bayard, of Delaware, in reply, set aside the force of the precedent by saying: "The House made no decision that the ground of loyalty was necessary to the qualification of the party." He thus replied to the question of loyalty: "The question of loyalty is too indeterminate in itself. It rests in opinion. What one man may say is disloyal, another may not think disloyal. It may be that many members of the Senate now may think it would be disloyal to believe that it would be wiser and better for this country, if they could, to adjust amicably by national convention, or in any other mode, the existing differences, than to carry on the war. Is that disloyalty? Is a man disloyal because he entertains the opinion that the interests of his whole country, North and South, would be benefited by one course of things? Again, there are others who think, because the Administration is in power during war, that any opposition to the course and policy of that Administration would be disloyal. Many men would think so honestly. Others would say, no; it is no evidence of disloyalty at all. What definition, then, can there be put to the term to make it a qualification of a party for a seat in the Senate of the United States in the face of the Constitution of the United States? There is no certainty about it. It depends and rests upon opinion altogether; and that opinion may be as variable as it can be. Nay, sir, there is, as we all know, a difference in this body, as well as in the other House, as to the mode and policy on which this war should be carried on. Some tell us it ought to be carried on for the purpose of ex-

tinguishing slavery altogether, and entire emancipation. Others tell us, no; that would be the destruction of the Union if you attempt to do it. Which is loyal? Which is disloyal? It depends upon opinion. Each may be equally conscientious; and it follows not that either one or the other is disloyal to the Government because he may differ as to the means or the propriety of the mode in which this war ought to be carried on.

"I mention these facts to show how dangerous it would be to introduce, as a qualification not prescribed by the Constitution, the question of loyalty."

Mr. Trumbull, of Illinois, followed in reply, saying: "The Senator from Delaware takes the broad ground that in no case where a person presents himself here with credentials regular upon their face, can the Senate refuse to admit him to be sworn as a member of the body; and he goes so far as to say that if he were a convicted felon, still he must be sworn in as a member of the body. If then in any conceivable case it were possible that a man could be so degraded or so disloyal that he ought not to be admitted to a seat here, if he were a negro even with credentials, on the principle laid down by the Senator from Delaware, he should be sworn in as a member of this body."

Mr. Bayard: "No, sir; not on my principle. He must be a citizen of the United States to be sworn in as a member of this body."

Mr. Trumbull: "That is a matter of fact. I suppose you will inquire into that. Will you determine that by inspection?"

Mr. Bayard: "That is a matter of qualification."

Mr. Trumbull: "Ah! then you will decide, will you? You will look beyond the credentials to find out whether he is a black man. That is the very point to which I wish to bring the Senator from Delaware. Well, sir, suppose Jeff. Davis is commissioned by the Governor of Mississippi to-day as a Senator. The Senator from Delaware will swear him in as a member, and go into an investigation whether he will expel him afterward; and Beauregard and Johnson and all the confederate traitors now in arms against the Government, and ready to blow up the Capitol of the country—yes, sir, a spy sent here to blow up the building in which you sit, and you knew it, and bringing credentials from a traitor who is acting as Governor of Mississippi—is to be admitted to a seat here to set fire to the powder that is to blow up the Capitol! Such a monstrous doctrine, it seems to me, was never advocated in any deliberate body. Have we no power to protect ourselves; no power to preserve the Government? Why, sir, under this doctrine, traitor Governors may send a third of the members of this body here, and how will you expel them then?"

Mr. Bayard, in reply, said: "It is a very easy matter to refute the argument of an opponent if you choose to misstate his position, whether it is done intentionally or unintentionally. I never pretended to say, where the credentials alone were regular, that in all cases the party was admitted. I said that, unless the objection went to the authority to appoint or the credentials, that the party was always admitted.

"Now, the honorable Senator said: Would you, if a man came here, a convicted felon, with a regular appointment by the proper authority, and with the record of conviction before you, admit him? My answer is: Yes. The Constitution of the United States, not for him, but from respect to his State and its appointing power, authorizes him to be sworn in; but the next moment that protection which the body is entitled to against infamous members, to my mind, would justify me in turning round and expelling him from a seat in the body. I would admit him because it is not left to you to decide in the first instance who shall be elected or sworn in. You have a right to supervision over your members afterward in every respect; but you must pay that much respect to the appointing power, the State which he represents, as to suppose they would not elect a disloyal, improper, or infamous man to a seat in this body. You therefore admit him, and you admit him because the majority has no right to guard against that, for the Constitution leaves it in the States."

The credentials were referred to the Committee on the Judiciary, by the following vote, and after much debate on subsequent days on a report of the committee, Mr. Stark took his seat.

YEAS.—Messrs. Anthony, Browning, Chandler, Collamer, Cowan, Davis, Dixon, Doolittle, Fessenden, Foster, Grimes, Hale, Harlan, Harris, Howe, Johnson, King, Lane of Indiana, Lane of Kansas, Morrill, Pomeroy, Sherman, Simmons, Sumner, Ten Eyck, Trumbull, Wade, Wilkinson, and Wilson—29.

NAYS.—Messrs. Bayard, Bright, Carlile, Kennedy, Latham, Nesmith, Pearce, Powell, Rice, Saulsbury, and Thomson—11.

The purpose of conducting the war in such a manner as to destroy slavery, was brought out in the following debates, and was followed, at a later period of the session, by active measures for its abolition, and the emancipation of slaves.

In the House, Jan. 6, Mr. Conkling, of New York, offered the following resolution:

Whereas, on the second day of the session, this House adopted a resolution, of which the following is a copy:

"*Resolved*, That the Secretary of War be requested, if not incompatible with the public interest, to report to this House whether any, and if any what, measures have been taken to ascertain who is responsible for the disastrous movement of our troops at Ball's Bluff;"

And *whereas*, on the 16th of December, the Secretary of War returned an answer, whereof the following is a copy:

WAR DEPARTMENT, *December* 12, 1861.

SIR: I have the honor to acknowledge the receipt of a resolution of the House of Representatives calling for certain information with regard to the disastrous

movement of our troops at Ball's Bluff, and to transmit to you a report of the Adjutant General of the United States Army, from which you will perceive that a compliance with the resolution, at this time, would, in the opinion of the General-in-Chief, be injurious to the public service.

Very respectfully, SIMON CAMERON,
Secretary of War.

Hon. G. A. GROW,
Speaker of the House of Representatives.

HEADQUARTERS OF THE ARMY,
ADJUTANT GENERAL'S OFFICE,
WASHINGTON, *December* 11, 1861.

SIR: In compliance with your instructions I have the honor to report, in reference to the resolution of the honorable the House of Repreentatives, received the 3d instant, "that the Secretary of War be requested, if not incompatible with the public interest, to report to this House whether any, and if any what, measures have been taken to ascertain who is responsible for the disastrous movement of our troops at Ball's Bluff;" that the General-in-Chief of the Army is of opinion an inquiry on the subject of the resolution would, at this time, be injurious to the public service. The resolution is herewith respectfully returned.

Respectfully submitted, L. THOMAS.
Adjutant General.

HON. SECRETARY OF WAR, *Washington:*

Therefore,

Resolved, That the said answer is not responsive, nor satisfactory to the House, and that the Secretary be directed to return a further answer.

Mr. Conkling, on introducing the resolution, entered into a description of the scenes at Ball's Bluff, on the day of the battle, and a statement of his conclusions relative to that conflict, and concluded by saying, that his particular object was to learn whether the military authorities had in any manner looked into the proceedings on Oct. 21.

Mr. Richardson, of Illinois, followed, saying: "After the experiences of this House, it becomes its dignity to inquire whether we have the right and power to apply correctives to what we find wrong. On the first day of this session gentlemen, without consideration, without consultation, without the deliberation of the House, pledged themselves to do certain things in relation to the arrest of Mason and Slidell. The authorities, who in this Government had control of the matter, have not backed you up in it. What position do you occupy? Is your dignity vindicated? Have we maintained our own self-respect? If not, why? We have interfered with matters which did not belong to us, and over which we have no control.

"What does the gentleman from New York propose to do now? He proposes to investigate the disaster at Ball's Bluff. Suppose you find that somebody now living is at fault: what are you going to do next? Discuss it before a town meeting? Is that the way you conduct armies, fight battles, and carry on wars? It is unheard of in our legislation. We must trust something to the other departments of the Government.

"This House may subject the matter to an investigation of a committee; it may determine that certain persons are responsible, but the Commanding General, the War Department, the officers to whom we must trust the management of our armies, may differ with the House of Representatives."

Mr. Crittenden, of Kentucky, opposed the resolution and said: "The general question is this: Will the House interfere in the conduct of the war and the management of the army by the investigation of transactions through its committees, which transactions are in their nature and character purely military? Have you the power to do so? Congress has power to declare war, to raise armies. What further power in the matter does the Constitution give to it? What power over the command and management of these armies has Congress? The President is the Commander-in-Chief. When you have declared war, announced its object, and raised armies, those armies pass under the command of the President of the United States, for the execution of the purpose of Congress."

Mr. Crittenden then proceeded to speak of the consequences of such interference upon the army and its officers.

Mr. Vallandigham, of Ohio, dissented from the view of the previous speaker, and said: "But I rose, sir, not merely to explain my vote, but suggest a second time, as I did the other day, that hereafter all resolutions of a similar import should be made to conform to the rule of this House, and that the responsibility which these Executive Departments owe to this House shall be rigidly enforced. Let us yield not an inch, especially at a time when executive power in its most dangerous form—the military—threatens the civil authorities with utter subordination, if not permanent overthrow. I dissent, very respectfully but totally, from the unconstitutional and dangerous doctrines of the gentleman from Kentucky; and I congratulate the country also, that gentlemen of the majority are beginning already, no matter from what motives, to fall back upon the very principles for maintaining which I have for months past been falsely and impudently denounced as an enemy to my country."

Mr. Lovejoy, of Illinois, protested also against the doctrine of the member from Kentucky, on the ground that there was a clause in the Constitution, which provided that the military should be subject to the civil authority, and then proceeded to remark upon the conduct of the war. He said: "I do not think that the want of success in our military operations is owing so much to this general or that general, to the want of military skill in this officer or that officer, as to other causes. Although, by the way, the gentleman deprecates transforming civilians into military men, and military men into civilians, I will say that we have been familiar with such transformations ever since we have been a nation. The two leading generals in our army were civilians when this war broke out—one in California, and one in Illinois; and a large proportion of the officers of the

army now were civilians when the war commenced. This must, of necessity, be so; and I believe, on the whole, that the civilians are the best officers, and will prove to be the best officers; and that the men who have received a military education are more in the way of the success of our arms than anything else. That is my conviction, though I do not wish to blame any one, or to discuss personal merits or demerits. The truth is, if I understand it, our want of success in this war is owing to the theory adopted by this Government in regard to its prosecution. The Government is holding the army in a state of inactivity—for what reason? Not because the officers are not skilful and brave; not because the soldiers are not brave and efficient; but they are holding this whole army in this stand-still position, and literally making it a *standing* army, upon the same principle that a simpleton mentioned, I think, in Grecian fable, stood upon the banks of a stream waiting for it to flow by, that he might pass over dryshod. We are waiting in the hope—in my opinion, a vain and fruitless hope—that this rebellion will put itself down; that if we do not hurt them, these rebels will return to their allegiance, and that, too, before a great while.

"But, Mr. Speaker, to return to that which I wanted chiefly to say, and that is this: I care very little about investigating these incidental facts. The great trouble is that this nation has failed, and is yet failing, rightly to interpret the providences of God. Although a reference to any higher law or providence may be received here with a smile and a jeer, yet the truth is that God is holding this nation, and refusing to allow us to achieve any victories because we are not just; because we are not true to the principles of justice, and truth, and human equality which we proclaimed in the original structure of our Government. We are failing to proclaim liberty throughout all the land to all the inhabitants thereof. I believe before God—and if it be fanaticism now, it will not be fanaticism when the muse of history traces the events of the day—that the reason why we have had Ball's Bluff, Bull Run, and other defeats and disasters, is that God in his providence means to arraign us before this great question of human freedom and make us to take the right position. Where are we now, sir? Just where a certain crew were, on a vessel whose history is found in the sacred writings. These ancient mariners put out from the shore and a storm overtook them, like that which came down upon the Trojans. The billows, foaming and raging, threatened the destruction of vessel and crew. Affrighted, they called upon their respective deities, inquiring what had brought upon them the divine displeasure, and found a certain refugee on board who had proved derelict to sacred obligations. They cast lots about the matter, referring it immediately to a divine solution, and the lot fell on the guilty person. What then? Why, the culprit himself said he must be thrown overboard. The sailors, with characteristic generosity, tried to save him, but could not, and cast him forth, and so saved their vessel and the lives of those on board.

"Now, sir, when we cast this accursed slavery overboard, God will give us success, and will crown our arms with victory—for that is just, that is right. But no: this slaveholding Jonah has paid his fare, has got some sort of constitutional, guaranteed right, and prays and whips Christianity into its tortured catechumen: and we are here to-day, with this old national vessel drifting wildly amid the maddened waves, every spar bowing, every joint creaking, and every plank bending, while the angry ocean shivers its crested waves charged with divine wrath against its sides: and still men say, "For God's sake, do not touch this old slaveholding Jonah!" We must do it, sir. It must go to the depths, or we must: and when it is cast into the sea, God will save the nation. Then it will be a nation worth saving.

"Here is the trouble, sir. It is not in Stone, nor McClellan, nor in Halleck altogether. God uses these poor instruments to punish us, and when we take the right position He will bring us the right men and we shall be saved, but not otherwise. To this complexion it will come at last. It is written in the unfolding leaves of that book chained to the throne. This Jonah must go down into the depths of the ocean, to the foundation of the hills. We have refused to vote for the negro, we have refused to care for the negro, we have refused to sympathize with the negro, and now God has set us to fighting about the negro; and the man is blind or an atheist who does not see the hand of God in it all. History will tell you that.

"Now, Mr. Speaker, the people are determined to put down this rebellion, and I tell the Government, without the least ripple or shadow of unkindly feeling toward a single gentleman—for if I had, it would be groundless and ungrateful—intrusted with the administration of affairs, and without believing for a moment that they are not true and loyal and earnest, although, as I think, acting on mistaken theories; I tell them that the people mean to put down this rebellion, and do not mean to stand with the rope round their necks always. This rebellion must be put down by the Government or without it. I know how the people feel, and I know that the slaveholding interest of one or two border slave States will not be allowed to control the destinies of this Republic."

Mr. Wickliffe. "Will the gentleman from Illinois allow me to ask him a question?"

Mr. Lovejoy. "Yes, sir."

Mr. Wickliffe. "I see, sir, that this House passed at a former session the following resolutions:

Resolved, That neither the Federal Government nor the people or governments of the non-slaveholding

States have a purpose or a constitutional right to legislate upon or interfere with slavery in any of the States of the Union.

Resolved, That those persons in the North, who do not subscribe to the foregoing proposition, are too insignificant in numbers and influence to excite the serious attention or alarm of any portion of the people of the Republic, and that the increase of their numbers and influence does not keep pace with the increase of the aggregate population of the Union.

"In favor of the passage of the resolutions I see a gentleman's name, 'OWEN LOVEJOY.' Are you the man?"

Mr. Lovejoy. "I am that man. I thank the gentleman for that word. Before replying to it, however, I want to say, in pursuance of the line of thought which I was upon, that the people have determined, as I believe, to carry on this war so as to put down the rebellion in the speediest and most effectual way, and I have no doubt that the Government will gracefully yield to the popular sentiment.

"Now, if I understand the resolution read by the gentleman from Kentucky—and my attention was diverted from the reading of it for the moment—it asserted that we had no right to interfere with slavery in the States.

"Yes, sir; you will always find my vote in the affirmative upon any such resolution as that. But that was when these States were all loyal to the Federal Government; that was before slavery had broken out into rebellion; that was before these States had seceded, and cast off their allegiance to the Government, to all its claims, and all its obligations, and of course to all right to protection and immunity.

"Now, Mr. Speaker, it is one thing, as I understand it, for two combatants to get together in a duel, for instance, in the ancient sword practice, and contend according to rule, according to the code. If they get together even as prize-fighters, they have requirements that will not allow the combatants to strike certain parts of the body; but here is a man who is playing foul, and who is striving to take your life by any and all means: are you bound by the rules, then? Has not the Constitution the right of self-preservation?"

Mr. Richardson. "I desire to ask my colleague what was the condition of South Carolina at the time when he voted for that resolution?"

Mr. Lovejoy. "I do not remember the date of it."

Mr. Richardson. "It was in February last."

Mr. Lovejoy. "It is well understood that when this resolution passed no state of war existed, no rebellion had broken out in arms."

Mr. Richardson. "I ask my colleague whether the Star of the West had not been fired into."

Mr. Lovejoy. "I think it was subsequent to that, but no matter as to particular dates; I am talking about a state of war and rebellion as contrasted with a state of peace. Now, I suppose the gentleman from Kentucky, as well as others, will admit that the Constitution and laws require us to do a thousand things in the present state of the country that they would not allow us to do in an ordinary condition of peace. There is no question about that. My simple point is this: I have said it once before, but as the charge is persistently made upon me, and upon those who advocate the policy which I advocate, that we are for making this an abolition war, an anti-slavery war, I again take occasion to say that that is not our purpose as an original, ultimate purpose, but only as a necessary incidental measure in the suppression of the rebellion.

"Now, I want to ask the gentleman from Kentucky a question. Does the gentleman prefer that slavery should be preserved and perpetuated rather than that the Union should be preserved and maintained?"

Mr. Wickliffe. "I will answer the question. I am for preserving this Union under the Constitution, regarding its obligations imposed upon every citizen, every section, and every State of this Union. I am not for violating the Constitution when it is not essential for the safety of the Union. The gentleman asks whether I am for preserving this Union in preference to preserving slavery. If that issue is to be raised, when it is presented I shall be ready to meet it. I believe we shall preserve the Union and slavery under it. I am for the principles as declared by the gentleman himself in voting for the resolution I have read, as declared by the President in his inaugural address and in his two Messages to this House. If these principles are observed, I have no fear that the Union and the Constitution will not be preserved."

Mr. Lovejoy. "Now the question I presented to the gentleman respectfully was, supposing it is impossible to preserve them both, suppose it becomes as apparent to all as it is apparent to some of us, as we think, that one or the other must go into the ocean—the vessel or Jonah—which shall go overboard? That is the question I propounded."

Mr. Wickliffe. "I would prefer throwing the abolitionists overboard."

Mr. Lovejoy: "I do not doubt it, and that is tantamount to saying that the gentleman prefers seeing the Union go by the board rather than slavery; for in the sense in which he uses the term he makes them identical. Those gentlemen who advocate this policy which seems now to control the army, and apparently the Administration, prefer the preservation of slavery to the preservation of the Union, provided both cannot be preserved."

Mr. Mallory, of Kentucky, said: "I will say in response to the question propounded to my colleague (Mr. Wickliffe), that so far as I understand the feelings of the people of that State—that if they ever come to regard the institution of slavery as standing in the way of this Union, or of constitutional liberty, they will not hesitate to wipe out that institution."

Mr. Stevens, of Pennsylvania, obtained the floor for the purpose, as he stated, "of trying

to put a stop to the debate." He said: "I agree with the gentleman from New York, that the reply sent to us is not an answer to the resolution of the House. I do not believe there was any intention to evade an answer, but I believe the reply was made through inadvertence; and I believe further, that the House owes it to itself to get a direct answer, and that is all the resolution proposes. I do not see upon what ground any man can vote against that. The resolution asks nothing that is improper.

"But suppose the purpose of the resolution was to get at facts for the purpose of investigation, are we to believe in the horrible and abominable doctrine of the gentleman from Kentucky (Mr. Crittenden), which was nothing else than that this House dare not inquire into the manner in which this war is conducted, and dare not inquire whether our officers are doing their duty or are traitors? Has it come to that, that this body is a mere automaton to register the decrees of another power, and that we have nothing to do but to find men and money?

"I solemnly protest against that doctrine as having no shadow of foundation in the genius of our institutions or in the Constitution itself. These arguments will be profitable. Much eloquence has been displayed here. Some things have been said which strike sadness to my heart. I have seen what I have sometimes suspected, that at last many distinguished men of the border States would rather see the Constitution and the Union go down than to see slavery abolished, if it came to that alternative. Sir, we have just given twenty thousand men to defend Kentucky, and to support slavery, I suppose, in preference to the Union, if that alternative is presented. I do not wonder that gentlemen hold that doctrine. They have a perfect right to hold that doctrine. It is my right, however, to repudiate it."

Mr. Mallory, of Kentucky, demanded: "What gentleman from Kentucky has avowed the doctrine the gentleman speaks of?"

Mr. Stevens: "I could put no other construction upon the reply of the gentleman from Kentucky over the way (Mr. Wickliffe), to the question of the gentleman from Illinois. I do not wonder that those inhabiting the border States hold such a doctrine with their attachment to slavery; I do not wonder that gentlemen across the lines in the Free States hold very much the same doctrine."

Mr. Dunn, of Indiana, immediately rose and asked: "Does the gentleman impute to me any such doctrine?"

Mr. Stevens said: "I thought from what the gentleman said he had a tenderness for the negro."

Mr. Dunn replied: "The gentleman from Pennsylvania imputes certain sentiments to one of the Representatives on this floor, from the State of Kentucky (Mr. Wickiffe), saying, as I understand him, that that gentleman preferred the preservation of slavery to the preservation of the Constitution and the Union. He then intimates that I, living also on the border, sympathize with the gentleman from Kentucky in that feeling. I am glad of the opportunity of saying to that gentleman that I do not exalt slavery above our Constitution; that I would make no sacrifice of our Constitution to preserve slavery, and that I regard the preservation of the Union and the perpetuation of our present form of Government as far more important to me, to the people of my day, and to the generations yet to come, than the preservation of slavery. But I do not believe this Government is to be perpetuated, or that these institutions can be handed down to posterity, if, instead of adhering to that policy which we proclaimed to the world at the commencement of this controversy, we now cut loose from our moorings, and, instead of struggling for the preservation of the Government, make this a war upon slavery. I tell you that if the general emancipation of slaves is to be our policy, our Union is forever gone, and there is no redemption for it."

The vote was then taken on the resolution, and it was adopted: ayes, 79; noes, 54.

The reply of the Secretary of War to the resolution, was as follows:

WAR DEPARTMENT, *January* 9, 1862.

SIR: I have the honor to acknowledge the receipt of the resolution adopted by the House of Representatives, on the 6th instant, to the effect that the answer of this Department to the resolution adopted by the House on the second day of the session "is not responsive nor satisfactory to the House, and that the Secretary be directed to return a further answer."

In reply, I have respectfully to state that "measures have been taken to ascertain who is responsible for the disastrous movement of our troops at Ball's Bluff;" but that it is not deemed compatible with the public interest to make known those measures at the present time.

Very respectfully, your obedient servant,
SIMON CAMERON, *Secretary of War.*

Hon. GALUSHA A. GROW,
Speaker House of Representatives.

The state of the Union was a subject which presented a broad field for the discussion of the measures which should be adopted to put an end to the institution of slavery, and save the life of the nation. It became a subject of discussion incidentally, and as a part of various questions which came before the House at this time.

On the 15th of January Mr. Corning, from the Committee of Ways and Means, reported the following joint resolution:

Resolved, &c., That in order to pay the ordinary expenses of the Government, the interest on the national loans, and have an ample sinking fund for the ultimate liquidation of the public debt, a tax shall be imposed which shall, with the tariff on imports, secure an annual revenue of not less than $150,000,000.

Mr. Vallandigham, of Ohio, urging the importance of preparing immediately a proper financial system for the Government, said: "The war must come to an end sooner or later, and in one way or another our foreign compli-

cations will be adjusted, with or without a war, which could not last long; but the errors or crimes of financial contrivances and embarrassments of to-day, and their results, will endure to the third and fourth generation of those who shall come after us.

"While, then, we ought to begin this work at once, let us not hurry over it. For twenty-six years the pestilent and execrable question of slavery, in every form, has been debated in this House for months in succession. Abolition petitions, the Wilmot proviso, the compromise of 1850, the Kansas-Nebraska bill, the Kansas troubles, and the Lecompton Constitution, each in turn consumed the time of the House for weeks together. And even now, with a public debt already of some seven hundred millions of dollars, increasing, too, at the rate of $2,000,000 a day; with every source of revenue nearly dried up, and even that last resource of the inevitable bankrupt—borrowing—cut off; with all these things staring us full in the face, nevertheless the objects of the war, the conduct of the war, emancipation, confiscation, Ball's Bluff, the Trent affair, Government contracts, the Cooly trade, the Coast Survey, the franking privilege, or whatever else may happen to be the particular 'goose question' of the hour—(I beg pardon, sir, but is not that now a classic phrase?)—all of them highly important, certainly, and worthy of due consideration—are debated for days at a time, and even the best abused man in the House finds no difficulty in obtaining an audience.

"Let us prepare then at once for the great questions of finance which are before us."

Mr. Bingham, of Ohio, followed. He took the position that the war power of the Government was under no limitation. He said: "Sir, in all that I have said, or may say, touching your unlimited power to legislate 'for the common defence,' I do not mean to ignore that highest law, whose voice is the harmony of the world, and whose seat is the bosom of God—the law, not of material, but of human life; that life which is more than breath, or the quick round of blood; that life which is a great spirit and a busy heart, which is thought incarnate, mind precipitated, and which we designate by the strong word man—by whom is made the great living world of human thought, and human feeling, and human action. Nor when I speak of your unlimited power to legislate for the general welfare, do I mean that you may rightfully legislate to the hurt of the general welfare, or in wanton disregard of those rights of human nature, to protect which all good government is ordained. I admit, sir, that civil government, with all its complex machinery of civil polity, is but a means for the attainment of a more important end—the protection of individual man, the development of his deathless faculties, of his generous affections, of the immortal sentiments, hopes, and aspirations of his being.

"But, sir, it is a part of the essential economy of good government, that individual interests and individual rights must observe, at whatever cost, the public good. No man lives for himself alone, but each for all. Some must die that the state may live; individuals are but for to-day; the commonwealth is for all time.

"I reaffirm my proposition that you are intrusted by the people with the unlimited sovereign power to make all laws just and needful 'for the common defence.' What limitation is there but the public necessity upon your power to lay and collect taxes in the manner prescribed, to contract debts and borrow money, to declare war, raise armies and navies, and make rules for their government. The limitations of the Constitution may be cited.

"From all this it must be apparent that while unnecessary or wanton cruelty to the public enemy is forbidden by the law of nations, as well also by the Constitution; all else essential, however destructive of their lives and property, is justifiable—a right and a duty. If these rebels in arms against the Constitution and laws were alien, not citizen enemies, the Government of the United States, by authority of Congress, could visit upon them all these dread penalties of war, the destruction of their lives, and the confiscation of their property, so far as necessary to the vindication of the nation's rights. That they are citizen enemies does not relieve them from such penalties, or in any wise mitigate their guilt. But what is forbidden by the law of nations toward alien enemies waging war against us by the authority of their sovereign, is expressly allowed by the Constitution of our country toward these rebels. Every one of them taken in the overt act of rebellion, inasmuch as he is a citizen of the United States, and owes allegiance to the Government of the United States, may be treated as a traitor, and upon trial and conviction, may justly be subjected to the punishment prescribed by the statute upon those guilty of the crime of treason, and be subjected to such other penalties for his rebellion as may be prescribed by law. No State in the Union can legalize treason, or absolve any of its citizens from his allegiance to the Federal Government.

"The Government is invested with the right of self-defence and self-preservation, and, to that end, with the power to provide by law for the maintenance of its authority by force against all conspiracies, however sanctioned by State statutes, or State constitutions, or State ordinances of secession."

Such being the rights and powers of the Government, he next proceeded to inquire respecting its duties.

"Is it not the duty of the legislative department to provide by law at once for the employment of all justifiable force against the persons and property of these rebels, to the end not merely that the avenging arm of an insulted people may fall upon them, but that the nation may live, that justice may be established, that

domestic tranquillity may be restored, that the general welfare may be promoted, that personal security and the blessings of liberty may be forever insured. For these ends the Constitution was ordained by the people; not without suffering and martyrdom and the sacrifice of blood. Let not these ends fail of realization by any act of ours. The sacred trust of providing for the common defence is in our hands; let us not fail, so far as in us lies, to execute it."

After stating the laws which had been passed by Congress to preserve the Government, he proceeded to show that the most needed of all was an act to liberate the slaves. He continued: "Pass your laws liberating the 4,000,000 slaves held by the rebels, and thereby break every unjust yoke in that rebel region; and let the oppressed go free, in obedience to that command which comes to us as a voice out of heaven, 'proclaim liberty throughout all the land, to all the inhabitants thereof.' Do you say this is fanaticism? Do you say God was a fanatic when He commanded it, and that the fathers of the Republic were fanatics when they adopted it as the sign under which they should conquer, and burned it with fire into the very bell whose iron tongue summoned them to the stern work of resistance?

"And do you say we have not the constitutional power to enact such a law? Why not? Because, you say, the slave is the rebel's property. I cannot admit that; but, conceding it for the moment, has he not forfeited his property, as well as his life, to the Government? Have you not by your law authorized the taking of his life, both by the sword and the gallows? Is his right to his slave, which came by wrong, more sacred than his right to his life, which is the gift of God? Has the rebel special rights and immunities of property in his slave which you do not accord to the loyal citizen? Are you not about to assert your power to take the property of the true and loyal citizen by taxation, to the extent needed for the public defence? Do you stop with a law demanding the property of the loyal citizen? Do you not demand his life as well, and the life of the first-born of his house? Why, sir, the loyal citizen has no right or immunity which must not yield to the paramount claims and wants of an imperilled country. Even his house and home, the most sacred possession of man on this side of the grave, must, by the very terms of your Constitution, be yielded up for the common defence:

> No soldier shall in time of peace be quartered in any house without the consent of its owner; nor in time of war, but in a manner to be prescribed by law.—3, *Amendments to the Constitution.*

"You may thus in war exercise a power which in time of peace, even under the constitution of monarchy, is denied to the sceptre and the throne. The words of the great commoner of England will live forever:

> The poorest man may in his cottage bid defiance to all the powers of the Crown. It may be frail, its roof may shake, the wind may blow through it, the storm may enter, the rain may enter, but the king dare not enter—all his forces dare not cross the threshold of the ruined tenement.

"By your law this inviolable sanctity of the hearthstone, whence comes the nation's strength, may be swept away, and yet you cannot confiscate the property or liberate the slaves of rebels in arms. Believe it not, sir, though one rose from the dead to proclaim it."

The previous question was then called for, and the resolution passed: ayes, 134; noes, 5.

Subsequently, on the same day, the House went into Committee of the Whole upon the appropriation for certain fortifications. Mr. Wadsworth, of Kentucky, improved the opportunity to reply to Mr. Bingham, as follows: "A resolution, the most important, I undertake to say, yet introduced into this House, was brought in here, and a speech in interpretation of the purposes for which it was introduced, and as a commentary upon its text, from the distinguished gentleman from Ohio (Mr. Bingham), is delivered, and then the previous question is sprung and sustained by the majority, and gentlemen are asked to vote at once under that commentary and under that previous question, and without any answer to the most remarkable speech, considering the source from which it came, that was ever heard upon this floor. I am never startled when the gentleman from Illinois (Mr. Lovejoy), who sits yonder, rises, upon that subject so near his heart, to teach us his construction of the Constitution, the will of the Lord, and the duty of the nation in this rebellion. Nor am I astonished when the distinguished gentleman from Pennsylvania (Mr. Stevens), and who gives me the honor of his attention, rises and unfolds his views upon this question.

"But I was astonished in more respects than one when my neighbor from the State of Ohio delivered his views of the policy of the Government, and laid down the boundaries—the no boundaries, rather—of the power of Congress to provide for the common defence and the public welfare—astonished in more than one respect. A gentleman for whom I had the highest esteem, and whose course, as I had observed it here, gave me the impression of a patriotic man and a learned lawyer, rises here and tells the Representatives of the people that there are no boundaries to that power, and that Congress is omnipotent to provide for the common defence, and that, under that general phrase of the Constitution, all other limitations of the Constitution are swept away as chaff, and that we may do anything in the world not forbidden by 'natural right.' Sir, is not the limitation itself absurd?

"The argumentation by which so startling a proposition as that was supported was equally surprising. It was asserted that trial by jury, indictment, presentment, all the guards thrown around the rights of the citizens of this country, were swept away, because alien enemies had no

such rights. It was argued that the power to take life without due process of law, and without trial by jury, was implied because we could take life by court-martial—bring a man to the drum-head, condemn him to death, and execute him. It was argued that the power 'to make rules concerning captures on land and water' implies the power to take the property of citizens without making compensation therefor, and without due process of law. With fervid declamation and with an utterance thickened by intense feeling, the gentleman rushed into these extremes, and pointed out what he would do under these supposed powers to my constituents as well as the constituents of other gentlemen upon this floor. Now, sir, I do not give in to any such interpretation of the Constitution as that. Not one dollar will I vote, not one man will I grant for any such purpose, or to sustain any such interpretation. Nay, more, sir, I will give all that my people have, their cattle on a thousand hills, their slaves, their lands and tenements, their lives, even to the last one of them, to resist any attempt to enforce such a construction of the Constitution as that to the ruin of the people of this country.

"And, sir, I am not one of those who prefer slavery to the integrity and glory and perpetuity of my country. I prefer its renown and its integrity above all property and to my own poor life, and have proven it. All that my people have they are willing to give for the defence of the Constitution and the Union. The glory and renown and preservation of their country is higher than any other earthly consideration. Kentucky has gone into this war to extinguish rebellion by the sword, and she never will lay down that sword while the war is waged in the spirit of the Constitution till that great purpose has been accomplished, and the audacious men who have precipitated this ruin upon the country—the leaders and controllers in the council and in the field—have been brought to the halter.

"Is it necessary that I should attempt to answer a constitutionl argument, such as that to which I have referred—that Congress has power for the common defence to do anything that can be done that is not forbidden by natural rights? No, sir. I maintain that the Federal Government is not sovereign. I declare that sovereignty does not reside in the States, and that there is no such thing as sovereignty in this country except the sovereignty of the mass. The Federal Government itself is not sovereign, but limited in many and important particulars. The State Governments are not sovereign. The Federal Government can do nothing that is not permitted to it in that instrument which brought it into being, and upon the preservation of which its existence depends. Yet it is argued that all which is not forbidden by natural right may be done for the common defence. That to preserve the nation we may break open the temple of the Constitution, and steal thence 'the life o' the building.' Sir, it is not contrary to natural right to establish a monarchy in this country; it is not contrary to natural right to pass *ex post facto* laws; it is not contrary to natural right to unite Church and State; it is not contrary to natural right to found orders of nobility; and yet can all these monstrous things be done to provide for the general welfare and the common defence, whether you base the argument upon the preamble of the Constitution or upon the eighth section of article one—to which, I suppose, the gentleman refers—which declares that 'the Congress shall have the power to lay and collect taxes, duties, imposts, and excises, to pay the debts, and provide for the common defence and general welfare of the United States?' Can it be contended for a moment that such vast and illimitable powers belong to Congress? No, sir; Congress can provide for the common defence only in the manner that the Constitution points out, and by the exercise of the powers granted by that instrument. Congress can exercise all those great powers which are conferred upon it by this Constitution for the common defence; it cannot exercise one solitary power not granted by this instrument, or necessarily inferable from its language. It overthrows our whole theory of government to say that Congress can exercise any power not expressly granted by the Constitution or necessarily implied from the language of that instrument; all other powers are unnecessary, so determined by that great work.

"There are two dangers which threaten the Union. One is a foreign war; and the other, dissension among the friends of the Union. We might outlive the storm of foreign war.

"But, sir, dissension among the friends of the Union would have a far wider result. From the passage of an act of emancipation, the lines of the rebellion would advance; it would receive a fresh impulse; its original pretence would be justified as truth. Some of you propose to emancipate the slaves of loyal masters as well as those of rebel masters. Some of the gentlemen say the loyal man has no more right to hold slaves than the rebel; and with their view of the institution, they are right; of course, if slavery is a sin, no man has a moral right to hold slaves. A virtuous man should not commit sin. Then, I say the first attempt to emancipate slaves will necessarily result in the enlargement of the boundaries of the rebellion. Millions in the revolted States, now faithful, awaiting in silence and grief the coming of the banner of their country, with one heart would join the foe. That instant the people of Missouri, Kentucky, and Maryland would resist the execution of such an act; that instant the loyal men of these States, with many of the men from the free States in arms for the maintenance of the Union, but who have not gone into the war for the purpose of freeing slaves, or to accomplish the Africaniza-

tion of our society, will disband. Yes, sir; justice, honesty, and humanity, everythig that is honorable in the human character, would compel them that instant to throw down their arms. They would revolt at the idea of having been drawn into a war under the pretence of sustaining the Union, but in fact for the purpose of forcing emancipation upon the States of the South.

"Then how would you fight your battles, already sufficiently arduous? I see the distinguished gentleman from Pennsylvania leading the charges upon the cohorts of rebellion and storming the batteries armed by treason and theft. I think I see the meek-faced gentleman from Indiana (Mr. Julian), who read his printed composition to the committee the other day upon 'the sum of all human villanies,' I think I see him heading a charge against the regiments of rebellion. Yes, sir, the war would be brought to a speedy conclusion with men like these to fight it. They are not the fighting men; they belong to what is known as the school of humanitarians; they deprecate the shedding of blood, and do not like the smell of villanous saltpetre. Unless you bring emancipation into the war they will not vote another man, another dollar, to carry on the war. They will permit the rebellion not only to profane with storm and slaughter this capital, bearing the honored name of Washington, but they will permit it to burn Baltimore, Philadelphia, and New York, to overwhelm the nation in its progress rather than vote a man or a dollar, unless you, the representatives of the people, will give an anti-slavery turn 'and vigor' to the war. Who does not know the objects of these things? These men belong to the peace party; they and their policy aim at disgraceful peace, and a dissolution on the slave line.

"Mr. Chairman, we, who are from the States most nearly concerned, have sat here for weeks and weeks, and suffered this question to be brought forward and debated in the most intemperate and offensive manner. We have heard them talk about the slaveholder as if he were not their peer, and of the same race as themselves. Yet, for the sake of securing the great measures necessary to accomplish a successful termination of this war and the preservation of our torn country, we have sat still and endured it. No forbearance moves their 'stern, inexorable hearts.' The consideration of these topics has been forced upon us by the peace party in this House, who believe that if this question of emancipation is forced into the war there will be fifteen States in the rebellion instead of eleven; and that peace and dissolution follows.

"They may be dissapointed in this. As for ourselves, we do not intend to quit this Union —we will never give up our lot and part in it. We will find ways and means and friends and safety for all our rights in the Union. We will never commit the mighty sin, the mightier blunder, which the seceded States have committed, of going out of the Union. Every acre of all the lands from Atlantic shores to Pacific seas forms a part of our inheritance, and our country, and we will never surrender one grain of all their sands. If you commit the great blunder of making this a war for emancipation, then let me tell you that we will stand by the Constitution that your fathers and our fathers gave to us; we will seek beneath its ample shield protection from the horrors of servile insurrection, and the preservation of liberty and equality, our inalienable birthright. The cotton States cut themselves off from the sympathy of the conservative men in the halls of legislation, as well as from their support upon the field of battle. We of Kentucky will not break away from this Union and enter into the same folly of rebellion. No, sir; we have sworn by the blood that cemented it; we have sworn by the great men who founded it, and our own great departed Teacher; we have sworn by every tie of affection and honor eternal fidelity to it, and we will defend ourselves and our rights in the Union, not out of it, to the last gasp. And in that contest we expect to see worthy patriots from all the States rallying to our aid in Congress, or as we now see them, upon the tented field. We expect, too, patriot Presidents, rulers of the whole people, to interpose to shield us from oppression. The result cannot be doubted. The Union and the Constitution, the cause of right and justice, will prevail, and abolition and rebellion meet a common fate."

On the close of Mr. Wadsworth's remarks the House adjourned.

The subject was again considered on the 20th, in committee, when Mr. Fessenden, of Maine, took the floor and summarily expressed his views thus: "Mr. Chairman, possibly we may ultimately be successful in this war without taking such measures as shall result in the abolition of slavery. Possibly we may be strong enough to do this, and leave slavery in the slave States *in statu quo ante bellum.* I do not believe, however, that we are sufficiently powerful to accomplish this object, if it be our object, because I cannot disbelieve that God has good still in store for us. But possibly, I say, we may have this power, as many have the will. But in this event, we return from victory, as did the Thracian horse, still bearing a master on his back."

Mr. Steele, of New York, followed, on the other side. He said: "It is my firm belief that if abolitionism should rule the day, this war would become one of extermination and death all over the country; that 'the blackness of darkness' would overshadow the land, and the sun of liberty go down in blood, thereby extinguishing the hopes of freemen for a republican government, and obliterating all reasonable grounds for expecting the permanent sovereignty of the people."

Mr. Wright, of Pennsylvania, then com-

menced some remarks upon the objects of the war and the just and proper mode of carrying it on. He said: "What was the policy of the war? I refer you, I refer the committee to that proclamation of the President of the United States, issued on the 15th day of April last, calling out seventy-five thousand men, in response to which six hundred thousand men are to-day marshalled in the field. And I want gentlemen on the other side to bear with me while I refer to a paragraph from that proclamation, which went out from the White House on that day. I want the attention of gentlemen calling themselves Republicans upon this floor, because it was enunciated as a part of their policy, because it has been carried out by the man whom they placed in power. I want them to adhere to that policy; for it is to them I am talking to-day. I now ask the Clerk to read from that proclamation the paragraph I have indicated."

The Clerk read as follows:

Now, therefore, I, Abraham Lincoln, President of the United States, in virtue of the power in me vested by the Constitution and the laws, have thought fit to call forth, and hereby do call forth, the militia of the several States of the Union, to the aggregate number of seventy-five thousand, in order to suppress said combinations, and to cause the laws to be duly executed.

The details for this object will be immediately communicated to the State authorities through the War Department.

I appeal to all loyal citizens to favor, facilitate, and aid this effort to maintain the honor, the integrity, and the existence of our national Union, and the perpetuity of popular government, and to redress wrongs already long enough endured.

I deem it proper to say that the first service assigned to the forces hereby called forth will probably be to repossess the forts, places, and property which have been seized from the Union; and in every event the utmost care will be observed, consistently with the objects aforesaid, to avoid any devastation, any destruction *of or interference with property*, or any disturbance of peaceful citizens in any part of the country.

"There, Mr. Chairman, is the first summons that went out from the American Government in regard to the objects and design of this war when the first demand for troops was made. I wish Republican gentlemen of this House to tell me what the President means by this language:

In every event, the utmost care will be observed, consistently with the objects aforesaid, to avoid any devastation, any destruction of or *interference with property*, or any disturbance of peaceful citizens in any part of the country.

"What did the President mean by alleging, when he called a military force into the field, that there should be no interference whatever with property of any kind? Sir, if he meant anything, he meant that this question of slavery agitation should be let alone; or, in his own language, that there should be no interference with property. If you adopt the doctrines advanced by the gentleman from Ohio (Mr. Bingham), in his place a few days since, and declare that four millions of slaves shall be manumitted and set free, you do interfere with the rights of property, and you do oppose the Executive proclamation.

"Mr. Chairman, the next thing that was done in the process of time, defining the object of the war, was the adoption of the resolutions offered in this House by the gentleman from Kentucky (Mr. Crittenden), upon the 4th of July last.

"Up that point, then, there had been no change of policy in reference to the prosecution of the war. Those resolutions embodied the principle upon which the war was inaugurated, to wit: to put down rebellion, and not to manumit slaves, and to set them loose upon the community—four millions of illiterate, and I may almost say half barbarous people, without any means of support, leaving the Government to take care of them, or the people to guard themselves against their inroads. Yes, sir, the adoption of the principle contended for by the gentleman from Ohio (Mr. Bingham) would lay waste the fair State of Kentucky. Its adoption would strike from the charter of our liberties Maryland and Western Virginia, and the State of Missouri. Why, then, will gentlemen contend for carrying out an idea which strikes at the homes and hearthstones of as loyal men as exist in the Union this very day? Let it be the policy of the Government to carry out the Crittenden resolutions, and I firmly believe, Mr. Chairman, that the Union is safe; but if you make this a war of slave emancipation, as God is my judge, I believe that the Government is irretrievably gone. This is no war for slave emancipation; it is to put down rebellion and treason; to save a great and mighty republic from overthrow and ruin."

Mr. Diven, of New York, followed, saying: "Mr. Chairman, I suppose I need not state to this House that since the assemblage of this Congress at the extra session a principle has been gathering strength that has divided the councils of this House, and that has divided the sentiments of this country. One side of the question has been strongly represented upon this floor. If the other side has remained quiet, I apprehend it has not been because they have not been as firmly rooted in their principles as the side that has been more active. If we were to judge from the debates which have occurred in this House, it might be supposed that the Executive of this country had no support from the party that elevated him to power. All the attacks which have been made upon the Administration have come from the Republican side of this House, and all the replies which have been made to those attacks have come either from the Democratic side of the House, which opposed his elevation to power, or from those who represent the border States, and who really were neither for nor against him in the election.

"There is another set of men here, among whom I rank myself, who are in favor of prosecuting this war in the spirit in which it was

commenced—for the purpose of restoring this Union to its original position, and leaving all these States in the possession of the same constitutional power that they possessed before this rebellion. That is the division that exists, and I regret that it has been made and has to be met now. It ought not to have been made now. Those men who want to prosecute this war for the paramount purpose of abolishing slavery, must know, if they know anything, that they cannot attain their end until they annihilate the rebel army that stands between them and the slaves. We, also, who want to prosecute this war for the restoration of the Union, know equally well that we never can attain our end until we annihilate that same army. Thus far we are travelling upon the same road. The same force is to be overcome for the attainment of either end. Why, then, should we not unite all our energies? Why, then, should we introduce any disturbing element to divide our councils or distract our aims? Why should we not employ those whole energies in obtaining a victory over this common foe, and when that shall have been attained, then determine what use we will make of that victory? That is the spirit in which I should have been glad that the affairs of this country should have been conducted."

Mr. Stevens, of Pennsylvania, now took the floor to close the debate. He argued that the salvation of the country demanded the most thorough measures, and said: "The question now again recurs, how can the war be carried on so as to save the Union and constitutional liberty? Prejudice may be shocked, weak minds startled, weak nerves may tremble, but they must hear and adopt it. Those who now furnish the means of war, but who are the natural enemies of slaveholders, must be made our allies. Universal emancipation must be proclaimed to all. If the slaves no longer raised cotton and rice, tobacco and grain for the rebels, this war would cease in six months. It could not be maintained even if the liberated slaves should not lift a hand against their masters. Their fields would no longer produce the means by which they sustain the war; unconditional submission would be the immediate and necessary result. The sympathizer with treason would raise an outcry about the horrors of a servile insurrection, and would prate learnedly about the Constitution. Which is most to be abhorred, a rebellion of slaves fighting for their liberty, or a rebellion of freemen fighting to murder the nation? Which seems to you the most cruel, calling on bondsmen to quell the insurrection, or shooting down their masters to effect the same object? You send forth your sons and brothers to shoot and sabre and bayonet the insurgents; but you hesitate to break the bonds of their slaves to reach the same end. What puerile inconsistency?

"But it will be said that the Constitution does not authorize Congress to interfere with slavery in the States. That is true so long as the Constitution and the laws are *in fact supreme;* as in times of peace, when they can be maintained by the ordinary tribunals of the country. I believe there is no one in this country who would attempt it. But when the Constitution is repudiated and set at defiance by an armed rebellion, too powerful to be quelled by peaceful means, or by any rules provided for the regulation of the land and naval forces, the Constitution itself grants to the President and Congress a supplemental power, which it was impossible to define, because it must go on increasing and varying according to the increasing and varying necessities of the nation. The Constitution makes it the duty of the President to see that all the laws be executed. If any unforeseen and uncontrollable emergency should arise endangering the existence of the Republic, and there were no legal provision or process by which the danger could be averted, the section of the Constitution which says that 'the President shall take care that the laws shall be faithfully executed' creates him, for the time being, as much a dictator as a decree of the Roman senate that the consul 'should take care that the commonwealth should receive no detriment' made him a dictator, and gave him all power necessary for the public safety, whether the means were inscribed on their tables or not. Of course such power would be limited by the necessity, and ought to exist only until Congress could be convened. The Romans, I believe, limited theirs to six months. But when Congress would assemble, they would possess the same full powers. They are authorized to raise armies and navies; to organize and call out the militia 'to suppress insurrection and repel invasion.' Lest these enumerated acts should prove insufficient, it wisely provides that

> Congress shall have power to make all laws that shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the Government of the United States, or in any department or officer thereof.

"This Government is empowered to suppress insurrection; its Executive is enjoined 'to see all the laws faithfully executed;' Congress is granted power to pass all laws necessary to that end. If no other means were left to save the Republic from destruction, I believe we have power, *under the Constitution and according to its express provision*, to declare a dictator, without confining the choice to any officer of the Government. Rather than the nation should perish, I would do it; rather than see the nation dishonored by compromise, concession, and submission; rather than see the Union dissevered; nay, rather than see one star stricken from its banner, all other things failing, I would do it now."

On a subsequent day, Mr. Riddle, of Ohio, urged the same principle, but upon different grounds. He said: "We are told on conclusive

grounds that this rebellion has opened a vast and limitless source of law, that lies sealed up during the periods of peace, but which springs forth a sceptred king at the first footfall of an armed foe. It is called the war power; and without definition or outline it comes to the aid of a beleaguered nation. It is said that this extraordinary agency can fulminate its edicts alone through the voice of a commander-in-chief at the head of his armies; and that in no form can or does it attach itself to the ordinary legislature. This I deny. We are the legislative power—the proclamation of a rule that changes existing relations is the enactment of a law, simple and pure; and the Constitution confers no semblance of legislative power elsewhere. If a new fountain of law-making power is opened up, it naturally flows to us, and we may and should embody so much of it as we deem necessary into the ordinary forms of statutes. This power—undefined, vague, and shadowy—can nowhere else be so safely exercised as by us; and rather than permit an Executive to be clothed with it, without limit or definition, and thus make him an irresponsible despot, I would deny its existence and resist its exercise. With us it is safe; even a usurpation on our part that did not impinge upon a coördinate branch of the Government may be comparatively harmless.

"I hold, then, that this war power, whatever it may be, or whence its source, is our special property; and it may be well to inquire whether we have not already permitted its exercise by the Executive to an extent trenching upon danger. On broader grounds yet may the power to deal with this matter be most securely rested. Nations, like individuals, possess inalienable rights; and for the same reasons. An individual sustains certain relations, and is under consequent obligations from which he cannot be discharged—to the God who created him, to his fellows about him, and to himself. To insure a performance of these, he possesses certain rights and privileges that cannot be taken from him, and with which he cannot part by any act of his own; and if such a pretended alienation has taken place, enforced or voluntary, he may at any moment and under all circumstances, resume them. For the same reason and to the same extent, a nation must possess these rights, which pertain to it simply because it is a nation; and without them it cannot discharge the paramount obligations of protection to its subjects, and self-defence.

"In the application of our power, however derived, to the subject under consideration, I would adopt the principles of that proclamation to the language of which the oppressed and laboring heart of the nation rose up as to the voice of God—the property of all the rebels should be confiscated, and their slaves 'are hereby declared free.' My convictions and judgment might carry me further, but there are checking considerations that at this time, to me, render this inexpedient. I know that our amazing policy in this gasping, strangling contest for the breath of life is thus far the reverse of this; we even reject with scorn the aid of one entire and powerful class of our subjects; that race, too, for whose destiny and our own the war is; and yet we will perish rather than aid shall come from them. Nay, we will perish rather than seek to withdraw them from striking with our mortal foes. Was ever fatuity so sublime? What can be the solution of this prodigious folly? Is it indeed true that slavery is the one holy thing, so sacred that even in this struggle we are to remain the enemies of our own allies, and the allies of our enemies against ourselves? There never was a war conducted so lambent and so lamb-like, where the persons of your enemies are too sacred to be smitten by any save a pure white; and where you so carefully guard their feelings against the mortification of being beaten in the field by the kindred of their own bondmen. Never, until we can shuffle off these sickly and sickening sentimentalisms, and confront this great catastrophe with all the means that lie within our grasp in our hands, shall we be equal to its fearful demands. Gentlemen may turn their pallid faces loathingly away, and hold their weak stomachs, but I say to them that they and their policy must go to the rear—the front of this battle is for other hands."

Mr. Sheffield, of Rhode Island, dissented entirely from the grounds urged by the preceding speakers on which to authorize emancipation, and said: "Now, gentlemen may ask me what I would do in Congress in reference to putting down this rebellion. I frankly tell these gentlemen what I would not do. I would not violate the Constitution I had sworn to support, and to maintain which my fellow citizens and friends were now endangering their lives upon the battle field. I would not spend the time of this House in trying to depreciate the efforts of the Administration and of the army in putting down the rebellion, or in making inflammatory appeals against the horrors of the institution of slavery, or against those men who are battling with us for the Union. Now, I will tell these gentlemen what I would do. I would direct the attention of Congress to providing the means and the men to put down the rebellion. We cannot otherwise legislate against it effectively. I would put it down in the only way in which it can be put down; I would fight it down. I would move on the army; and as the army went on, I would capture and send to the rear every disloyal person I could find. If slaves were found among those disloyal persons, I would capture them, and, by the laws of war, as I understand them as pertaining to captured property, the proprietorship of such slave would immediately vest in the United States. I would allow the slaves to remain the property of the United States, in the rear of the army, until treason had been put down, and until the rightful jurisdiction of the civil authorities was

extended over the whole Union; and then I would treat the slaves and their masters as I, in view of the light which then appeared, should deem to be just to those interested and to the country.

"Before they can be punished by any act of Congress, they must be convicted by a verdict of a jury from the State and district where the crime was committed. That, sir, is the form and mode of trial prescribed by the Constitution under which we live. How are you going to convict traitors before a jury of traitors? This is a practical difficulty which gentlemen do not seem to foresee."

In the House, on the 14th of February, the following joint resolution was considered:

Resolved, That the joint committee on the conduct of the present war be authorized to employ a stenographer, who shall be paid out of the contingent fund of the Senate at the same rate of compensation as that received by the reporters of the Congressional Globe.

Mr. Wickliffe, of Kentucky, said: "We have a Constitution which prescribes the duty of each department of the Government. The conduct of a war, when such exists, is specially confined to the executive department of the Government. But the Congress of the United States, not content with performing its legislative functions and furnishing the means which the requirements of the executive department demanded, has undertaken to take charge of the conduct of the war by means of a joint committee.

"I wanted to see why it was that the Congress of the United States committed this important power to a committee, which, of right, belongs to the President. I confess that when I saw what was done, I was struck very forcibly with an item of history, which I once read, connected with the French Revolution. The Chamber of Deputies was about to be overrun by the Paris mob. Minot, the commander of the army, was overpowered in that struggle. The members were alarmed, and some one suggested to call in a lieutenant—a young man called Napoleon Bonaparte—to consult him. He came, and was consulted. He was asked what was his opinion as to the cause of the defeat of Minot the day before. He answered, 'because of the interference of the Deputies.' They appealed to Napoleon to take the command. He consented to it, on condition that the Chamber of Deputies were to mind their own business, and not to interfere with the military department of the Government. They had to agree to his terms; and he saved them.

"Well, sir, let us turn back to the motives and ends which it is said this committee have in view. Of all things upon God's earth, the most hazardous to us at this time is to create in the army, in the country, in this House, a distrust of the ability or capacity of the men who have charge of the movements of this army, by your operations through the committees of this House. Men will not fight if they have not confidence in their leaders. You have a Commander-in-Chief in whom the nation seems to have confidence, and I have seen nothing that should indicate that that confidence has been misplaced. You complain of want of action. Why, look at the condition of the country when this rebellion commenced. The former Secretary of War had gutted your arsenals and placed your arms within the reach of those who desired to destroy the Government. He had scattered your loyal army to the remotest frontiers, so that it was hardly possible to get a guard around this Capitol to maintain peace against the insurrectionary men who would, if they had the power, have prevented the inauguration of a President constitutionally elected by the people of the United States. And, sir, but for the patriotism in the States near at hand, and the promptness with which the people sprang to arms and rallied to its defence, this Capitol would last spring have ceased to have been the Capitol of this Government; it would have been in the possession of the armed forces of the South. The Government had not left in its arsenals in the loyal States, or in its forts, arms enough to have placed in the hands of twenty-five thousand men at the time this invasion was threatened. But, sir, we did get some volunteers, and some of them fought very well."

Mr. Gooch, of Massachusetts, in reply said: "Now, sir, I desire to say a few words in reference to the manner in which the committee has performed its duties. The committee entered on the performance of its duties as soon as it came into existence. I know not on what authority the gentleman from Kentucky rests the allegations which he made, and I will yield to him most cheerfully that he may state his authority to the House."

Mr. Wickliffe replied: "The statement which I made was, that the commander-in-chief had been before the committee, and was questioned as to the manner in which he carried on the war, and that he made an answer which satisfied me. The gentleman from Massachusetts knows whether that is true or not.

Mr. Gooch, of Massachusetts, in continuation said: "I am perfectly free to say, because it is known of all men, that the general commanding the Army of the United States did appear before the committee, not by summons, but by invitation; and I am free to say still further, that I think this House has too much respect for the men who constitute that committee to suppose that they asked him any questions respecting the conduct of the war which he had the least objection to answer, or that they made a single inquiry of him in reference to his plans or purposes, or that they took his testimony in any form whatever. That they did have an interview with him—agreeable to both parties, I believe—is true; but that they called him before them as a witness, is not true.

"Now, sir, there was an allegation made here the other day against the committee, that it was a secret committee. So far as that

charge goes, we plead guilty. There have been present at investigations of the committee only the persons necessary for the carrying on of its business. The committee deemed it its duty to keep secret whatever was communicated to it by witnesses. They did not suppose that they should make revelations to individuals or to newspapers, or that the members of the House should be called upon to read the proceedings of one of its committees in the newspapers, in advance of their report to the body which constituted it.

"Now, sir, there is still another allegation against the committtee, and also against the Senate and the House. It is, that the committee or Congress had usurped, or intended to usurp, the prerogatives of the Executive. I know of no such intent on the part of the committee or of Congress. Every man knows that while the different branches of this Government work together energetically and harmoniously, it is the strongest, most powerful form of government on earth. But, sir, when the legislative branch does not cordially and earnestly support the Executive, or when the Executive fails faithfully to execute and enforce the enactments of the Legislature, or when the Judiciary uses its power to defeat the legitimate action of the other branches, it becomes weak and impotent. Legislature, Judiciary, and Executive are each parts of the common whole; and while each is to a certain extent independent in its action, the concurrent action of all is requisite to the exercise of the powersof the Government."

Mr. Crittenden, of Kentucky, followed, saying: "I do not rise for the purpose of entering into any debate in connection with the policy or propriety of our constituting this committee, although I am entirely opposed, not on account of any objection to the gentlemen composing it, but on account of graver and higher objections, to the organization of any such committee, constituting a little *imperium* in our own body, whose proceedings are necessarily obliged to be secret, and contrary to the spirit of our Constitution. At best, I am totally opposed to the committee, and think it ought to be abolished as soon as the House can do it, and that for the very purpose of preserving that harmony and concurrence of action which the gentleman thinks is necessary to the efficiency of the Government."

Mr. Thomas, of Massachusetts, said: "I was among the members of the House who voted against the appointment of this committee. I should so vote again to-day. I think the appointment of the committee wrong in principle. I think it is useless for any wise purpose."

Mr. R. Conkling, of New York, said: "If the gentleman will allow me, I should like to indulge in one remark. I am one of those who voted to raise this joint committee, and I cannot agree that it is useless, as was said by the gentleman from Massachusetts (Mr. Thomas). On the contrary, I believe the action of Congress, and, among other things, the creation of this committee has been instrumental, with other kindred agencies, in bringing about valuable reforms—reforms which have inaugurated beneficial changes and a vitalizing policy, without which we might not have had even the victories which to-day millions applaud."

Mr. Crittenden, of Kentucky, observed: "I have been under a great misapprehension, as it seems, as to whom our gratitude was properly due on this occasion. I believed it was generally supposed that we owed these victories to the valor of our army and the skill of our generals."

In the House, on the 17th of June, the bill for the issue of Treasury notes was taken up.

Mr. Spaulding, of New York, the Chairman of the Finance Committee, upon introducing the resolution said: "The largest latitude is given to the President, Secretary of War, and Secretary of the Navy, in carrying on the war. They have full discretionary power to contract all the debts which they may deem necessary to amply supply the Army and Navy. All parties loyal to the Government are united in urging a vigorous prosecution of the war; all parties, therefore, ought to be willing to furnish all the means necessary for this purpose. We must, at any rate, pay all the debts contracted by the Executive in the progress of the war. If we knew how much this would amount to, we could easily figure up the amount of the bonds and notes which Congress must authorize the Secretary to issue. No man, not even the President, the Secretary of War, the Secretary of the Navy, the Secretary of the Treasury, or the chairman of the Committee of Ways and Means, or all of them together, can give even an approximate estimate as to the whole cost of this war, because they do not know the number of years it will continue, nor what will be the final solution of the grave questions involved. We are working out a great problem, the result of which no man can know. Slavery was the cause of this war; and until the solution of the slavery question is arrived at, and the cause of the rebellion removed, we have no hope of permanent peace and tranquillity. This will take a long time; but how long no man is wise enough to determine."

Mr. Wickliffe, of Kentucky, followed, saying: "I came here pledged to my people, pledged to my conscience, and determined to vote all the men, means, and money necessary to defend the Constitution and Government from the assaults of its enemies; to do all that I could to put down this rebellion; to maintain the Constitution of our fathers as it was given to us, and to leave the State governments, when you have overcome the rebellion, in the possession of all their constitutional rights and privileges, and with all their constitutional obligations resting upon them. I was told by the secession party opposed to me, that this war would be waged and turned into a war for the subjugation and destruction of the State

governments, and for the emancipation of their slaves. I met that charge as best I could. I met it by an appeal to the vote of this House, and a two-third vote, too, by which you proposed to amend the Constitution of the United States, by declaring that Congress should not, in any shape or form, interefere with slavery in the States, and that the Constitution itself should not be changed so as to authorize Congress to interfere with the slave property of the South. You voted an amendment to the Constitution that it never should be changed on this subject. I quoted your own words and your own resolution, in which you declare that there is no party in the North worthy of consideration that has a purpose or design to interfere with the interests of the slave property of the South. We in the West were not content with this vote alone, and in order to be able to quiet our people, we asked you to pass a resolution in July last, declaratory of the purposes, objects, and intentions of this war, and the time when it should cease. That resolution was passed unanimously.

"What do we find is to-day the temper and disposition of a majority of this House? I call upon the gentleman who seems to be the leader of this measure to tell me if it is the purpose of the Secretary, and whether it is the intention of the Administration, to enter into a crusade by the power of the army; or whether you intend to force the Administration into a crusade, a John Brown raid, upon the negro property of the country? Is that your purpose? What does the gentleman mean by saying that we have 'a new problem to solve?' He says he cannot tell us how much money we owe, or how much it will require to develop the solution of this 'new problem' —the problem, I suppose, which has been put upon your record to-day. Not content with letting those who incited this war take the consequences and incidents of war in reference to their property, you propose to send your army and commissions into that country for the purpose of inviting the slaves of the peaceable and non-combatants into your lines, and free them, arm them, and turn them loose upon defenceless women and children, to commit rapine, murder, and conflagrations of defenceless habitations. When money appropriated for the war has been misapplied, law disregarded in its expenditure, I am opposed to giving more to be thus misused.

"What have you seen done here? The churches of the living God are taken for hospitals for the sick and wounded soldiers. I do not object to this if it is necessary. The Government is now occupying in the city, at high rent, a large tenement, in which are kept and supported four hundred (my friend says eight hundred) runaway negroes at the public expense. [A Voice: Eleven hundred.] Eleven hundred, I am told; I do not know. They are fed and clothed out of the money appropriated to feed and pay the soldiers."

Mr. Spaulding, of New York, replied, and then explained the power of Congress: "This bill is a necessary means of carrying into execution the powers granted in the Constitution 'to raise and support armies,' and 'to provide and maintain a navy.'

"In the present crisis of our national affairs it is necessary that the army should be 'supported,' and the navy 'maintained.' This necessity will not be questioned by any loyal member on this floor.

"The Constitution provides that 'all the laws necessary and proper for carrying into execution the foregoing powers' may be passed by Congress.

"If the end be legitimate, and within the scope of the Constitution, all the means that are appropriate, which are plainly adapted to that end, and which are not prohibited, may be constitutionally employed to carry it into effect.

"If a certain means to the exercise of any of the powers expressly given by the Constitution to the Government of the Union be an appropriate measure, not prohibited by the Constitution, the degree of its necessity is a question of legislative discretion, not of judicial cognizance.

"The Government of the United States is not prohibited by the Constitution from issuing Treasury notes on demand, and making them a legal tender in payment of all debts within its jurisdiction. The Constitution (article one, section ten) prohibits the States from making anything but gold and silver coin a legal tender in payment of debts; but this does not at all restrict the sovereign power of the United States. Congress has the power to coin money, 'regulate the value thereof, and of foreign coin.' Gold and silver by long practice —a practice that has continued for centuries among all nations—has become the legal money of the world in all commercial transactions. Its real intrinsic value is not as great as that fixed upon it by Governments. All Governments fix the value of gold and silver; and without their Government stamp gold and silver would be a simple commodity, like other things having intrinsic value. Some Governments fix the value of coin higher, and some lower; just as each for itself chooses to determine. Any other metal or thing that should be stamped, and its value regulated by all the Governments of the world, would pass equally well in all commercial transactions, as gold and silver, although not intrinsically as valuable. Exchequer bills or Treasury notes, whose value is fixed by Government, and stamped as money, would pass as money in the payment of debts within the jurisdiction of the Government fixing such value."

Mr. Pendleton, of Ohio, followed in opposition to the bill. He said: "I have examined, Mr. Chairman, with some care, every law authorizing the issue of Treasury notes which has been passed from the foundation of the Gov-

ernment up to this hour, and I find that this bill differs from all of them in several essential particulars. Every other law authorizing the issue of Treasury notes provided that they should bear some rate of interest, whereas these are to bear none; that they should be payable at a fixed time prescribed in the note, whereas these are only to be payable at the pleasure of the United States; that the notes thereby authorized should be receivable in payment of public debts only by those who were willing to receive them at par, while these notes are to be received by every public creditor who is not willing to forfeit his right to payment at all. These notes are to be made lawful money, and a legal tender in discharge of all pecuniary obligations, either by the Government or by individuals, a characteristic which has never been given to any note of the United States or any note of the Bank of the United States by any law ever passed. Not only, sir, was such a law never passed, but such a law was never voted on, never proposed, never introduced, never recommended by any Department of the Government; the measure was never seriously entertained in debate in either branch of Congress.

"The feature of this bill which first strikes every thinking man, even in these days of novelties, is the proposition that these notes shall be made a legal tender in discharge of all pecuniary obligations, as well those which have accrued in virtue of contracts already made as those which are yet to accrue in pursuance of contracts which shall hereafter be made. Do gentlemen appreciate the full import and meaning of that clause? Do they realize the full extent to which it will carry them? Every contract for the payment of money is in legal contemplation a contract for the payment of gold and silver coin. That is the measure of the obligation of the one party, and of the right of the other.

"The provisions of this bill contemplate impairing the obligation of every contract of that kind, and disturbing the basis upon which every judgment and decree and verdict has been entered. It proposes to say to a party who has entered into a contract, 'You shall be discharged from the obligations of that contract by doing something else than that which you have agreed to do.' It proposes to say to every party with whom a contract has been made, 'Though you are entitled to demand one thing, you shall, perforce, remain satisfied with the doing of another.' It proposes to say, 'Although you have agreed to pay gold and silver, you shall be discharged upon the payment of these notes; although you are entitled to demand gold and silver, you shall rest content with the reception of this paper.' It proposes, in one word, to release the one party from the obligation of his contract, and to divest the other party of the right which has been vested in him by that contract. Sir, I am sure I need only state the proposition to shock the mind of the legal profession of the country, so thoroughly has it been imbued with the idea of the sanctity of the obligation of contracts by those who have taught it the beneficent maxims of constitutional law.

"As for the rest, this bill provides that it shall be illegal to make a contract for dealing in gold and silver coin; or, to state it more exactly, it provides that whatever executory contracts parties may make concerning the gold and silver coin of the country, they shall be discharged upon the performance of another and different duty—by the delivery of an equivalent number of dollars in these notes. Where, sir, does Congress get this power? Where is the grant to be found? One would suppose that a power like that—a power which involves the impairing of the obligations of such a vast class of contracts, which proposes to disturb vested rights to such an immense extent—would be worthy of a place in the express grants of the Constitution.

"Sir, it seems to me that if the language of the Constitution, and the weight of authority can settle any proposition, it is that Congress has not the power to do that which it is proposed shall be done by the provisions of this bill."

Mr. Hooper, of Massachusetts, stated that the financial plan of the Government embraced three measures: "The first of these measures is the one now before the House, by which the Secretary of the Treasury is authorized to issue United States notes, not to exceed $150,000,000 in amount (including those authorized by previous laws), of denominations not less than five dollars. They are not to bear interest, but are to be issued and received as money, convertible, at the option of the holder, into six per cent. stock of the United States, the principal and interest being payable either here or abroad; and these notes are to be a legal tender.

"The second measure consists of a tax bill, which shall, with the tariff on imports, insure an annual revenue of at least $150,000,000.

"The third is a national banking law, which will require the deposit of United States stock as security for the bank notes that are circulated as currency."

Mr. Morrill, of Vermont, opposed the bill, saying: "The subject of issuing $150,000,000 of paper currency and making it a legal tender by the Government at a single bound—the precursor, as I fear, of a prolific brood of promises, no one of which is to be redeemed in the constitutional standard of the country—could not but arrest my attention; and, having strong convictions of the impolicy of the measure, I should feel that I utterly failed to discharge my duty if I did not attempt to find a stronger prop for our country to lean upon than this bill—a measure not blessed by one sound precedent, and damned by all."

Mr. R. Conkling, of New York, argued against the necessity for the measure, and, alluding to the power conferred by the Constitu-

tion for the issue of demand notes, said: "The proposition is a new one. No precedent can be urged in its favor; no suggestion of the existence of such a power can be found in the legislative history of the country; and I submit to my colleague, as a lawyer, the proposition that this amounts to affirmative authority of the highest kind against it. Had such a power lurked in the Constitution, as construed by those who ordained and administered it, we should find it so recorded. The occasion for resorting to it, or at least referring to it, has, we know, repeatedly arisen; and had such a power existed, it would have been recognized and acted on. It is hardly too much to say, therefore, that the uniform and universal judgment of statesmen, jurists, and lawyers has denied the constitutional right of Congress to make paper a legal tender for debts to any extent whatever. But more is claimed here than the right to create a legal tender heretofore unknown. The provision is not confined to transactions *in futuro*, but is retroactive in its scope. It reaches back and strikes at every existing pecuniary obligation. This was well put by the gentleman from Ohio (Mr. Pendleton), and I concur with him, that substituting anything for gold and silver in payment of debts, and still more of precedent debts, is of very doubtful constitutionality. But, in looking at the Federal Constitution, the question is: has the power been given; is it there? Can you put your finger upon it among the grants of the Constitution? If not, if it is not there at all, you have not the power, and there is an end of the whole matter."

Mr. Bingham, of Ohio, took the position that Congress had the power to declare what should be a legal tender, and said:

"In the first place, the Constitution has expressly provided that Congress shall have power to regulate commerce with all foreign nations, among the several States, and with the Indian tribes. This general provision of the Constitution has frequently undergone interpretation in our Supreme Court, and the effect of this language has been matter of deliberate consideration with every man who has ventured to issue a treatise upon the Constitution of the United States. Whoever takes the pains to look into either of these authorities—the decisions of the Supreme Court or the writers upon the true construction of the Constitution—will discover that they all agree in this, that this power to regulate commerce includes the exercise of all powers necessary to the existence of commerce among the several States, and extends even to its prohibition, when the public necessities require it. This, I undertake to say, is matter of agreement among all who have written upon the construction of the Constitution, and is substantially the ruling of the Supreme Court. Sir, if there were no limit in the Constitution upon this general power of Congress to regulate commerce, I would say at once that the Congress of the United States might make anything money which it pleased. But there are certain limitations in the Constitution. Money has a twofold office. It determines the standard of value on the one hand, and it discharges obligations on the other. There is a limitation, and I am free to admit it. That brings me to the very pith and marrow of this debate.

"What is that limitation? That is the important point. I desired to-day to ask the attention of my excellent friend from Vermont (Mr. Morrill) to the question whether the Constitution of the United States has declared what shall be a legal tender. He did not find it convenient to yield to me for that inquiry. I stand here to assert that the Constitution of the United States has nowhere declared what shall be a legal tender. I stand here to assert further, that nothing has ever been made a legal tender in the United States at any time, in discharge of private obligations, or of public obligations, or of universal application in States and Territories alike, except that which was made so by act of Congress. Your Constitution, I repeat, never made gold and silver a legal tender. It never made anything a legal tender in the discharge of debts. The Constitution simply conferred the power on Congress by its general grants of power to declare by law what shall be a legal tender. Gold and silver and copper, if I recollect aright—and if I am wrong I hope the venerable chairman of the Committee of Ways and Means will correct me—have been all made alike legal tenders, at one time or other, by act of Congress."

Mr. Morrill, of Vermont, next rose and said: "I ask my friend from Ohio to point out as many words giving Congress the power to make paper money a legal tender. In relation to foreign coin, everybody who made a contract did so with his eyes open to the fact that Congress might make a change in regard to that matter. But when it comes to making paper money a legal tender, there is not a word in the Constitution about it."

Mr. Bingham, of Ohio, immediately replied: "Says the gentleman from Vermont (Mr. Morrill), 'I ask my friend from Ohio to point out as many words giving Congress power to make paper money a legal tender.'

"Sir, the gentleman's question is answered by asking another of him: Point out the words in the Constitution giving to Congress the power to make gold or silver coin, either foreign or domestic, a legal tender. There are no such words. The gentleman seems to infer, because Congress is expressly authorized 'to regulate the value of foreign coin,' it is therefore in words authorized to declare foreign coin a legal tender. Such a conclusion is by no means self-evident. The Constitution declares that 'no State shall make anything but gold and silver coin a tender in payment of debts.' No one doubts, I presume, that any State of the Union may make the legalized gold and silver coin of

the United States 'a tender in payment of debts;' but does it thence result that a State may either regulate or change the established value of foreign or domestic coin? If any State could do this, the very purpose of the Constitution, to secure a uniform standard of value, would be defeated.

"The point I make is this: Congress has power, by the terms of the Constitution, to fix the standard value of foreign coin, and of domestic coin, and the power to declare a legal tender, and that these powers are distinct."

Mr. Vallandigham, of Ohio, rose to ask a question, saying: "Congress, is, by the Constitution, expressly empowered to regulate the value of coins. Now, I wish to ask my colleague whether the value thus regulated is not the legal value of the coin; and if therefore it is not a legal tender, although the word 'tender' is not written in the Constitution?"

Mr. Bingham, of Ohio, replied: "I agree that what Congress declares and enacts shall be the value of coin, is the legal value of such coin; but, sir, an act declaring the legal value of coin does not make it a legal tender."

Mr. Hickman, of Pennsylvania, now rose to inquire: "I desire to ask the gentleman from Ohio (Mr. Vallandigham) a simple question, with his permission. Taking the standard of gold and silver as it is established by law to-day, a contract is entered into for the payment of a debt in gold and silver at the present standard, that being by law a legal tender; but suppose the gold and silver should before the debt becomes due, by act of Congress, be debased thirty-three per cent., can that coin so debased be made a legal tender for the payment of that debt?"

Mr. Vallandigham replied: "It may be made a legal tender if Congress has the power to debase coin; but I deny that the power conferred by the Constitution on Congress to coin money and regulate the value thereof, confers the power to debase the coin of the country. There is no such power in Congress; and I think that is a sufficient answer to the gentleman's question."

Mr. Hickman, of Pennsylvania, again said: "Congress has, from time to time, changed the alloy of gold and silver coin. Now, if it may make coin so alloyed a legal tender in payment of a debt arising out of a contract, and in the mean time, before the debt becomes due, Congress again changes the alloy, debasing the coin to the extent of one third its value, can that coin so debased be made a legal tender in payment of that debt? Would not that, by the argument of the opponents of this bill, be as much a violation of that clause of the Constitution as to make paper a legal tender?"

Mr. Vallandigham now made this reply: "I answer, that if the purpose of the act of Congress be simply to change the alloy in order to harden the metal and make it more serviceable for the purposes of a currency, not to change its value, Congress has certainly the right to do it; but because Congress has the implied right to do that under the power to coin money and regulate the value thereof, it does not follow that it may alloy the coin for the purpose of debasing it. The intent of the act makes the distinction."

Mr. Morrill, of Vermont, next rose to ask Mr. Hickman a question, saying: "If Congress have the power to debase the coin of the country by mixing with the gold and silver, in the shape of alloy, other metals, I desire to ask the gentleman from Pennsylvania if he derives from that fact the power of Congress to debase it in any other way."

Mr. Hickman thus replied: "The question I asked the gentleman from Ohio was in answer to the argument which has been made here by the opponents of this bill, that Congress can pass no law impairing the obligations of contracts; yet if a contract is made to-day by which I am to be paid a certain amount in the present standard of gold and silver coin, and to-morrow Congress passes a law debasing that coin thirty-three per cent., I am required to take that debased coin in payment of the debt, and my contract is thus impaired to the extent of thirty-three per cent."

Mr. Morrill further said: "I admit the power of Congress to debase the coin; but how would the gentleman derive from that power the power of Congress to substitute as a legal tender something else than coin?"

Mr. Thomas, of Massachusetts, now asked a question of Mr. Hickman, saying: "When the gentleman from Pennsylvania says the obligation of a contract is impaired, I want to ask him if in law this very essential provision of the Constitution does not enter into the contract, and if the contract must not conform to it? For instance, when a man agrees to take so much coin at a future day, he does it knowing that Congress has, by the Constitution, power to regulate and change the value of that coin."

Mr. Hickman, in answer, said: "Yes, sir, and for that reason, inasmuch as the Constitution allows us, as I contend, the power to issue paper money, the man who enters into a contract does it with the Constitution before him. Now, allow me in turn to put a question to the gentleman from Massachusetts. Suppose gold and silver should be discovered in such quantities in California, or within the limits of the United States, as to make it as plentiful as iron, as to make it useless as a money standard, I wish to know whether it is not in the power of Congress to substitute some other metal which may be more desirable as a circulating medium than gold?"

Mr. Thomas: "That question does not now arise."

Mr. Hickman: "If that power be conceded, then why not substitute paper, if that shall be found more useful for that purpose?"

Mr. Crisfield, of Maryland, said: "The sum of the whole argument that has been made in favor

of the constitutionality of the power of Congress to declare the Treasury notes contemplated by this bill a legal tender in the payment of all debts, public and private, may be stated in these three propositions: first, Congress may declare these notes a legal tender because it is not inhibited; secondly, the Government must maintain itself, and Congress may exercise all the power and adopt any measure it judges necessary for that object; and thirdly, that the power to declare these notes a legal tender is a means necessary and proper to the full execution of the power to regulate commerce.

"The Constitution found gold and silver coin the medium in which all contracts were to be settled. It recognized, but did not seek to disturb it. It gave Congress no power to disturb it, and inhibited the States from making anything else a tender in payment of debts. And we have no power to alter what the Constitution chose to leave untouched. We have no constitutional power to pass this bill."

Mr. Pike, of Maine, followed, saying: "In my judgment, any measure of finance now assumes the highest character. The existence of the Government depends upon a successful administration of the finances. Crippled here, we are balked everywhere. Upon the consideration of every financial measure there might well present itself anew the same question so fitly put by President Lincoln, in his message to Congress in July: 'Is it better to assume powers, the exercise of which shall violate a portion of the Constitution, rather than allow the whole to be destroyed?' and the country come to the paradoxical conclusion that it was his duty, as President, to violate the Constitution in order to preserve it.

"I trust that I have as much respect for that instrument as any man in the House; and it is because I would not have its authority over any portion of the Union impaired that I am bold in the exercise of power under it. But I would construe it in the light of the rule authoritatively announced for our action: 'The Sabbath was made for man, and not man for the Sabbath.'

"I have a high respect for the motives of gentlemen who discover so many constitutional objections to contemplated action; but for myself, I have concluded that whatever has a tendency to furnish means to suppress this rebellion, and affords a reasonable probability of hastening the consummation of what all loyal men so much desire, is perfectly constitutional. Nothing but an absolute prohibition would prevent me from adopting a measure which answers these conditions. I will never render to my people as a reason why I voted against such a measure that I deemed it unconstitutional, nor will I assist this Congress in proclaiming to the world and sending down to posterity the lack of constitutional power as a reason for failing to enact any law which will have a tendency to preserve this Union. This is no time for the exercise of thin constitutional pedantry. Let us act boldly and forcibly, and so discharge the high and solemn duty imposed upon us infinitely better than if we shrunk from action under fear of constitutional scruples."

Mr. Alley, of Massachusetts, expressed his view of the constitutionality of the bill in these words: "This question of its constitutionality is hardly worthy of consideration in the face of the overshadowing necessities of the Government, for the reason that at most it can only be claimed as doubtful; for, to say the least, we have the authority of legal eminence as much in favor as against it; and every intelligent man knows, and will admit, outside of the legal profession, that legal enactments and constitutional provisions themselves have always in this country, whenever occasion required, with courts as well as statesmen, proved as packthreads upon the arms of an unshorn Samson before the resistless will of the people.

"No, sir; not a man will oppose this bill, or vote against it, upon any constitutional grounds, unless he is opposed to it for other and satisfactory reasons. This question of making paper money legal tender has never before been seriously entertained or discussed in this country since the adoption of the Federal Constitution, because the emergency has never before arisen to make it necessary."

Mr. Wright, of Pennsylvania, rose in opposition to the bill; he said: "Mr. Chairman, I have never been more embarrassed in my life as to how I should cast my vote than I am in regard to the vote I am about to cast upon this bill; for, as I live, I have no object or desire to embarrass the Government in regard to any of its measures, or the measures of any of the committees of this House, which have in view the putting down the rebellion now upon our hands. I am willing to do anything I constitutionally can, to bring about that result which, of all others, is most desirable; but at the same time, Mr. Chairman, I have the obligations of a constitutional oath resting upon me. I do not desire, and it is not my intention, unless we arrive at a period when there are more difficulties surrounding us than there are now, to violate the obligations of that oath. If it is to be done, it must be done in a case of more extremity than we have now upon us.

"I was going on to state that I voted, during the extra session of Congress, to affirm the act of the President of the United States in the suspension of the writ of *habeas corpus*. I voted also to approve his act by which he declared certain of our seaports in a state of blockade. I also voted to approve his act declaring the establishment of military law. I did it for the sole reason that I regarded, at that time, that the exigency had arisen which justified us and the President of the United States himself in violating a constitutional provision. It was a vote *in extremis*. I voted the other day also to give the President of the United States the control of all the railroads in

the country for the transmission of troops. Nay, I went further than that, and voted for a clause in that bill which gave to the President the privilege of bringing into the public service the officers and employés of all the railroads of the country. I did that because it was an extreme case. And now we are called upon, according to the terms of this bill, to vote to declare it to be constitutional and legal to make paper itself money. Now, sir, I do not feel justified in going so far as to cast my vote for any such measure.

"It is said that this is among the great powers of the Government. Why, sir, all the powers this Government has under the Constitution are the powers delegated to it by the several States which thus met in Convention. There is no such thing in construing the Constitution as inference. There is nothing to be implied. The States that met together in convention clothed Congress with all the powers, in express terms, that Congress can legitimately exercise under the Constitution. Who doubts that? Who can gainsay that proposition? Not one iota of power does this Congress possess save what it derives under the Constitution. In plain terms have the States written their charter. It is in language not to be misunderstood. The powers of the General Government are expressed in the debates and votes of the men who gave it existence; in the decisions of the Supreme Court of the United States, and of the supreme courts of the several States; and in the views and votes of our predecessors in the halls of Congress. It seems to me that it is vain on our part to attempt to override these conclusions and to set them at nought, in the delusive idea that we have a clearer view and a keener perception of the powers with which this Government is clothed than had these worthy men who have gone before us.

"I lay down the principle that we are to conform our action to the Constitution of the country as it is, and I call upon gentlemen to show me how, when, where, in what particular, we have power, under the Constitution, to make anything, except gold and silver, a legal tender? I think, Mr. Chairman, it cannot be done. If it can be done, then courts, members of conventions, and the statesmen who have gone before us, have committed an egregious error, and we are coming now to perform the solemn act of condemning their judgment and of setting all their precedents at defiance."

Mr. Kellogg, of Illinois, said: "What is this legal tender? Is it found in the Constitution. Gentlemen seem to admit everywhere that gold and silver are a legal tender. I challenge any gentleman to put his finger upon the clause of the Constitution that expressly declares that anything shall be a legal tender, or that Congress shall have the power to make anything a legal tender. You cannot find it. Yet, sir, everybody seems to understand that gold and silver are a legal tender. What is it that the Constitution declares? That Congress shall have power to regulate commerce, to coin money, and regulate the value thereof. What is this power of coining money and the regulation of the value thereof? Certainly the power to issue anything in the nature of coin that is to operate as a circulating medium. Gold and silver are not mentioned here, and there is not a gentleman who will not admit that the Government can coin and make money out of iron, or brass, or copper."

Mr. Thomas, of Massachusetts, followed on the other side. He said: "We look to the Constitution to see if the power is given. We do not say the power is not denied, and therefore exists; but that it is not granted, and therefore does not exist. The powers granted are express or implied, are given in terms, or are the reasonable inferences from the express grants. Now it is conceded that there is no express power given to Congress to make the notes or bills of the Government legal tender. There is a power given to Congress upon the subject-matter. It has the power to coin money, regulate the value thereof and of foreign coins.

"These words, 'to coin money,' have a plain and obvious meaning. The only coinage is that of the metals, 'hard money.' To coin money and regulate the value thereof is to fix its legal value, the value for which it is to be received, as an equivalent in commerce and in discharge of obligations and contracts. This constitutional power of coinage was first executed by the statute of 1792; and that statute has a provision making the coins legal tender; but there can be no doubt that whenever money is coined by Government under the Constitution it becomes *ipso facto* legal tender. But whether legislation be necessary to carry the provision into effect or not, it is too plain for argument that the power to coin money and regulate its value is the power to say for what value it shall be received.

"There being no express power in the Constitution to make the notes a legal tender, is such a power to be reasonably inferred from any of the express powers? Before answering this question, two things are to be observed.

"The first is that there being an express grant of power upon this subject of the coining of money and fixing its legal value, we should not reasonably expect to find an additional power on the same subject given by implication. The expression of the one would ordinarily be the exclusion of the other. The second thing to be noted is that it appears by the debates of the convention, and by the note of Mr. Madison, that this subject was before the convention, and that a grant of power to emit bills of credit, with the apparent purpose of making them legal tender, was refused.

"It is said that the power to make these notes a legal tender is a reasonable implication from the power to regulate commerce with foreign nations, among the States, and with the Indian tribes. The argument is, and it is

entitled to consideration, that money is one of the great instruments of commerce—as much so as the ship—and that the power to regulate the principal thing is the power to regulate its instrumentalities. I confess that at first this view of the question deeply impressed me. But further reflection has satisfied me it is not sound. If the Constitution were otherwise silent upon the subject, the implication would doubtless be a strong one.

"But the Constitution has spoken, has indicated what shall be money under its provisions, and the power of Congress over it.

"Again: the practical construction of the Constitution has been that no such power existed. Though the exigencies of the Government have heretofore been great, the experiment has never been tried, nor, so far as I know, ever before suggested."

Mr. Edwards, of New Hampshire, in reply, said: "Why, sir, where is the express authority for the legislation—to seize upon an illustration nearest to us—under which this Capitol and all the spacious and durable public buildings around us have been provided for the uses of the Government; where is the express power for most of the details of all the Departments of the Government, for all the interests and security of commerce, for all the organization of your army and navy; not to extend this summary, where, sir, is the express power for doing that in which now this whole House unhesitatingly concurs, in the very bills before us? Nowhere in the Constitution. The emission of bills of credit, which these notes are, is nowhere named except as associated with the provision to make them a lawful tender, and to prohibit the States from doing either; and yet the power to emit bills of credit, when the necessity for its exercise arose in the war of 1812, found its recognition as a constitutional power, and has been acted upon as such at various periods without question.

"So, sir, the power which is now attempted to be exercised and to be deduced from the express powers granted would, in my belief, have found, as have other latent powers, a clear recognition, if the imperative necessity which is now upon us had ever earlier occurred."

Mr. Blake, of Ohio, urged that the legal tender clause was constitutional because it was necessary, saying: "We say it is necessary to make Treasury notes a legal tender, and by it we intend to be understood to mean that the interests of the Government and the people require that it should be done. It is just in this sense the word necessary is used in the Constitution."

Mr. Campbell, of Pennsylvania, also believed the necessity of the case secured its constitutionality. He said: "I humbly conceive my duty to be a plain one. The path I have marked out for myself I will follow, let it lead where it may. Whatever measure is now or hereafter may become necessary to adopt in order to maintain the Union and perpetuate free government, that will I support. Speak not to me of 'objections' and 'scruples' and 'dangers,' of 'constitutional objections' and 'conservative influences.' Sophistry is ever plausible, and opposition to a just and necessary measure generally wears the mask of a 'constitutional objection.' The highest duty of every member is to maintain the Union—to sustain the Constitution against this causeless and wicked rebellion; and in doing this, let us bear in mind that the Constitution was made for the people—to secure to them and their posterity the blessings of free government. Therefore with me the primary inquiry is, Is this measure necessary to suppress the rebellion? If it is, here am I ready to sustain it. It will be found the Constitution gives ample power to sustain this view."

Mr. Stevens, of Pennsylvania, thus examined the constitutional objections: "Having, as I think, shown the impossibility of carrying on the Government in any other way, let us briefly notice some of the objections to it. First, is it constitutional?

"The power to emit bills of credit and make them a legal tender is nowhere expressly given in the Constitution; but it is known that but few of the acts which Government can perform are specified in that instrument. It would require a volume larger than the Pandects of Justinian or the Code of Napoleon to make such enumeration, whereas our Constitution has but a few pages. But everything necessary to carry out the granted powers of the Government is not only implied but expressly given to Congress. If nothing could be done by Congress except what is enumerated in the Constitution, the Government could not live a week.

"The States are prohibited from making anything but 'gold and silver coin a tender in the payment of debts;' but such prohibition does not extend to Congress. The Constitution is silent as to the power of Congress over that subject. The whole question of the right to emit bills of credit by Congress was considered in the convention that framed the Constitution. It was reported as a part of the power 'to borrow money.' It was objected to as tending to make paper a currency with legal tender, and a motion was made to strike it out and insert an express prohibition. That was resisted, because, as Mr. Mason said, 'it could not be foreseen what the necessities of the Government might at some time require.' 'The late war,' he said, 'could not have been carried on had such prohibition existed.' It was finally agreed to strike out the express power, and not to insert the prohibition, leaving it to the exigencies of the times to determine its necessity. The right to emit bills of credit, which the convention expressly refused to grant as a substantive power, has for fifty years, by the common consent of the nation, been practised, and is now conceded by every opponent of this bill. With what grace can the concomitant power to make them a legal tender be objected to? The Su-

preme Court have settled certain principles with regard to the power of Congress over measures not expressly enumerated in the Constitution. The principle is, that where anything is necessary to carry into effect the granted power it is constitutional. The eighth section of the first article of the Constitution gives Congress power—

To make all laws which may be necessary and proper to carry into execution the foregoing powers, and all other powers vested by this Constitution in the United States or in any department or officer thereof.

"The Constitution nowhere gives Congress power to create corporations or to establish a bank of the United States. But as Congress had power to regulate commerce, and to regulate the value of coin, and it deemed the establishment of a bank necessary to effectuate those powers, the Supreme Court pronounced it constitutional. In short, whenever any law is necessary and proper to carry into execution any delegated power, such law is valid. That necessity need not be absolute, inevitable, and overwhelming—if it be useful, expedient, profitable, the necessity is within the constitutional meaning. Whether such necessity exists is solely for the decision of Congress. Their judgment is absolute and conclusive. If Congress should decide this measure to be necessary to a granted power, no department of the Government can rejudge it. The Supreme Court might think the judgment of Congress erroneous, but they could not review it. Now, it is for Congress to determine whether this bill is necessary 'to raise and support armies and navies, to borrow money, and provide for the general welfare.' They are all granted powers. It is for those who think that it is not 'necessary, useful, proper,' to propose some better means, and vote against this; if a majority think otherwise, its constitutionality is established."

The bill subsequently passed the House by the following vote:

YEAS.—Messrs. Aldrich, Alley, Arnold, Ashley, Babbitt, Goldsmith F. Bailey, Joseph Baily, Baker, Beaman, Bingham, Francis P. Blair, Jacob B. Blair, Samuel S. Blair, Blake, Buffinton, Burnham, Campbell, Chamberlin, Clark, Colfax, Cutler, Davis, Delano, Delaplaine, Duell, Dunn, Edgerton, Edwards, Ely, Fenton, Fessenden, Fisher, Franchot, Frank, Gooch, Granger, Gurley, Haight, Hale, Hanchett, Harrison, Hickman, Hooper, Hutchins, Julian, Kelley, Francis W. Kellogg, William Kellogg, Killinger, Lansing, Leary, Loomis, McKean, McKnight, McPherson, Marston, Maynard, Mitchell, Moorhead, Anson P. Morrill, Nugen, Olin, Patton, Timothy G. Phelps, Pike, Price, Alexander H. Rice, John H. Rice, Riddle, James S. Rollins, Sargent, Shanks, Shellabarger, Sherman, Sloan, Spaulding, John B. Steele, Stevens, Trimble, Trowbridge, Upton, Van Horn, Van Valkenburgh, Van Wyck, Verree, Wall, Wallace, Charles W. Walton, Whaley, Albert S. White, Wilson, Windom, and Worcester—93.

NAYS.—Messrs. Ancona, Baxter, Biddle, George H. Browne, Cobb, Frederick A. Conkling, Roscoe Conkling, Conway, Corning, Cox, Cravens, Crisfield, Diven, Dunlap, Eliot, English, Goodwin, Grider, Harding, Holman, Horton, Johnson, Knapp, Law, Lazear, Lovejoy, Mallory, May, Menzies, Justin S. Morrill, Morris, Nixon, Noble, Norton, Odell, Pendleton, Perry, Pomeroy, Porter, Richardson, Robinson, Edward H. Rollins, Sedgwick, Sheffield, Shiel, William G. Steele, Stratton, Benjamin F. Thomas, Francis Thomas, Train, Vallandigham, Voorhees, Wadsworth, E. P. Walton, Ward, Webster, Chilton A. White, Wickliffe, and Wright—59.

On the 12th of February the bill came up in the Senate.

Mr. Fessenden, of Maine, having explained its features, thus argued the constitutionality of the legal tender clause: "The ground upon which this clause making these notes a legal tender is put, I have already stated. It is put upon the ground of absolute, overwhelming necessity; that the Government has now arrived at that point when it must have funds, and those funds are not to be obtained from ordinary sources, or from any of the expedients to which we have heretofore had recourse, and therefore this new, anomalous, and remarkable provision must be resorted to in order to enable the Government to pay off the debt that it now owes, and afford circulation which will be available for other purposes. The question then is, Does the necessity exist? That is a question which I propose in some degree to discuss, because I admit fully and decidedly that the Government, or the country, rather, is to be sustained in its present undertaking, and that we are bound to obtain the means to effect that object. If the necessity exists, I have no hesitation upon the subject, and shall have none. If there is nothing left for us to do but that, and that will effect the object, I am perfectly willing to do that."

Mr. Collamer, of Vermont, replied: "If I understand him, he says that if there is a necessity for the issuing of this paper and making it a legal tender, he is ready to vote for it. I differ from the Senator there, to begin with. I do not know how other members of the Senate look upon the obligation of their oath to support the Constitution of the United States. To me it is an oath registered in heaven as well as upon earth, and there is no necessity that in my estimation will justify me in the breach of it. I think those men who are now risking their lives upon the high places of the field to support the Constitution, are not to be treated in this hall by us with the concession that we are ready, if the necessity calls for it, to break it. All that our rebel enemies are engaged in is the overthrow of the Constitution, and all that we are contending for is its maintenance and preservation. Let the necessity be what it may, I cannot disregard the obligation of my oath to support the Constitution; and it is mainly with a view to ascertain what is the true meaning of the Constitution upon this subject that my remarks are presented, though other things will run parallel with that tending to the same result.

"But, sir the more important feature to which I wish to call attention is that the bill proposes to make these notes a legal tender in payment of private debts between man and man, with which the Government has nothing

to do. Why is this? What is the object intended to be effected by making these notes thus a tender in payment of private debts? I have before me a letter addressed by the Secretary of the Treasury, Mr. Chase, to a Representative in the other House, and which was used in that body, from which I wish to read for the purpose of seeing what is the object to be effected, and why it is to be effected. Speaking of these notes, he says:

> The making them a legal tender, however, might still be avoided, if the willingness manifested by the people generally, by railroad companies, and by many of the banking institutions, to receive and pay them as money in all transactions were absolutely or practically universal; but, unfortunately, there are some persons and some institutions which refuse to receive and pay them, and whose action tends not merely to the unnecessary depreciation of these notes, but to establish discrimination in business against those who, in this matter, give their cordial support to the Government, and in favor of those who do not make such discrimination. This, if possible, should be prevented, and a provision making notes a legal tender, in a great measure at least, prevents it, by putting all citizens in this respect on the same level, both of rights and duties.

"There is the statement. This feature of the bill is ingrafted on it for the purpose of making the thing precisely equal, and operating alike on all citizens of the community. Now, what does the word 'tender' mean? I do not speak of it as an adjective; I speak of it as a noun, a substantive. It means an attempt at payment, an offer of payment of a debt due. It applies to nothing else. Here comes a distinction which, it seems to me, has hardly been looked at, in the importance in which I view it, in all the discussions in the House of Representatives. Who, under this bill, is compelled to take this paper called money? Nobody but those who have debts due them. Nobody is compelled to take it for his property. Tender cannot be made to a man to obtain his horse from him. He has a horse to sell, he has flour to sell, merchandise to sell, work to perform, labor to do; you cannot make a tender to a man for any of these things. In all the great general affairs of life, this provision, made, as it is said, to make men equal, can never have any application to them. It applies to nobody except some man who has been so unfortunate as to incur the public displeasure because he has saved a little money from his industry, and has it in the form of a debt due him. It is none but such an unfortunate man that can be reached by this provision, and that is called making things equal! I do not know what opinions other men may have about equality. I have heard that equality was equity. If they are convertible terms, I say that is not equality nor equity either. The number of people who owe debts in every community is very much larger than those who have debts due to them. To all those people you address yourself by this tender clause, saying, 'We engage all of you who owe debts to depreciate this paper as much as you can and get it as cheap as you can, to cheat your creditors with.' That is enlisting a very great aid, I take it, to the currency of this paper.

"Mr. President, where is the power to do this derived from? It is said to be an incidental power, falling within that provision of the Constitution giving Congress authority to make all the laws which are necessary and proper to carry into effect the granted powers. When gentlemen desire to get some latitude and elbow room for action, I know that they are generally exceedingly desirous to get a thing into that category. If you can only get the power into that incidental clause, you have plenty of elasticity. It has so much India-rubber substance in it that you can take just as much elbow room as you want. There is, therefore, in those who desire to magnify their office and their power, a very strong inclination to resort to this clause.

"It is said to be incidental to a great variety of powers. It is said that Congress has power to raise and support armies, *ergo* the incidental power to raise money in this form or any other form for the purpose of supporting armies! So it is said that the Government has power to pay its debts, *ergo* we may raise money in this way! The most general packhorse for this incidental power, however, has been the authority given to Congress by the Constitution to regulate commerce, and this power is said to be derived from that. I have heard some considerable latitude of argument about that. But, sir, what is the power of Congress to regulate commerce? The Constitution says that Congress may 'regulate commerce with foreign nations, and among the several States, and with the Indian tribes.' Here is a bill authorizing the issue of Treasury notes and making them a tender in payment of debts. I want to know what that has to do with trade between the States? To my mind that, if it is doing anything, is regulating trade between me and my neighbor in the same State, not regulating trade between separate States, and not regulating foreign trade. It is merely regulating a shaving trade between debtor and creditor. The bill proposes to make these notes a tender to pass as the representative of value in trade between man and man. Under this clause of the Constitution, it might be proposed to adopt some measure for a commercial agency or commercial functionary; but if you make paper a tender, as I have before remarked, nobody will be bound to take it in exchange for property. Then it cannot be a measure of regulating commerce. It will not regulate it at all."

Mr. Wilson, of Massachusetts, thus expressed his views on this point: "It is not my purpose to say anything in regard to the constitutional question. Senators of eminent ability differ upon that question; men eminent in constitutional law, in and out of Congress, differ upon that question; and when the most eminent constitutional lawyers of the country

differ in regard to a question of that importance and of that character, it seems to me that those of us who choose to do so may exercise our own judgments in regard to the constitutionality of the measure."

Mr. Sherman, of Ohio, followed. He said: "I agree that this measure can only be justified on the ground of necessity. I do believe there is a pressing necessity that these demand notes should be made a legal tender if we want to avoid the evils of a depreciated, dishonored paper currency. I do believe we have the constitutional power to pass such a provision, and that the public safety now demands its exercise. Is there such a necessity?"

Mr. Cowan, of Pennsylvania, followed, saying: "I had supposed, sir, that this question could never enter the American Senate; that the day had gone by when it was open to discussion, if it ever was open since the Constitution was formed. Surely, if anything in the world is settled—settled by the fathers, by contemporary history, painful experience, and the total absence of all precedent for the exercise of these powers—it is that they were not delegated nor intended to be delegated. I have never till now heard it doubted; and after the argument of the learned and venerable Senator from Vermont, I think no one of us, looking at it in the light of the oath he has taken, could doubt it. If this is not settled, then is nothing settled, and we are all at sea.

"It may be superfluous, Mr. President, but still I think proper to recur a moment to first principles upon this question—whether the United States Government can make its notes a legal tender in payment of debts—and in so doing, I think it will be found, if answered in the affirmative, that the power would be subversive of all our notions of government and the ends for which it is established, which are the protection and preservation of society."

Mr. Bayard, of Delaware, followed in opposition to the bill. He said: "I shall pass over the constitutional argument. I really do not think, from anything I ever heard on the subject, that it is worth an argument. The thing is to my mind so palpable a violation of the Federal Constitution, that I doubt whether in any court of justice in this country, having a decent regard to its own respectability, you can possibly expect that this bill which you now pass will not, whenever the question is presented judicially, receive its condemnation as unconstitutional and void in this clause."

Mr. Howard, of Michigan, on the other side of the question, thus expressed his views: "We have under the Constitution the power to borrow money. This no one disputes. If we have the power to borrow money, we have the right; and it is our duty to place in the hand of the lender an evidence of the fact that we have so borrowed it, and, further, that we intend to pay what we have borrowed. These two things are manifestly, in their very nature, inseparable; and the only real question, it seems to me, which addresses itself to the Senate, is this: whether we have any power, after having issued this description of paper to the public creditors in payment of their debts, to protect the credit of the United States expressed upon the face of the paper, while it is in the hands of innocent and honest holders. I think we have. I think this is one of the most obvious means of extending protection to the public credit thus expressed upon the paper. If we have it not; if we cannot subject, so to speak, the entire property of the nation to something like an assistance to the public credit, then this power to borrow money at once ceases to be a power of any value, and it is a mere mockery upon the face of the Constitution. If we cannot declare that this paper shall in commercial transactions be of equal validity to transactions based upon gold and silver, then I say that the power to borrow money ceases in and of itself to be of any benefit to the Government or to the nation; and it is because I believe that we have this power thus to protect the public credit, expressed and pledged on the face of a Treasury note, that I shall vote to retain this clause in the bill. I think we have the constitutional power, and I am willing to use it on this occasion."

Mr. Sumner, of Massachusetts, argued that the measure was not unconstitutional, saying: "It is true that in the Constitution there are no words expressly giving to Congress the power to make Treasury notes a legal tender; but there are no words expressly giving to Congress the power to issue Treasury notes. If we consult the text of the Constitution, we shall find it as silent with regard to one as with regard to the other. But, on the other hand, the States are expressly prohibited to 'emit bills of credit, or make anything but gold and silver coin a tender in payment of debts.' Treasury notes are 'bills of credit;' and this prohibition is imperative on the States. But the inference is just that this prohibition, expressly addressed to the States, was not intended to embrace Congress indirectly, as it obviously does not embrace it directly. The presence of the prohibition, however, shows that the subject was in the minds of the framers of the Constitution. If they failed to extend it still further, it is reasonable to conclude that they left the whole subject in all its bearings to the sound discretion of Congress, under the ample powers intrusted to it.

"If the Constitution failed to speak, Congress has not failed; and the exercise of this power cannot now be questioned without unsettling our whole financial system. But we have seen that throughout our colonial history the legal tender was a constant, though not inseparable, incident to the bill of credit; that, indeed, it was so much a part of the bill of credit that the Imperial Parliament positively interfered to separate the two, and, while sanctioning the bill of credit, forbade the tender. And now, if this historical review is properly apprehend-

ed—if it is not entirely out of place—it must conduct to the conclusion that, whatever may be the present question of policy, the power to make Treasury notes a legal tender has precisely the same origin in the Constitution with the power to create Treasury notes. It is true that you may exercise one power, and decline to exercise the other; but if you assume the power to issue bills of credit, I am at a loss to understand how you can deny the power to make them a legal tender. The two spring from the same fountain. You may refuse to exercise one or both; but you cannot insist upon one under the Constitution and reject the other."

A vote was then taken on a motion to strike out the legal tender clause, which resulted as follows:

YEAS.—Messrs. Anthony, Bayard, Collamer, Cowan, Fessenden, Foot, Foster, Kennedy, King, Latham, Nesmith, Pearce, Powell, Saulsbury, Simmons, Thomson, and Willey—17.

NAYS.—Messrs. Chandler, Clark, Davis, Dixon, Doolittle, Harlan, Harris, Henderson, Howard, Howe, Lane of Indiana, McDougall, Morrill, Pomeroy, Rice, Sherman, Sumner, Ten Eyck, Wade, Wilkinson, Wilson of Massachusetts, and Wilson of Missouri—22.

The bill was subsequently passed by the following vote:

YEAS.—Messrs. Anthony, Chandler, Clark, Davis, Dixon, Doolittle, Fessenden, Foot, Foster, Grimes, Hale, Harlan, Harris, Henderson, Howard, Howe, Lane of Indiana, Latham, McDougall, Morrill, Pomeroy, Rice, Sherman, Sumner, Ten Eyck, Trumbull, Wade, Wilkinson, Wilson of Massachusetts, and Wilson of Missouri—30.

NAYS.—Messrs. Collamer, Cowan, Kennedy, King, Pearce, Powell, and Saulsbury—7.

In the senate, on the 28th of January, on motion of Mr. Wade, of Ohio, the bill to authorize the President of the United States in certain cases to take possession of railroad and telegraph lines was taken up. The bill proposed to authorize the President of the United States, when, in his judgment, the public safety might require it, to take possession of any or all the telegraph lines in the United States, their offices and appurtenances; to take possession of any or all the railroad lines in the United States, their rolling stock, their offices, shops, buildings, and all their appurtenances; to prescribe rules and regulations for the holding, using, and maintaining of the telegraph and railroad lines in the manner most conducive to the safety and interest of Government; to place under military control all the officers, agents, and employés belonging to the telegraph and railroad lines thus taken possession of, so that they should be considered a part of the military force of the United States, subject to all the restrictions imposed by the rules and articles of war. Any attempt, by any party or parties whomsoever, to resist or interfere with the unrestrained use by Government of the property thus taken possession of, or any attempt to injure or destroy it, was to be punished as a military offence by death or such other penalty as a court martial may impose.

Three commissioners were to be appointed by the President, by and with the advice and consent of the Senate, to assess and determine the damages suffered, or the compensation to which any railroad or telegraph company might be entitled, by reason of the railroad or telegraph line being seized and used under the authority conferred by the act, and their award was to be final, and the amount was to be paid to the party entitled to it out of any money in the Treasury not otherwise appropriated.

The transportation of troops, munitions of war, equipments, military property and stores throughout the United States, was to be under the immediate control and supervision of the Secretary of War, and such agents as he might appoint.

The compensation of each of the commissioners was to be eight dollars per day while in actual service, and the provisions of the act were not to be in force any longer than was necessary to bring the war to an end.

Mr. Cowan, of Pennsylvania, said: "The bill contemplates that, under certain contingencies, the military force of the country may take possession of the railroads and telegraph lines of the country. This, I have no doubt, is proper, and, under the right of eminent domain, I have no doubt the Government has power to authorize it; but who shall decide upon the contingency? The owners of these roads may be citizens having rights which are secured and guaranteed to them under the fifth amendment of the Constitution, and they have a right to appeal to the courts, I should think, in order to determine whether those rights were or were not violated by the military officers in taking possession of their property at that time for public use.

"Why, it may be asked, are persons in the land and naval forces subjected to military punishment for offences? It is because they have waived their constitutional rights by subscribing at the time they entered this force to the rules and regulations laid down by Congress for the government of the land and naval forces; and I very much doubt whether a man could be subjected to the peculiar punishment there inflicted, unless he had first subscribed to those articles. Certainly, when a man enters the army, he is called upon and he does agree to those rules and regulations, which are outside of the course of the common law, and which do not proceed by due process of law, before he can be held answerable."

Mr. Trumbull, of Illinois, followed, saying: "The Senator from Ohio says that it would be impossible in districts where railroads would probably be taken possession of to impanel juries and try the parties resisting that possession. That is very true; it would be; and it is not necessary to do it there. Now, the distinction which I make, and the basis of the bill which has been introduced here to confiscate

the property of rebels goes upon this idea: that the Constitution of the United States, which guarantees a jury trial, and which declares that no man shall be deprived of life, liberty, or property without due process of law, has no application whatever to a district of country where the judicial tribunals are utterly overthrown, and where the military power is called in for the purpose of putting down an insurrection, just because the judicial authorities are overthrown. That is the very point where the military may begin to operate."

Mr. Pearce, of Maryland, expressed his astonishment at the bill, saying: "It seems to me that this bill is a very extraordinary one. It has taken me by surprise. I believe that it was only laid on our tables yesterday. If it were confined to the States in secession I should make no objection; but I confess I am appalled with the idea of giving the Executive such an enormous power as this over States which are not in insurrection, which may not be in insurrection, and in which there is not a fortieth part of the people who desired it ever should get into insurrection."

Mr. Pearce also said: "But further, sir—you authorize them to place under military control all the officers, agents, and employés belonging to the telegraphs and railroads thus taken possession of by the Government, so that they shall be considered a part of the military forces of the United States, subject to all the liabilities imposed by the rules and articles of war. Where do you get the authority to make these civil employés of these railroads subject to the rules and articles of war? They are only military men who are subject to them. These persons have not made themselves subject to them by enlisting in the military service of the United States, or by volunteering into its service, or by being drafted into the militia; and yet you take these poor civilians, the whole business of whose lives is railroad transportation for passengers and freight, and make them subjects of military law."

Mr. Davis, of Kentucky, was of the opinion that the exception taken to the bill by the Senator from Maryland was well taken. He said: "He objects to that portion of it which proposes 'to place under military control all the officers, agents, and employés belonging to the telegraph and railroad lines thus taken possession of by the President.' I say that that is wholly an unauthorized power. Congress, the law-making power of the United States, cannot invest the President with that authority. He has no right to assume that persons who are in civil employment, either in a State or in a State corporation, or in their own private and individual capacity, can be seized by authority of a law of Congress, and appropriated to and made a part of the military power of the United States, and subjected to the military law. I utterly deny that that is constitutional."

Mr. Trumbull, of Illinois, thus expressed his opinion: "I am for punishing a man in the loyal States who interferes with a telegraph line or a railroad line as severely as in the disloyal States. I am for punishing them all. The constitutional point is simply this: can you punish a citizen by military court martial in a loyal portion of the country?"

Mr. Wilson, of Massachusetts, followed: "What is the whole object of this bill? What is the reason why it has been introduced here, and why does the new Secretary of War desire a measure of this kind? We have assembled large armies; it is expected that these armies are to move; the public voice demands action; they have to move over vast spaces of country; railways must be a great means of transportation for them. Now, the object is to have the control of the railway lines for the purpose of moving these masses of men. The object is to concentrate our forces, to move large masses of men without the knowledge or consent of anybody, without negotiating with railway directors as to how many men are to be moved, or where they are to be moved, or what rolling stock is wanted, or anything of the kind."

Mr. Hale, of New Hampshire, said: "It is unquestionably true that the power to do these things exists at the preseut time. Nobody can doubt—not even my friend from Maryland, who says that he is appalled by the principles enunciated by this bill—that, in a time of war, when the necessity exists, the Government may seize upon property; may seize upon men; may seize upon anything and everything which is necessary to accomplish its war purposes. In seizing private property your authorities do not stop to call a jury to estimate its value under that clause of the Constitution which provides that private property shall not be taken for public use without compensation. They take it when the necessity arises; take the man, the horse, the grain, the railroad, the large thing as well as the small. There is no doubt about the power."

Mr. Fessenden, of Maine, said: "If you mean only to give power to impress a certain class of your fellow citizens, under a given state of facts, into the military service of the country, I am willing to do it if it is recommended by the proper authorities, and it is thought advisable that it should be done by general law, instead of leaving the power to be exercised in each case where an emergency may present itself. We have just as much right to consider men who are employed for the purpose of this bill, in the military service, as to provide that men shall be drafted for our armies. That is a power that exists in the Government, undoubtedly. It is within the war-making power; and if that is the design, I do not know that I have any objection so far as that point goes."

Mr. Wade, of Ohio, argued in reply: "The Senator declared that the war power was vested in the President. There is no such power as that in the President. It is in the Congress—in the representatives of the people and of the

States. To place it anywhere else would lead you directly to an irresponsible despotism. Sir, as a representative of a State of this Union, I will never consent to yield my right to declare upon this floor upon what principles any war shall be conducted. I deny the right of the President, without any interference of Congress, to conduct everything pertaining to war according to his own views. He has no right to do it. We have seen the trouble that has been occasioned by an attempt to exercise a power that he probably has, in a way not regulated by law, and it has greatly impaired his authority, if not his good name abroad. Look at the complaints against him because he has undertaken to suspend the *habeas corpus*, a power not regulated by law. Ought not that power to be regulated by law like every other? Would it not be better for your Executive that it should be so? Ought we, the representatives of the people and of the States, to shrink from declaring upon what principles men may be deprived of their liberty? I do not say this in any sense of denunciation against what has been done, because there has been a necessity for it. We create and continue that necessity every hour that we fail to declare on what principles a man may be taken and deprived of his liberty.

"Now, sir, I am as anxious as any other man to defend the rights of the people, and to confer the proper authority upon the Executive to act; but I absolutely deny that without our assent he may exercise just what powers he pleases in respect to the conduct of this war. We, the representatives of the States and the representatives of the people, whose interests and whose persons are affected by the war, have the right here to limit the powers that he shall exercise upon just such subjects as we see fit, just as we please, and when we please; and because, in my judgment, he has not this unlimited power to exercise, except from necessity, when we fail to act, the duty is devolved upon us of prescribing the rules under which he shall act, and therefore I have brought forward this bill."

Mr. Doolittle, of Wisconsin, continuing the debate, said: "Mr. President, in the course of this discussion we have come up against the great question that divides the judicial minds of the country, whether the power of suspending the *habeas corpus* and of declaring martial law is in the President or in Congress. If it is in the President, no legislation whatever would be necessary, because the President can extend his martial law anywhere throughout the United States, over every railroad in it; and any man who commits an offence upon the railroad over which martial law is extended can be tried by martial law, and shot at a drum-head court martial. But inasmuch as there is a large and respectable portion of the judicial minds of the country who believe that it belongs to Congress to extend martial law in the United States, therefore I understand this committee, for greater security and caution, to have both the authority of the President and the authority of Congress, ask for the provisions of this bill, which are nothing more nor less than to extend martial law, or *quasi* martial law, over the railroads and telegraphs of the United States.

"Why should we hesitate to give it? The Senator from Maine insists that the President has it now. What harm is it, then, if Congress says he shall have it?"

Mr. Cowan, of Pennsylvania, followed in a lengthy speech. His view was thus expressed: "I do not think this bill is necessary. I think that all laws of this kind which are calculated to enlarge the power of the President as Commander-in-Chief of the Army, will in the end only be found to impede his march, and involve not merely himself but Congress and everybody else in trouble. He had better be left to the exercise of that absolute power with which he is clothed, within its limits free to act, free to do everything. I should be sorry if he had not done everything that was necessary and that he had a right to do; but I suppose, if not now, it will soon be found out.

"I am opposed to the whole scheme; but if there is to be a law of this kind at all, it ought to be so well considered as to at least keep us who legislate for the citizen, who has a right to have the laws administered through the medium of the judiciary, clearly within the limits of the Constitution. I would not throw a straw in the way of the President; and why? In what way am I to carry that out? By not passing laws—not by passing them. The men who are giving the President a full and fair opportunity with the military force of the nation to put down the rebellion are those men who do not restrain him, who do not fetter him, but who leave him as the commander-in-chief of an army ought to be left, to do that which in his own discretion and good judgment he ought to do, and let him take the responsibility."

Mr. Bayard, of Delaware, in opposition to the bill, said: "I do not rise for the purpose of opposing this bill. I shall vote against it. I consider it a plain and palpable violation of the Constitution of the United States. I know of no power, executive or legislative, to establish martial law within the United States. I therefore have no comments to make upon this bill. The provisions of it speak for themselves. It assumes the power to compel citizens of the United States to act under military law without their consent, and subjects them to the penalties of military law. Though the Constitution says that private property shall not be taken for public purposes without compensation, it assumes the power, not to seize private property, but the power to use it temporarily for Government purposes without compensation for the value of the property.

"Sir, in all these cases it is the first step which costs. Once accustom the people of this country—I do not care under what plea, whether of state necessity, or putting down of rebellion, or what you will—that within that por-

tion of the United States in which the laws are not suspended, in which civil remedies can be afforded, the civil power is subordinate to the military, and there is an end of civil liberty; there is an end to republican government. You may talk about fighting for the restoration of the Union; but if your restoration of the Union is merely for the acquisition of power, apart from the preservation of the Constitution and the principles of liberty on which that Constitution is founded, is it worth the struggle and the destruction of human life which will ensue in consequence? Is it for mere conquest that you are fighting, or is it to preserve the Union, because the Union is to save the great principles of civil liberty upon which that Union is based?

"I deny the principle on any possible ground of legal construction, consistent with the Constitution and the preservation of civil as opposed to military authority, where the laws of the United States can be executed by the civil power, that you have the right to interpose military power and to override the civil power, because you may think it more convenient.

"Mr. President, this doctrine of State necessity is at all times a dangerous doctrine. In truth, the whole question comes to this: There are in reality but two forms of government: one is a government of will, and the other a government of laws. The United States profess to have a government of laws. If you transfer that power, no matter under what plea, no matter under what necessity or what excuse, so that the mere will of the Executive or of his subordinate military commanders can, without the laws which secure the rights of individuals, trespass upon personal liberty, and upon the rights of private property, where those laws are enforced, there is an end of republican government; there is an end of a government of laws. There is the substitution of a government of will, and that is a despotism wherever it exists."

The bill was finally passed by the following vote:

YEAS.—Messrs. Carlile, Chandler, Clark, Dixon, Doolittle, Foot, Hale, Howard, Howe, Johnson, King, Lane of Indiana, Latham, Pomeroy, Rice, Sherman, Sumner, Ten Eyck, Wade, Wilkinson, Wilmot, Wilson of Massachusetts, and Wilson of Missouri—23.

NAYS.—Messrs. Browning, Cowan, Davis, Fessenden, Foster, Grimes, Harris, McDougall, Powell, Saulsbury, Trumbull, and Willey—12.

The expulsion of all members of the Senate who had either united with the Southern Confederacy, or who had said or done anything not strictly loyal, in the opinion of Senators, caused very extended debates during this session. The points embraced in each case are here shown. In this crisis of the country all measures were considered necessary which might remove some real or apprehended danger.

In the Senate, on the 10th of January, the resolution relative to the expulsion from the Senate of Waldo P. Johnson, Senator from Missouri, was taken up and the report of the committee made as follows:

The Committee on the Judiciary, to whom was referred a resolution for the expulsion from the Senate of Waldo P. Johnson, a Senator from the State of Missouri, submit the following report:

Previous to his election to the Senate, Mr. Johnson was known, in Missouri, as entertaining secession proclivities, and to sympathize and coöperate with the prominent citizens of that State who are now in open rebellion against the Government. He was elected to the Senate by a Legislature which has since sought to array the State against the Union. Since his election he is reported to have made a speech evincing a spirit hostile to the Government, which speech was extensively published in the State of Missouri without public contradiction from him. He has not appeared in his seat in the Senate since the session began; and though the resolution for his expulsion was proposed in the Senate on the 10th day of December, and referred to this committee on the 12th day of December, 1861, and has been extensively published in Missouri and other parts of the Union, the said Johnson has wholly failed to furnish any reason for his absence, or explanation of the charges of disloyalty urged against him.

The failure of said Johnson for so long a period to appear in his place to discharge the high duties incumbent upon him for the preservation of the Republic in this time of rebellion against its authority, and his silence under the imputations upon his loyalty, which, from their publicity, could not have escaped his notice if within a loyal portion of the Union, of themselves furnish strong presumptive grounds against his fidelity to the Government.

His whereabouts at this time the committee have been unable, with actual certainty, to ascertain. They are satisfied that, had he been so disposed, there was nothing to prevent his attendance on the Senate at its commencement; and when last heard from, he was reported to have gone voluntarily within the lines of rebels in arms against the Government.

Under these circumstances, the committee are of the opinion that he ought to be expelled from the body, and they accordingly report the resolution back to the Senate, with a recommendation that it do pass.

Mr. Bayard, of Delaware, said: "For my own part I have read too much of the past history of the world to condemn men merely for opinions, however widely they may differ from my own; but acts are another thing. The evidence in this case satisfied me that Mr. Johnson had left the United States clandestinely, and that every rational presumption was that he had gone to the Confederate States, who now are at open war with the United States. Under these circumstances, I have no hesitation in giving my vote for his expulsion as a member of this body."

The resolution was then adopted by a unanimous vote.

The resolution relative to the expulsion of Senator Trusten Polk was then taken up, and the committee submitted their report as follows:

The Committee on the Judiciary, to whom was referred the resolution of the Senate for the expulsion of Trusten Polk, a Senator from the State of Missouri, report:

That it appears, to the satisfaction of the committee, that Trusten Polk recently, and since the commencement of the present rebellion, in a letter transmitting pecuniary means to aid in the publication of a secession newspaper in Southwestern Missouri, among other

disloyal and treasonable expressions, used the following:

"Dissolution is now a fact; not only a fact acccomplished but thrice repeated. Everything here looks like inevitable and final dissolution. Will Missouri hesitate a moment to go with her southern sisters? I hope not. Please let me hear from you. I would be glad to keep posted as to the condition of things in Southwest Missouri. I like Governor Jackson's position. It looks like adherence to the 'Jackson resolutions.'"

That a copy of this letter was published in full in the Congressional Globe of the 19th of December last, the day after the resolution of expulsion, in this case, was introduced in the Senate, and has, also, both before and since that time, been published and referred to in several other newspapers in Missouri and elsewhere, and widely circulated throughout the country, which publication could hardly have failed to come to the notice of Senator Polk; and yet neither he, nor any other person in his behalf, has appeared before the committee to deny the authenticity of the letter referred to, or attempted in any other way to deny or explain it, so far as the committee are aware—a course of conduct deemed to be wholly incompatible with the idea of his innocence, since an innocent man, in his position, according to the first impulses of a true and loyal heart, would not have suffered a moment to elapse without flying to his place to deny, if false, so grave and foul a charge.

That besides this, he has not only failed to appear in his seat during the whole time of the continuance of the present session, now a period of six weeks, to perform his duty to his State and to the Union, on an occasion of the greatest possible urgency, when the votes as well as counsel of every true and loyal Senator were eminently needed in providing for the public welfare and putting down a fierce rebellion, threatening the very existence of the Union, but on the contrary, as the committee are fully satisfied on information derived from reliable official and other sources in Missouri, has left his home in St. Louis and gone clandestinely within the lines of the enemy now in open, armed rebellion against the United States, whose Constitution he, as Senator, has solemnly sworn to support.

The committee, under this state of facts, are of opinion that justice to the Senate, to rid its roll of his name, as well as the chamber of his presence; justice to the State of Missouri, whose high commission he has dishonored; and justice to the Union, which he has sought to betray, all require that he should no longer continue a member of this body.

They therefore respectfully report the resolution for the expulsion of Trusten Polk, a Senator from Missouri, back to the Senate, with the unanimous recommendation that the same do pass.

It was then unanimously passed.

The Committee of the Judiciary, to whom was referred a resolution to expel Jesse D. Bright, Senator from Indiana, reported on the 13th of January, as follows:

The Committee on the Judiciary, to which was referred a resolution to expel Hon. Jesse D. Bright from his seat in the United States Senate, respectfully report:

That they are of opinion that the facts charged against Mr. Bright are not sufficient to warrant his expulsion from the Senate; and they therefore recommend that the resolution do not pass.

The further consideration of the subject was postponed.

On the 20th the subject was again taken up.

The resolution which was introduced by Mr. Wilkinson, of Minnesota, upon which the committee reported, was as follows:

Whereas Hon. Jesse D. Bright heretofore, on the 1st day of March, 1861, wrote a letter, of which the following is a copy:

WASHINGTON, *March* 1, 1861.

MY DEAR SIR: Allow me to introduce to your acquaintance my friend Thomas B. Lincoln, of Texas. He visits your capital mainly to dispose of what he regards a great improvement in firearms. I recommend him to your favorable consideration as a gentleman of the first respectability, and reliable in every respect.

Very truly, yours, JESSE D. BRIGHT.

To His Excellency JEFFERSON DAVIS,
President of the Confederation of States.

And *whereas* we believe the said letter is evidence of disloyalty to the United States, and is calculated to give aid and comfort to the public enemies: therefore,

Be it resolved, That the said Jesse D. Bright is expelled from his seat in the Senate of the United States.

Mr. Wilkinson took the floor to support the resolution, and against the report of the committee. He said: "This is an hour, Mr. President, when men must stand up straight if they would serve their country; it is no time for faltering, for hesitation, or for doubt. And it is my deliberate opinion that, surrounded as we are with treason and with corruption in the high places of this Government, if the Senate fails to discharge its whole duty without any regard to fear or to favor, or without being moved from the right line of duty by personal considerations, this country will be lost. I believe that the firm, steady, and heroic action of Congress must save this nation, if it is saved at all; and I further believe that every other department of the Government has utterly failed to meet with sufficient heroism and virtue the demands which the crisis of the country has made upon them. I am overwhelmed with the revelations which are hourly made of the treason and corruption which surround and enter into every department of this Government; and strange as it may appear, startling as may be the announcement, there is scarcely a single act of treason or of fraud which surrounds, or is in any wise connected with this Government, but that finds an eager and ready apologist in Congress. If this course is not checked at once, then indeed may we bid farewell to all hope of saving the country and the institutions of freedom which our Constitution has guaranteed to the people."

He then considered the points of the case: that the Senator from Indiana did not deny that he wrote the letter,—the manner of its address,—the state of the country at the time when it was written,—the object of the letter,—the position of the writer, &c., and concluded thus: "Mr. President, whilst I regard the letter of the 1st of March last, recommending an inventor of improved firearms to the especial notice of the leader of this wicked war, as giving the clearest and most perfect evidence of disloyalty in him who wrote it, still I think that the letter of the 7th of September last is still more objectionable than the other. At this last date, the war in defence of the Government had assumed the most gigantic proportions; five hundred thousand loyal men were then in the field in defence of our Government, to save it from being destroyed by the attacks of the most ruthless enemy that

ever blackened or disgraced the annals of civilized warfare. The whole nation was reeling to and fro, and staggering like a drunken man; commerce was destroyed; the ordinary business of the entire country had been suspended, and the good men and the loyal men and the true men all over the land thought of nothing, did nothing, cared for nothing but the success of our army and the maintenance of this Government. It was at this time that a Senator of the United States, bound by the most solemn of earthly obligations to sustain the Government in which he held an office of high dignity and honor, boldly declared to the country that he was opposed to the entire policy of the Government—that policy which is for maintaining its very existence!"

Mr. Bayard, of Delaware, replied: "Mr. President, I am not surprised at anything that occurs in times of high excitement; nor am I surprised at distortions of the human intellect by which the most ordinary actions or the simplest forms of expression are perverted from their purpose, and have attached to them a meaning (from emphasis and an imperfect statement of facts) which otherwise no rational man would attach to them. I had hoped, however, that when the resolution of the Senator from Minnesota was submitted to a committee of this body; when the whole matter was investigated and weighed by them, and the party accused heard, and they reported that the resolution ought not to pass, the honorable Senator would be content to submit to the determination of the committee, and without coming here with a written set speech for the purpose of aggression upon my friend from Indiana, would let the vote of the Senate be taken, if he desired it, without the necessity of any controversy on the subject."

A very extended debate followed, during which Mr. Bright said: "I have said repeatedly that I have no recollection of ever having written this letter. I have no doubt when the letter was asked for, Mr. Lincoln said he wanted to go there to dispose of an invention in firearms. I understand Mr. Lincoln says I gave him a letter to Mr. Floyd in the month of December, which was some time before I gave him the letter to Mr. Davis, recommending his improvement in firearms, whatever it was: I really do not know what it was, and never heard what it was. I went this morning to the War Department, and with the aid of the chief clerk searched its files for the purpose of ascertaining whether there was such a letter there. The chief clerk stated that if it was merely a letter of introduction, such a one as would be given in a case of that kind, the presumption was that Governor Floyd threw it in his basket, and so it had been destroyed, or he might have it among his private papers. Mr. Lincoln, I understand, says I gave him a letter first recommending his firearm to Mr. Floyd. If it was such a valuable improvement, and was likely to be so serviceable in the destruction of human life, and I was in collusion with the Southern States, I would hardly have recommended it first to Governor Floyd, then Secretary of War. I suppose I gave him a letter first to Mr. Floyd, and he, finding that like many of these Yankee inventions there was nothing in it, threw it overboard, and then Mr. Lincoln came and bored me for a second letter to Jefferson Davis, and I gave him that one. I have no doubt those are the facts."

At the close of the debate the vote on the question of expulsion was taken and resulted as follows:

YEAS.—Messrs. Anthony, Browning, Chandler, Clark, Collamer, Davis, Dixon, Doolittle, Fessenden, Foot, Foster, Grimes, Hale, Harlan, Henderson, Howard, Howe, Johnson, King, Lane of Indiana, McDougall, Morrill, Pomeroy, Sherman, Simmons, Sumner, Trumbull, Wade, Wilkinson, Wilmot, Wilson of Massachusetts, and Wilson of Missouri—32.

NAYS.—Messrs. Bayard, Carlile, Cowan, Harris, Kennedy, Latham, Nesmith, Pearce, Powell, Rice, Saulsbury, Ten Eyck, Thomson, and Willey—14.

Mr. Lovejoy, of Illinois, offered a bill for the prohibition of slavery in the Territories of the United States, on which an extended debate took place. He subsequently proposed to modify the substitute as follows, which was agreed to:

To the end that freedom may be and remain forever the fundamental law of the land in all places whatsoever, so far as it lies within the powers or depends upon the action of the Government of the United States to make it so: therefore,

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That slavery or involuntary servitude, in all cases whatsoever (other than in the punishment of crime, whereof the party shall have been duly convicted), shall henceforth cease, and be prohibited forever in all the Territories of the United States, now existing, or hereafter to be formed or acquired in any way.

Mr. Lovejoy then moved to amend by striking out the preamble.

Mr. Cox, of Ohio, said: "I would like to amend that by inserting the words 'to carry out the Chicago platform, and to dissolve the Union.' That is the idea."

The previous question was seconded, and the main question ordered, which was on the amendment striking out the preamble.

The amendment was agreed to.

The bill was subsequently passed—ayes, 85; noes, 50—in the following words: "That from and after the passage of this act there shall be neither slavery nor involuntary servitude in any of the Territories of the United States now existing, or which may at any time hereafter be formed or acquired by the United States, otherwise than in the punishment of crimes whereof the party shall have been duly convicted."

Thus, what was originally known as the "Wilmot Proviso" offered in the House about 1847, after fifteen years became a law. This was the arrow that had pierced the heart of the Union.

In the Senate, on the 13th of March, the bill

"for the release of certain persons held to service or labor in the district of Columbia" was taken up.

Mr. Davis, of Kentucky, offered the following amendment:

And be it further enacted, That all persons liberated under this act shall be colonized out of the limits of the United States; and the sum of $100,000, out of any money in the Treasury not otherwise appropriated, shall be expended, under the direction of the President of the United States, for that purpose.

Mr. Davis, in support of his amendment, said: "Mr. President, whenever any power, constitutional or unconstitutional, assumes the responsibility of liberating slaves where slaves are numerous, it establishes as inexorably as fate a conflict between the races, that will result in the exile or the extermination of the one race or the other. I know it. We have now about two hundred and twenty-five thousand slaves in Kentucky. Think you, sir, that we should ever submit to have those slaves manumitted and left among us? No, sir; no, never; nor will any white people in the United States of America where the slaves are numerous. If by unconstitutional legislation you should, by laws which you shrink from submitting to the test of constitutionality in your courts of justice, liberate them, without the intervention of the courts, the moment you reorganize the white inhabitants of those States as States of the Union, they would reduce those slaves again to a state of slavery, or they would expel them and drive them upon you, or south of you, or they would hunt them like beasts and exterminate them. They would not do this from choice, but they would do it from necessity. It will produce such a conflict between the races as will render it inevitable, and there will be no escape from it.

"I maintain that it is a matter of humanity to the negro in this city, and of justice to the white population in this city, that when you turn three or four thousand negroes who are now in a state of slavery, free, you should relieve them from the curse of such a population, from its expense, from its burdens upon this community in every form; you ought to assume the philanthropy and the justice—the philanthropy to the negro race and the justice to the white race—to remove these people from the District. You may refuse to do it. If you do, a few years' experience will tell you what a mistake you made."

Mr. Hale, of New Hampshire, replied to the objection of the Senator from Kentucky in regard to the consequences that might ensue from the passage of the bill. He said: "I may remark that of all the forms scepticism ever assumed, the most insidious, the most dangerous, and the most fatal is that which suggests that it is unsafe to perform plain and simple duty for fear that disastrous consequences may result therefrom.

"This question of emancipation, wherever it has been raised in this country, so far as I know, has rarely ever been argued upon the great and fundamental principles of right; the inquiry is never put, certainly in legislative circles, what is right, what is just, what is due to the individuals that are to be affected by the measure, but what are to be the consequences? Men entirely forget to look at the objects that are to be affected by the bill, in view of the inherent rights of their manhood, in view of the great questions of humanity, of Christianity, and of duty; but what are to be the consequences, what is to be its effect upon the price of sugar, tobacco, cotton, and other necessaries and luxuries of life? The honorable Senator from Kentucky looks upon it in that point of view entirely."

The Senator then proceeded to examine the effects of emancipation in the British West Indies and St. Domingo, and concluded this portion of his argument by saying: "Now, sir, I do not question in the slightest degree the very strong convictions which the honorable Senator from Kentucky has upon this question; but I ask him, and I ask every man who hesitates upon it upon the grounds he has suggested, to take the trouble not to read the frothy speeches made upon the floor of the House of Representatives or the Senate during the last ten or twenty years, but to go to the facts as they are portrayed by the impartial pen of history. I ask them to look at the statistics which exist to-day as to the condition of the colored population in those islands in which emancipation has been tried. They will find that no such disastrous consequences have ensued. Sir, the account that was given of the final inauguration of emancipation in the British West Indies in 1838, ought to stand in all time to be read by every man that wishes to inform himself upon this subject as to the character of this much-abused population, and the effects of this much-abused measure."

The constitutional objection to the bill, he thus treated: "Sir, I do not ask that the Government of the United States should trample upon the Constitution in any one of its provisions. I believe that up to a very late period in our history, it was the conceded doctrine of this Republic, by Statesmen north and south, that the constitutional power to legislate upon the subject of slavery in this District existed in Congress. I know that in late years that has been questioned, and even denied. I know that within the last ten or twelve years this nation has been rent upon a new dogma, which denied the constitutional power of Congress to legislate for the Territories; and, while that question was rending the country, while it was tearing political parties in twain, dividing churches, bringing itself home to the hearts and consciences of this people, the Supreme Court of the United States undertook, with their puny efforts, to throw themselves in the way of the great question by the Dred Scott decision, and to say to the surging waves of humanity that, while washing out the stain of

oppression from our history, they should go thus far and no farther. The Supreme Court will find out ere long how much that has effected. Whether it has done more to wipe out the controversies that they wanted to crush out, or to obliterate whatever of respect there was remaining in the public heart for themselves, they will find out before the issue is settled.

"But, sir, while by this decision the Territories of the United States were taken theoretically from the management of the Federal Government, I believe, though I never read the Dred Scott decision in reference to that particular view of it, it did not go to the extent of saying that Congress had no constitutional power to legislate in the District of Columbia. But, sir, that is left to us. Over this little spot of ten miles square, or what there is left of it after the retrocession of the part ceded by Virginia, we have confessedly the right of legislation; and here in our midst, and by our laws, the system of human slavery exists, and we are called upon to-day to abolish it, to repeal the laws upon which it rests, and to the most limited extent to try what will be the effect of emancipation upon the few slaves that are in this District."

Mr. Doolittle, of Wisconsin, followed in support of the bill. He moved to amend the amendment, so as to make it read:

And be it further enacted, That the sum of $100,000, out of any money in the Treasury not otherwise appropriated, shall be expended under the direction of the President of the United States to aid in the colonization and settlement of such free people of African descent now residing in said District as may desire to emigrate to the republics of Hayti or Liberia, or such other country beyond the limits of the United States as the President may determine.

He said: "The negro question involves more than the question of voluntary or involuntary servitude. I am not satisfied without an answer to the whole question. Jefferson gives it in these words:

Nothing is more certainly written in the book of fate than that these people are to be free; nor is it less certain that the two races, equally free, cannot live in the same Government. Nature, habit, and opinion have drawn indelible lines of distinction between them. It is still in our power to direct the process of emancipation and deportation peaceably, and in such slow degree as that the evil will wear off insensibly, and their places be, *pari passu,* filled up with free white laborers. If, on the contrary, it is left to force itself on, human nature must shudder at the prospects held up.

"Mr. President, in the temperate zone, the Caucasian race has always been dominant, and always will be. In the torrid zone the colored man dominates, and will forever. No laws of Congress or any other legislative power can reverse this great law stamped upon the earth and upon the constitution of man. Poets may dream otherwise; unwise philanthropy may hope to make it otherwise; but it cannot be done. The Creator has written it upon the earth and upon the race."

Mr. Doolittle then examined the condition of the West India Islands—the relations of the white and black races—the solution of the negro question, and said: "Mr. President, while I would connect the action of this Government in emancipating the slaves in this District with the idea of colonization, I would make it, not compulsory, but voluntary emigration. I would embrace those only who by their own free consent are willing to go from this District to Hayti, Liberia, or elsewhere. I am not in favor of the amendment as proposed by the Senator from Kentucky (Mr. Davis), to compel the colonization of all who may be set free under this bill. Upon this point I desire not to be misunderstood. I would make this colonization voluntary; upon their own free consent. I would hold out inducements which might lead them to go, and not compel them by force of arms. For that purpose I have offered my amendment."

Mr. Willey, of Virginia, followed in opposition to the bill, saying: "Mr. President, the question which I wish to discuss is: Is it wise or expedient, under existing circumstances, and at this time, to pass this bill? Sir, this bill is a part of a series of measures, already initiated, all looking to the same ultimate result—the universal abolition of slavery by Congress. This bill and the bill of the Senator from Illinois (Mr. Trumbull), for the confiscation of property in the seceded States, and the resolutions introduced by the Senator from Massachusetts (Mr. Sumner) some weeks ago, contemplate the same purpose—unconditional, immediate, and universal emancipation. It is to the consequences which must inevitably result from these measures, if adopted, to which I solicit the attention of the Senate. These consequences, in my judgment, involve the lives of thousands of my fellow citizens, and the happiness of all the loyal people of all the border slaveholding States. Perhaps I should be justified in saying that they involved in most serious peril the restoration of the Union and the Constitution.

"Sir, the agitation of these questions under existing circumstances, must be positively mischievous. Will it not create strife and divisions here? Will it not disturb the country? Above all, will it not afford aid and comfort to the enemy? I am sure it will. It will be used by the leaders of the rebellion to 'fire the Southern heart.' The people of the South have been taught to believe that the object and design of the Republican party was to abolish slavery in all the States. These propositions will be seized upon as evidence of this intention. They will say, "Look at their unconstitutional confiscation laws, making no safe or practical discrimination between Union men and secessionists. Look at the bill to abolish slavery in the District of Columbia; it is a stepping stone to further encroachments.' Especially will they point to the sweeping resolutions of the great apostle of abolition, the Senator from Massachusetts (Mr. Sumner), which, by one dash of the pen, deprives every Southern man

of his slaves. This is what the rebel leaders will delight to say, and delight to have so much reason to say."

The amendments were rejected, and the original bill then considered.

Mr. Davis, of Kentucky, in opposition to the bill said: "I shall now assume the position that the Congress of the United States have no power to emancipate a slave anywhere in a State or in the District of Columbia. The great rights which are secured by the Constitution to the citizen and to the States, and the great restrictions upon the powers of Congress by the Constitution also limit and restrict the grant of legislative power to Congress in the District of Columbia. That is my proposition. It is one founded in the Constitution itself. It is immovably moored in that instrument, and no lawyer can tear it from its firm anchorage. It is upon that position that I now propose to draw my deduction, and it is this: I say that all the great rights secured by the Constitution to the citizen exist in the District of Columbia as they exist in all the States of the Union, notwithstanding the clause in the Constitution which gives Congress the exclusive power of legislation in the District. That exclusive power means necessarily in subordination to and within all the prohibitions and the rights made and secured by the Constitution itself. What is one of those rights secured universally in this District as well as in the States? It is the right of property. Is not the right to the writ of *habeas corpus*, the right to trial by jury, the right to freedom of conscience, the freedom of speech, and the liberty of the press guaranteed to the people of the District of Columbia as inalienably, as inviolably, as inextricably, as they are guaranteed to the citizens of any of the States? I say they are; and I say among other rights that are guaranteed to the people of the District of Columbia, and to every citizen of the United States, is the right of property. He cannot be deprived of his property except in the mode prescribed and authorized by the Constitution of the United States. I will now read that clause in the amendments to the Constitution:

No person shall be held to answer for a capital or otherwise infamous crime, unless on a presentment or indictment of a grand jury, except in cases arising in the land or naval forces, or in the militia, when in actual service in time of war or public danger; nor shall any person be subject for the same offence to be twice put in jeopardy of life or limb; nor shall be compelled in any criminal case to be a witness against himself, nor be deprived of life, liberty, or property without due process of law; nor shall private property be taken for public use without just compenstion.

"I concede that whenever it is necessary, in the administration of the Government, in carrying forward the great business of the Government of the United States, that the Government should have private property for public use, it has the right to take that private property on the condition of making compensation for it, and upon no other condition. The point in that provision of the Constitution is this, and I ask the attention of my honorable friend from Maine to it: the Government of the United States cannot take the citizen's property capriciously; it cannot take it without a purpose, even by making just compensation for it; it cannot take it to burn it, if it may be consumed, or to destroy it; it may take it for public use. This is the simple and sole condition upon which the inviolability of private property can be broken by the Government itself; it must be necessary for public use. What is use? It is employment. To use is to employ. To employ is to apply as an instrument or an agent the thing that is taken for public use; and unless in good faith and in strict truth the thing or the property is taken for public use in the sense in which I have stated it, there is no constitutional right on the part of the Government to take the property at all.

"Even if Congress had the power to emancipate slaves, I ask if that is not taking from the owners of those slaves their private property? How is that private property to be taken from them? The Constitution provides that no citizen shall be compelled in any criminal case to be a witness against himself.

Nor be deprived of life, liberty, or property, without due process of law; nor shall private property be taken for public use without just compensation.

"This is my position: that the Congress of the United States has not the right to declare arbitrarily a mode, and arbitrarily a limit of price, even if it has the power to emancipate slaves in this District, by which these slaves will be taken from their owners and manumitted. If the slaves are taken for the purpose of being emancipated, of being liberated, they must be taken by due process of law. What is that due process of law? It is this: just as a citizen's property of any other class or description is taken from him for any purpose of the Government, so is the negro to be taken from his owner, even conceding that Congress has the power to liberate him. You must take that slave and you must have him appraised judicially, and by a mode that is quasi judicial; you must have a court to act in the matter; you must have a court to summon a jury; you must have a court to appoint commissioners, and under the supervision and sanction of this court, this matter of valuing the property in slaves is to proceed, as it does in relation to any other property of a citizen that may be taken by the exercise of the power of Congress or of the General Government over him."

Mr. Davis then alluded to the statements of the Administration relative to the objects of the war, and read the following extract from the resolution passed at the preceding session in July, 1861:

That this war is not prosecuted upon our part in any spirit of oppression, nor for any purpose of conquest or subjugation, nor for the purpose of overthrowing or interfering with the rights or established institutions

of those States; but to defend and maintain the supremacy of the Constitution and all laws made in pursuance thereof, and to preserve the Union, with all the dignity, equality, and rights of the several States unimpaired; that as soon as these objects are accomplished the war ought to cease.

"Now, sir, here is my position: if you intended to make and did make that pledge in good faith, you have no right now to enlarge the purposes of the war."

Mr. Clark: "Does the Senator understand this to be a purpose of war that we are now about?"

Mr. Davis: "Yes, sir; this is a purpose of war now. It is an entering wedge. You want to get the head in, and then you intend to push the monster through. That is what you are after. If there was to be no other movement upon slavery, we never should have heard of this bill to abolish slavery in the District of Columbia. It is extreme men that bring parties and nations to ruin. Men in a body will violate pledges that they would never dream of violating as single individuals. Here are your pledges, as strong and as emphatic as they can be made, defining the purpose for which you intended to wage the war. I say that you cannot with a due regard to your pledged word, to your faith, to your honor as men and as patriots, enlarge materially the purposes of the war. The object of such enlargement is not to limit and to spend the force of your action upon this downtrodden and oppressed District, but it is to extend your usurpations into the States. This is but a preliminary operation. You are endeavoring to experiment now how far you can go, and how far the moderate men of your party will go with you."

Mr. Wilson, after stating the position of the slave in the District and the laws regulating his conduct, said: "Have not the American people the constitutional right to relieve themselves from the guilt and shame of upholding slavery in their national capital? Would not the exercise of that right be sanctioned by justice, humanity, and religion? Does the Senator suppose that we, the representatives of American freemen, will cowardly shrink from the performance of the duties of the hour before these dogmatic avowals of what the men and the women of the slaveholding States will do? Sir, I tell the Senator from Kentucky that the day has passed by in the Senate of the United States for intimidation, threat, or menace, from the champions of slavery."

Mr. Kennedy, of Maryland, followed in opposition to the bill. He said: "I shall content myself with the simple purpose, in a very few words, of entering the most solemn protest, in the name of my State, against the adoption of this measure which I have ever yet made as one of the representatives of her sovereignty on this floor. The State of Maryland is most deeply interested in the result of this unhappy and unnatural war. All of her prosperity, present and to come; all of her historical renown in the past, connected with her bloody struggles for this Union; all of her dignity as a State, is involved in the policy by which this contest is to be conducted and finally settled.

"I earnestly hope I may be mistaken in the purposes and power of the majority to pass this measure; but if otherwise, then, sir, it no longer remains to her, either by argument or protest, to obtain her rights as a sovereign State, or just consideration for her dignity or interests as an equal in this Union under the Constitution. To show that the faith of this Government has long been pledged to the States of Maryland and Virginia not to interfere with slavery in this District, I will take the liberty of presenting to the Senate the views of an able committee of the House of Representatives presented in 1836, a committee composed of distinguished gentlemen from every section of the country."

From this report he read the following and other extracts:

Your committee must go further, and express their full conviction that any interference by Congress with the private interests or rights of the citizens of this District, without their consent, would be a breach of the faith reposed in the Federal Government by the States that made the cession, and as violent an infraction of private rights as it would have been if those States themselves, supposing their jurisdiction had remained unimpaired over their territory, had abolished slavery within those portions of their respective limits, and had continued its existence upon its present basis in every other portion of them. And surely there is no citizen in any quarter of the country, who has the smallest regard for our laws and institutions, State and national, or for equal justice, and an equality of rights and privileges among citizens entitled to it, who would attempt to justify such an outrage on the part of those States. The question then is, are the citizens of the District desirous of a change themselves? Has any request or movement been made by them that would justify an interference with their private rights on the part of Congress? None, whatever!

He also said: "In further support of these views, I beg to refer to the resolutions of Mr. Clay, which were adopted by the Senate in 1838:

Resolved, That when the District of Columbia was ceded by the States of Virginia and Maryland to the United States, domestic slavery existed in both of those States, including the ceded territory, and that, as it still continues in both of them, it could not be abolished within the District without a violation of that good faith which was implied in the cession, and in the acceptance of the territory, nor, unless compensation were made to the proprietors of slaves, without a manifest infringement of an amendment to the Constitution of the United States, nor without exciting a degree of just alarm and apprehension in the States recognizing slavery, far transcending in mischievous tendency any possible benefit which could be accomplished by the abolition.

Resolved, therefore, That it is the deliberate judgment of the Senate, that the institution of domestic slavery ought not to be abolished within the District of Columbia; and it earnestly hopes that all sincere friends of the Union and of harmony and general tranquillity, will cease to agitate this disturbing question.

Mr. Saulsbury, of Delaware, offered the following amendment:

And be it further enacted, That the said persons liberated under this act shall, within thirty days after the passage of the same, be removed at the expense of the Federal Government into the States of Maine, New

Hampshire, Massachusetts, Rhode Island, Connecticut, Vermont, New York, Pennsylvania, New Jersey, Ohio, Indiana, Illinois, Michigan, Iowa, Wisconsin, Minnesota, Kansas, Oregon, and California, and that said persons shall be distributed to and among the said States *pro rata* according to the population of the same.

He said: "While I speak in support of that amendment, I will simply say, to be frank with the Senate, that I intend to vote against the bill in any shape in which it can be presented. I offer this amendment, however, upon the principle adopted by the Senator from Kentucky (Mr. Davis) yesterday, of perfecting the bill, as far as I can, before the final vote; and I do think that if gentlemen who are not interested in this question will persist in freeing the slaves in this District or elsewhere, they ought to be willing to take them among themselves; and they ought not to throw this class of persons, idle and vicious and worthless, as we know they will be, upon this District, which already, I am told, has a population of eleven thousand free negroes. If they should persist in setting the additional number of three thousand free, the nineteen Free States ought certainly, having so few among themselves, to be willing to share the burden with the people of this District, by dividing the freed slaves among themselves, still leaving this District with the burden of eleven thousand free persons of color. It would be one of the most sublime examples of philanthropy I have ever seen. By your fruits you shall be known. If it is a spirit of philanthropy and a love of freedom that prompts you, gentlemen, to set these three thousand slaves in the District of Columbia free; render that philanthropy and that love of freedom sublime in the sight of all human kind, by taking into your own embrace, in your own midst, the slaves thus liberated. Prove that you are sincere."

Mr. Wilkinson, of Minnesota, advocated the passage of the bill, saying: "Believing, as I do, that human slavery is the great sin of this country, that it is in violation of every principle of justice and of truth, that its influence upon this country, and upon the world, has a tendency alike to encourage everything that is evil, and to repress everything that is good in the State; that its evil influences are visited alike upon the master and the slave; that it affects us for evil in our political as well as in our social relations, and that it is the primary cause of the wicked rebellion which has risen up against the constitutional authorities of the Government, I feel bound, by every vote which I am called upon to give, and by every word which I may utter upon this question, to do everything in my power toward its final extinction; and, so far as my influence goes, to blot out the last remains of slavery upon this continent.

"Thus believing, I cannot place expediency in the scales against justice, nor shall I fail to perform a simple duty for fear of the consequences which may result from such action."

Mr. Sumner, of Massachusetts, next took the floor, saying: "It is surely enough for the present to consider slavery at the national capital; and here we are met by two inquiries so frankly addressed to the Senate by the clear-headed Senator from Kansas (Mr. Pomeroy): first, has slavery any constitutional existence at the national capital? and, secondly, shall money be paid to secure its abolition? The answer to these two inquiries will make our duty clear. If slavery has no constitutional existence here, then more than ever is Congress bound to interfere, even with money; for the scandal must be peremptorily stopped, without any postponement or any consultation of the people on a point which is not within their power.

"It may be said that, whether slavery be constitutional or not, nevertheless it exists, and therefore this inquiry is superfluous. True, it exists as a monstrous fact; but it is none the less important to consider its origin, that we may understand how, assuming the form of law, it was able to shelter itself beneath the protecting shield of the Constitution. And when we shall see clearly that it is without any such just protection, that the law which declares it is baseless, and that in all its pretensions it is essentially and utterly brutal and unnatural, we shall have less consideration for the slave tyranny, which, in satisfied pride, has thus far—not without compunction at different moments—ruled the national capital, reducing all things here—public opinion, social life, and even the administration of justice—to its own degraded standard, so as to fulfil the curious words of an old English poet:

> It serves, yet reignes as King;
> It lives, yet's death; it pleases full of paine.
> Monster! ah, who, who can thy beeing faigne?
> Thou shapelesse shape, live death, paine pleasing, servile reigne.

"It is true, there can be no such thing as property in man; and here I begin to answer the questions propounded by the Senator from Kentucky (Mr. Davis). If this pretension is recognized anywhere, it is only another instance of the influence of custom, which is so powerful as to render the idolater insensible to the wickedness of idolatry, and the cannibal insensible to the brutality of cannibalism. To argue against such a pretension seems to be vain; for the pretension exists in open defiance of reason as well as of humanity. It will not yield to argument; nor will it yield to persuasion. It must be encountered by authority. It was not the planters in the British islands or in the French islands who organized emancipation, but the distant Governments across the sea, far removed from the local prejudices, who at last forbade the outrage. Had these planters been left to themselves, they would have clung to this pretension as men among us still cling to it. Of course, in making this declaration against the idea of property in man, I say nothing new. An honored predecessor of the Senator from Maryland (Mr. Kennedy), whose fame as a statesman was eclipsed, perhaps, by

his more remarkable fame as a lawyer—I mean William Pinkney, and it is among the recollections of my youth that I heard Chief Justice Marshall call him the undoubted head of the American bar—in a speech before the Maryland House of Delegates, spoke as statesman and lawyer when he said:

Sir, by the eternal principles of natural justice no master in the State has a right to hold his slaves in bondage for a single hour.

"And Henry Brougham spoke not only as statesman and lawyer, but as orator also, when, in the British Parliament, he uttered these memorable words:

Tell me not of rights—talk not of the property of the planter in his slaves. I deny the right—I acknowledge not the property. The principles, the feelings of our common nature, rise in rebellion against it. Be the appeal made to the understanding or to the heart, the sentence is the same that rejects it. In vain you tell me of laws that sanction such a claim. There is a law above all the enactments of human codes—the same throughout the world, the same in all times: it is the law written by the finger of God on the heart of man; and by that law, unchangeable and eternal, while men despise fraud and loathe rapine and abhor blood they will reject with indignation the wild and guilty phantasy that man can hold property in man.

"Slavery exists at the national capital absolutely without support of any kind in the Constitution; and here again I answer the Senator from Kentucky (Mr. Davis). Nor is this all. Situated within the exclusive jurisdiction of the Constitution, where State rights cannot prevail, it exists in open defiance of most cherished principles. Let the Constitution be rightly interpreted by a just tribunal, and slavery must cease here at once. The decision of a court would be as potent as an act of Congress."

Mr. Sumner then proceeded to consider "how completely slavery had installed itself here (in this District) in utter disregard of the Constitution, and compelled Congress ignobly to do its bidding."

A historical statement was made of the proceedings which led to the location of the capital, in illustration of this position, and he concluded this portion of his remarks by saying: "Bringing the argument together, the conclusion may be briefly stated. The five-headed barbarism of slavery, beginning in violence, can have no legal or constitutional existence, unless through positive words expressly authorizing it. As no such positive words can be found in the Constitution, all legislation by Congress supporting slavery must be unconstitutional and void, while it is made still further impossible by positive words of prohibition guarding the liberty of every person within the exclusive jurisdiction of Congress."

Advocating the appropriation of money for compensation to the owners, he said, in conclusion: "Amidst all present solicitudes, the future cannot be doubtful. At the national capital slavery will give way to freedom; but the good work will not stop here. It must proceed. What God and nature decree rebellion cannot arrest. And as the whole, wide-spread tyranny begins to tumble, then, above the din of battle, sounding from the sea and echoing along the land, above even the exultations of victory on well-fought fields, will ascend voices of gladness and benediction, swelling from generous hearts wherever civilization bears sway, to commemorate a sacred triumph, whose trophies, instead of tattered banners, will be ransomed slaves."

Mr. Davis, of Kentucky, followed and examined the entire constitutional question relative to the bill. As his remarks present the views and principles upon which the Government has been hitherto administered, they afford a criterion by which every one may judge of the extent of the great political change which the country and government are now undergoing.

"Mr. President, I will say a few words upon the subject of the power which Congress claims to exercise over this question. It seems to me that the reason why this power has been so uniformly and so generally conceded is that the question of power has never been carefully examined. I laid down a few days ago this proposition—and I defy the Senator from Maine or the Senator from New Hampshire to refute it—that there is no positive written law which establishes property in a slave or in land or in a horse or in any other subject of property; that the law upon that subject arises from the uniform custom and usage of the civilized world. And I laid down this further propoosition; that my legal right to my slave was precisely of the same nature and character with my legal right to my land; and that if I were a citizen of the District of Columbia, Congress would have no more right to deprive me of the one subject of property than of the other.

"Both the gentlemen deny that property can exist in a human being. That is their broad proposition. Upon that point I am totally at issue with them, and I am sustained by the Constitution of the United States, and by the judgment of the Supreme Court and of all the circuit judges of the United States wherever the question has been mooted and decided. The Senator from New Hampshire now concedes explicitly that Congress has no power to take from the people of the District their houses or their lands, or any other property but their slaves, as I understand him. I ask the gentleman for the law or the provision of the Constitution which forms the interdict, and he explicitly gives it to me. It is the provision that no citizen's property shall be taken for public use except by due process of law and upon just compensation. I maintain that that prohibition on the power of Congress applies as legitimately and with as much truth and logic to slaves as it does to real estate.

"My proposition a few days ago was that slavery was general, that the abolition of slavery was local; and that proposition I sustained by reading from the opinion of Chief Justice Marshall in the case of the Antelope, and he

sustained the opinion which he rendered in that case by quoting from the decrees of Lord Stowell, of the admiralty court of England, who was a greater judge than ever Chief Justice Mansfield was. They both decide this principle broadly and without any sort of reservation or condition, that slavery and the slave trade existed by public national law."

Mr. Collamer: "The gentleman will permit me to say that I take issue with him on that point. It is acknowledged by international law only in such nations as recognize it."

Mr. Davis: "No, sir; my honorable friend is mistaken there, and I will tell him wherein, in my judgment, he is mistaken. The Supreme Court of the United States, in this decision rendered by Chief Justice Marshall, decided that slavery and the slave trade existed by national law, and that this national law may be repealed locally by the proper legislation of every country upon the earth; and that this national law, recognizing slavery and the slave trade, exists in every country save in those countries where, by positive enactment, it has been repealed."

Mr. Collamer: "That, to my mind, amounts to precisely the same proposition that I stated."

Mr. Davis: "No, sir. I will read from the opinion in the case of the Antelope again, and I will read from several other opinions. I know that gentlemen are becoming impatient for the sacrifice; but here, sir, I stand up in my place in the Senate Chamber of the United States, and I maintain the rights of a people who have no self-government, and who have no representation in this chamber; and although gentlemen may be restive under the exercise of this right of mine, which I claim, to appear here in defence of the rights of property of the people of this District, they will have to submit to that restiveness. In the case of the Antelope (10 Wheaton's Reports, 120), the court say:

> The question whether the slave trade is prohibited by the laws of nations has been seriously propounded, and both the affirmative and negative of the proposition have been maintained with equal earnestness.
>
> That it is contrary to the law of nature, will scarcely be denied.

"I never denied it myself; but I say that the law created by the usages of mankind overrules the law of nature in relation to this subject. What is the law of nature? My honorable friend from Vermont might have one code of the law of nature, and other gentlemen might have other codes of the law of nature. When this traffic was indulged in by the civilized world, and the States of Massachusetts and Rhode Island were inundating the colonies with slaves torn from Africa, and selling them for a price, what was the law of nature then in Massachusetts that indulged such a traffic; and what was the law of nature then in the civilized world? What is the law of nature now in Turkey and in China? What was the law of nature in Europe two centuries ago? What is the law of nature in Utah? The law of nature varies with the altered condition of civilization and the condition of the world; and what is the law of nature in one age and in one country and in one generation, is not the law of nature universally. It is because of this want of uniformity in the law of nature, and because there is no common tribunal to ascertain and define and establish what the law of nature is, that it has been uniformly decreed to be subservient to the positive laws of any country, and to the laws of nations, as established upon the usages of the civilized world. But I will read:

> That it is contrary to the law of nature will scarcely be denied. That every man has a natural right to the fruits of his own labor, is generally admitted; and that no other person can rightfully deprive him of those fruits, and appropriate them againt his will, seems to be the necessary result of this admission. But from the earliest times war has existed, and war confers rights in which all have acquiesced. Among the most enlightened nations of antiquity, one of these was, that the victor might enslave the vanquished.

"That was once a principle of the law of nations as recognized by the whole world. I admit that that principle has been exploded, and properly exploded, by the Christian civilization of this age.

> This, which was the usage of all, could not be pronounced repugnant to the law of nations, which is certainly to be tried by the test of general usage. That which has received the assent of all, must be the law of all.
>
> Slavery, then, has its origin in force; but as the world has agreed that it is a legitimate result of force, the state of things which is thus produced by general consent, cannot be pronounced unlawful.

"What does Chief Justice Marshall here decide? That although slavery has its origin in force and is against the law of nature, yet as it has been universally recognized by the civilized world, it exists and is acknowledged by the laws of nations.

> Throughout Christendom this harsh rule has been exploded, and war is no longer considered as giving a right to enslave captives. But this triumph of humanity has not been universal. The parties to the modern law of nations do not propagate their principles by force; and Africa has not yet adopted them. Throughout the whole extent of that immense continent, so far as we know its history, it is still the law of nations that prisoners are slaves. Can those who have themselves renounced this law, be permitted to participate in its effects by purchasing the beings who are its victims?

"Here is a principle to which the honorable Senator from Maine referred:

> Whatever might be the answer of a moralist to this question, a jurist must search for its legal solution in those principles of action which are sanctioned by the usages, the national acts, and the general assent of that portion of the world of which he considers himself as a part, and to whose law the appeal is made. If we resort to this standard as the test of international law, the question, as has already been observed, is decided in favor of the legality of the trade. Both Europe and America embarked in it; and for nearly two centuries it was carried on without opposition and without censure. A jurist could not say that a practice thus supported was illegal, and that those engaged in it might be punished either personally or by deprivation of property.

"Now, I ask the attention of the Senator from Vermont to this point in the decision:

In this commerce, thus sanctioned by universal assent, every nation had an equal right to engage. How is this right to be lost? Each may renounce it for its own people; but can this renunciation affect others? No principle of general law is more universally acknowledged than the perfect equality of nations. Russia and Geneva have equal rights. It results from this equality that no one can rightfully impose a rule on another. Each legislates for itself, but its legislation can operate on itself alone. A right, then, which is vested in all by the consent of all, can be divested only by consent; and this trade, in which all have participated, must remain lawful to those who cannot be induced to relinquish it. As no nation can prescribe a rule for others, none can make a law of nations; and this traffic remains lawful to those whose Governments have not forbidden it.—10 *Wheaton*, pp. 120–122.

"There is the principle."

Mr. Collamer: "The gentleman has a peculiar way of reading that decision."

Mr. Davis: "I read it according to the letter."

Mr. Collamer: "Gentlemen who are tenacious about that particular form of reading, are utterly incapable of being answered to their satisfaction. I cannot, by any version I can give it, satisfy the gentleman; but every lawyer who reads that case and other cases cognate to the same subject in other books, understands it thus: when a question comes before a court in relation to a prize of a vessel engaged in the slave trade, upon the broad law of nations they cannot declare it a prize if the nation to which the vessel belongs make that business legitimate. That is all there is in that decision. It is that the law of nations recognizes slavery as existing and lawful in those nations that make it so; and that is all."

Mr. Davis: "There is a little more, Mr. President, notwithstanding the gentleman's position. It decides that the slave trade was once practised by all the civilized nations of the world, and it decides, furthermore, that it cannot be restricted except by positive legislation of the countries that choose to restrict it."

Mr. Collamer: "Will the gentleman permit me one moment on that point? When it was universal, it was because it was made so by the acts of the several nations themselves. It was not a law of nations; it was the law of each nation, and therefore of all; but it was a law for each nation that made it, not an international law; and the very fact that some nations may repeal that law, and prevent its being operative on them, while others may retain it and have it operative on them, shows that it is not a part of the law of nations, for that law cannot be changed in that way. Another thing: it never was a law of nature. The laws of nature can never change, until nature and nature's God change."

Mr. Davis: "The gentleman is still mistaken. I admit that the law of nations was made by the practice of nations, and that is what this opinion says. I will read an opinion directly that will show it conclusively—an opinion of Judge McLean himself. Neither the Senator from Vermont nor any other Senator here can find any positive express law of any nation upon the earth sanctioning the slave trade, except the Constitution of the United States, which continued the traffic until the year 1808."

Mr. Collamer: "Allow me to say to the gentleman that on that point I take distinct issue with him. The Constitution never continued the slave trade one day. It merely said that Congress should not interfere with the importation or immigration of such persons as the States might think proper to admit until after a certain time."

Mr. Davis: "The Senator from Vermont has informed me that he cannot convince me. I agree with him in that proposition; and there is another proposition on which there is even less doubt than on that in my mind, and that is that I cannot convince him. Therefore I will proceed with my speech as though my honorable friend was not a hearer at all.

"The Supreme Court of the United States, in the case of the Antelope, laid down the doctrine and the principle that the law which regulates the slave trade and establishes it as a legal traffic arises from custom and usage alone, not from positive enactment; and further, that the law of nations recognizing the validity of the slave trade once existed among all the civilized nations of the world. France had colonies in the West India Islands; England had colonies there; so had Spain, Portugal, Denmark, Sweden, Holland; and each one of those nations was engaged in the slave trade. Their usage for two centuries, according to the language of this decision, established the slave trade as a legal traffic. It existed, not by positive law, but by usage and custom conformed to by all the civilized nations of the world; and having that authority and that extent of existence, the only way in which it ceased to exist anywhere in any of the countries of the earth, was by positive local prohibition. I believe that Brazil still continues the trade. By what authority? By the law of nations. So far as any nation has not by its own positive legislation, or by its treaty stipulations, prohibited the slave trade, it still exists in that nation, and with its people and subjects, as a legitimate trade sanctioned by the law of nations. The court say:

No principle of general law is more universally acknowledged than the perfect equality of nations. Russia and Geneva have equal rights. It results from this equality that no one can rightfully impose a rule on another. Each legislates for itself, but its legislation can operate on itself alone. A right, then, which is vested in all by the consent of all, can be divested only by consent; and this trade, in which all have participated, must remain lawful to those who cannot be induced to relinquish it. As no nation can prescribe a rule for others, none can make a law of nations, and this traffic remains lawful to those whose Governments have not forbidden it.

"Suppose the United States Government had never made the slave trade piracy, would it not still exist as a legitimate trade to the people of the United States, in which they might enter?

Most certainly. The Supreme Court have decided this principle again and again. It is true that where a nation, either by its positive enactments or by its treaty stipulations, proscribes the slave trade, it is not lawful for the subjects or people of that State or nation to enter into that trade; but that constitutes the exception. This case just as explicitly and as undeniably establishes the position that if a single nation upon earth stands out, and fails or refuses by its legislation or by its treaty engagements to proscribe the slave trade, the slave trade still exists in relation to that nation as a legitimate traffic. So much for the decision in the case of the Antelope.

"Now, sir, I will read another authority, and it is the authority of the judge dwelt upon with so much pleasure and high approval by the honorable Senator from Massachusetts (Mr. Sumner) the other day—Judge McLean. In the case of Henry Miller *vs.* George McQuerry (5th McLean's Reports, p. 472), he said:

No proof, it is contended, has been offered to show that Kentucky is a State in which slavery is authorized by law. And a discussion in the Senate of the United States is referred to, in which certain Senators declared there was no law in the South expressly establishing slavery. It is with regret that I hear this argument relied on in this case. It was used by gentlemen of the South to justify the introduction of slavery into our Territories without the authority of law. In Groves *vs.* Slaughter, a Mississippi case, reported in 15 Peters's Reports, 450, the Supreme Court of the United States declared that slavery was local, and that it could not exist without the authority of law; that it was a municipal regulation.

"I observe that gentlemen smile at this quotation. Let them wait a moment and they will see that it is explained, and it is shown that the position here quoted is not the true position. Slavery is not a municipal regulation, and the learned judge shows it in this very opinion, as you will see presently. What is a municipal regulation? It is a regulation that is made by local, civil law. Here is the slave trade, not founded, not created, not having its origin or sanction in local law at all, but by the universal custom and usages of the civilized world, as decided in the case of the Antelope, and as this learned judge himself recognizes:

Whether this law was founded upon usage, or express enactment, is of no importance. Usage of long continuance, so long that the memory of man runneth not to the contrary, has the force of law. It arises from long-recognized rights, countervened by no legislative action.

"That is the whole case. Usage makes national law, usage makes public law; that establishes in what subjects property exists, and establishes what is legitimate trade among the nations of the earth. This opinion so decides, and it decides that when usage has established these principles they cannot be abolished or varied or modified, except by legislative enactment.

It arises from long-recognized rights, countervened by no legislative action. This is the source of many of the principles of the common law. And this for a century or more may constitute slavery, though it be opposed as it is to all the principles of the common law of England. I speak of African slavery.

"The same opinion continues:

But such a law can only acquire potency by long usage. Now, it may be admitted that in some of the Southern States, perhaps in all of them, there cannot be found a statute which contains the words: "And be it enacted, that slavery shall exist."

"That is a historical and a legal fact. So far as I know or have read—and I admit that my reading has been very limited compared with that of the learned gentleman from Massachusetts—there is not a positive written law in any of the States of Europe that ever indulged in this traffic, sanctioning and legalizing it. That law which most directly comes up to the point of establishing the slave trade is found in the Constitution of the United States which permitted its continuance until 1808, and that at the instance of Massachusetts and other Northern States. They were sustained in that action by Georgia, South Carolina, and North Carolina; Virginia, Pennsylvania, and New Jersey went for the immediate abolition of the slave trade, and it would have been abolished at the time of the adoption of the Constitution by a provision to take immediate effect, if it had not been for the resistance and the opposition made to it by South Carolina, North Carolina, and Georgia, and Massachusetts and Connecticut and some of the other Northern States. Judge McLean in this decision says:
